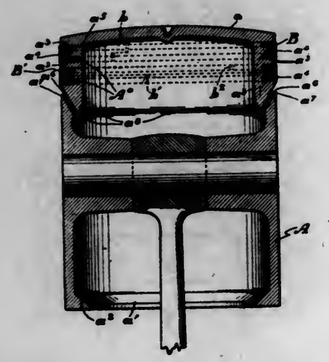
REISSUES.

MAY 22, 1923.

15,608. HEATING OR COOLING PLATE FOR MOLDING PRESSES. CHARLES F. BURROUGHS, East Orange, N. J., assignor, by mesne assignments, to The Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Dec. 13, 1919. Serial No. 344,711. Original No. 1,296,916, dated Mar. 11, 1919, Serial No. 215,821, filed Feb. 7, 1918. 28 Claims. (Cl. 18—5.3.)

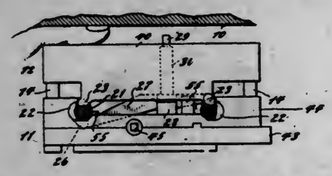
9. The process of heating and cooling a flat die for handling hot phonograph record material which consists in forming a plurality of circularly arranged channels close to each other and to the die surface for the passage of fluid and supplying each of the fluids thereto concurrently.

15. In combination, a die body member, a channeled disk member interfitting therewith, and a fluid tight joint between the members and including a projecting rib in one member fitting a groove in the other, and an additional fluid-closure member confined in said groove.



26. In combination, a structure having a surface to be heated, means including a plurality of passages within the structure for flowing a heating medium close to the surface, and means for regulating the flow to the different parts of the surfaces to uniformly bring said surface to the same degree of heat.

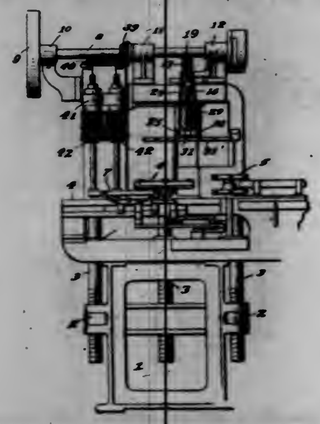
15,609. JACK. ENOS E. THOMSON, Cleveland, Ohio. Filed July 15, 1921. Serial No. 485,042. Original No. 1,359,849, dated Nov. 23, 1920, Serial No. 341,773, filed Dec. 1, 1919. 9 Claims. (Cl. 254—103.)



1. A jack comprising a base, a hollow tubular standard rising therefrom, and interiorly threaded, an exteriorly threaded sleeve operable within said standard, a bevel gear secured to the upper end of said sleeve, a lifting screw slidable through said sleeve, a bevel gear having threaded association with said screw, means for rotating said gears in reverse direction whereby the sleeve is elevated within the standard and the screw lifted with respect to said sleeve, and means for supporting said screw.

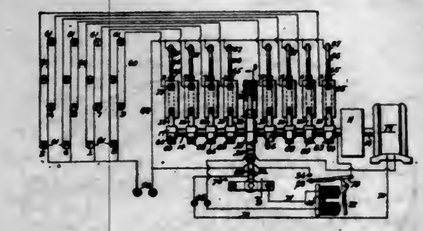
15,610. METALLIC PISTON PACKING. HARRY MORTON BRAMBERRY, Norfolk, Va., assignor to Piston Research Corporation, Norfolk, Va., a Corporation of Virginia. Filed Nov. 24, 1922. Serial No. 603,092. Original No. 1,382,465, dated June 21, 1921, Serial No. 358,259, filed Feb. 12, 1920. 6 Claims. (Cl. 74—109.)

1. In combination with the cylinder of an internal combustion or other compression engine, a piston having an annular ring-groove in the cylindrical surface thereof with parallel plane side walls perpendicular to the axis of the piston, the ring-groove having a generally rectangular rib or ridge projecting outwardly from the bottom of the groove, with side walls parallel to but of less height than the side walls of the groove and defining, with the side walls of the groove, two channels, one on each side of the rib, the walls that define the groove, the rib, and the channels being continuous with each other and unbroken; and a split spring packing-ring structure fitted in the groove and provided with a cylinder-engaging surface and expanding as a whole to keep the cylinder-engaging surface in contact with the cylinder wall, the ring-structure having substantially the same cross-sectional configuration and dimensions as the ring-groove, whereby an oil-sealing packing is provided and leakage of fluid between ring-structure and piston is minimized in the operation of the piston.



15,611. SAFETY OPERATING MECHANISM. HENRY DE SMITH, Rochester, N. Y., assignor to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 25, 1921. Serial No. 510,400. Original No. 1,354,895, dated Oct. 5, 1920, Serial No. 308,608, filed July 3, 1919. 28 Claims. (Cl. 192—132.)

17. In combination with a pressure applying element, a form as characterized, comprising a base, side and end

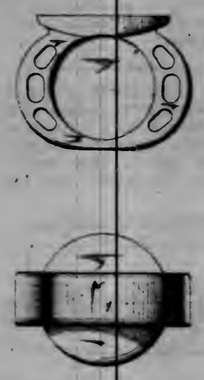


walls suitably supported thereon and adapted to yield under pressure, and means positioned on said base and engageable with said walls to prevent them from yielding, said means adapted to be actuated by said pressure element upon its approximation to the walls.

15,612. BOTTLE-CAPPING MACHINE. ELOF NORDSTROM, East Orange, N. J., assignor, by mesne assignments, to American Can Bottle Seal Corporation, a Corporation of Delaware. Filed May 13, 1921. Serial No. 469,372. Original No. 1,303,580, dated May 13, 1919, Serial No. 89,363, filed Apr. 6, 1916. 14 Claims. (Cl. 226—86.)

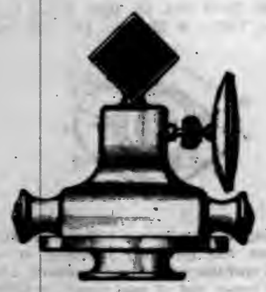
1. In a machine of the character described, the combination with cap applying and preliminary crimping means, means for feeding vessels to and from said cap applying and crimping means, final cap crimping means, and means operating at a different speed than the first mentioned feeding means for feeding vessels from the first mentioned feeding means to said final cap crimping means.

15,613. SIGN FLASHER. JOHN H. WHEELOCK, Fitzwilliam, N. H., assignor to Signal Engineering and Manufacturing Company, New York, N. Y., a Corporation of Massachusetts. Filed Dec. 16, 1922. Serial No. 607,445. Original application filed May 11, 1917, Serial No. 168,018. Renewed Feb. 6, 1922, Serial No. 534,589. Original No. 1,428,499, dated Sept. 5, 1922. 9 Claims. (Cl. 177—346.)



1. In a system of the class described, the combination of a plurality of circuits in multiple connected with a source of power, a plurality of controlling elements for said circuits, a shaft on which said elements are fixed, a master wheel on said shaft, means controlled by said master wheel for connecting said controlling elements with said source of power, means for connecting each controlling element with its circuit as said shaft rotates, and means for thereafter completing each circuit through a shunt around its corresponding controlling element.

DESIGNS.



MAY 22, 1923.

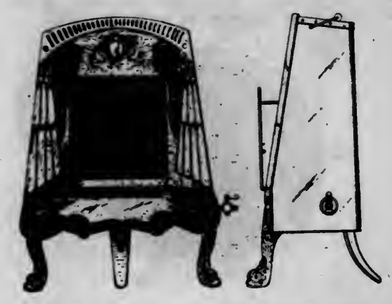
62,389. TOOTHBRUSH AND TUMBLER SUPPORTING FIXTURE. JOHN H. BALMER, Newark, N. J. Filed June 21, 1922. Serial No. 2,755. Term of patent 14 years.

The ornamental design for a toothbrush and tumbler supporting fixture, as shown.

62,390. MOTOR-VEHICLE SIGNAL. MAURICE RENÉ JOHN BRUINS, New York, N. Y., assignor to Fanrot-Scope Corporation, a Corporation of Delaware. Filed Oct. 28, 1921. Serial No. 511,151. Term of patent 14 years.

The ornamental design for a motor vehicle signal as shown.

62,391. TEXTILE FABRIC OR SIMILAR ARTICLE. JAMES H. BUNTING, Clifton, N. J., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1922. Serial No. 4,735. Term of patent 7 years.



The ornamental design for a textile fabric or similar article, as shown.

62,392. PITCHER. HOWARD A. CHUACH, Elkhart, Ind. Filed June 24, 1922. Serial No. 2,816. Term of patent 3½ years.

The ornamental design for a pitcher, as shown.

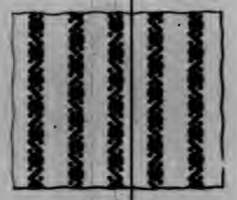
62,393. HEATER. VINCENT CHWALKOWSKI, Newark, N. J. Filed June 16, 1922. Serial No. 2,702. Term of patent 3½ years.

The ornamental design for a heater, as shown.

62,394. TIRE TREAD. FRANK W. DANIEL, Wissinoming, Pa., assignor to Quaker City Rubber Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 12, 1922. Serial No. 3,367. Term of patent 14 years.

The ornamental design for a tire tread as shown.

62,395. TIRE. FRANK DISCH, Rutherford, N. J., assignor to Baker, Murray & Imbrie, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 10, 1922. Serial No. 3,344. Term of patent 7 years.

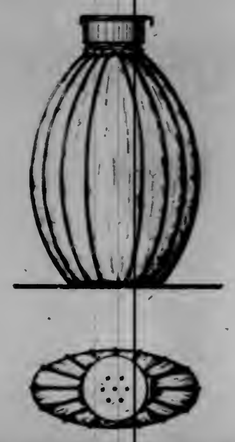


The ornamental design for a tire, substantially as shown.

62,396. PIN, EMBLEM, MEDAL, RING, OR ARTICLE OF A SIMILAR NATURE. CHARLES B. DYER, Indianapolis, Ind. Filed Oct. 21, 1921. Serial No. 509,431. Term of patent 7 years.

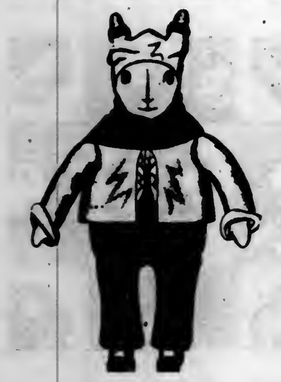
The ornamental design for a pin, emblem, medal, ring or article of a similar nature, as shown.

62,397. TEXTILE FABRIC. HAROLD B. FELDMAN, New York, N. Y., assignor to Arden Mills, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 27, 1922. Serial No. 4,728. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

62,398. PLAQUE OR SIMILAR ARTICLE. GEORGE S. HUNT, Chicago, Ill. Filed Jan. 6, 1923. Serial No. 4,829. Term of patent 14 years.

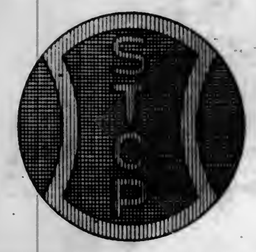


The ornamental design for a plaque or similar article, as shown.

62,399. BOTTLE. FERNAND JAVAL, Paris, France. Filed Aug. 3, 1922. Serial No. 3,279. Term of patent 14 years.

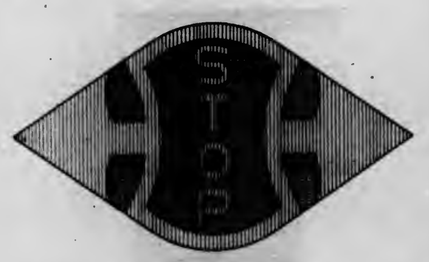
The design for a bottle substantially as shown.

62,400. DOLL. RAYMOND KELLY and GERTRUDE E. LONG, Chicago, Ill., assignors of one-third to Gibson and Gibson, Chicago, Ill., a Copartnership composed of James D. Gibson and Raymond Gibson. Filed Jan. 20, 1923. Serial No. 4,952. Term of patent 3½ years.



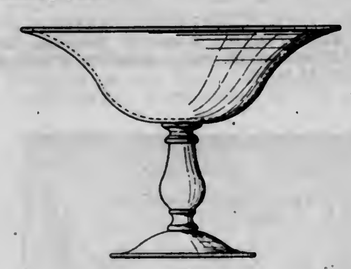
The ornamental design for a doll, as shown.

62,401. FRONT FOR A TRAFFIC-DIRECTING SIGNAL LAMP. OSCAR KROEHLE, Lakewood, Ohio, assignor to The Protex Signal Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 8, 1921. Serial No. 499,347. Term of patent 3½ years.



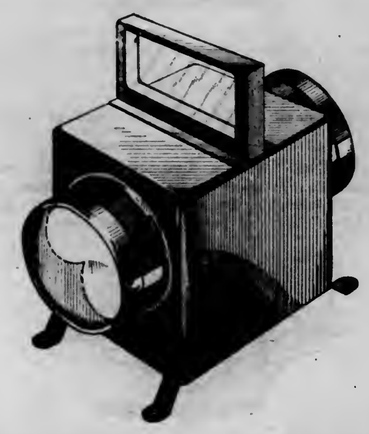
The ornamental design, substantially as shown, for the front for a traffic-directing signal-lamp.

62,402. FRONT FOR A TRAFFIC-DIRECTING SIGNAL LAMP. OSCAR KROEHLE, Lakewood, Ohio, assignor to The Protex Signal Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 12, 1921. Serial No. 500,214. Term of patent 3½ years.



The ornamental design, substantially as shown, for the front for a traffic-directing signal-lamp.

62,403. FRONT FOR A TRAFFIC-DIRECTING SIGNAL LAMP. OSCAR KROEHLE, Lakewood, Ohio, assignor to The Protex Signal Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 16, 1921. Serial No. 501,200. Term of patent 3½ years.

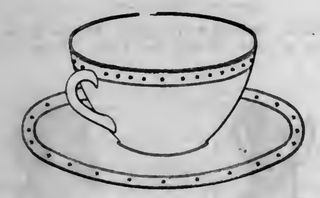


The ornamental design, substantially as shown, for the front for a traffic-directing signal-lamp.

62,404. GLASS DISH. WILLIAM H. MAGEE, Wheeling, W. Va. Filed Jan. 30, 1922. Serial No. 433. Term of patent 3½ years.

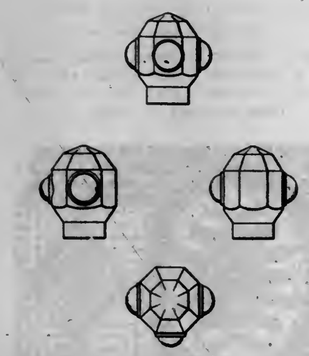
The ornamental design for a glass dish, as shown.

62,405. AUTOMOBILE SIGNAL. PETER MCLAREN, Whittier, Calif., assignor to McLaren Automobile Signal Co., a Corporation of California. Filed Apr. 10, 1922. Serial No. 1,667. Term of patent 14 years.



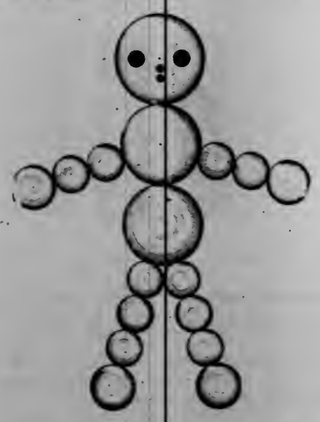
The ornamental design for an automobile signal, as shown.

62,406. JEWELRY TRINKET. HERBERT NALTY, London, England. Filed Sept. 13, 1922. Serial No. 3,711. Term of patent 3½ years.



The ornamental design for a jewelry trinket as shown.

62,407. CUP AND SAUCER. STARRATT D. NICHOLS, Buffalo, N. Y. Filed June 22, 1921. Serial No. 479,667. Term of patent 7 years.

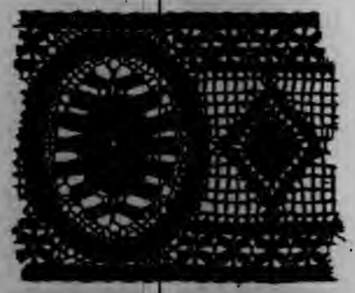


The ornamental design for a cup and saucer, substantially as shown.

62,408. CASING FOR PARKING LAMPS. CHARLES S. OVERTON, Baltimore, Md. Filed May 17, 1922. Serial No. 2,284. Term of patent 7 years.

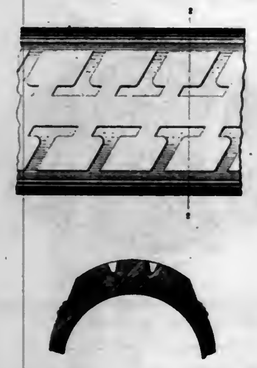
The ornamental design for a casing for parking lamps, as shown.

62,409. TOY DOLL. CHARLES HAMILTON PAJEAU, Evanston, Ill. Filed Dec. 16, 1921. Serial No. 522,934. Term of patent 14 years.



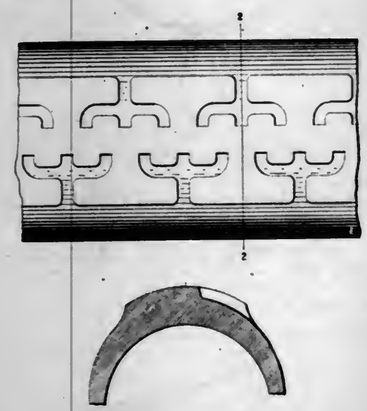
The ornamental design for a toy doll, as shown and described.

62,410. DOLL. MABEL L. PHINNEY, Fergus Falls, Minn. Filed Jan. 5, 1923. Serial No. 4,819. Term of patent 7 years.



The ornamental design for a doll, as shown.

62,411. LACE. GEORGE RADFORD, Oakland Beach, R. I., assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed July 19, 1922. Serial No. 3,124. Term of patent 3½ years.



The ornamental design for lace, as shown.

62,412. TIRE TREAD. HAROLD D. REICHARD, Akron, Ohio. Filed June 17, 1922. Serial No. 2,725. Term of patent 14 years.

The ornamental design for a tire tread as shown.

62,413. TIRE TREAD. HAROLD D. REICHARD, Akron, Ohio. Filed June 17, 1922. Serial No. 2,726. Term of patent 14 years.

The ornamental design for a tire tread as shown.

62,414. RING. WALTER SHANLEY ROBERTSON, Philadelphia, Pa., assignor to The Chas. H. Elliott Company, Philadelphia, Pa. Filed Nov. 20, 1922. Serial No. 4,341. Term of patent 3½ years.

The ornamental design for a ring as shown.

62,415. MESH BAG. HARRY BRADLEY ROWAN, North Attleboro, Mass., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed June 28, 1922. Serial No. 2,872. Term of patent 7 years.

The ornamental design for a mesh bag as shown.

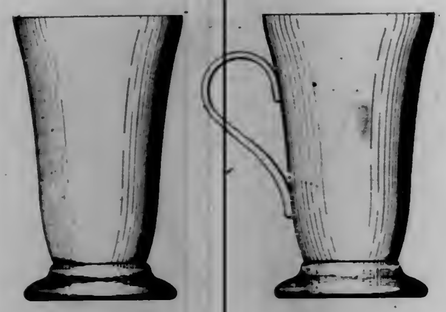
62,416. COFFEE PERCOLATOR, TEAPOT, OR SIMILAR ARTICLE. ALFRED H. SANDER, Maplewood, N. J., assignor to George Borgfeldt & Co., New York, N. Y., a Corporation of New Jersey. Filed Sept. 10, 1921. Serial No. 499,829. Term of patent 3½ years.

The ornamental design for a coffee percolator, teapot or similar article, substantially as shown and described.

62,417. TEAPOT OR SIMILAR ARTICLE. ALFRED H. SANDER, Maplewood, N. J., assignor to George Borgfeldt & Co., New York, N. Y., a Corporation of New Jersey. Filed Sept. 10, 1921. Serial No. 499,830. Term of patent 3½ years.

The ornamental design for a teapot or similar article, substantially as shown and described.

62,418. TEAPOT OR SIMILAR ARTICLE. ALFRED H. SANDER, Maplewood, N. J., assignor to George Borgfeldt & Co., New York, N. Y., a Corporation of New Jersey. Filed Sept. 10, 1921. Serial No. 499,836. Term of patent 3½ years.

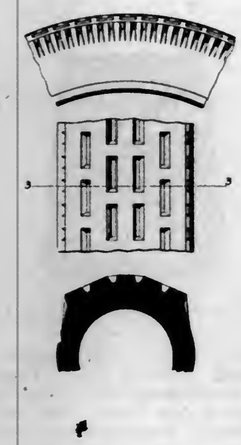


The ornamental design for a teapot or similar article, substantially as shown and described.

62,419. BOX FOR TALCUM POWDERS AND THE LIKE. ANTONIO ZIRION Y SARAVIA, Mexico, Mexico, and RAMON M. RODRIGUEZ, New York, N. Y., assignors to Dermophile Products Company, Inc., New York, N. Y., a Corporation of New York. Filed June 5, 1922. Serial No. 2,527. Term of patent 14 years.

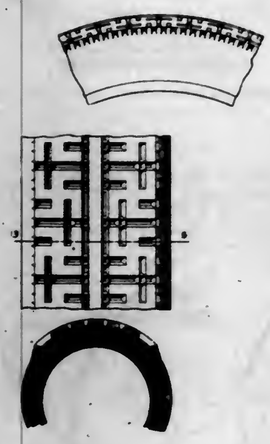
The ornamental design for a box for talcum powders and the like as shown.

62,420. DRINKING CUP. ALBERT F. SAUNDERS, East Syracuse, N. Y., assignor to T. N. Benedict Mfg. Co., East Syracuse, N. Y., a Corporation of New York. Filed Aug. 3, 1921. Serial No. 489,638. Term of patent 3½ years.



The ornamental design for a drinking cup, substantially as shown.

62,421. SIGNAL HEAD. PAUL H. SCHULZ and CHRISTIAN JESSEN, Milwaukee, Wis. Filed Dec. 20, 1921. Serial No. 523,780. Term of patent 3½ years.

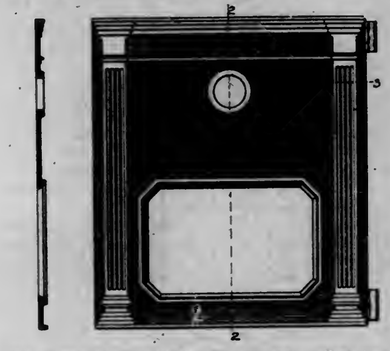


The ornamental design for a signal-head, as shown.

62,422. TIRE. ALFRED K. SIMMONS, Faribault, Minn., assignor of thirty-five one-hundredths to Gus N. Boosalis and fifteen one-hundredths to Lucius A. Smith, both of Faribault, Minn. Filed Aug. 4, 1922. Serial No. 3,284. Term of patent 14 years.

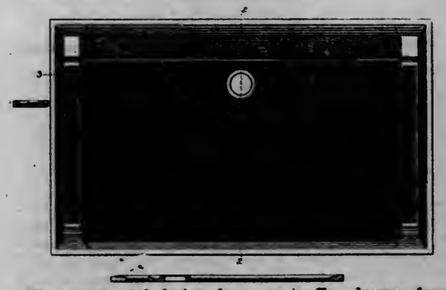
The ornamental design for a tire, as shown.

62,423. TIRE. ALFRED K. SIMMONS, Faribault, Minn., assignor of thirty-five one-hundredths to Gus N. Boosalis and fifteen one-hundredths to Lucius A. Smith, both of Faribault, Minn. Filed Aug. 4, 1922. Serial No. 3,285. Term of patent 14 years.



The ornamental design for a tire, as shown.

62,424. HAND BAG. JACOB SIMS, Brooklyn, N. Y. Filed Aug. 3, 1922. Serial No. 3,277. Term of patent 3½ years.

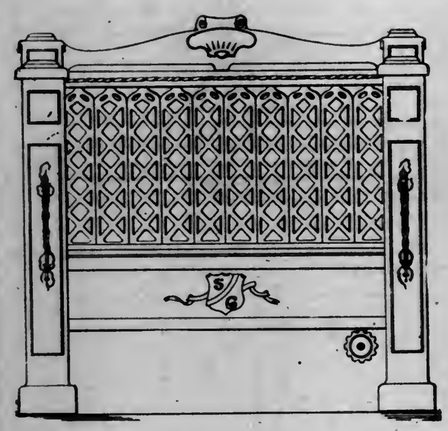


The ornamental design for a hand bag as shown.

62,425. POST-OFFICE-BOX DOOR. GROVE F. STEELE, Jr., New Britain, Conn. Filed Jan. 9, 1922. Serial No. 129. Term of patent 14 years.

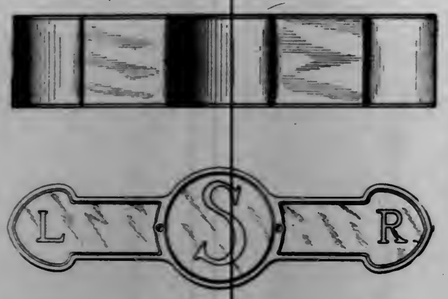
The ornamental design for a post office box door shown in the accompanying drawing.

62,426. POST-OFFICE-DRAWER FRONT. GROVE F. STEELE, Jr., New Britain, Conn. Filed Jan. 9, 1922. Serial No. 130. Term of patent 14 years.



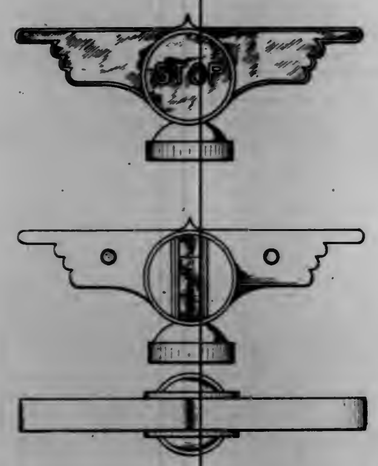
The ornamental design for a post office drawer front shown in the accompanying drawing.

62,427. TRINKET OR SIMILAR ARTICLE. ADOLPH STUETZEL and HERMAN W. BOHN, Boston, Mass.; said Stuetzel, assignor to said Bohn. Filed Dec. 27, 1922. Serial No. 4,721. Term of patent 3½ years.



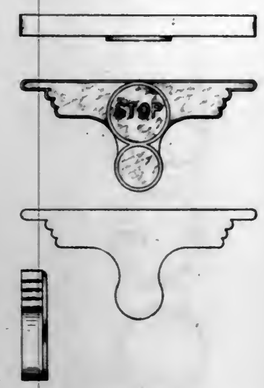
The ornamental design for trinket or similar article, substantially as shown.

62,428. GAS HEATER. JOHN R. TAYLOR, Mansfield, Ohio. Filed May 5, 1922. Serial No. 2,094. Term of patent 7 years.



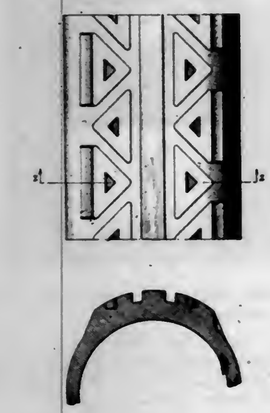
The ornamental design for a gas heater, as shown.

62,429. TRAFFIC SIGNAL. WILLIAM THOMAS, Jr., Los Angeles, Calif., assignor to Thomas Auto Traffic Signal Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 18, 1922. Serial No. 1,831. Term of patent 14 years.



The ornamental design for a traffic signal as shown.

62,430. AUTOMOBILE SIGNALING DEVICE. WILLIAM H. WOOLUMS, South Bend, Ind. Filed Aug. 3, 1922. Serial No. 3,275. Term of patent 14 years.

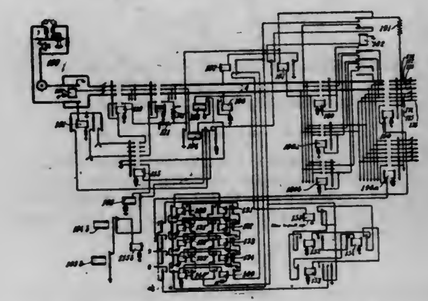


The ornamental design for an automobile signaling device, as shown.

62,431. AUTOMOBILE SIGNALING DEVICE. WILLIAM H. WOOLUMS, South Bend, Ind. Filed Aug. 3, 1922. Serial No. 3,276. Term of patent 14 years.

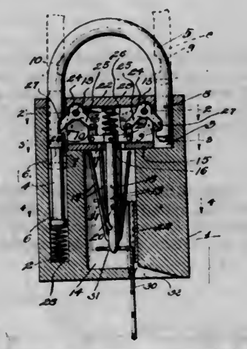
The ornamental design for an automobile signaling device, as shown.

62,432. AUTOMOBILE TIRE. BENJAMIN F. WORRELL, Chicago, Ill. Filed Mar. 16, 1922. Serial No. 1,208. Term of patent 3½ years.



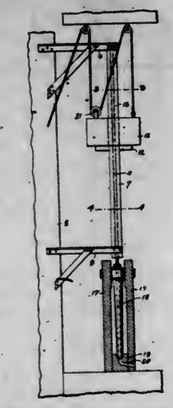
The ornamental design for an automobile tire as shown.

PATENTS



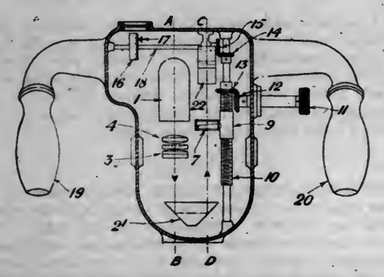
GRANTED MAY 22, 1923.

1,455,769. MACHINE-SWITCHING TELEPHONE SYSTEM. ROY C. ARTER, Galion, Ohio, assignor to The North Electric Manufacturing Company, Galion, Ohio, a Corporation of Ohio. Filed June 7, 1920. Serial No. 387,275. 15 Claims. (Cl. 179—18.)



1. In a telephone exchange system, a line, a plurality of groups of other lines, each group bearing a different numerical designation, means for rendering busy said other lines, switching means associated with said line and operable in accordance with the numerical designations of said groups, other switching means associated with said line and operable in accordance with the busy or idle condition of said other lines, means for actuating said first mentioned switching means to select a desired group of lines, and means including said other switching means, operative thereupon for connecting said line directly to an idle one of said other lines.

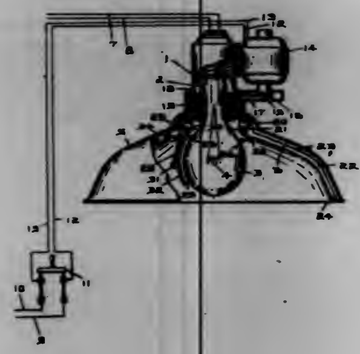
1,455,770. LOCK. EDWARD ANDERSON, Denver, Colo., assignor of one-tenth to J. Harry Moorman, Denver, Colo. Filed Mar. 3, 1921. Serial No. 449,505. 3 Claims. (Cl. 70—17.)



2. A lock comprising a body, a shackle yieldably engaged therewith, a plate located in the body and having a plurality of holes formed therein, a bar slidably mounted in the body and having one end extended through the plate, a plurality of resilient prongs carried by the bar and normally out of alinement with said holes, a yoke carried by the extended end of the bar, bell cranks pivotally connected with the yoke and body and engaged with the shackle to normally hold the same locked, and a key adapted to engage the bar and prongs to flex the latter to aline the same with said holes when said key is forced into the body, as and for the purpose set forth.

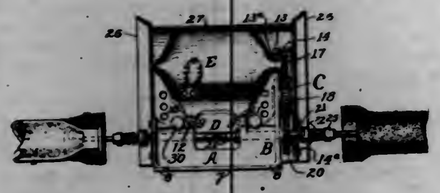
1,455,771. PROCESS FOR EXPANDING AND SMOOTHING THE BORES IN GUN BARRELS. MARTIN ANDERSON, Randwick, near Sydney, New South Wales, Australia. Filed Oct. 25, 1918. Serial No. 259,701. 4 Claims. (Cl. 29—1.11.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A method of expanding and smoothing gun barrels, which consists in first drilling or forming a bore in the gun to be made and subsequently forcing through said bore a hardened sphere of slightly larger diameter than the bore, said sphere being advanced through the gun bore under the influence of a heavy weight which is guided in its movement to effect rectilinear movement of the sphere.



1,455,772. OPTICAL APPARATUS FOR MEASURING SMALL ANGLES. ARCHIBALD BARR and WILLIAM STROUD, Glasgow, Scotland, assignors to Barr and Stroud, Limited, Glasgow, Scotland. Filed May 24, 1921. Serial No. 472,188. 8 Claims. (Cl. 88—2.7.)

1. Optical apparatus consisting of two telescopic systems of the prismatic type, an eyepiece common to the



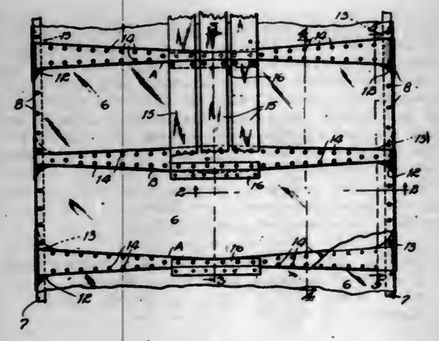
two telescopic systems, each telescopic system having prisms for reflecting the beams of light first vertically in one direction then horizontally and laterally, then vertically, in a direction opposite to the first, a separating prism system by which the beams are directed into the eyepiece, and means in the telescopic systems for producing coincidence, for the purposes set forth.

1,455,773. LIGHT-CLEANING APPARATUS. JAMES A. H. BELL, Toledo, Ohio. Filed Mar. 7, 1921. Serial No. 450,441. 9 Claims. (Cl. 15—97.)

8. A wiper device for a bulb, having a shade, said device embodying wiper means for cleaning the bulb and shade, and a motor connected to operate the wiper means.

1,455,774. BOTTLE-WASHING MACHINE. GUSTAF A. BERG, Los Angeles, Calif. Filed June 13, 1921. Serial No. 477,088. 5 Claims. (Cl. 15—65.)

3. A bottle washing machine having a supporting base, a motor mounted thereon, a hood engaged over the base and presenting splash-plates at opposite ends thereof, said hood inclosing the said motor, spindles penetrating the said plates, driving means between the motor and the inclosed portions of the said spindles, and a washer element at the outer end of each spindle.

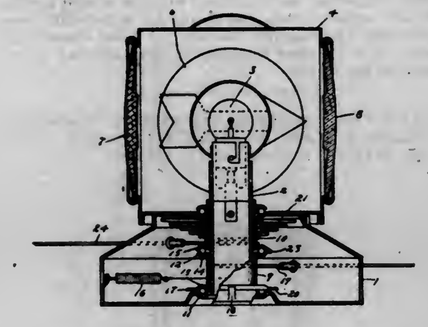


1,455,775. LEAKPROOF INNER TUBE. GROVER C. BERRYMAN, Los Angeles, Calif. Filed Feb. 12, 1921. Serial No. 444,390. 2 Claims. (Cl. 152—13.)

1. An inner tube built up of two layers, said layers being molded together outwardly from a transverse center line and said layers being molded separately inwardly from the transverse center line so as to form a compressed air space between the layers entirely around the tube, circumferentially and half way around crosswise, a puncture-resisting strip of uncured rubber se-

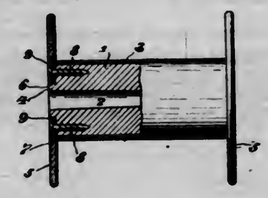
cured to the outer face of the inner layer in the compressed air space all the way around, and a tire valve communicating with the compressed air space.

1,455,776. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Feb. 27, 1922. Serial No. 539,710. 15 Claims. (Cl. 108—5.4.)



1. A metal car roof comprising a series of transverse stiffening ribs whose width varies from bridge to eaves, some of said ribs being wider at the eaves than at the ridge and other of said ribs being wider at the ridge than at the eaves.

1,455,777. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1922. Serial No. 548,289. 13 Claims. (Cl. 108—5.4.)



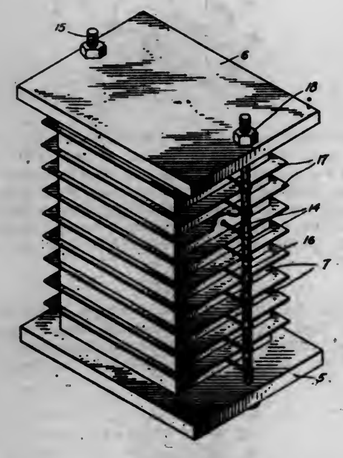
1. A car roof comprising a series of roof sheets connected by raised seams alternating with depressed seams.

1,455,778. VEHICLE TRAFFIC SIGNAL. ROBERT FRANKLIN BOWER, Detroit, Mich. Filed Dec. 14, 1921. Serial No. 522,287. 14 Claims. (Cl. 116—48.)

1. The combination with a rotatable member, of a concentric rotatable carrier having indicating signals, said carrier being normally rotatable with said rotatable member, but being adapted to be rotated independently thereof about the same axis.

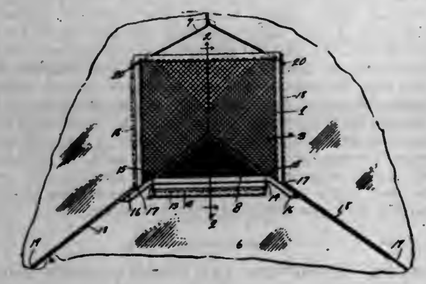
1,455,779. SPOOL. JAMES MORRIS BROWN, Philadelphia, Pa. Filed June 7, 1922. Serial No. 566,529. 5 Claims. (Cl. 242—124.)

3. A spool comprising an inner core member having projections at its opposite ends concentric therewith, end plate members having central openings through which the said projections extend, the said end plate members being seated in the spaces surrounding the said projections, said plate members being provided with grooves concentric with the said openings and a shell surrounding the said core member and having its opposite ends projecting into the said grooves, substantially as described.



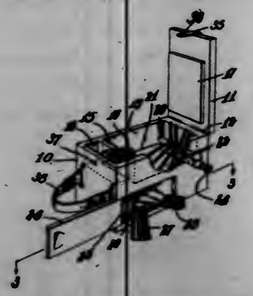
1,455,780. COOKING UTENSIL. FRANK E. CORWIN, Toledo, Ohio. Filed Dec. 30, 1921. Serial No. 525,845. 6 Claims. (Cl. 53—7.)

1. A cooking utensil embodying a plurality of major concave bottom pockets and a minor convex bottom having trough connection with said major pockets.



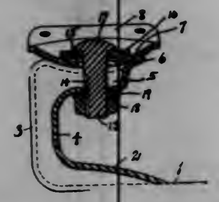
6. An aluminum cooking vessel provided with a sand blast roughened cooking surface, whereby the soft aluminum skin is impacted to be less porous as to absorbing or conducting away grease and is more effective for retaining grease in the uneven hardened or close grained indentations of such surface for more effectively permitting ready removal of foodstuffs cooked therein.

1,455,781. ELECTRICAL CONDENSER. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser & Radio Corporation, a Corporation of Delaware. Filed Dec. 7, 1921. Serial No. 520,594. 4 Claims. (Cl. 250—41.)



1. A condenser unit comprising a plurality of condenser sections connected in parallel through a light fusible conductor.

1,455,782. FLYTRAP. HENRY A. FAES, Crook, Colo. Filed Mar. 7, 1922. Serial No. 541,683. 3 Claims. (Cl. 43—119.)

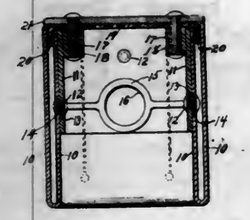


3. An insect trap comprising a receptacle adapted to be supported adjacent a window, downwardly and outwardly extending legs carried by said receptacle and forming means for supporting the trap on a horizontal support, insect guide members pivoted to said legs at points spaced from their ends, said legs forming means for limiting the downward movement of the guide members, means for holding the guide members in vertical positions adjacent the sides of the trap, a fly entrance between the guides, a bait pan pivoted below the insect entrance and having its lower side higher than the lower ends of the supporting legs of the trap.

1,455,783. CONTAINER FOR TOILET ARTICLES. ANDY FTYKLO, Braznell, Pa. Filed Dec. 30, 1921. Serial No. 525,836. 4 Claims. (Cl. 132—79.)

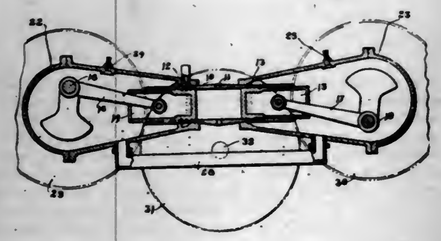
2. In a device of the class described, a box having a soap compartment therein, a well formed partly in the bottom and partly in one end wall of said compartment, drainage grooves in said bottom and wall leading to said well, and drainage means leading from said well, said means comprising a conduit leading outwardly through the sides of the box, and a removable cap on said conduit.

1,455,784. LAMP BRACKET. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Aug. 18, 1922. Serial No. 582,717. 1 Claim. (Cl. 240—57.)



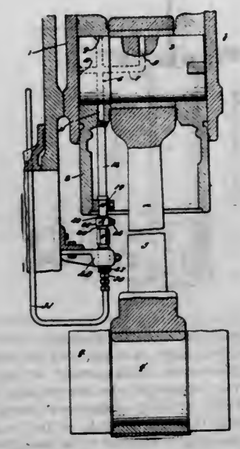
The combination of a lamp provided with a convex spherical surface and a hole in said surface, a bracket comprising a foot, an intermediate portion and a head formed with an arcuate concave seat for the spherical surface of the lamp body and with a hole adapted to aline with the hole in the lamp body, said bracket being formed of metal of substantially even thickness and with an integral rib extending along the inner sides of the foot, head and intermediate portion, a part of the groove produced by the bending of the metal to produce said rib forming a recess within the arcuate seat on the head, and a bolt extending through said holes to adjustably hold the lamp body in the bracket.

1,455,785. SCREENING AND SIZING PROCESS AND APPARATUS. GEORGE C. HACKSTAFF, Denver, Colo. Filed Dec. 18, 1920. Serial No. 431,748. 2 Claims. (Cl. 83—56.)



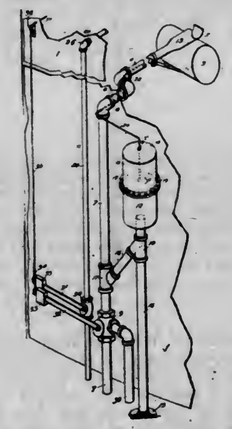
1. A machine for screening powdered ore comprising a frame inclined about two inches in every twelve feet, a screen attached thereto, said screen comprising a plurality of sections of graduated mesh, a supporting member over each screen section, a magnet provided with a movable armature secured to said supporting member, means connecting said armature with the central portion of each screen section, and means for periodically energizing said electromagnet whereby the latter vibrates the screen in a direction substantially perpendicular to the plane of the screen.

1,455,786. SHEET-METAL PISTON. STEPHEN D. HARTOG, St. Louis, Mo. Filed Nov. 19, 1919. Serial No. 339,047. 19 Claims. (Cl. 74—108.)



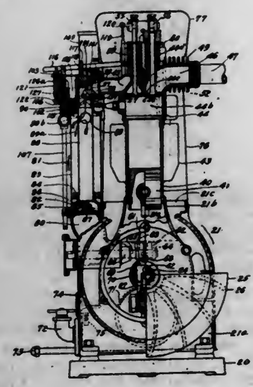
1. A piston, comprising an expansible body, and a member in connection with said body having a coefficient of expansion less than that of the body when heated, said member being located within said body and limiting the contraction of the body, and leaving the body free to expand independently of any pressure by said member.

1,455,787. DIESEL ENGINE. HERBERT T. HERR, Merion, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1921. Serial No. 460,804. 6 Claims. (Cl. 123—51.)



1. In a two-cycle internal combustion engine of the opposed-piston type, a differential cylinder having a central portion and two end portions, the end portions being of slightly greater diameter than the central portion, the central portion constituting a working chamber and the end portions second stage compression chambers, a differential piston arranged to reciprocate in each end of the cylinder, a piston controlled exhaust and scavenging ports at the outer ends of the central cylinder portion, a crank shaft adjacent each end of the cylinder, each shaft being operatively connected to the adjacent piston, a fluid-tight crank case for each shaft to form first stage compression chambers, an inwardly opening valve in each crank case, connections between the crank cases and the second stage compression chambers, and connections between the second stage compression chambers and the scavenging ports.

1,455,788. PUMP. REINHARD HILDEBRAND, Webster Groves, Mo., assignor to Fulton Iron Works Company, St. Louis, Mo., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,302. 14 Claims. (Cl. 103—42.)

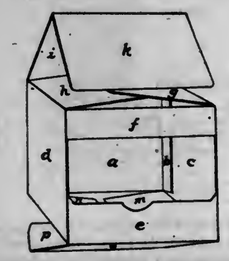


1. A pump comprising two pumping elements one of which is movable relative to the other so as to force fluid through the pump, and operating means comprising a striking member movable into and out of engagement with the movable pumping element, said striking member and movable pumping element having registering discharge passageways through which fluid is discharged while the striking member is engaged with the movable pumping element, and the other pumping element having an open inlet permitting reflux of some of the fluid in response to the pressure transmitted from said striking member.

1,455,789. APPARATUS FOR AUTOMATICALLY EXTINGUISHING FIRES IN OIL TANKS AND OTHER STRUCTURES. OSCAR J. HOLMES, Tulsa, Okla. Filed Jan. 7, 1918. Serial No. 210,755. 2 Claims. (Cl. 169—4.)

1. In a fire-apparatus, the combination with a structure to be protected from fire, of separate sources of supply for acid and a foam-forming alkaline solution exterior of said structure; means for conveying said acid and solution separately into said structure under pressure; a swinging acid and foam-mixing device connected to said acid and solution conveying means in said structure; and means for discharging the foam formed in said swinging mixing-device.

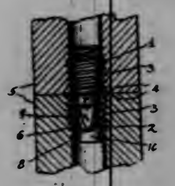
1,455,790. POWER PLANT. LESTER S. KEILHOLTZ, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 28, 1918. Serial No. 225,312. 14 Claims. (Cl. 123—132.)



1. In a device of the kind described, the combination with an internal-combustion engine have an intake; of a pump communicating with the intake, and having cooperating stationary and movable elements; a fulcrum; a lever connected to the movable element and sented upon the fulcrum; yielding means normally holding the lever on the fulcrum: and means connecting the lever with a moving part of the engine.

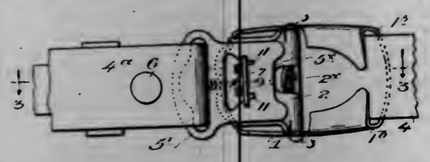
1,455,791. FLUX OR SOLVENT FOR USE IN TECHNICAL PROCESS. ALBERT ANDREW KELLY, London, England, assignor to Borax Consolidated Limited, London, England, a British Company. Filed Sept. 16, 1920. Serial No. 410,787. 3 Claims. (Cl. 106—36.1.)

1. A vitreous material comprising sodium decaborate as a constituent therein.



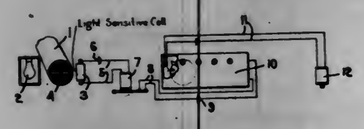
1,455,792. PAPER BOX. HARRY C. KESSLER, Warrington, Pa., assignor to Breuker & Kessler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 24, 1921. Serial No. 495,069. 1 Claim. (Cl. 229—17.)

A foldable box having front, end and rear walls secured to each other, the rear wall having an opening there-



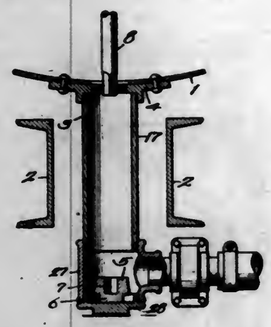
hrough so located and of such dimensions as to display he goods placed therein, and a top formed of three flaps, wo of which extend from the end walls while the third xtends from the front wall and is arranged to overlie he other top forming flaps, the latter flap having a flap t its free end which forms a closure for the opening in he back of the box.

1,455,793. DOWEL PIN. ERNEST T. KINDT, Cleveland, Ohio. Filed Apr. 7, 1922. Serial No. 550,548. 8 Claims. (Cl. 22—119.)



1. In dowel pin construction the combination of complementary male and female pins, each provided with a screw threaded shank having a thin upper flange and means for engagement with a wrench to allow such pins to be screwed into position.

1,455,794. BELT BUCKLE. FRANK F. KNOTHE, Ridgewood, N. J., assignor to Knothe Brothers Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 15, 1922. Serial No. 536,676. 5 Claims. (Cl. 24—78.)

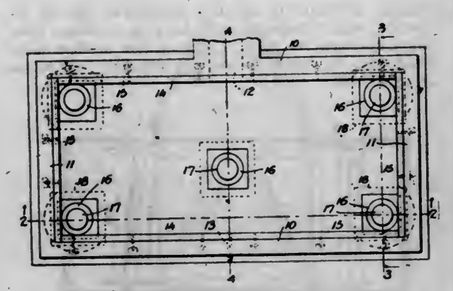


1. A belt buckle comprising a frame, a clamp member movably connected therewith, a connector adapted for attachment to a belt end, a projection upon one of said parts and the other part provided with a recess to receive said projection, said recess having a reduced neck-like portion and slots on opposite sides thereof communicating with said recess providing spaced stop fingers between the neck-like portion and the slots to cooperate with said projection to retain said member and connector in engagement.

1,455,795. MEANS FOR CONTROLLING A PRODUCTION PROCESS. LLOYD LOGAN, Pittsburgh, Pa. Filed Dec. 20, 1920. Serial No. 432,086. 5 Claims. (Cl. 250—1.)

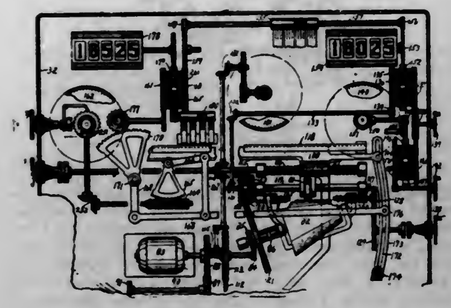
1. The combination with means for producing radiant energy, of other means to cause variations therein by the quantity produced in a process or operation in which material is acted upon, and means rendered operative by said variations to exercise control over said process or operation.

1,455,796. TANK. HOWARD LOGAN, Chicago, Ill. Filed Apr. 1, 1922. Serial No. 548,860. 16 Claims. (Cl. 137—21.)



16. A tank having a circular discharge opening; a removable plug within said opening and in threaded engagement with the surrounding portion of the tank and having an exterior formation whereby it may be turned; a stem in separable turning engagement with an inner portion of the plug through the side of the tank opposite the side where the plug is located to be operable upon the exterior of the tank; means for obstructing movement of the stem longitudinally of its axis and serving to hold the inner end of the stem at the plug opening in position to enable the plug to be engaged with the stem in the entering movement of the plug; and a discharge nozzle separably assembled with the tank and in register with said discharge opening and having an angular outlet portion.

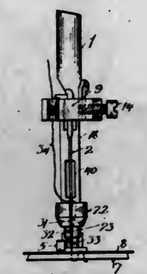
1,455,797. ASPARAGUS CUTTER. FRITZ MACKENSEN, Worpswede, near Bremen, Germany. Filed May 25, 1922. Serial No. 563,634. 8 Claims. (Cl. 55—65.)



1. The combination, in an asparagus-cutter, of a rod, a handle at one end of said rod and a ring at the other, a tube upon said rod, a scythe-like knife-blade fixed upon the lower end of said tube and arranged at the back of and shaped to be covered by said ring, a handle attached at the upper end of said tube, and a helical spring upon the said rod between said handles adapted to press said blade axially against the back of said ring, substantially as set forth.

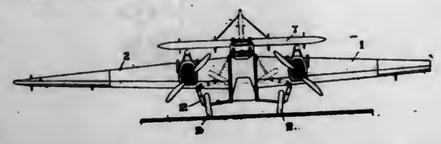
1,455,798. PLATFORM-SCALE FOUNDATION. JOSEPH J. MAGRADY, Chicago, Ill. Filed May 20, 1922. Serial No. 562,374. 2 Claims. (Cl. 72—77.)

1. A foundation or pit for platform scales having side and end walls and a base and bearing supporting pedestals of frusto-conical form extending upwardly through the base at spaced points and having foundation supports below and independent of the base and rounded dirt shedding surfaces above the base.



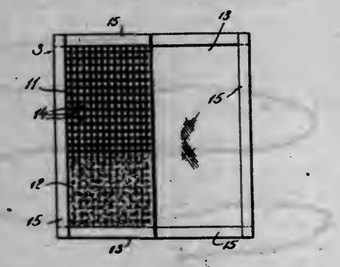
1,455,799. RANGE CLOCK. ELEMER MEITNER, Brooklyn, N. Y., assignor, by mesne assignments, to Ford Instrument Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 16, 1915. Serial No. 40,235. 13 Claims. (Cl. 235—61.)

1. In a range clock, means for determining the rate of change of range comprising an indicator adapted to show the angle between the course and the target bearings, a second indicator adapted to show the speed, connecting means between said indicators for multiplying the speed by a function of said angle, a third indicator to show the angle between the target's course and the target bearings, a fourth indicator to show the target's speed, connecting means between said last named indicators for multiplying the speed by a function of said last named angle, and differential connections between said connecting means.



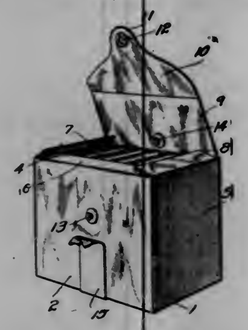
12. In a range change calculator, a range counter, rate of range change computing mechanisms, means for operating said counter through a constant speed device, variable speed mechanism controlled by said range change computing mechanism for changing the effective operation of said constant speed motor, said variable speed mechanism comprising a speed cone and cooperating roller, and means for adjusting the speed cone in position.

1,455,800. SAFETY GUARD. HERMAN MILLER, New York, N. Y., assignor of one-fourth to Norman Miller, one-fourth to Nathan Miller, and one fourth to Isidore L. Miller, all of New York, N. Y. Filed May 10, 1921. Serial No. 468,462. 3 Claims. Cl. 112—261.)



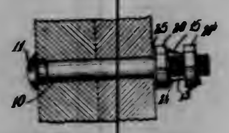
1. A guard for a machine having a reciprocating member adapted to operate on stock fed to the machine, of means for guarding the lower end of the reciprocating member of the machine, comprising telescoping members surrounding the reciprocating member, said telescoping members having vertically aligning slots for the purpose set forth, and means for preventing said telescoping members from revolving to maintain said slots in alignment.

1,455,801. AIRCRAFT. FRANCIS JOHN MORSE, Norwich, England. Filed May 17, 1922. Serial No. 561,643. 5 Claims. (Cl. 244—14.)



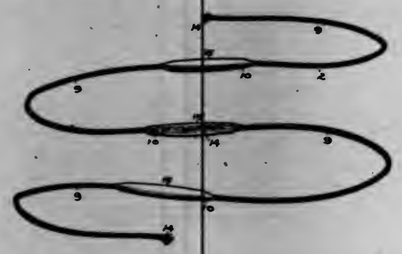
1. An aircraft comprising in combination supporting wings of pterygoid aerofoil form, a fuselage of similar form arranged at a different angle of incidence from the wings, and a tail plane mounted on said fuselage above the plane of the wings.

1,455,802. DEVICE FOR WAVING NATURAL HAIR. CHARLES NESSLER, New York, N. Y. Filed Oct. 5, 1921. Serial No. 505,451. 9 Claims. (Cl. 132—36.)



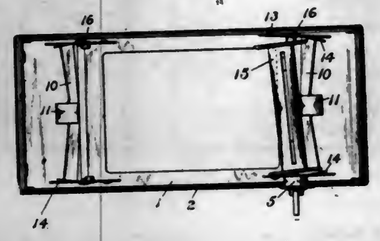
1. A hair waving device comprising material having a surface capable of receiving and retaining a hair-treating substance distributed thereover and juxtaposed absorbent material constructed and arranged to be interposed between said retaining means and the treated hair.

1,455,803. CARTRIDGE BOX. FRANK B. NOFSINGER, Kansas City, Mo. Filed July 1, 1921. Serial No. 481,815. 5 Claims. (Cl. 224—23.)



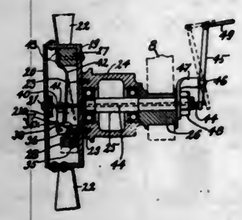
1. A cartridge box comprising a container having a hinged cover and a flap on one edge thereof, a fastening device on the inner face of the cover and on one face of the box, and a fastening device on the flap adapted to interchangeably engage the first named fastening device.

1,455,804. NUT LOCK. STANLEY NOVINSKI, Braznell, Pa., assignor of one-half to Szymon Spryszak, Braznell, Pa. Filed Feb. 13, 1922. Serial No. 536,016. 4 Claims. (Cl. 151—6.)



1. In combination, a bolt having a recess formed therein, a latch fixed in said recess and normally projecting laterally beyond the bolt, a nut threaded on the bolt and being formed on its rear face with ratchet toothed projections, and a spring fixed to the bolt and carrying said latch and adapted to permit both of lateral and longitudinal movement of the latch with respect to the bolt.

1,455,805. THERMAL CONTROL CABLE. FREDERICK W. PARSONS, Cleveland, Ohio. Filed May 8, 1922. Serial No. 559,429. 4 Claims. (Cl. 169—42.)

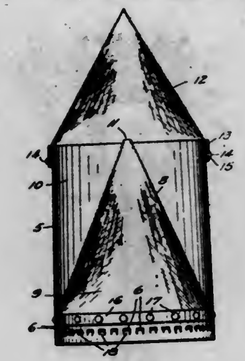


1. As an article of manufacture and sale, a thermal control cable for fire protection uses, comprising a series of cable sections made of twisted wire strands, the strands being separably interlaid at their meeting ends and bonded together solely with relatively small bodies of low fusing solder, said bodies being of relatively small diameter and without sharp or abrupt projections.

1,455,806. SWINGING SPOOL CARRIAGE. OLIVER W. PAUSCH, San Francisco, Calif., assignor to Ansco Company, Binghamton, N. Y., a Corporation of New York. Filed Oct. 20, 1922. Serial No. 595,864. 8 Claims. (Cl. 242—71.)

2. In a swinging spool carriage comprising a spool carrier, pivot members therefor, and a roller mounted to rotate in said pivot members in bearings independent of the spool carrier.

1,455,807. GOVERNOR FOR EXPLOSIVE ENGINES. NELS PEDERSON, Trent, S. Dak. Filed Mar. 12, 1921. Serial No. 451,782. 1 Claim. (Cl. 264—16.)

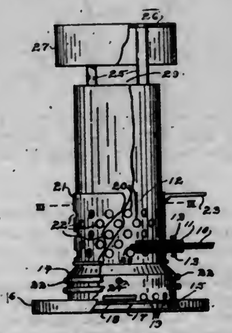


The combination of an explosive type engine having a cylindrical revolving member and a rod extending centrally out of the cylinder to act upon valve controlling means of the engine, means within the cylinder for actuating said rod and comprising a leaf spring secured with one end near the inner periphery of the cylinder and extending with its other end across the inner end of the slidable rod in a slanting position allowing the rod to normally project partly into the cylinder, a bell crank lever mounted in the cylinder and having in one arm an antifriction roller bearing on the leaf spring, the other arm being operatively connected to a lever pivoted at one end and having at its other end a centrifugal weight, a spring resisting the swing of said weighted lever, and a counterbalancing weight fixed in the cylinder diametrically opposite the weighted lever.

1,455,808. FLYTRAP. JAMES FOTTS, Seattle, Wash. Filed Feb. 7, 1921. Serial No. 443,236. 1 Claim. (Cl. 43—118.)

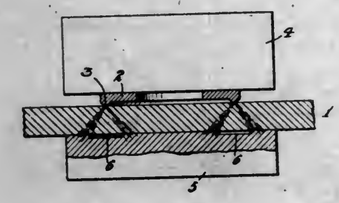
A fly-trap comprising an opaque tubular body, a conical cap of wire gauze detachably connected to the upper end of said body and a conical partition of wire gauze provided within the body and having a passage-way at its apex between the compartments above and below the partition, said partition having its lower end secured to the body adjacent to the lower end of the latter and having its upper end located at approximately the elevation of the upper end of the body, said body being provided below

the partition with circumferentially arranged inlets produced by punching from the body tongues which extend



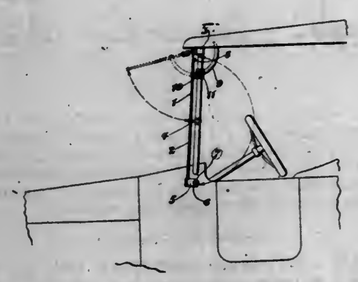
inwardly and upwardly from the bottom of the edges of said inlets being coextensive with the periphery of the body.

1,455,809. ELASTIC GASKET COMPOSITION. JOSEPH RITTER, Pittsburgh, Pa., assignor to Whitaker-Glessner Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Jan. 7, 1922. Serial No. 527,715. 4 Claims. (Cl. 106—8.)



1. An elastic gasket composition adapted for use in sealing covers on metal containers, comprising comparatively large proportions of glycerin and glue and comparatively small proportions of varnish and a vegetable oil, the proportion of glycerin at least equaling that of the glue.

1,455,810. BURNER. CHARLES O. ROWLEY, Toledo, Ohio. Filed Dec. 2, 1921. Serial No. 519,352. 5 Claims. (Cl. 158—91.)

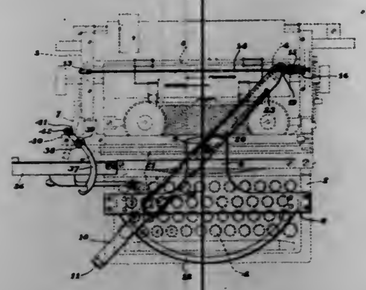


1. A burner comprising a gravity supply line, means for adjusting the flow of fuel from said line, a combustion chamber having therein a pan and a flue upward from the pan, said line serving as means for conducting a fuel supply for freely flowing therefrom for falling into the flue toward the pan centrally thereof, there being air supply ways into the flue in annular series adjacent the pan and adjacent the fuel supply into and through the flue, said flue having an upper discharge opening, means for confining distribution of air supply to the flue to below said discharge opening, and means for holding heat in the flue as a chamber to approximate incandescence.

1,455,811. METHOD OF UNITING METAL PLATES. JACOB C. SANDER, Lynn, Mass., assignor to Thompson Spot Welder Company, Boston, Mass., a Corporation of Massachusetts. Filed May 10, 1920. Serial No. 380,083. 6 Claims. (Cl. 719—10.)

1. The method of uniting metal parts consisting in applying an electrode to one side of the work and in contact therewith in line with the proposed weld, applying an electrode to the opposite side of the work said electrode having a depression in its contacting surface in the line of proposed weld, but being engaged with said opposite side of the work at both sides of said line, passing an electric current from one electrode to the other and applying pressure to weld the parts together.

1,455,812. AUTOMOBILE. LOUIS SCHAFER, St. Louis, Mo. Filed Nov. 15, 1920. Serial No. 424,037. 2 Claims. (Cl. 296—95.)

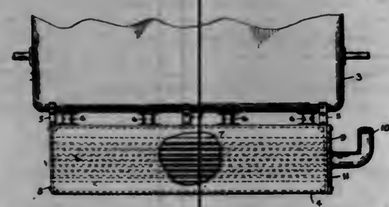


1. In an automobile, the combination with a wind shield, of a visor pivotally supported in front of the wind shield and comprising an upper panel and a lower panel pivoted to the upper panel, means for supporting the two panels folded one upon the other in an inclined position as a visor in front of the wind shield, and means for holding the two panels extended in an approximately vertical position in front of the wind shield to obstruct forward vision from the seating portion of the automobile.

1,455,813. TYPEWRITER. GEORGE F. SCHEFFER, Detroit, Mich. Filed Nov. 19, 1921. Serial No. 516,341. 6 Claims. (Cl. 197—65.)

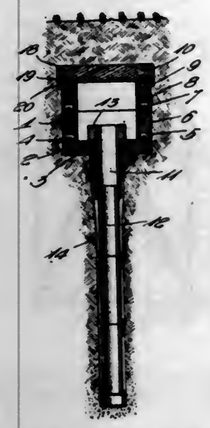
1. In a typewriter the combination with its frame and its carriage movable in forward and reverse directions, of a hand operated lever fulcrumed on the frame and movable to and from a normal position, a flexible member connecting the carriage and the lever and adapted to move the carriage in the reverse direction when the lever is moved from its normal position, said member having a head thereon and said lever having a stop adapted to be

engaged by said head to cause the carriage to be moved forwardly by the lever when it is moved from its normal position, a spring connecting said head and said lever to



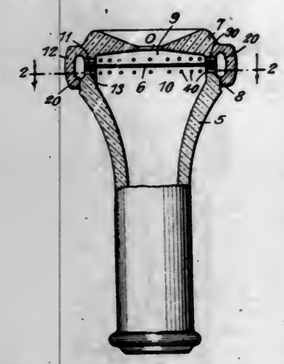
draw the head away from the stop to take up the slack in said member, and means for guiding said member between the lever and the carriage.

1,455,814. RAIL JOINT. SAMUEL SHULL, Philadelphia, Pa. Filed June 12, 1922. Serial No. 567,565. 5 Claims. (Cl. 238—225.)



1. A rail joint comprising ends of rail sections having projecting portions; a connecting member between the projecting portions having sockets to receive the same: means in the sockets to limit longitudinal movement of the projections, and means in the sockets for preventing vertical movement of the connecting member.

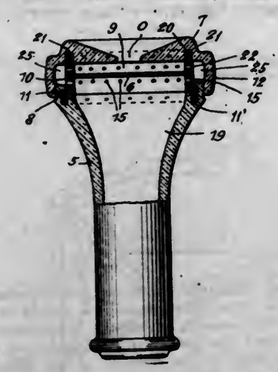
1,455,815. INTERNAL-COMBUSTION MOTOR. WILLIAM J. SNADECKI, Bridgeport, Conn., assignor to Richard Crane, Washington, D. C. Filed June 14, 1917. Serial No. 174,788. 1 Claim. (Cl. 123—196.)



In combination with an internal combustion engine, tubes through which the air for combustion is passed, means in combination therewith for circulating the lubricating medium of said engine around said tubes, said tubes in a chamber beneath the crank case and a space between said chamber and said crank case for the circulation of air.

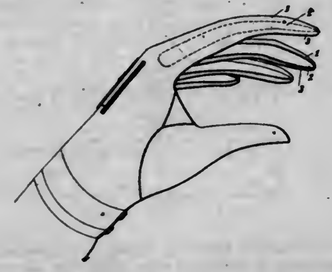
1,455,816. GRAVITY DRAIN. MARTIN W. STAPLETON, Muscatine, Iowa. Filed Oct. 20, 1921. Serial No. 508,910. 5 Claims. (Cl. 61—11.)

1. A gravity drain comprising a receiver composed of a bottom, and a continuous upright wall rising therefrom and formed of a plurality of loosely jointed sections, and a drain pipe leading from the receiver.



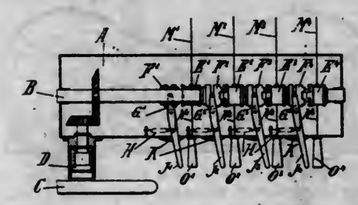
1,455,817. TELEPHONE OR OTHER SOUND RECEIVER. LOUIS STEINBERGER, Brooklyn, N. Y. Filed Jan. 21, 1921. Serial No. 438,851. 3 Claims. (Cl. 179—115.)

1. A telephone receiver comprising a casing with a longitudinally extending perforated annular flange formed at one end thereof, a diaphragm seated on said flange, and a cap secured to said casing having a perforated annular flange engaging the opposite side of said diaphragm and adapted to exert an even pressure on the outer peripheral margin of the diaphragm, the said perforations leading into an annular chamber formed between the casing and cap.



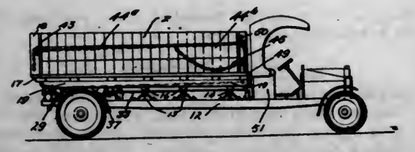
1,455,818. TELEPHONE OR OTHER SOUND RECEIVER. LOUIS STEINBERGER, Brooklyn, N. Y. Filed Jan. 21, 1921. Serial No. 438,852. 5 Claims. (Cl. 179—115.)

2. A sound receiver comprising a casing having an annular metallic ring molded thereto, said casing having an outer threaded portion surrounding said ring, a cap having a threaded flange engaging said casing, an



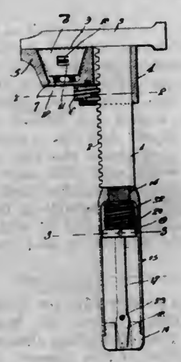
inner metallic ring spaced away from said flange to form an annular chamber and a diaphragm held between said metallic rings.

1,455,819. GLOVE. HANS SCHRÖDER-STRANZ, Rittergut Stranz, Western Prussia, Germany. Filed Aug. 24, 1921. Serial No. 494,965. 3 Claims. (Cl. 2—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A glove the natural position of the fingers of which as a result of the manufacture approaches the position of the fingers of the closed hand.

1,455,820. CONTROLLING DEVICE FOR AERIAL VEHICLES. KARL STAHL, Friedrichshafen, Germany, assignor to the Firm Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany, a Corporation of Germany. Filed June 28, 1920. Serial No. 392,601. 3 Claims. (Cl. 244—3.)

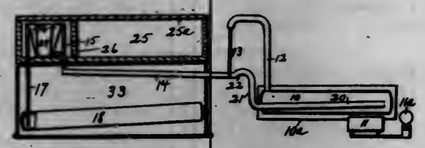


1. In a controlling device for aircraft in combination, pairs of valves, a shaft and means for rotating said shaft, a plurality of winding drums loose on said shaft, each drum being adapted to control a pair of valves, a traction rope connected with each drum, means for coupling any number of drums with said shaft and means for controlling each valve separately.

1,455,821. UNLOADING TRUCK. CHARLES A. SWANSON, Fridley, Minn., assignor of one-half to George W. Swanson, Fridley, Minn. Filed Aug. 6, 1920. Serial No. 401,720. 4 Claims. (Cl. 298—14.)

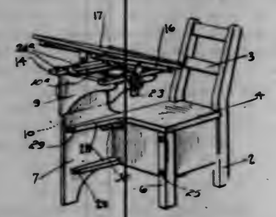
1. The combination with a pivoted unloading body, of a binder for a load of independent elements, end members for the load with which parts of said binder adjustably engage to render the binder taut for holding the load elements tightly bound together, while in carriage, and to afford slack to the binder, when the load is being dumped, so as to compensate for the buckling and avoid the breakage of the load elements in the unloading action and a cable connected to said body and adapted to connect with one of said end members, substantially as described.

1,455,822. WRENCH. RUDY VOINOV, Cleveland, Ohio. Filed May 25, 1921. Serial No. 472,608. 2 Claims. (Cl. 81—186.)



1. A wrench, comprising a shank, having a laterally projecting stationary jaw at one end, a main opposed laterally projecting jaw, movable on said shank towards and from said stationary jaw, and adapted to engage the same, said movable jaw provided with a recess in its engaging face, having oppositely inclined sides, and a loose jaw member mounted in said recess, said loose jaw member being wedge-shaped and adapted to engage with a rounded or irregularly shaped object, and said main movable jaw and stationary jaw member having flat surfaces adapted to engage with flat objects.

1,455,823. ICE MACHINE. HENRY E. WILLSIE, Darien, Conn. Filed Mar. 7, 1914, Serial No. 823,067. Renewed May 21, 1920. Serial No. 383,286. 16 Claims. (Cl. 62—118.)

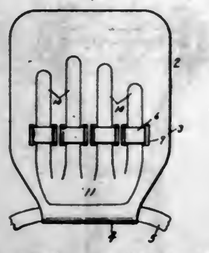


4. In an ice machine, an evaporator, a pipe communicating with said evaporator above the bottom thereof.

a passage through which a communication is established between the lower portion of said evaporator and said

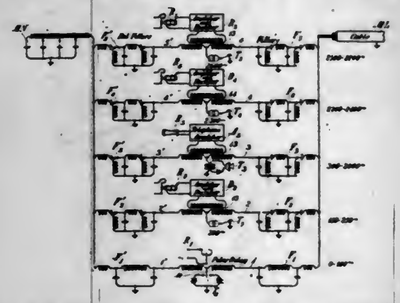
pipe, and a thermally controlled valve for controlling the flow through said passage.

1,455,824. COMBINED CHAIR AND DESK. JACOB J. WOLFE, North Manchester, Ind., assignor to The Peabody School Furniture Company, North Manchester, Ind., a Corporation of Indiana. Filed Apr. 4, 1921. Serial No. 458,286. 4 Claims. (Cl. 155—128.)



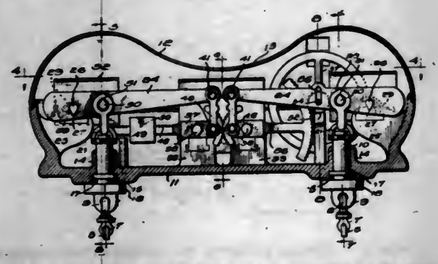
1. In combination with a chair having an upright standard positioned in front and at one side of said chair, a metallic supporting frame vertically slidable on the upper portion of said standard and having means for adjustable attachment thereto, spaced wooden slide bars horizontally slidable on the upper surface of said frame, metallic straps secured to said frame and overlying said slide bars suitably to permit longitudinal movement thereof, a desk top, spaced cleats mounted on the under side of said desk top, a pivot rod engaging the inner ends of said cleats and said slide bars, and means associated solely with said slide bars and said cleats for adjustably securing the desk top in angular position, said top being movable in its adjusted condition on said bars independently of said frame to variably space the same relative to said chair.

1,455,825. OPTICAL METHOD OF OBTAINING LINEAR DIMENSIONS. ROBERT W. WOOD, Baltimore, Md., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed June 15, 1921. Serial No. 477,716. 20 Claims. (Cl. 88—2.2.)



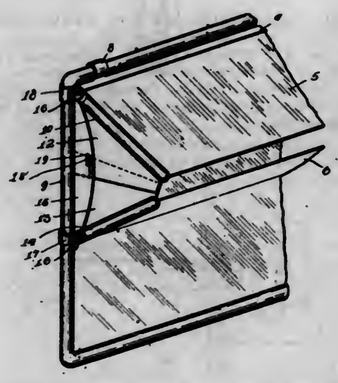
1. In an apparatus for determining the dimensions of an article, the combination of a rotatable support for said article, a table mounted thereon, two plates mounted on said table having plane surfaces contiguous with surfaces of the article being examined, said surfaces being adapted to transmit and reflect light waves received upon them, and means to determine an angle through which said support may be rotated.

1,455,826. SWIMMING APPLIANCE. PAUL L. L. YORGENSEN, Hartford, Conn., assignor of one-half to Alfred J. Gengras, Hartford, Conn. Filed Nov. 27, 1922. Serial No. 603,477. 1 Claim. (Cl. 9—21.)



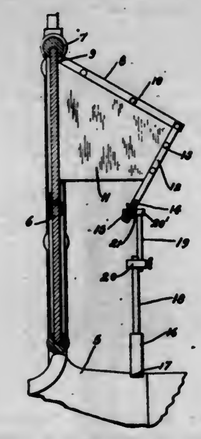
A swimmer's appliance involving a fan-shaped plate having loops to detachably receive the fingers of a user and also having channels to receive the fingers placed through the loops and also having a transverse channel to receive the hand at the junction of the fingers with the palm.

1,455,827. SELECTIVE CIRCUIT FOR MULTIPLEX TRANSMISSION. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 24, 1919. Serial No. 325,841. 6 Claims. (Cl. 179—4.)



4. In a multiplex signaling system, a transmission circuit, comprising a grounded cable conductor, an artificial line or network, a plurality of signaling paths connected in multiple between said transmission circuit and artificial line, said artificial line simulating the impedance of the transmission circuit at the frequencies transmitted over each of said paths, and selective means in said paths for providing frequency discrimination between alternating currents transmitted over the paths.

1,455,828. COMBINED SCALE AND TONGS. ABRAHAM AGRONOFSKY, St. Joseph, Mo. Filed Oct. 4, 1921. Serial No. 505,332. 12 Claims. (Cl. 265—66.)

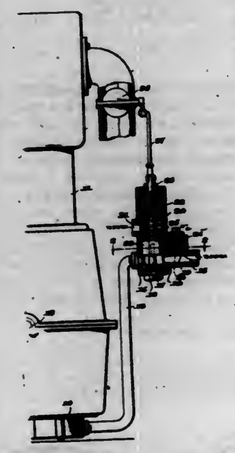


1. A combined scale and tongs comprising a handle, a scale arranged therein, suspension members secured to said scale and extending through said handle, tongs secured to said suspension members, and means for locking said suspension members to said handle.

1,455,829. STORM SHIELD. JOHN BAUER, Detroit, Mich. Filed July 24, 1920. Serial No. 398,801. 1 Claim. (Cl. 296—95.)

In combination with a wind shield, an auxiliary storm shield including opposed transparent sections, end members secured to the sections, end guarding sections having connection with the end members and adapted to overlap each other to permit of adjustment of the transparent sections, a securing plate having connection with the end members and overlapping the end guarding sections, means contacting with the end guarding sections for supporting the transparent sections in their positions of adjustment, and hook members on the sections to support the shield.

1,455,830. STORM SHIELD. JOHN BAUER, Detroit, Mich. Filed Nov. 3, 1920. Serial No. 421,516. 1 Claim. (Cl. 296—95.)

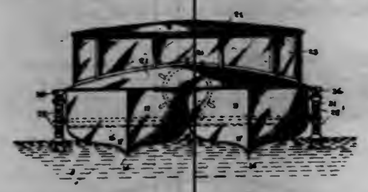


In combination with a wind shield and cowl of a motor vehicle, a wind shield protector including an upper section and a lower section, said upper section comprising side bars including pivotally connected sections, bracket members secured to the cowl, said bracket members having grooves, guarding members positioned in the grooves to permit of movement of the guarding members with respect to the bracket members, and means for connecting the upper and lower sections to permit of adjustment of the lower section with respect to the upper section, and guarding members carried by the upper section.

1,455,831. BELT BUCKLE. JOSEPH O. CHABOT, North Attleboro, Mass., assignor to Geo. L. Paine Co., North Attleboro, Mass. Filed Jan. 21, 1922. Serial No. 530,904. 4 Claims (Cl. 24—191.)

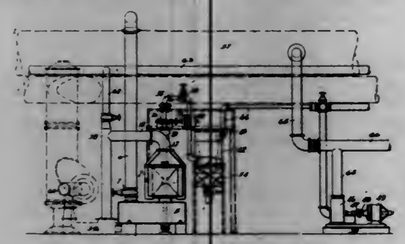
1. In a belt buckle, a front plate having top and bottom flanges, and having end projections extending inwardly therefrom, a cam pivoted between said flanges and having the ends of its outer side cut away, slotted guides carried by the flanges, and a guide of approximately C shape having its ends pivoted in the cutaway parts of the cam and having parts at its outer corners engaging in the slots of the slotted guides.

1,455,832. HYDROCARBON MOTOR. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 15, 1919. Serial No. 297,385. 6 Claims. (Cl. 264—14.)



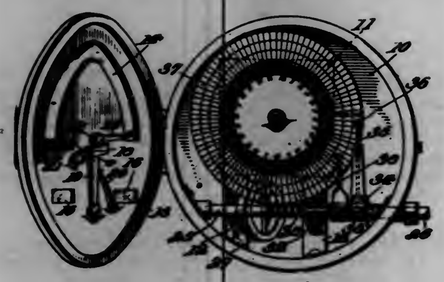
1. In combination with a hydrocarbon motor, an oil circulation system for lubricating said motor, a by-pass adapted to permit the passage therethrough of a predetermined quantity of oil at a predetermined pressure, and a second by-pass having a movable member operated by pressure beyond said predetermined amount, a throttle, and means connected to said member for operating said throttle.

1,455,833. BOAT. ARTHUR CLEMONT DALE, New Orleans, La. Filed Dec. 13, 1921. Serial No. 522,100. 2 Claims (Cl. 114—61.)



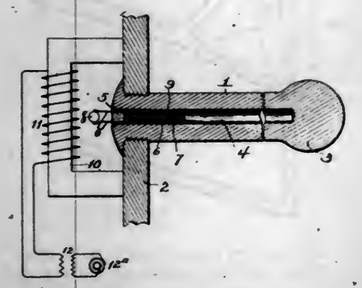
1. A boat comprising a duplex hull consisting of a pair of united hulls, the hulls having outer sides and a common vertically extending inner side and also having separate bottoms, each of said bottoms having a keel and a

pair of bottom sections flaring upwardly from the keel to the sides of the hull, the adjacent bottom sections of the hulls merging into the common side at a point a sub-



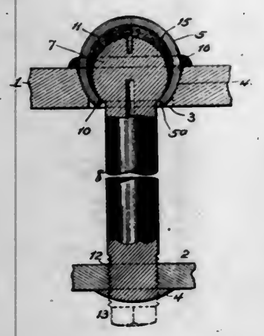
stantial distance above the water line to define a substantially closed intervening air space between the hulls, said air space extending the entire length of the hulls.

1,455,834. METHOD OF AND APPARATUS FOR CLEANING GASES. AMBROSE N. DIEHL, Duquesne, Pa. Filed Aug. 5, 1919. Serial No. 315,519. 7 Claims. (Cl. 183—34.)



1. The method of cleaning gases which consists in passing a column of gases through a screen to retard and arrest the passage of finely divided materials therethrough, reversing the direction of flow of portions of the gases through successively different parts of said screen and increasing the velocity of said reversed flow to thereby remove the retarded and arrested materials from the screen, passing the withdrawn or reversed flow of gases through a separator to remove the arrested materials therefrom, imparting a centrifugal whirling motion to said gases in said separator, and returning said reversed or withdrawn gases to the uncleaned column of gases to be again passed through said screen.

1,455,835. COMBINED INDICATOR AND RECORDER. HENRY J. DOOLAN, Washington, D. C. Filed Nov. 20, 1920. Serial No. 425,405. 10 Claims. (Cl. 234—31.)

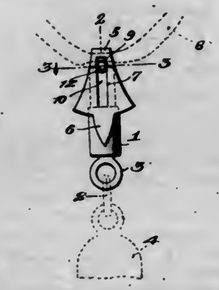


1. A combined indicator and recorder comprising a marker, a movable abutment member, a speed responsive element operatively connected with said marker and said abutment member to impart reciprocations thereto, a chart positioned to be engaged by said marker, means imparting movement to said chart, an indicator member having a projection, and a movable support for the indicator member normally maintaining the latter in a position to bring said projection into the path of movement of said abutment member.

1,455,836. MEANS FOR TESTING STAY BOLTS IN BOILERS. JOHN ROGERS FLANNERY, BENJAMIN E. D. STAFFORD, and ETHAN I. DODDS, Pittsburgh, Pa., assignors, by mesne assignments, to Flannery Bolt Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Sept. 11, 1917. Serial No. 190,786. 3 Claims. (Cl. 85—1.5.)

1. The combination with a stay bolt having a bore, of a coil within said bore, a material within said bore, and contacting with said coil, said material being such as will by contact with moisture cause severance of the wire of said coil, a translating device included in circuit with said coil, and means for inducing an electric current in said coil.

1,455,837. STAY-BOLT STRUCTURE. JOHN ROGERS FLANNERY and ETHAN I. DODDS, Pittsburgh, Pa., assignors, by mesne assignments, to Flannery Bolt Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Sept. 10, 1919. Serial No. 322,871. 2 Claims. (Cl. 85—1.5.)

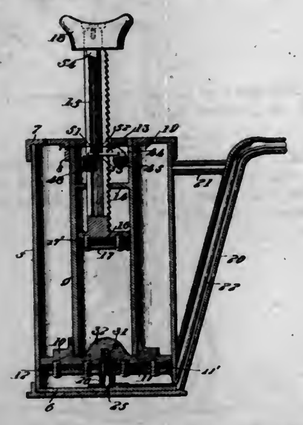


1. In a staybolt structure, the combination with a boiler sheet having an opening, of a combined bearing member and closure having an initial universally movable mounting on the boiler sheet coincident with said opening and adapted to permanently enclose the head of a staybolt, a staybolt having a head mounted in said member, and a weld securing said combined bearing member and closure to the boiler sheet.

1,455,838. CORDAGE WRAPPER AND PACKAGE. HERMAN L. GREVE, New York, N. Y. Filed June 2, 1920. Serial No. 386,025. 3 Claims. (Cl. 216—64.)

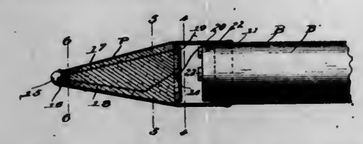
1. A package wrapper adapted to encircle a hank of cordage comprising a sheet of strong, flexible material, one end of which is provided with a perforation and the opposite end having a sinuous hook adapted to be passed through said perforation to couple the ends of the wrapper together.

1,455,839. EMBLEM HOLDER. ROBERT W. HAMILTON, Providence, R. I. Filed Aug. 10, 1922. Serial No. 580,902. 4 Claims. (Cl. 24—263.)



1. In a jewelry holder for chains, a tubular body closed at one end, means to attach an article of jewelry to the closed end of the body, a jaw having a tubular shank slidable in the tubular body, a coil spring in the shank abutting the jaw and the closed end of the body at its ends, a pin carried by the jaw, and a U-shaped member having its arms secured to opposite sides of the tubular body and having longitudinal slots in its arms receiving the ends of the pin therethrough, the closed end of the U-member forming a jaw and the sides of the member being open to allow the chain to be passed therethrough and engaged with and between the two jaws.

1,455,840. VANITY CASE. GEORGE C. HILL, Yonkers, N. Y. Filed Feb. 9, 1922. Serial No. 535,257. 5 Claims. (Cl. 24—3.)

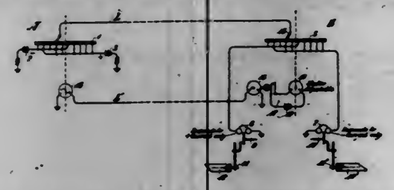


3. In combination with a garter, a vanity case, having a stud, a fastening member having a right angular end riveted to the case and formed to engage the stud, the garter being engaged between the member and case and between the stud and the right angular end of the member, said member being formed flat to lie flat against the limb of the wearer.

1,455,841. PNEUMATIC JACK. WILLIAM F. KELLY, Greenwood, Miss. Filed July 5, 1921. Serial No. 482,442. 11 Claims. (Cl. 138—9.)

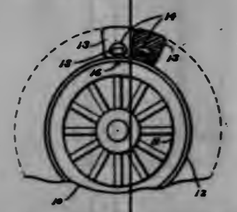
1. A jack including an outer cylinder, an inner cylinder mounted in the outer cylinder and having a piston and engaging the said outer cylinder, a rack arranged slidably in the inner cylinder and having a piston engaging the inner cylinder, means for admitting air to the outer cylinder, below the piston carried by the inner cylinder, and valve means for directing the air first into the inner cylinder for raising the rack, and then into the outer cylinder for raising the inner cylinder, said valve operating when the outer cylinder is opened to the atmosphere to allow exhaust of the air first from the outer cylinder and then from the inner cylinder, substantially as described.

1,455,842. IMPLEMENT FOR WRITING. WILLIAM F. KELLY, Greenwood, Miss. Filed Mar. 23, 1922. Serial No. 546,067. 9 Claims. (Cl. 219—31.)



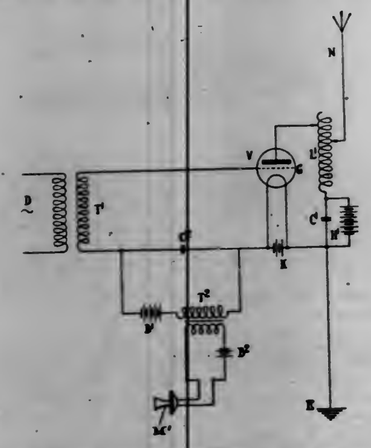
1. A device of the character described, comprising a barrel, an electric storage battery positioned within said barrel, a metal writing point carried at the one end of said barrel adapted to be heated a predetermined degree with the passage of an electric current therethrough, and means whereby the battery will be automatically connected to cause a current to pass through said writing point when said barrel is elevated with respect to the writing point.

1,455,843. SYSTEM FOR MEASURING DISTORTION. MACLEAN KIRKWOOD, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 7, 1920. Serial No. 356,974. 4 Claims. (Cl. 178—44.)



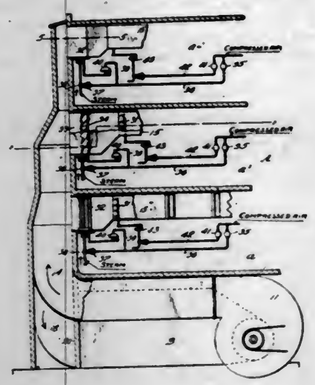
1. In a signaling system, means for indicating the transmission character of a line, comprising means at

one end for impressing a signal on the line, means at the other end for receiving the signal, and recording



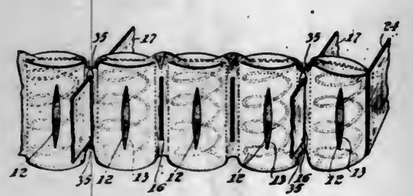
means responsive to the difference between the transmitted and the received signal.

1,455,844. VEHICLE WHEEL. JOHN LANG, Philadelphia, Pa., assignor of one-half to Frank Peer, Philadelphia, Pa. Filed June 10, 1921. Serial No. 476,516. 3 Claims. (Cl. 152—9.)



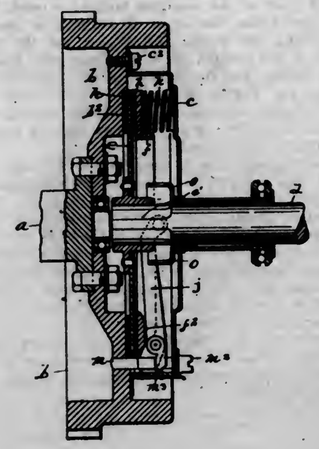
1. In a vehicle wheel the combination of a felly, an annular ring peripherally mounted around said felly, a series of transversely disposed resilient blocks detachably mounted on the outer face of said annular ring, a transverse opening through the body portion of each of said resilient blocks, a clamping member passed through said opening in each of said blocks and engaging the body portion thereof, and fastening means engaging said clamping member and said annular ring detachably fastening said clamping member thereto and thereby locking the blocks in operative relation to the wheel.

1,455,845. MODULATED SIGNALING SYSTEM PARTICULARLY APPLICABLE TO WIRELESS SIGNALING. NORMAN LEA, London, England. Filed May 2, 1921. Serial No. 466,205. 8 Claims. (Cl. 250—6.)



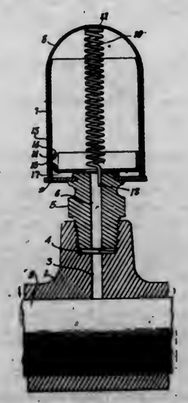
1. In a radio telephone transmitting system including a thermionic valve, means for modulating the electrical variations of the control electrode of said valve, said means comprising a source of unmodulated high frequency potentials, a modulating source of variable potential, and a source for supplying a fixed negative potetial of greater magnitude than that sufficient to reduce the anode current approximately to zero, said sources being connected to said control electrode.

1,455,846. AIR-CONDITIONING OR HUMIDIFYING AND HEATING SYSTEM. LEO L. LEWIS, Plainfield, N. J., assignor to Carrier Engineering Corporation, New York, N. Y. Filed Feb. 20, 1920. Serial No. 360,263. 13 Claims. (Cl. 236—44.)



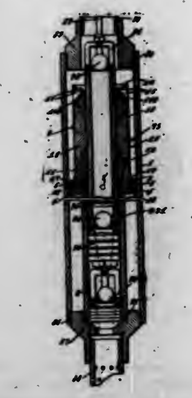
1. In an air conditioning system, the combination of an air conditioner, air supply and return flues connecting the conditioner with a room or rooms, fresh and return air dampers controlling respectively the admission of return air from the room or rooms and fresh air to the conditioner, a relief damper for permitting escape of the return air, regulating means for actuating said fresh and return air dampers for controlling the humidity of the air supplied to the room or rooms by the conditioner, said means causing one of said dampers to open as the other closes, and means also controlled by said regulating means for opening or closing said relief damper correspondingly as said fresh air damper is respectively opened or closed.

1,455,847. MATTRESS, CUSHION, AND SEAT. CHARLES C. MEUTSCH, Buffalo, N. Y. Filed Feb. 24, 1920. Serial No. 360,936. 5 Claims. (Cl. 5—13.)



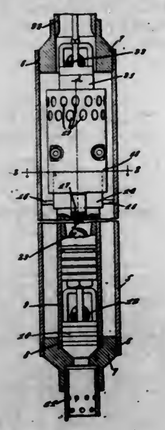
1. A device for the purpose described comprising in combination parallel rows of fabric pockets, a spring for each pocket permanently enclosed therein, and a lacing separate from and extending lengthwise between the several rows of pockets, and connected at intervals to and adjacent the ends of said pockets.

1,455,848. CLUTCH. ALFRED MOORHOUSE, Jackson, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 28, 1917. Serial No. 198,645. 3 Claims. (Cl. 192—68.)



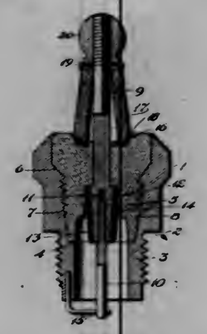
3. In a clutch, the combination with a driving member having separated elements, a driven element, and a pressure plate arranged between the driving elements and having spring means for engaging it with the driven element, of a pin having its ends extending into the driving elements and having an enlarged intermediate part adapted to engage the pressure plate and forming a shoulder, and a lever pivoted to the pressure plate and having a part engaging said shoulder to relieve the clutch.

1,455,849. LUBRICATING CUP. JOHN G. MUELLER, CARL A. GRANZOW, and HENRY M. GRANZOW, Dayton, Ohio. Filed May 31, 1921. Serial No. 473,616. 2 Claims. (Cl. 184—84.)



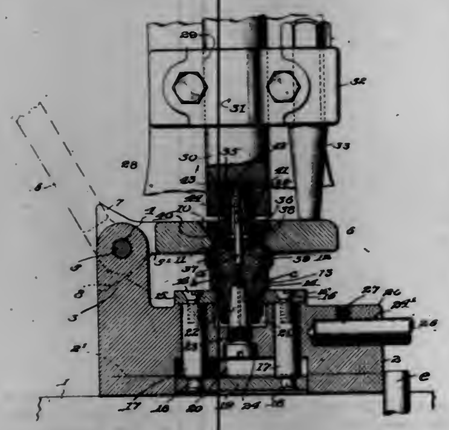
1. A lubricating device comprising an air tight cup having an oil orifice, a valve to control said orifice and a cover adapted to fit over the cup and to act on the valve to permit oil in the cup to flow between the cup and cover.

1,455,850. SAND SWAB. JOHN PENROD and ROBERT D. THOMPSON, Okmulgee, Okla. Filed Aug. 30, 1921. Serial No. 496,863. 4 Claims. (Cl. 103—220.)



1. In a device of the class described, a casing, a working barrel within the casing, a plunger operating within the working barrel, a sand trap mounted on the working barrel and comprising members mounted for movement toward and away from each other; and spring means for moving said members toward each other.

1,455,851. PUMP SWAB. JOHN PENROD and ROBERT D. THOMPSON, Okmulgee, Okla. Filed Mar. 21, 1922. Serial No. 545,444. 5 Claims. (Cl. 103—220.)

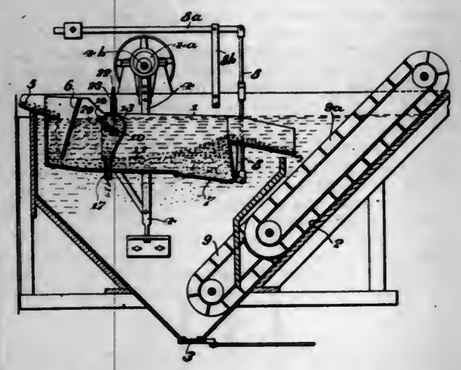


1. In a device of the character described, a casing, a head at each end of the casing, a working barrel within the casing and disposed in spaced relation therewith to provide a sand pocket, a head secured to the upper end of the working barrel, an adjustable sand trap having means adapted to cooperate with the head to secure the same in position, said adjustable sand trap having an inclined upper edge adapted to trap sand, said wall having openings to direct material from the sand trap to the sand pocket.

1,455,852. SPARK PLUG. D FRANKLIN PYLE, Washington, D. C., and JAMES ANDERSON, Catonsville, Md. Filed Oct. 27, 1921. Serial No. 510,752. 3 Claims. (Cl. 123—169.)

1. A spark plug comprising a shell adapted for attachment to the cylinder of an explosive engine, an insulating core of glass or other analogous material in the upper part of said shell, and having a cavity in the lower part thereof, a primary electrode part of which is embedded in the glass core, said electrode having a portion extending into the cavity in the lower end of said core, the portion of said electrode within the cavity being surrounded by a sleeve of insulating material of different character from the core, said sleeve also surrounding a portion of the electrode which is embedded in the core, a secondary electrode secured to the lower part of the shell and extending into sparking proximity with the lower end of the central, or first mentioned electrode.

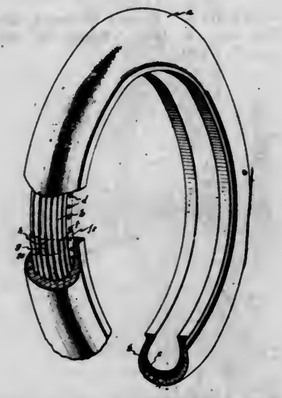
1,455,853. APPARATUS FOR MAKING SPARK PLUGS. D FRANKLIN PYLE, Washington, D. C., and JAMES ANDERSON, Catonsville, Md. Filed Oct. 27, 1921. Serial No. 510,754. 6 Claims. (Cl. 49—66.)



1. A mold of the character described comprising a base, an ejector movable vertically therein and comprising in part an annular seat for the article to be filled, a lid having an aperture therein, said lid adapted to rest upon and hold in place said article, and said aperture serving for the passage of the material to be filled into the article, and also as an entrance opening for a suitable plunger, a pressure applying plunger adapted to apply pressure to the material with which the article is filled, and means for actuating said plunger.

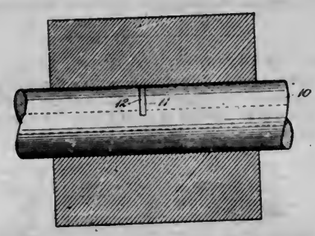
3. A mold comprising a base, an ejector in said base formed in part of an annulus forming a seat for the article upon which the mold is adapted to operate, a cavity-forming die within the ejector for the purpose set forth, a lid pivoted above the seat and having an aperture therein for the passage of the material to be filled into the article, and also for the entry of the plunger for applying pressure to the filler of said article, said lid being adapted to prevent movement of the article both vertically and laterally.

4. A mold comprising a body having a flange around its lower edge adapted to cooperate with suitable stops upon a suitable support to hold the mold in a definite predetermined position, an ejector in said mold comprising in part an annular seat for the article upon which the mold is adapted to operate, a cavity-forming die within the annular seat, a lid above said seat adapted to rest upon the article to simultaneously prevent its movement in vertical or lateral direction, said lid having an aperture therein for the passage of the filler of the article, and also for the entry of a pressure applying plunger that operates upon the filler, means for actuating the plunger, and means for actuating the ejector for the purposes set forth.



1,455,854. SKIMMING DEVICE FOR COAL JIGS. EDGAR T. ANDERSON and WILLIAM MORGAN, Scranton, Pa. Filed Mar. 15, 1921. Serial No. 452,487. 9 Claims. (Cl. 83—80.)

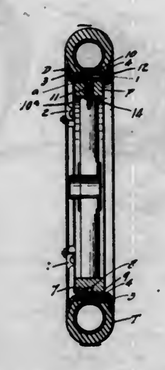
1. A jig for washing coal or other similar material, having a device for separating relatively light material from said coal or other material, the said device comprising means for skimming the floating material from the top surface of the water in the jig tank, and for catching such lighter material as may be within the body of the water and above the top surface of the bed of coal in the jig, and means for discharging the said material from the said jig into the jig tank when the water is withdrawn from the latter, whereby the said material is withdrawn with the water from said jig tank.



1,455,855. PNEUMATIC-TIRE CASING. HERBERT F. ANDAICH, Detroit, Mich. Filed Apr. 11, 1921. Serial No. 460,354. 1 Claim. (Cl. 152—18.)

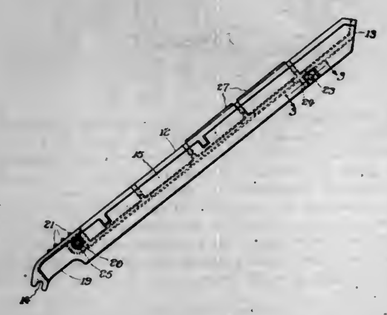
An improved casing for pneumatic tires composed of a rubber tread portion, a fabric backing for the tread portion, a one-piece concaved longitudinally-corrugated metal plate interposed between said rubber tread and fabric backing, said plate provided with a marginally disposed series of perforations on each side thereof through which the rubber of the tread extends and adheres to the

fabric backing on the opposite side of the plate, the free ends of said plate provided with registering slotted portions adapted to co-act to receive end thrust and interlock together against relative movement.



1,455,856. MANUFACTURE OF HOLLOW STEEL OR IRON BARS, TUBES, SHAFTS, ROCK DRILLS, AND THE LIKE. REGINALD A. BEDFORD, Sheffield, England. Filed Dec. 1, 1922. Serial No. 604,432. 2 Claims. (Cl. 80—62.)

1. That process of forming tubes from hollow billets which consists in placing the billet on a mandrel of the required interior diameter of the tube and having a weakened central portion, forming the billet into an elongated cylinder on said mandrel, applying tensile stress to the mandrel at the opposite ends thereof to fracture the weakened portion, and withdrawing the broken mandrel sections from opposite ends of the formed billet.



1,455,857. SECTIONAL RIM. AMOS BENNETT, Chesapeake, Ohio, and JAMES H. HATCHETT, Huntington, W. Va. Filed Mar. 11, 1922. Serial No. 543,029. 1 Claim. (Cl. 152—21.)

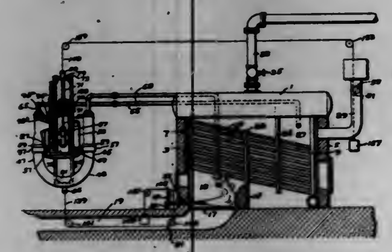
In combination with the felly of a wheel, a sectional rim mounted thereon, said rim comprising two separable circular sections each having tire engaging means, said sections when applied overlapping, the inner section having a pair of substantially diametrically opposed open slots, said slots being directed transversely of the section and having their open ends at the same side of the section; the outer section being provided with an inwardly directed pin disposed through one of said slots when the sections are assembled, the felly being provided with a recess into which said pin extends, the outer section being also provided with an opening registering with the second open slot of the inner section, the stem of the inflating valve of a tire being insertible through said registering

opening and slot when the tire is mounted upon the rim, and means carried by the felly for holding the sections of the rim against lateral separating movement.

1,455,858. FURNACE SECTIONAL DEAD GRATE WITH BRICK INSERTS. FRANK B. BIGELOW, Detroit, Mich., assignor to Murphy Iron Works, Detroit, Mich., a Corporation of Michigan. Filed Feb. 20, 1922. Serial No. 537,720. 14 Claims. (Cl. 126—152.)

11. A furnace-dead grate section having a plate with an inwardly-extended ledge on its inner face for the greater portion of its length between its upper and lower edges, a plurality of spaced braces joining the top face of said ledge with the inner face of said plate, a brace beneath one of said upper braces connecting the lower face of said ledge with the inner face of said plate beneath said ledge, said plate having an inwardly-offset apertured part adjacent to said lower brace and below said ledge, said plate also having an inwardly-extended plate-section along its top edge below the lower-most brace above the ledge, said plate beneath said top plate-section and adjacent to said lowermost brace having an inwardly-offset apertured part.

1,455,859. TAPE FEED AND MOISTENING MACHINE. RUFUS MARION BROOKS, Roseburg, Oreg. Filed Nov. 7, 1921. Serial No. 513,534. 10 Claims. (Cl. 91—14.5.)

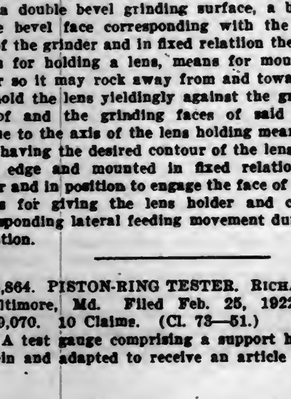


1. A device of the character described, comprising a

pivoted guide way for a tape, a wheel associated with the guide way, means for engaging the wheel with the tape

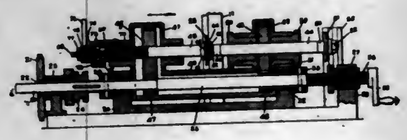
when the wheel is active and separating the tape from the wheel when the latter is inactive.

1,455,860. REGULATING APPARATUS. FRANCIS H. BROWN, Glenolden, Pa., assignor to Petroleum Heat and Power Company, Boston, Mass., a Corporation of Delaware. Filed Apr. 16, 1920. Serial No. 374,395. 6 Claims. (Cl. 236—15.)



1. The combination of a furnace having a combustion chamber, means for controlling the supply of air to the combustion chamber, means for controlling the passage of the gases of combustion from the combustion chambers, a regulator responsive to differential pressures, means for subjecting the regulator to the difference in pressure between two points within the furnace, and power operated means controlled by the regulator and adapted to regulate the air controlling means and the controlling means for the gases of combustion.

1,455,861. ANIMAL POKE. HAROLD BROWN, Dacoma, Okla. Filed Oct. 12, 1920. Serial No. 416,401. 3 Claims. (Cl. 119—138.)

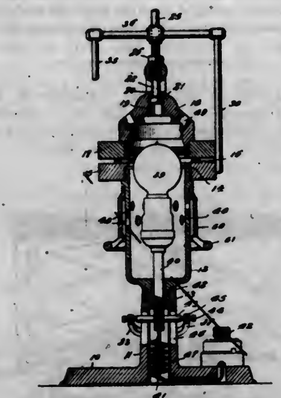


1. An animal poke including a poke bar, a sectional yoke having its inner ends adjustably and detachably connected to the poke bar and arranged in spaced relation and the outer ends overlapped and adjustably and detachably connected.

1,455,862. WINDMILL. ANTONI BRZYKCY, Minneapolis, Minn. Filed Dec. 8, 1921. Serial No. 520,853. 7 Claims. (Cl. 74—102.)

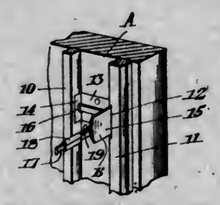
1. In a windmill, the combination with a rotatable head, of a wind wheel having a shaft journaled on the head, a shaft secured for rotation with the head, a driving shaft, wheels on the wind wheel shaft and the driving shaft, a belt drive arranged to run over said wheels, and means carried by the shaft secured to the head for changing the direction of travel of the belt drive.

1,455,863. LENS-EDGING MACHINE. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed June 16, 1919. Serial No. 304,689. 6 Claims. (Cl. 51—101.)



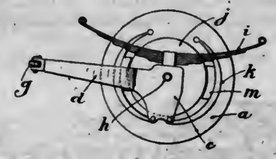
1. A lens edging machine including a rotatable grinder with a double bevel grinding surface, a block having a double bevel face corresponding with the grinding surface of the grinder and in fixed relation thereto, rotatable means for holding a lens, means for mounting the lens holder so it may rock away from and toward the grinder and hold the lens yieldingly against the grinding surface thereof and the grinding faces of said grinder being oblique to the axis of the lens holding means, a controller form having the desired contour of the lens with a double bevel edge and mounted in fixed relation to the lens holder and in position to engage the face of said block, and means for giving the lens holder and controller form corresponding lateral feeding movement during the edging operation.

1,455,864. PISTON-RING TESTER. RICHARD H. BUSICK, Baltimore, Md. Filed Feb. 25, 1922. Serial No. 539,070. 10 Claims. (Cl. 73—51.)



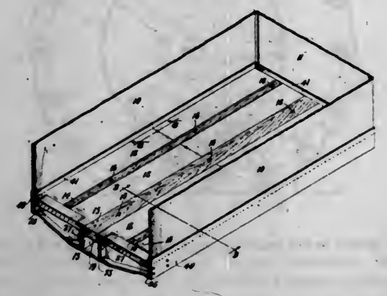
1. A test gauge comprising a support having openings therein and adapted to receive an article to be tested, a

member also provided with openings and mounted above the support and capable of universal movement and



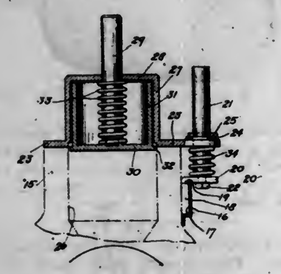
adapted to rest upon the article and a source of light located within the openings provided in the support and member.

1,455,865. WINDOW-SASH LOCK. CHARLES GEORGE CALLAN, Bengough, Saskatchewan, Canada. Filed June 5, 1920, Serial No. 386,776. Renewed Oct. 24, 1922. Serial No. 596,684. 2 Claims. (Cl. 292—204.)



1. A window lock comprising a U-shaped member designed to be secured to a window frame, the arms of the U-shaped member being outwardly disposed, an angle shaped locking member pivotally mounted in the U-shaped member, and means carried by the locking member for mounting the said locking member in the desired position.

1,455,866. FRAME FOR VEHICLES TRAVELING UPON RAILWAYS. HERBERT FRANCIS EDOUARD LUCIEN CALLOT, Nancy, Meurthe-et-Moselle, France. Filed Nov. 8, 1922. Serial No. 599,718. 2 Claims. (Cl. 105—165.)

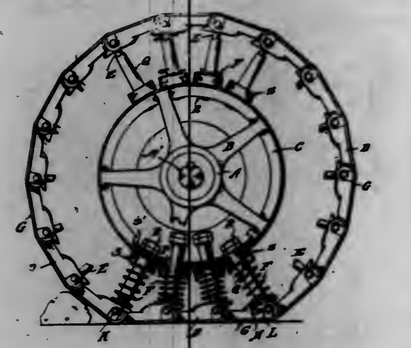


1. A vehicle frame comprising in combination for each pair of wheels, journals for said wheels, short longitudinals respectively supporting said journals, inclined arms integral with said longitudinals and assembled to each other at a point in the median longitudinal plane of the vehicle, means for pivotally connecting the said inclined arms to the vehicle body at said point, a rigid cross member extending between the said logitudinals and forming with said inclined arms an indeformable triangular structure adapted to pivot about said point and springs secured on said longitudinals and adapted to be connected to the vehicle body.

1,455,867. METAL CAR STRUCTURE. IRA S. DOWNING, Indianapolis, Ind. Filed Aug. 7, 1922. Serial No. 580,000. 32 Claims. (Cl. 105—414.)

1. A car floor comprising metal floor plating with a gap therein, and nailing timber exposed through said gap.

1,455,868. LUBRICATOR. JAMES L. DOWNS, New York, N. Y. Filed Dec. 22, 1921. Serial No. 524,112. 1 Claim. (Cl. 184—45.)



A lubricating grease cup attachment comprising in combination with a grease cup having an open cylindrical top, of a support detachably engaged with the cup at one side thereof, a stud fixed in said support, a circular plate having a projection rotatably mounted on said post, a compression spring interposed between said support and plate projection encircling said stud, means for retaining the projection on said stud, said plate being registerable with the open upper end of the grease cup, a cylinder formed with said plate having a closed outer end, the inner portion of said cylinder agreeing with the opening in said cup, a guide stem passing axially through said cylinder, a head in which said stem is fixed, said head being adapted to enter the grease cup, an annular guide formed with said head extending into said cylinder, and a coiled compression spring encircling said stem abutting the closed end of said cylinder and said head respectively.

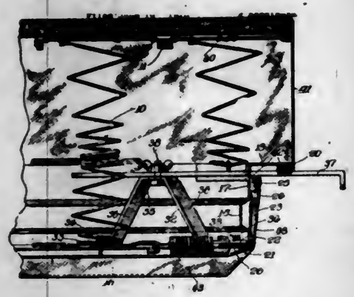
1,455,869. TRACTION WHEEL. LOUIS J. FELLAY, Peoria, Ill. Filed Dec. 13, 1919. Serial No. 344,673. 4 Claims. (Cl. 152—30.)

1. In a wheel, a rim or tread therefor including in its construction a series of jointed links, an annulus fixed with respect to the wheel hub, and a series of spokes each hingedly mounted at one end at the joint of each

pair of the links and projecting at its other end through said annulus, the latter having countersunk holes therein,

the spokes being flared to seat therein, the flared portions being adjustable upon the spokes, and compression springs interposed between the links and the annulus.

1,455,870. BATH SPONGE. GEORGE FIERHELLER, Toronto, Ontario, Canada. Filed July 29, 1921. Serial No. 488,403. 3 Claims. (Cl. 15—244.)

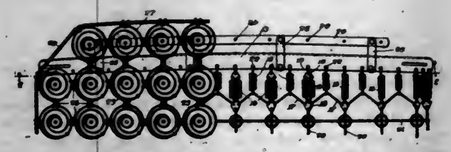


1. A bath device comprising a core of elastic absorbent material and a tubular knitted envelope formed with a double thread for the major portion of its length and with single thread ends, which are drawn in to hug the ends of the core.

1,455,871. SAND TRAP. JESSE M. FLEMING, Drumright, Okla. Filed June 7, 1921. Serial No. 475,671. 2 Claims. (Cl. 103—220.)

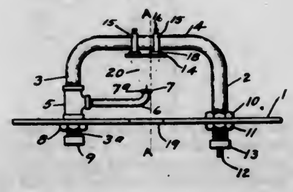
1. In a device of the character described, a pipe having openings formed therein, a strainer disposed at one end of the pipe, a flared collar secured to the pipe adjacent to the strainer, a cone-shaped collar secured to the pipe and disposed in spaced relation with the flared collar, and means secured to the pipe between the flared collar and cone-shaped collar for guarding the openings of the pipe.

1,455,872. BOX BEDSPRING. CHARLES H. GAIL, Cincinnati, Ohio, assignor to The Shott Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 19, 1920. Serial No. 390,073. 8 Claims. (Cl. 5—13.)



1. In an appliance of the character described, the combination of a bed-spring having a main supporting-frame with a pair of outside flanges, a fabric-cover for the top and upper portions of the sides of the bed-spring, a fabric cover for the bottom and lower portions of the sides of said bed-spring, and means detachably securing said covers directly to and having sliding engagement longitudinally on the respective flanges of said frame, the latter closing the space between the edges of said covers, substantially as described.

5. In an appliance of the character described, the combination of a bed-spring having a supporting-frame composed of a bar substantially Z-shape in cross-section, having a rib along the edge of its top flange, a plate fastened to the outer face of the web of such bar and having a rib disposed longitudinally of the bar and spaced away from its web, a fabric-cover for the upper portion of said spring, a second fabric-cover for the lower portion of said spring and hooks secured to said covers and detachably fastening such covers to said ribs, substantially as described.

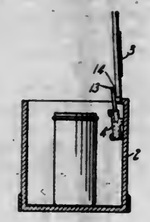


7. In a bed-spring, a rectangular frame composed of two longitudinal sheet-metal members, the one of substantially Z-shape in cross-section with a lengthwise hollow rib embossed in its web, the other welded to a face of said web and overlying the hollow interior of said rib, substantially as described.

1,455,873. BEDSPRING. CHARLES H. GAIL, Cincinnati, Ohio, assignor to The Shott Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 19, 1920. Serial No. 390,074. 1 Claim. (Cl. 5—29.)

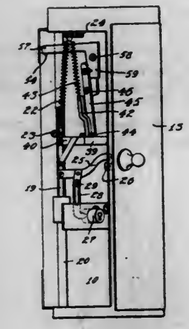
In a bed-spring structure of the character described, the combination of a main frame having an upwardly-arched outwardly bowed foot-end cross-bar, a main-spring structure including a plurality of upright spiral-springs and underlying longitudinal supporting-elements for said spiral-springs, helical-springs connecting said longitudinal supporting-elements to said cross-bar, an auxiliary extension upwardly-arched outwardly-bowed cross-bar shorter than and mounted on said foot-end cross-bar, and a cross row of upright spiral-springs forming an extension portion of the bed-springs mounted on said auxiliary cross-bar, such row of springs being of less length than the cross rows of springs of the main-body of the bed-spring, substantially as described.

1,455,874. OIL BURNER. JOSEPH GILMORE, Seattle, Wash. Filed Aug. 5, 1921. Serial No. 490,037. 1 Claim. (Cl. 158—63.)



An oil-burner of the character described consisting of a substantially U-shaped pipe having legs of unequal length each of said legs externally threaded adjacent its end, a T-joint adapted to seat and be secured to the shorter leg, an L-shaped pipe carried by the lateral opening of the T-joint and extending between the legs of the first mentioned pipe and in the same plane therewith and having its short arm directed toward the base of the U; a base plate having three aligned orifices, the central orifice being larger than the end ones and the latter slightly larger than the external diameter of the U-pipe; nuts on the threaded longer end of the U tube adapted to secure said leg to said base when said leg is passed through one of said end orifices, said nuts being screwed up against opposite faces of the base; a nipple secured in the end of the T-joint and adapted to pass through the other end orifice of the base, a nut on said nipple, said nipple adapted to be secured to the base by the engagement thereof by the said T-joint and nut and a cap for closing said nipple substantially as specified.

1,455,875. TOWING DEVICE. JOSEPH F. GRAFF, Milwaukee, Wis. Filed Mar. 31, 1921. Serial No. 457,394. 1 Claim. (Cl. 280—33.55.)



A towing device including a body bar with a transverse opening, bearing plates disposed at opposite sides of said bar, and being provided with centrally disposed openings in alignment with said transverse opening, an angle plate, a pivot stud formed on said angle plate adapted to extend through the openings in said bearing plates and body bar, the horizontal and vertical portions of said plate being provided with slots, a second angle plate mounted upon the horizontal portion of the first plate and having its vertical portions arranged in spaced relation with the vertical portion of the first plate and provided with a longitudinal slot, a bolt movable within the slot in the vertical portion of the plate and a second bolt carried by the horizontal portion of the second plate and movable in the slot in the horizontal portion of the first plate.

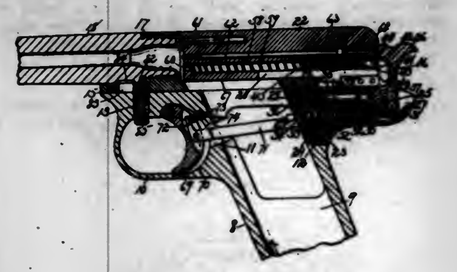
1,455,876. LID BRACE. LEON GRAUMAN, Denver, Colo. Filed Apr. 5, 1922. Serial No. 549,827. 12 Claims. (Cl. 217—60.)

1. A brace of the character described, comprising a channeled keeper open at its upper end, and a bar longitudinally slidable therein, the channel of the keeper having a recess in one of its edges, and the bar having at its corresponding edge, a foot adapted to enter said recess when the bar extends partially outside of the keeper through the opening at the upper end thereof.

1,455,877. DELIVERY BOX. JOSEPH GRIGAS, Shenandoah, Pa. Filed July 11, 1922. Serial No. 574,137. 13 Claims. (Cl. 232—41.)

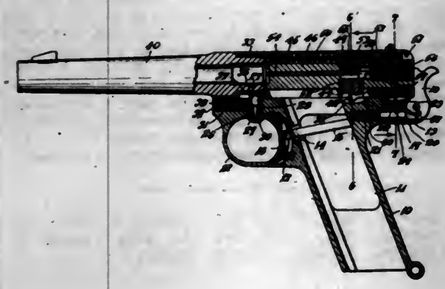
1. A safety receptacle comprising a vertically movable container support, spring means opposing downward movement of said support under the influence of a container, a member adapted to confine a container upon said support, locking means operatively connected to said support, for locking said confining member in operative position when said support is depressed, and means for varying the spring resistance to the downward movement of said support whereby containers of different weights may selectively be required to cause said locking means to lock said confining member.

1,455,878. FUSE-PLUG PULLER. HAROLD D. GRINNELL, Pittsfield, Mass., assignor to The G. C. A. Manufacturing Company, Pittsfield, Mass., a Corporation of Massachusetts. Filed Mar. 3, 1922. Serial No. 540,770. 7 Claims. (Cl. 81—3.)



1. In a device of the class described, a support, and a series of clamping arms pivoted to the support and having jaw portions adapted to be moved into and out of cooperative relationship, each of said jaw portions having a concave gripping face and a rigidly acting extension member on said face adapted to cooperate with the object engaged to prevent rotation on such object.

1,455,879. GUARD FOR WRITING IMPLEMENTS. OLAF A. GRONLUND, Fargo, N. Dak. Filed Nov. 25, 1922. Serial No. 603,370. 1 Claim. (Cl. 24—3.)



The herein described guard for writing implements, comprising a flexible element adapted to embrace the neck of a user, a loop embracing overlapping portions of the said flexible element and with relation to which the flexible element may slide, and writing devices attached to the ends of the flexible member.

1,455,880. FIREARM. GRANT HAMMOND, New Haven, Conn., assignor of one-third to Alva C. Washburne, Pittsfield, Mass., and one-third to Frederick G. Crane, Dalton, Mass. Filed Feb. 28, 1917, Serial No. 151,460. Renewed Apr. 12, 1923. 22 Claims. (Cl. 42—4.)

1. A firearm including a handle, a receiver slidably mounted on the handle and having a slot therein, a lock located in a hole in the handle and projecting into said slot, a lock operating member secured to said lock and located within the opening in the trigger guard of the firearm, and means for disengaging the receiver and said lock by impact of the breech bolt at the time it strikes the receiver.

1,455,881. FIREARM. GRANT HAMMOND, New Haven, Conn., assignor of one-third to Alva C. Washburne, Pittsfield, Mass., and one-third to Frederick G. Crane, Dalton, Mass. Filed July 20, 1917, Serial No. 181,855. Renewed Apr. 12, 1923. 7 Claims. (Cl. 42—4.)

1. A firearm including a frame, a receiver movably mounted on the frame, said parts having a chamber for the receiver actuating spring, an actuating spring located in said chamber, a controlling slot and retaining recess located in one of said parts (frame or receiver); a locking bolt located in the other part to engage said slot and recess, a breech-bolt movably mounted on the frame, and firing mechanism to actuate said breech-bolt.

1,455,882. MEMORIAL TABLET AND GRAVE MARKER. ELMON D. HARDING, Montevideo, Minn. Filed Feb. 25, 1922. Serial No. 539,203. 1 Claim. (Cl. 40—124.5.)

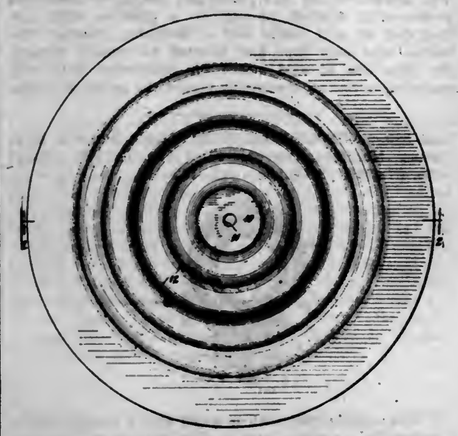
A combined casket plate, memorial tablet and grave marker having a substantially flat body provided with a bendable eye upon its rear face at one end and also provided with a bore extending therein at its opposite end,

and a stake detachably associated with the bore, as described.

1,455,883. EXPANDING BRACELET, BELT, OR THE LIKE. GEORGE WILLIAM HARRISON, London, England, assignor to G. R. Baldock & Co. Limited, London, England, a Company of Great Britain. Filed Aug. 9, 1921. Serial No. 490,957. 5 Claims. (Cl. 59—79.)

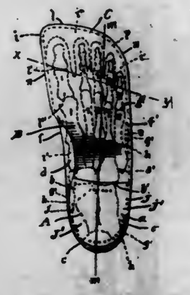
1. A spring controlled expanding bracelet, belt or the like, comprising a series of units each of said units consisting of a hollow link formed of strips connected together at their ends and open along their sides, a division wall between said strips forming housings for separate springs, an upper closed link having one end passing through the upper of said housings, a spring located between one end of said upper housing and one end of said upper link, a lower closed link having one end passing through the lower of said housings, a spring located between one end of said lower housing and one end of said lower link, in combination with connecting links adapted to connect the upper link of one unit with the lower link of an adjacent unit, for the purposes set forth.

1,455,884. SPLIT-LAP PREVENTER. WILLIAM HARROP, PETER REILLY, and PATRICK F. FARRELL, New Bedford, Mass. Filed Mar. 25, 1922. Serial No. 546,783. 12 Claims. (Cl. 19—145.)



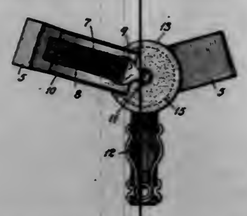
1. In a machine of the character described, the combination with a winding spool upon which the lap is wound, of means for disposing a separating thread in an approximately zigzag line upon the face of the lap prior to its passage to the winding spool.

1,455,885. TYPOGRAPH MECHANISM. WILLIAM A. READE, Evanston, Ill., assignor to Ludlow Typograph Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1920. Serial No. 429,058. 10 Claims. (Cl. 199—66.)



1. In typograph mechanism, a matrix bar having parallel sides and a character impression inclined with respect to such sides, said bar being formed with a plurality of relatively angularly inclined surfaces for alignment purposes.

1,455,886. PHONOGRAPH RECORD. WILLIAM H. ROSS, Jersey City, N. J., assignor of one-half to Howard S. Neiman, New York, N. Y. Filed Apr. 16, 1920. Serial No. 374,257. 3 Claims. (Cl. 274—41.)



1. A single continuous disc phonograph record having a series of concentric undulations carrying sound wave impression capable of reproduction into sound waves.

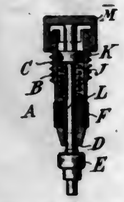
1,455,887. SHOE. ORLANDO B. SALISBURY, Brooklyn, N. Y. Filed Sept. 12, 1921. Serial No. 499,927. 10 Claims. (Cl. 36—1.)

1. A shoe or footwear consisting of a heel portion, a metatarsal portion, and a toe portion having the inner toe edge on a straight line with the deflected lower side of said heel portion before the turn of the extension in front toward the median line of the wearer's toes, substantially as shown and described.

1,455,888. GARTER. LOUIS J. SCHEINMAN, New York, N. Y., assignor to Governform Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1921. Serial No. 501,402. 5 Claims. (Cl. 241—6.)

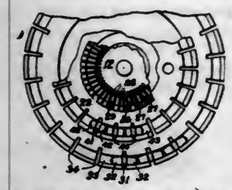
1. A garter comprising a band of inelastic material terminating at one end in a sleeve, a suspending device connected with said band at its other end and adapted for detachable connection with the hose, a fastening device located at said other end of said band, an elastic tape located within said sleeve and having its inner end permanently secured therein at a distance from the free end of said sleeve and a fastening member connected with said tape and adapted to project through the open end of said sleeve for connection with said fastening device to detachably secure the garter in place.

1,455,889. AUTOMOBILE TUBE. JOHN SCHWAB, Winnipeg, Manitoba, Canada. Filed Aug. 1, 1922. Serial No. 578,956. 8 Claims. (Cl. 152—13.)



1. The combination with a wheel rim, a casing, and a tube within the casing and having channels in the face thereof next the casing, of means for introducing atmospheric air to the channels through the rim.

1,455,890. GAUGE. MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, N. J. Filed Aug. 12, 1915. Serial No. 45,166. 7 Claims. (Cl. 73—31.)

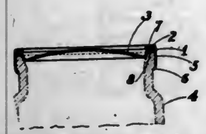


1. In a gauge, a casing, a deflating means at the foot of said casing, comprising a projecting part fixed in the foot of the casing, and a cap screwing on said fixed part, said cap having an opening therethrough and having a portion adapted to contact with the stem of a tire valve.

1,455,891. ATTACHMENT FOR VALVE INSIDES. MAXIMILIAN CHARLES SCHWEINERT, New York, N. Y. Filed May 20, 1922. Serial No. 562,503. 4 Claims. (Cl. 152—12.)

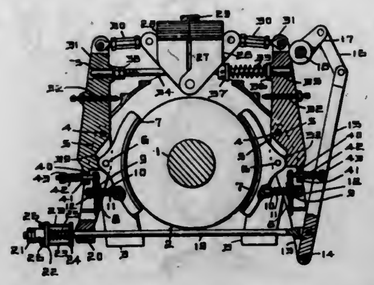
4. The combination with a valve inside having a seat and a valve proper, a spring carried by said inside, a pin connected with the valve proper against which said spring acts, and a member engaging the valve inside and said pin.

1,455,892. BEATER MECHANISM FOR BRAIDING MACHINES. HERMAN STAUB, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1923. Serial No. 612,187. 4 Claims. (Cl. 98—17.)



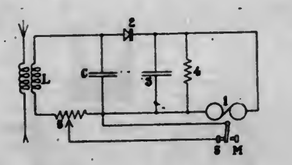
1. In a beater mechanism for braiding machines comprising an axial support and radially swinging beater elements having pivoting apertures; a pivot ring on said support having a circular pivot-pin groove and a series of intersecting radial slots, and a circular series of separately formed pivot pins engaged in said apertures and fixedly spaced in said groove.

1,455,893. UNVULCANIZED RUBBER COMPOSITION. FRANK WEBB STOCKTON, Pittsburgh, Pa., assignor to Aluminum Seal Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1921. Serial No. 512,498. 2 Claims. (Cl. 106—23.)



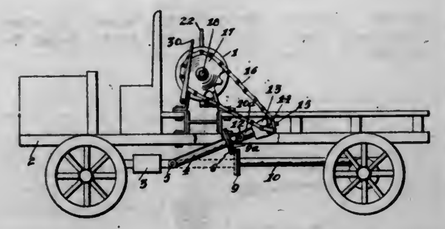
1. An unvulcanized rubber composition containing crude rubber, an inert filler, finely divided active gas black forming not less than about 15% of the composition, and a softening agent.

1,455,894. HERMETIC SEAL. FRANK WEBB STOCKTON, Pittsburgh, Pa., assignor to Aluminum Seal Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1921. Serial No. 512,590. 12 Claims. (Cl. 215—37.)



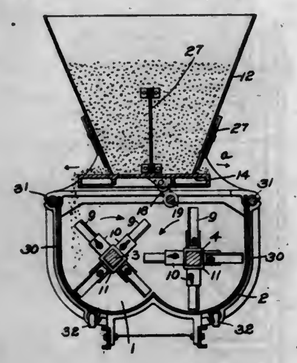
1. A hermetic seal made of an unvulcanized rubber compound containing finely divided active carbon dispersed therein to maintain stiffness and resilience even at elevated temperatures.

1,455,895. ELECTROMECHANICAL BRAKE. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator & Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed Nov. 12, 1918. Serial No. 262,113. 14 Claims. (Cl. 188—172.)



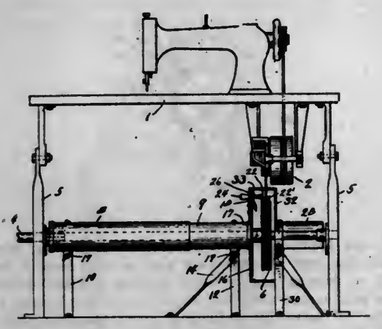
5. A brake drum, a brake shoe therefor, a pivoted mounting for the shoe to rock into position as to the drum, said mounting comprising an arm, a lever for actuating the arm, and means for actuating the arm to set the shoe against the drum independently of lever operation.

1,455,896. WIRELESS-TELEGRAPH RECEIVER. LAURENCE BEDDOME TUANER, Cambridge, England. Filed Feb. 9, 1921. Serial No. 443,636. 8 Claims. (Cl. 250—8.)



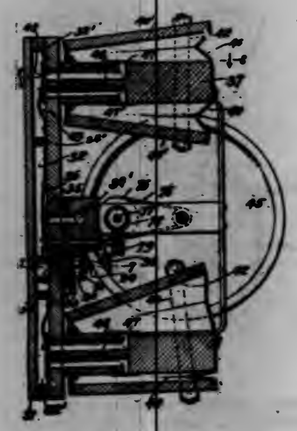
1. Apparatus for use in wireless telegraphy, comprising an oscillatory receiving circuit of relatively low decrement, a connection including a relay joined to the oscillatory circuit and means operated by said relay for increasing automatically the decrement of the oscillatory circuit when the amplitude of the current therein reaches the operative value.

1,455,897. HOISTING MACHINE. CLYDE UHL, Bartlesville, Okla. Filed Jan. 31, 1920. Serial No. 355,458. 4 Claims. (Cl. 254—166.)



1. A vehicle including a driven shaft with a coupling plate, and hoisting mechanism with drive gearing including a coupling plate; and a swingably mounted engine-driven shaft with a corresponding coupling plate, interchangeably connectible with either aforesaid coupling plate, to operate either the vehicle or the hoisting mechanism.

1,455,898. CONCRETE MIXER. SHERBURNE H. WIGHTMAN, Birmingham, Mich., assignor, by mesne assignments, to International Concrete Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 14, 1920. Serial No. 396,104. 12 Claims. (Cl. 83—73.)



1. A mixing apparatus having in combination a mixing chamber having its bottom formed by troughs extending side by side, the end wall of the chamber having openings in line with the troughs for the discharge of materials, rotatable shafts arranged above said troughs and provided with arms adapted on the rotation of the shafts to pass transversely across the troughs in such direction that materials are moved outwardly across the troughs and over the shafts from one trough to the other and arranged to effect movement of materials along the troughs and out through the openings in the end of the mixing chamber, means for rotating the shafts in opposite directions and regulable means for feeding the material to the respective troughs.

1,455,899. SEWING-MACHINE-SHAFTING GUARD. JULIUS L. CABELINSKY, Roxbury, Mass. Filed Dec. 1, 1919. Serial No. 341,782. 2 Claims. (Cl. 64—12.)

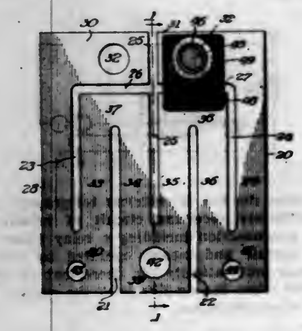
1. A shafting guard comprising a cylindrically shaped casing open at one side to permit the same to be placed in position about the shafting, a pulley guard comprising a split sheet metal disk having a central aperture corresponding in diameter to the internal diameter of said casing, and rotatably mounted on said casing at one end, in register therewith, and belt-engaging means carried by said disk.

1,455,899. PRESSURE REGULATOR FOR MUSICAL INSTRUMENTS. TOLBERT F. CHEEK, New York, N. Y., assignor to The Phil-Har-Chee Piano Player Corporation, a Corporation of New York. Filed Apr. 1, 1920. Serial No. 370,611. 6 Claims. (Cl. 230—36.)

1. In an automatic player for musical instruments, the combination of a wind chest, a pump connected with said wind chest and provided with a by-pass for allowing a portion of the air set in motion by the pump to circulate within the pump, said by-pass including a valve chamber, a valve located in said chamber and controlling said by-pass, a valve-opening cam arranged in said chamber, and means in positive relation to the operation of said pump for driving said cam.

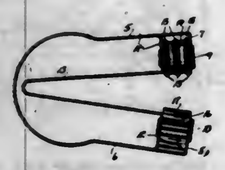
1,455,901. CLUTCH. MARK W. CHIPMAN, Lynn, Mass., assignor to Lynn Machine Screw Company, Lynn, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1921. Serial No. 491,684. 3 Claims. (Cl. 192—46.)

1. An improved clutch comprising, a driving member, a driving cam, an elongated slot in said cam, a second slot, a driving pin on said driving member extending into said second slot, and a driven member having a plurality of outwardly extending arms engaging said cam to force the cam inwardly and allow free rotative movement of the driven with respect to the driving member.



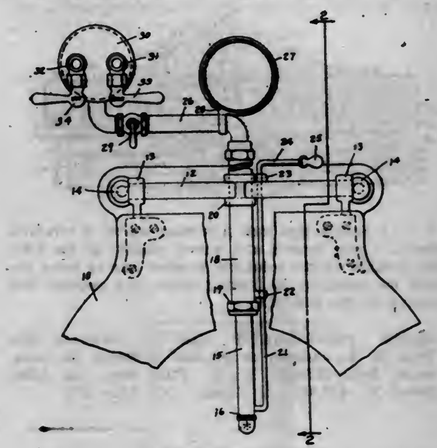
1,455,902. LAMP. HARRY CHRISTENSEN and EDMOND L. BRUNSWICK, Chicago, Ill. Filed Jan. 25, 1922. Serial No. 531,541. 8 Claims. (Cl. 240—2.)

1. In a support, a base, a hollow standard supported by said base and having an opening in one side thereof, the portion of said standard about said opening being adapted to support a picture or similar device opposite said opening, and a side of said standard opposite said



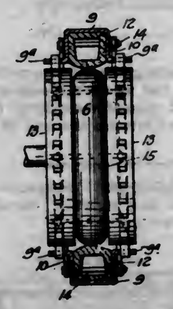
opening removable from said standard, the sides of said standard being arranged when in operative positions with their edges in interengaging relation.

1,455,903. RHEOSTAT. WILLIAM GUY CLARK, Oak Park, Ill. Filed May 9, 1921. Serial No. 468,184. 10 Claims. (Cl. 219—69.)



1. An electrical resistance grid having a reflexed strip, the adjacent edge portions of which are in different planes oblique to the general plane of the grid.

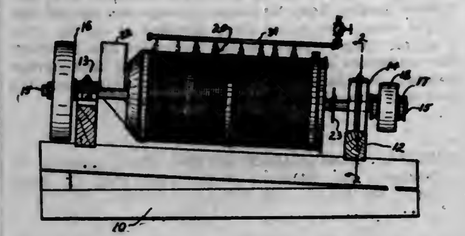
1,455,904. CHECK PROTECTOR. HARRY L. COIT, Bridgeport, Conn. Filed July 29, 1922. Serial No. 578,286. 2 Claims. (Cl. 101—24.)



1. A check protector comprising a pair of connecting arms having inwardly-turned ends, a V-shaped spring arranged between said arms and formed at their outer ends with fingers connected with said arms, and abrading wheels mounted at the outer ends of said arms.

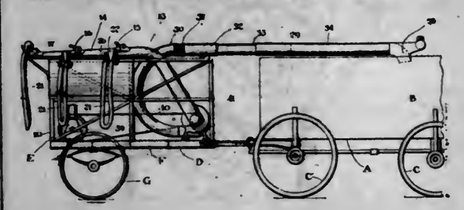
1,455,905. BIDET FOR CLOSET SEATS. ROBERT C. N. COOK, Lebanon, Ind. Filed Nov. 25, 1922. Serial No. 603,144. 8 Claims. (Cl. 4—25.)

1. In a device of the character described, the combination with a seat and a water supply pipe, of a spraying nozzle positioned adjacent the under side of said seat, and an operating handle located adjacent the side of said seat for sliding said nozzle longitudinally in and out of operative position whereby it will be positioned under said seat when in inoperative position and will slide forwardly and lingitudinally thereover when moved to operative position.



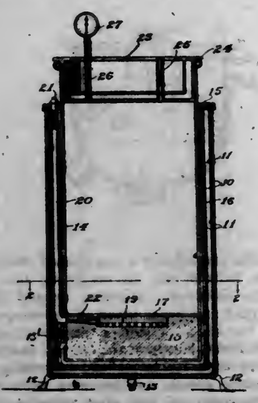
1,455,906. ENDLESS-TRACK STRUCTURE FOR MOTOR-DRIVEN VEHICLES. WALTER CECIL COX, Denver, Colo. Filed Mar. 1, 1920. Serial No. 362,220. 2 Claims. (Cl. 305—10.)

2. In a motor-vehicle of the character described, a traction-wheel having a tire and series of sprocket-teeth at opposite sides thereof, and an endless track composed of linked sections each consisting of a retainer having flanges which are apertured to cooperate with the sprocket-teeth, and a nonmetallic filler in the retainer engaging the tread of the tire.



1,455,907. VIBRATING TROMMEL SCREEN. ARTHUR C. DAMAN, Denver, Colo. Filed June 20, 1922. Serial No. 569,610. 6 Claims. (Cl. 82—56.)

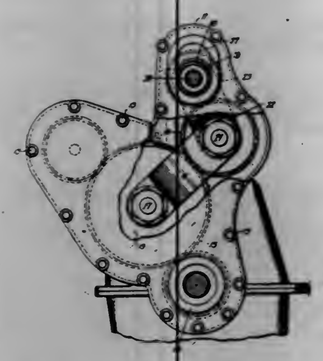
1. A trommel screen comprising a shaft, one extremity of said shaft being carried in a pivoted bearing, the opposite extremity in a flexibly mounted bearing; a cylindrical screen rigidly mounted on said shaft between said bearings; means for causing said shaft to gyrate in said



flexibly mounted bearing and means for causing said shaft to simultaneously revolve.

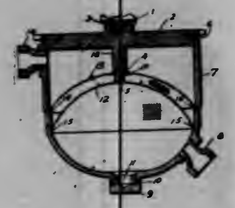
1,455,908. COTTON HARVESTER AND CONVEYER. DANIEL DANIEL, Little Rock, Ark. Filed Sept. 14, 1920. Serial No. 410,196. 5 Claims. (Cl. 302—27.)

1. In an apparatus of the character described, in combination a cotton wagon, a rigid superstructure thereon, a fan exhauster, a suction header connected thereto and having a manifold communicating therewith, said manifold supported longitudinally on said superstructure, a plurality of branch pipes communicating with said manifold, a flexible pipe connected with each of said branch pipes and means rigidly mounted on the superstructure and having rigid and positive engagement with the inner ends of the flexible pipes for supporting said inner ends of the pipes independently of the manifold whereby to relieve the manifold and branch pipes of strain.



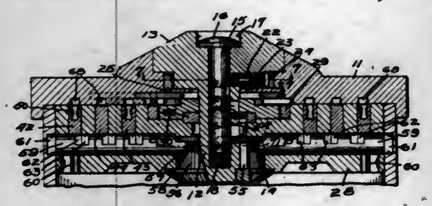
1,455,909. ELECTRIC COOKER AND HEATER. GEORGE O. DITTON, Lanoka, N. J. Filed Aug. 16, 1921. Serial No. 492,705. 2 Claims. (Cl. 219—43.)

1. An electric cooker comprising a receptacle having a heat-resisting bottom and side, a vessel fitting snugly



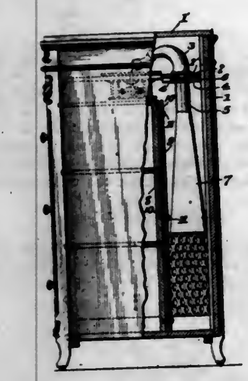
within the receptacle, a heat storage member fitting snugly in the lower end of the vessel, a heater in the upper portion of said heat storage member, and conductors leading from the heater through and up the side of the vessel, the vessel being provided at its top with a lateral flange resting on the receptacle and in which the conductors are secured, the vessel, the heat storage member, the heater and the conductors being removable as a unit through the top of the receptacle.

1,455,910. ADJUSTABLE MOTOR FAN. GEORGE V. DOMARUS, Jr., Saginaw, Mich. Filed Feb. 12, 1921. Serial No. 444,470. 27 Claims. (Cl. 230—1.)



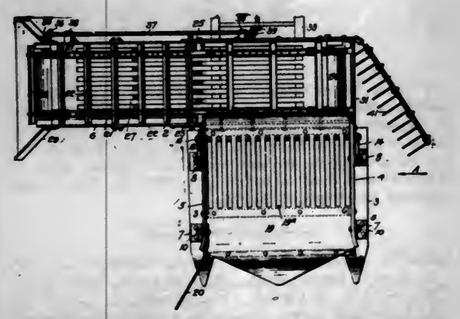
16. In a device of the class described, the combination of an adjustable fan, driving means for the fan, said driving means including a plurality of gears which are in mesh with each other, one of said gears being movable upon the adjustment of the fan, a member extending from the fan to the movable gear to which the movable gear is connected, an end of said member providing a journal in which said fan is mounted and means for locking said member against movement.

1,455,911. OIL PURIFIER. ALFRED R. GIFFIN, Cleveland, Ohio, assignor to J. E. Heene, Cleveland, Ohio. Filed Dec. 6, 1920. Serial No. 428,554. 1 Claim. (Cl. 210—165.)



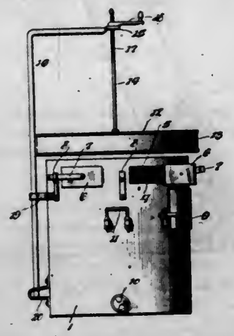
A liquid purifier comprising a cup-shaped casing having an inlet at the bottom and an outlet at the top, and upper and lower shoulders extending around the inside of the casing, upper and lower inverted cup-shaped screens in said casing, the edges of said screens resting on said shoulders respectively, and a cover on the casing having a depending stud with its lower end extending through a hole in the upper screen, and pressing upon the lower screen and a shoulder on the stud pressing upon the upper screen, whereby said screens are expanded to close contact with the shoulders.

1,455,912. COMBINATION SAFE LOCK. MILO C. HOARD, Stryker, Ohio. Filed May 18, 1922. Serial No. 561,805. 13 Claims. (Cl. 70—53.)



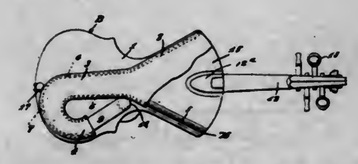
1. In a combination lock, a locking means, a rotatable member, a part rotated and moved relative to the rotatable member by the rotatable member, one or more elements for engaging the locking means and engaged and operated by the said part.

1,455,913. PHONOGRAPH. CARL J. HOFMANN, New York, N. Y., assignor of one-half to Edwin M. Heckscher, Belle Harbor, N. Y. Filed Sept. 14, 1920. Serial No. 410,324. 2 Claims. (Cl. 181—27.)



1. A phonograph having a horn or amplifier depending below the tone arm, and means for supporting the horn solely from the neck thereof comprising a horizontally slidable separable joint between the neck of the horn and the motor board.

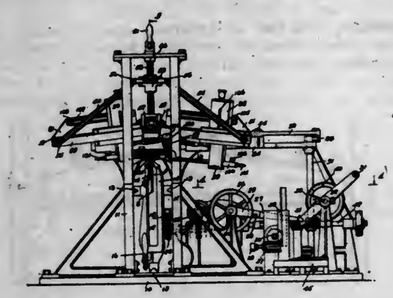
1,455,914. BEET LOADER. JOHNSTON T. HOUGH, Denver, Colo. Filed Jan. 19, 1921. Serial No. 438,365. 8 Claims. (Cl. 198—7.)



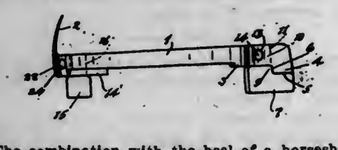
1. A beet-loader comprising in combination with a carrier, a shovel for removing beets from an edge of a pile along which the carrier is propelled, an elevator for lifting beets moved off the shovel to an elevated point of discharge, and a rake disposed to engage the upper portion of the pile of beets after the lower portion thereof has been engaged by the shovel.

1,455,915. TOBACCO SMOKING AND CURING APPARATUS. JOHN H. L. JOHNSON, Springfield, Tenn. Filed Apr. 7, 1922. Serial No. 550,405. 2 Claims. (Cl. 126—59.5.)

2. A tobacco-curing apparatus comprising an open-topped fuel container, screened outlets in the side of said container near the upper end thereof, a perforated plate removably supported in the upper end of the container above said outlets, a cover adapted to extend over the container, and means for shifting the cover into or out of operative relation to the container.



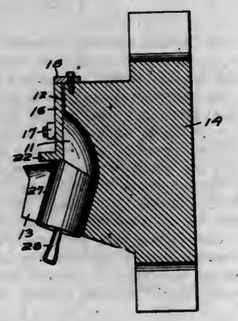
1,455,916. DIAPHRAGM VIOLIN. JOHN KALAF, Jr., Meta, Mo. Filed May 11, 1922. Serial No. 560,201. 2 Claims. (Cl. 84—296.)



1. A stringed instrument comprising a belly provided intermediate its ends with an opening; a neck located at one end of the belly; a sound conduit located completely beneath the belly and having a flared outlet disposed adjacent to the neck, the conduit being curved adjacent to the other end of the belly and being extended forwardly into communication with the opening; a casing on the belly and surrounding the opening; a diaphragm in the casing; a lever supported for tilting movement with respect to the belly; means for connecting the lever with the diaphragm; a bridge on the lever; and a string extended along the neck and across the bridge.

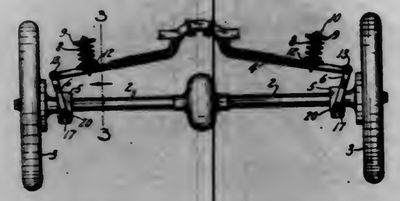
1,455,917. SAW SHARPENING AND SETTING MACHINE. TITUS H. LAURY, Detroit, Mich. Filed July 26, 1921. Serial No. 487,670. 7 Claims. (Cl. 76—36.)

1. A saw sharpening machine comprising a frame, a saw supporting clamp mounted therein for longitudinal movements, mechanism for intermittently feeding the saw supporting clamp through the machine, means for regulating said mechanism to coincide with the gage of the tooth saw, transversely disposed guide members carried by the frame, a pair of sharpening elements, transverse reciprocity members mounted in the guide members, vertical reciprocatory supporting members carried by the transverse reciprocating members for actuating the transverse reciprocatory members, and interengageable means on the guide members and the vertical reciprocating members adapted to coact upon movement of the transverse reciprocating members to alternately effect active engagement of the sharpening elements with alternate teeth of the saw.



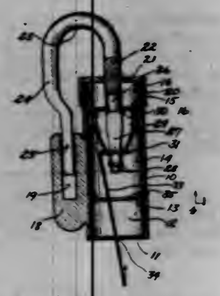
1,455,918. HORSESHOE. PHILIAS LEVESQUE, St. Boniface, Manitoba, Canada. Filed Mar. 13, 1922. Serial No. 543,412. 2 Claims. (Cl. 168—40.)

1. The combination with the heel of a horseshoe, said heel having a downward extension forming a shoulder with the shoe body, of a calk engaging the under face of the shoe and formed with a shoulder complementary to the heel shoulder, a stud extending from the calk and into the shoe in a location in advance of the shoulder, and a knockout crosspin extending transversely through the heel portion and engaging the stud.



1,455,919. MACHINE FOR MAKING CONNECTOR TUBES FOR RADIATORS. GEORGE H. LOBER, Toledo, Ohio. Filed Apr. 8, 1921. Serial No. 459,767. 2 Claims. (Cl. 153—32.)

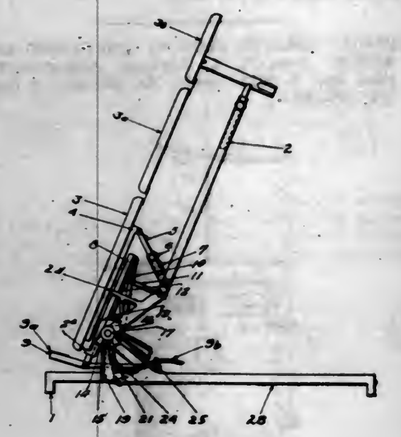
1. In a machine for forming radiator connectors from sheet metal pieces, a stationary die having a recess conforming substantially to the semi-form of the connector, a clamping plate for securing the semi-form of the connector in position and having a flange coacting to shape



a portion of the flange of the connector, a block positioned in the connector and forming an anvil, a movable die having a cylindrical recess for gathering edge portions of the sheet metal.

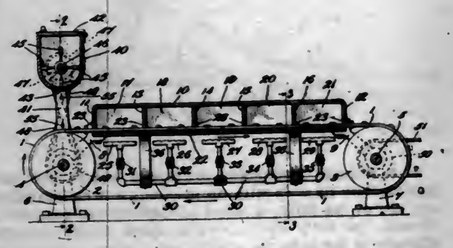
1,455,920. SHOCK ABSORBER. JOHN W. LUSK, Denver, Colo. Filed Apr. 5, 1922. Serial No. 549,810. 4 Claims. (Cl. 267—17.)

1. In a vehicle, the combination with an axle, a housing and a spring for the support of the vehicle body, of an element including an abutment in superposed relation to the spring, a compression spring between the upper surface of the vehicle spring and the abutment, and a bell crank lever fulcrumed at an end of the vehicle spring, one arm of said lever being pivoted on the housing beneath the horizontal plane of the axis of the axle, and its other arm bearing against the lower end of the compression spring to contract the same by upward movement of the axle.



1,455,921. SHACKLE LOCK. ALEKSANDER MIELNICKI, Brooklyn, N. Y. Filed Sept. 11, 1922. Serial No. 587,285. 2 Claims. (Cl. 70—108.)

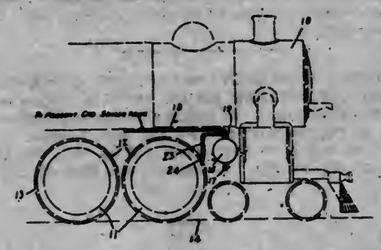
1. A lock comprising a cylindrical casing closed at one end and open at the other, a pair of spaced transverse partitions fixed in said casing, a cover fitting over the open end of the casing, a keeper fixed parallel on said casing, a fork-shaped bolt having one prong suited to slidably engage in said keeper, the other prong being fixed in said cover to extend through the adjacent partition, resilient arms attached to the last named prong, said arms being enterable through the partition and adapted to spring outward to engage its inner surface, and an angular key adapted to be inserted through the closed end of said casing and adjacent partition, there being a rectangular opening in said key adapted to engage and compress said arms to permit their withdrawal through the other partition and release said cover and bolt.



1,455,922. CHIROPRACTIC TABLE. HERBERT H. MILLER, Davenport, Iowa. Filed Jan. 17, 1922. Serial No. 529,894. 22 Claims. (Cl. 45—50.)

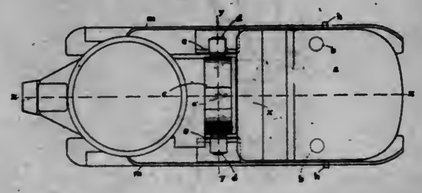
1. In a chiropractic table comprising a base and a bed hinged thereto, the combination with a balancing spring adapted to counterbalance the weight of the bed, of an additional spring secured to the base and the bed

frame, of sufficient strength to counterbalance the weight of a patient.



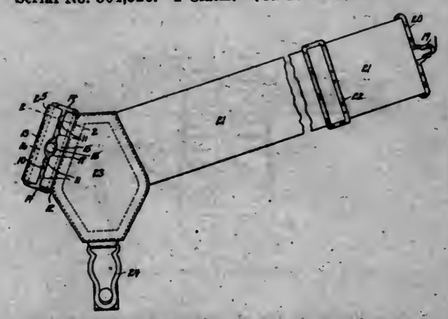
1,455,923. APPARATUS FOR PRODUCING FLAKED AND OTHER FOOD PRODUCTS. NATHAN MININBERG, Dickinson, N. Dak., assignor to Bran Products Company, Dickinson, N. Dak., a Corporation of North Dakota. Filed July 5, 1921. Serial No. 482,392. 7 Claims. (Cl. 107—57.)

1. In an apparatus of the class described, the combination of a closed chamber; a movable conveyor passing through said chamber; a heating element associated with said chamber adapted to raise the temperature therein; means comprising a hopper provided with an agitator for feeding material in the form of droplets to said conveyor; means to support said hopper above said conveyor a distance sufficient to permit the formation of said droplets in the air before they reach said conveyor; and means for moving said conveyor, substantially as described.



1,455,924. ANTISLIP DEVICE. WILLIAM J. MOFFATT, Indianapolis, Ind. Filed May 29, 1922. Serial No. 564,605. 2 Claims. (Cl. 291—1.)

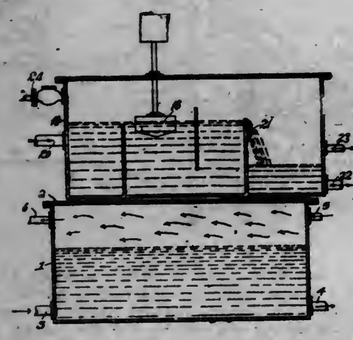
1. In a device of the character described, the combination with a source of fluid pressure, a single fluid reservoir, a plurality of nozzles, and a connection from each nozzle extending towards the reservoir, of a unitary



siphon construction associating the reservoir with the connections and the source of fluid pressure, including an injector extending into each connection.

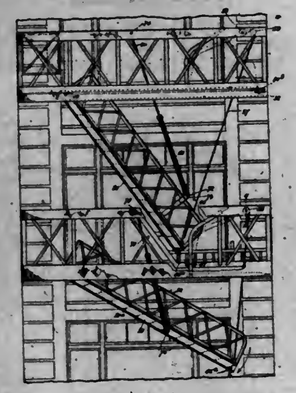
1,455,925. COAL CUTTING AND SIMILAR MACHINE. MATTHEW SMITH MOORE, London, England, assignor to Cowlishaw Walker & Company (1920) Limited, London, England. Filed May 6, 1922. Serial No. 559,062. 5 Claims. (Cl. 262—25.)

5. A coal cutting machine comprising a body, cutting means at one end and haulage means at the other end thereof, skids beneath both sides of the body, a central ring having the body mounted therein for movement about its longitudinal axis, means at the haulage end of the machine for imparting the said movement to the body, the cutting means capable of being swung laterally in a horizontal plane to extend over either of the skids.



1,455,926. GARTER TRIMMING. ROSWELL A. MOORE, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Oct. 3, 1921. Serial No. 504,926. 1 Claim. (Cl. 241—6.)

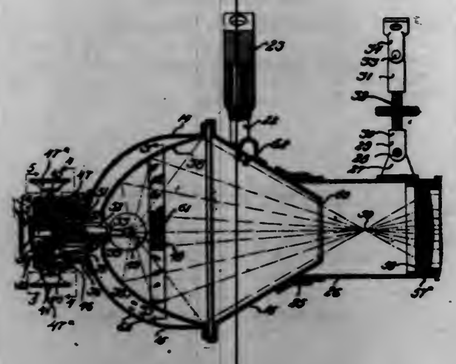
In a garter, the combination with the pad, stocking-gripping pendant and leg-band thereof; of a garter trimming of the hook-and-eye type comprising a cast-off loop applied to the outer end of the said leg-band and having an eye, and a cast-off plate having side bars, an intermediate bar



separated from the said side bars by threading-openings formed with downwardly-turned prongs and provided upon its upper face with an upstanding stud for engagement by the eye of the said cast-off loop; and a short length of fabric for attaching the said plate to the said pad at a point thereon opposite the attachment thereto of the inner end of the said leg-band, the said short length of fabric being applied to the said cast-off plate so as to receive the said prongs of the said intermediate bar and to cover the said prongs to prevent the contact of their clinched ends with the body of the wearer of the garter.

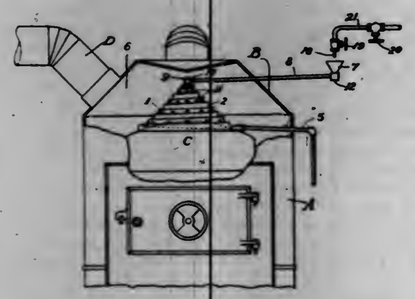
1,455,927. METHOD OF AND APPARATUS FOR PREVENTING THE ABSORPTION OF AIR BY BOILER-FEED WATER OR OTHER LIQUID. DONALD BARNS MORISON, Hartlepool, England. Filed Mar. 30, 1920. Serial No. 370,056. 4 Claims. (Cl. 137—111.)

1. The method of preventing degassed liquid from reabsorbing gases in a container said method consisting in causing the liquid to enter and leave the closed container below the water level in said container whereby the surface of said liquid is maintained quiescent and causing a current of the vaporised liquid to flow continuously across the whole surface of the liquid within the container.



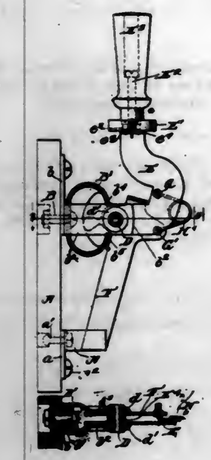
1,455,928. FIRE ESCAPE. CHARLES F. MORRILL, Boston, Mass. Filed Apr. 19, 1918. Serial No. 229,546. 10 Claims. (Cl. 227—5.)

1. A fire escape comprising a balcony having a relatively large opening constituting a passageway through the balcony floor, said floor including a stair-foot landing located at one end of said opening and provided with spaced apart narrow elongated slots, and a stairway



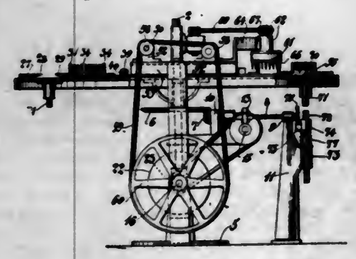
hinged to the balcony at one end of said opening, and provided with fixed upstanding hand rails, adapted to enter said slots when the stairway is raised, the stairway being elongated so that, when raised, one end portion projects under said landing, portions of its hand rails projecting through said slots.

1,455,929. SPOTLIGHT-PROJECTING DEVICE. EDWARD DUNBAR NEFF, Marysville, Pa. Filed July 17, 1920. Serial No. 397,103. 11 Claims. (Cl. 290—41.)



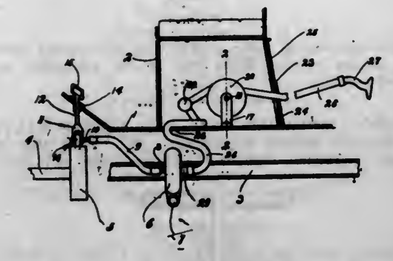
11. A spot light projecting device including a casing having a frusto-conical forward portion and a curved rear portion, an ellipsoid reflector within the rear portion of the casing, said reflector and rear portion of the casing having axial openings; a lamp holder over the opening in the rear portion of the casing; a lamp carried by said holder and projecting in the position whereby the rays of light emanating therefrom will be reflected to a point constituting the focus of the ellipsoidal reflector; a projecting tube threadedly mounted on the frusto-conical front portion of the casing spaced from the forward end thereof; a lens located adjacent to said focus and through which the reflected rays pass; and an auxiliary lens interposed between the source of light and the first named lens adapted to converge the rays of light from said source which do not intercept the reflector; substantially as described.

1,455,930. HUMIDIFIER FOR FURNACES. HARRY M. NOBIS, East Cleveland, Ohio. Filed Jan. 23, 1923. Serial No. 614,406. 13 Claims. (Cl. 126—113.)



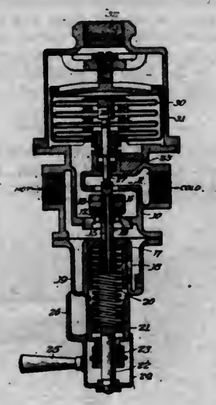
1. The combination with the hot air chamber and dome of a hot air furnace, of a humidifier comprising a hollow conical casing seated removably on the top of said dome with its apex uppermost and terminating in a pin, an overflow pipe leading from the base of the cone to a point outside the chamber, an inverted cup adapted to enclose said pin and an inflow pipe leading from an outside source of liquid supply and terminating within said chamber in said cup.

1,455,931. MANUALLY-CONTROLLED QUICK-MAKE AND QUICK-BREAK KNIFE SWITCH. HERMAN G. PAPE, New York, N. Y., assignor, by mesne assignments, to Beaver Machine and Tool Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Mar. 25, 1919. Serial No. 285,003. 15 Claims. (Cl. 200—67.)



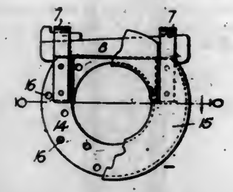
1. A knife switch comprising a handle; a pivoted blade; and means including a spring connecting the handle and blade through which the latter is controlled by the former but operates independently thereof with a quick make and a quick break; a fixed contact; and a stop independent of the fixed contact to limit the movement of said blade as it is moved into engagement with said fixed contact, said stop engaging the blade at the half thereof nearer to the pivot.

1,455,932. BRUSH-MAKING MACHINE. ULYSSES S. PERKINS, Lebanon, Ind. Filed Dec. 8, 1921. Serial No. 520,922. 3 Claims. (Cl. 300—2.)



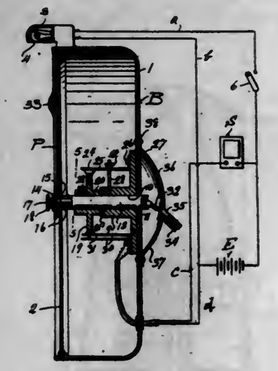
1. In a device of the character described, a rotatably mounted platform, means for removably securing sections of a fibrous and cellular substance to said platform, a horizontally disposed shaft carrying a comb-shaped cutting member mounted above said platform, a vertically disposed shaft carrying a comb-shaped cutting member mounted above said platform adjacent said first named cutting member, means for rotating said platform, and said first and second named shafts, and an ejector for ejecting said sections after they have passed out of engagement with said cutting members.

1,455,933. VACUUM CLEANER. HARRY A. R. PETERMAN, Chicago, Ill. Filed Aug. 19, 1920. Serial No. 404,499. 1 Claim. (Cl. 15—15.)



The combination with the frame, fly wheel and seat of a motor propelled vehicle, of a winding member housed within the seat; a suction device mounted on the frame and including a flexible shaft and a wheel on the shaft; a flexible conduit connected to the suction device and engaged about the winding member; and means under the control of an operator for moving the flexible shaft to bring the wheel thereof into and out of engagement with the fly wheel.

1,455,934. THERMOSTATIC WATER MIXER. FRED W. POWERS and MORTON O. SNEDIKER, Chicago, Ill., assignors to The Powers Regulator Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 28, 1921. Serial No. 511,174. 9 Claims. (Cl. 236—12.)



1. In a water mixer, the combination of a casing providing an inlet for hot and cold fluids and an outlet for the mixed fluids, a valve controlling the admission of fluids to said casing, a thermostat for positioning said valve, a piston associated with said thermostat and valve, one face of said piston being exposed to the entrance pressure of the cold fluid and the other face to the entrance pressure of the hot fluid in all positions of the valve.

1,455,935. HUB LINER. WILLIAM WALLACE RAMSEY, Sterling, Colo. Filed Oct. 9, 1918. Serial No. 257,452. 5 Claims. (Cl. 64—25.)

3. A liner comprising a ring composed of a body-section having an opening for the passage of an axle around which it is placed, ears at opposite sides of the opening, extending partially within the same to provide feathers along its edges, and a sliding section having grooves cooperating with said feathers, and a key engaging the ears and the sliding section to hold the latter in its proper position with relation to the body section.

1,455,936. INDICATOR. ROHDE REYNOLDS, Houston, Tex. Filed Jan. 8, 1921. Serial No. 435,928. 4 Claims. (Cl. 116—21.)

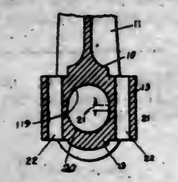
4. A device of the class described including a casing, a dial associated with the casing, a pointer coacting with the dial, a bearing arranged within the casing, a shaft supported by said bearing and with which the pointer is engaged, means for rotating the shaft, a wheel fixed to the shaft within the casing and adjacent the bearing, the periphery of the wheel being notched, a spring secured to the bearing and overlying the periphery of the wheel, a lip carried by the spring to seat within a notch of the wheel to hold the shaft and pointer normally against rotary movement, a shank extending from the bearing and disposed through the spring, and a member threaded upon the shank outwardly of the spring to provide means to regulate the tension of the spring.

1,455,937. BAILER. LEE ABE RHODES, Humble, Tex. Filed May 28, 1921. Serial No. 473,457. 3 Claims. (Cl. 166—19.)

1. A bailer including a barrel whose lower end is closed, and provided with a lateral opening, a valve seat in the barrel above said opening, a lift valve adapted to rest on

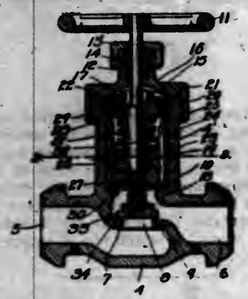
the seat, a stem depending from said valve and extended below the barrel, and a bearing block in the lower end

of the barrel through which the stem has a bearing which limits the stem to substantially a longitudinal movement.



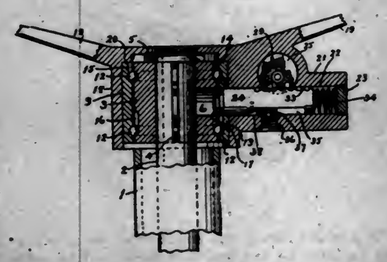
1,455,938. SIGNAL LANTERN. FREDERICK J. RODE, RALPH L. FROST, and JOHN L. LISTON, Augusta, Kans.; said Rode and said Frost assignors to said Liston. Filed Apr. 21, 1921. Serial No. 463,191. 4 Claims. (Cl. 240—8.5.)

2. In a lantern of the kind described, a support, two batteries, independent of one another, carried thereby, a circuit closing member, a plurality of electric lamps having two sets of terminals, conducting means connecting said batteries, with one set of terminals, means by which the other terminals are adapted to be consecutively connected with said circuit closing member, and conducting means including a switch connected with said circuit closing member and by which the latter may be connected in circuit with either one of said batteries, substantially as set forth.



1,455,939. PROCESS OF MAKING DIVIDED BEARINGS. ROBERT M. ROOT, Anderson, Ind., assignor to Laurel Motors Corporation, Anderson, Ind. Filed June 21, 1920. Serial No. 390,448. 3 Claims. (Cl. 29—149.5.)

1. The process of forming a divided bearing for shafts and the like comprising the steps of forming a unitary bearing blank with an elongated opening, providing aligned and securing openings in the unitary bearing blank, and dividing the unitary bearing at the elongation of said opening to remove said elongation from said



bearing opening to form a true bearing opening when said divided bearing is secured in the assembled and aligned position.

1,455,940. COMBINED STOP AND SAFETY VALVE. MARION W. STOMS, Kansas City, Mo. Filed Aug. 29, 1921. Serial No. 496,299. 4 Claims. (Cl. 251—3.)

1. A combined stop and safety valve for compressors comprising a valve casing, a reciprocatory follower carried by the casing, a threaded valve stem in the follower having a valve for normally closing an opening in the seat of the valve casing, a spring for normally exerting pressure against the follower to maintain the valve seated, said spring permitting movement of the follower to allow the valve to unseat upon the accumulation of abnormal pressure in the valve casing sufficient to preponderate over the spring, and a casing within the valve casing splined to the follower whereby the follower may have reciprocatory movement but be held against rotative movement.

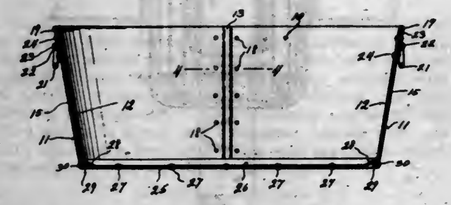
1,455,941. VEHICLE STEERING MECHANISM. LOUIS C. VANDERLIP, Elkhart, Ind. Filed Aug. 30, 1920. Serial No. 406,931. 15 Claims. (Cl. 70—129.)

1. In a mechanism of the class described, a shaft; an encompassing member rotatable thereon; means for preventing relative axial movement of said encompassing member and shaft; a member encompassing said first mentioned encompassing member; and means whereby the said second mentioned encompassing member may be releasably locked to said shaft, said locking means being adapted to engage said first mentioned encompassing member, when released from the shaft, for retaining the second mentioned encompassing member on the first.

1,455,942. PHONOGRAPH SOUND BOX. WILLIAM M. VENABLE, Pittsburgh, Pa. Filed Aug. 17, 1921. Serial No. 493,010. 13 Claims. (Cl. 274—35.)

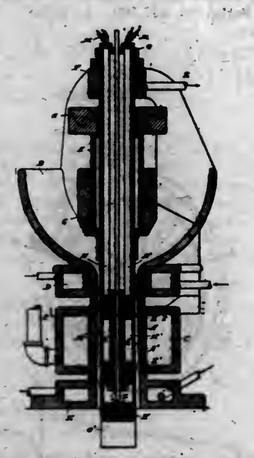
1. In a sound box structure the combination with the sound box casing, of a yoke secured to the casing and provided with a tongue capable of slight yielding, and a wire secured to the yoke and to said tongue.

1,455,943. DRIVING WHEEL FOR MOTOR VEHICLES AND THE LIKE. GEORGE R. WALKER, Clarendon Hills, Ill., assignor, by mesne assignments, to Walker Vehicle Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1919. Serial No. 338,229. 10 Claims. (Cl. 74—28.)



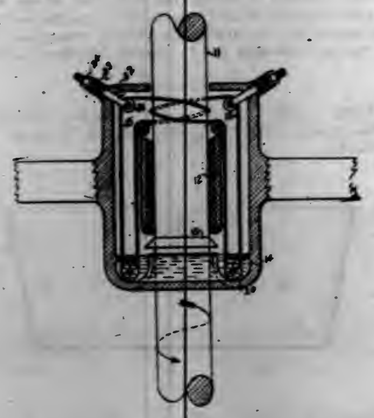
1. In combination, a wheel band, an internal gear adapted to be fitted therewithin, the wheel band and the gear having registering recesses on their facing surfaces, and key means yieldably held lying partly within each recess to secure said gear and said rim against relative displacement.

1,455,944. CURTAIN AND QUILTING FRAME. WILLIAM A. WALL, Carrollton, and ANNA N. MITCHELL, Rockbridge, Ill. Filed May 27, 1922. Serial No. 564,277. 2 Claims. (Cl. 45—24.)



1. A quilting frame comprising side members, each side member consisting of a sleeve substantially rectangular in cross section and open at its ends, one end of the sleeve being closed by a block, the side faces of said block adjacent the ends of the sleeves having cleats for the reception of supporting legs, the upper face of the block adjacent the end thereof having a recess, a supporting rod slidable in the sleeve, said rod having a slot extending transversely of the rod and longitudinally thereof, the opposite end portion of the sleeve having spaced registering openings, the supporting rod of each side member being connected to the adjacent supporting rod by an end member, the sleeve members of each side member being connected to each other through the medium of a second end member, a bolt disposed in said openings and in the slot of the supporting rod, the head of said bolt being adapted to engage one side of the sleeve, and a wing nut carried by the opposite end of the bolt and adapted to engage the outer end of the sleeve, the side members of said sleeves being resilient whereby said sleeves may be urged into binding engagement with the rod to hold said rod in various adjusted positions.

1,455,945. TUB. JOHN JAMES WALTON, Dante, Va. Filed Apr. 5, 1922. Serial No. 549,703. 1 Claim. (Cl. 220—63.)

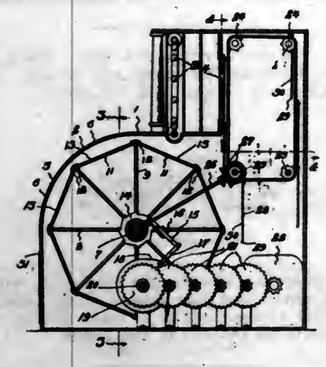


A tub comprising an inner tub of rust proof material and an outer reinforcing tub, and securing means extending through the walls and bottom of said tubs and securing the same together, the upper end of the side wall of the outer tub being abutted by a ring member, the upper end of the side wall of the inner tub being bent about said ring member and having its extremity abutting the outer face of the side wall of the outer tub.

1,455,946. APPARATUS FOR FORMING ARTICLES OF CORK. THEODORE C. WEBSTER, Wilmington, Del. Filed June 26, 1922. Serial No. 570,904. 6 Claims. (Cl. 18—5.)

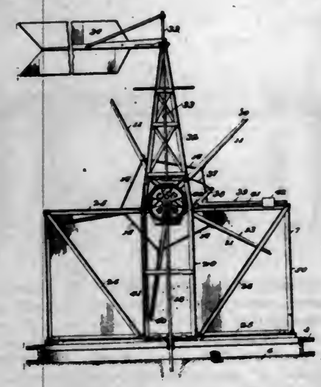
1. In apparatus for forming tubular bodies of comminuted cork and binder, the combination with a tubular die and means for forcing cork into and through the same, of a mandrel mounted axially within said die, means for creating cooling and heating zones in the confining walls of the die, and means for creating cooling and heating zones in the wall of the mandrel in regions substantially opposite the cooling and heating zones of the die.

1,455,947. OILING DEVICE. WILLIAM MONROE WHITE, Milwaukee, Wis. Filed July 21, 1921. Serial No. 486,413. 7 Claims. (Cl. 64—31.)



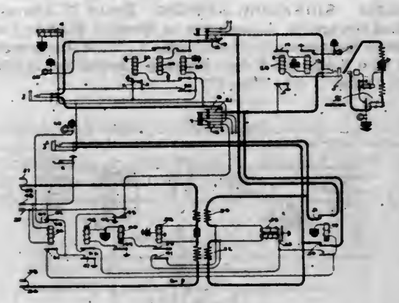
2. In combination, an upright shaft, a bearing for said shaft, a basin below the top of said bearing, and a continuous flexible band movable by direct contact with said shaft, said band comprising an elevating portion extending upwardly from said basin and longitudinally of said shaft, and a second portion extending laterally from said elevating portion to said shaft above the bottom of said bearing.

1,455,948. RESILIENT SUSPENSION DEVICE FOR THE FRONT WHEELS OF MOTOR CYCLES. SAVILLE WHITING, Melbourne, Victoria, Australia. Filed May 7, 1921. Serial No. 467,569. 5 Claims. (Cl. 208—97.)



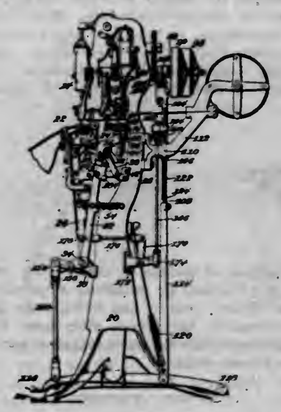
1. A resilient suspension device for the front wheels of a cycle comprising a yoke shaped member fitted rigidly to the rear of the steering fork, a pair of levers pivotally mounted at one end to the yoke shaped frame, means on the free ends of the levers for supporting the axle of the front wheel of the cycle, a pair of springs mounted rigidly on the yoke shaped frame and exerting a downward thrust on the free ends of the levers, a bifurcated bar connecting the free ends of the levers, a piston on the bifurcated bar, and a cylinder pivoted to the fork and accommodating the said piston.

1,455,949. ADVERTISING DEVICE. ALFRED E. WHITMORE, Norfolk, Va. Filed Sept. 6, 1921. Serial No. 498,812. 1 Claim. (Cl. 40—30.)



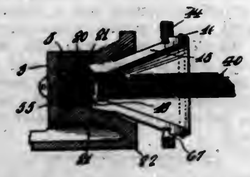
An advertising device of the character described comprising a casing having a reduced upper part and a rounded front face connecting the front face of the reduced part with the lower part, windows in the front face of the reduced part and the rounded part, lighting means arranged around the upper window, a movable element located adjacent each window, means for supporting advertising cards on said elements consisting of a shaft arranged in the lower part of the casing, a carrier frame of octagon shape rotatably mounted on said shaft, the frame including spokes having their inner ends connected to a hub and strips conecting the outer ends of said spokes together, said strips supporting guiding elements and cards containing advertising matter received in said guides, lamps for illuminating the cards appearing at the lower window, motor means for moving the movable elements thereby consisting of a train of gearing shafts, and an endless belt carrier which is designed to travel in a rectangular path.

1,455,950. WINDMILL. IRVIN F. WILLMAN, Muleshoe, Tex. Filed Dec. 23, 1921. Serial No. 524,458. 1 Claim. (Cl. 170—12.)



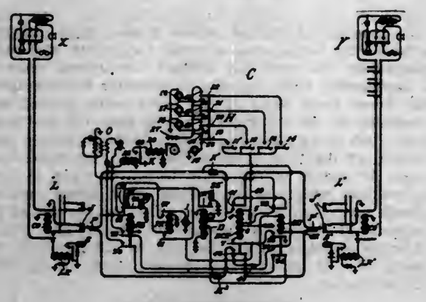
A windmill comprising a frame having a centrally arranged tower, a horizontal shaft rotatably carried by said frame, spaced wind wheels carried by said shaft, a vane arranged above the tower and having a control shaft extending through the tower, a crank pivoted to said frame and having a short upwardly and outwardly directed branch, and an approximately horizontal branch, a link connecting said arm and said short branch, a weight adjustable on said approximtely horizontal branch to regulate the response of the frame to the movement of the vane, and means whereby to rotatably support the frame.

1,455,951. SEMIAUTOMATIC TELEPHONE SYSTEM. BERNARD D. WILLIS, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1919. Serial No. 301,038. 18 Claims. (Cl. 179—27.)



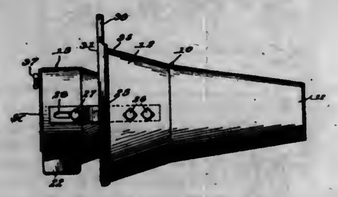
1. In a telephone system, a first operator, a second operator, a trunk line extending between the two, a signal associated with each operator, a pair of terminals associated with one end of said trunk, means for seizing either of said terminals to extend a connection to said trunk, and whereby when one of said terminals is seized the first signal only is automatically operated and whereby when the other one of the terminals is seized the second signal only is automatically operated.

1,455,952. SOLE-LAYING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 22, 1919. Serial No. 284,377. 11 Claims. (Cl. 12—17.)



1. A shoe machine having, in combination, a device for locating or positioning an article in a predetermined manner and adapted for withdrawal from the article operated upon after it has performed its locating function, and nail driving mechanism arranged to drive a single nail into the article when the locating device is in operative position and automatically to drive a series of nails into the article when the locating device is withdrawn.

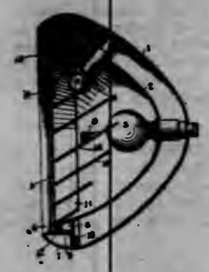
1,455,953. MACHINE FOR CAPPING BUNDLES OF TIE WIRES. PARVIN WRIGHT, Chicago, Ill. Filed Dec. 30, 1921. Serial No. 526,046. 6 Claims. (Cl. 153—1.)



1. In a tie wire capping machine the combination of a capping head having an inclined cone-shaped portion and a cylindrical portion adapted to receive a cap; an expansible cone-shaped crimping member provided with a beveled crimping surface on its extreme end and adapted to be guided by the cone-shaped portion of said head and to be forced into a crimping relation with said cap; and means for reciprocating said expansible crimping member, substantially as described.

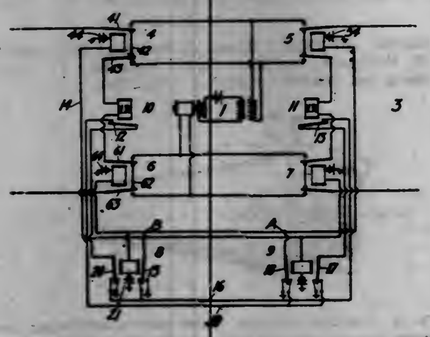
1,455,954. TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1917, Serial No. 164,318. Renewed June 2, 1922. Serial No. 565,405. 10 Claims. (Cl. 179—58.)

9. A telephone system including a calling and a called subscriber's line, a link circuit provided with only five relays for connecting said lines in conversational circuit, said link circuit being provided with automatic listening, flashing recall, automatic ringing and automatic disassociation of the ringing current from the called line, all of said features being controlled by said five relays.



1,455,955. BURNER. ELMER E. CORNWELL and JOSEPH H. MCCREADY, Okmulgee, Okla. Filed May 27, 1922. Serial No. 564,025. 2 Claims. (Cl. 158—118.)

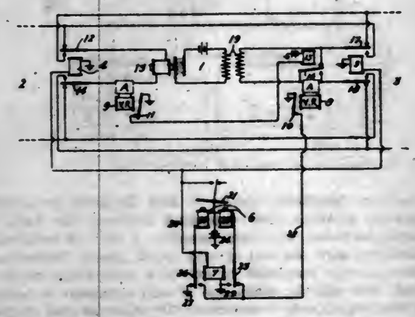
1. In a burner, an open ended shell constituting the mixing chamber and the nozzle of the burner and having a large section of frusto-conical form and of circular cross section and a small section of elliptical cross sec-



tion, the large section merging at its small end into the small section and the small section tapering toward its outlet end, and a gas chamber arranged at the open end of the large section and made up of an inner cylindrical wall defining an axial air passage, an outer wall including a cylindrical section and a frusto conical section, the frusto conical section converging toward the large end of the shell and connecting with this large end to define an air inlet into said shell, said gas chamber also having end walls integral with the inner and outer walls to define therewith an enclosed gas space, the end wall adjacent the shell having a circular series of discharge openings.

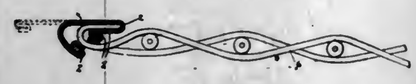
1,455,956. HEADLIGHT DIMMER. JAY D. JONES, New York, N. Y. Filed Apr. 20, 1922. Serial No. 555,716. 1 Claim. (Cl. 240—48.4.)

A dimmer for location within a head light including a forwardly flaring ring carrying a plurality of parallel rearwardly and upwardly inclined overlapping vanes of a considerable depth spaced a considerable distance apart, the lower front edges of the vanes being located substantially in the front plane of the ring and the upper rear edges being located in different vertical planes rearwardly of the back plane of the ring, the upper rear edges of certain of the vanes being cut away to form spaces into which the central and offset lamps projects, shields carried by certain of the vanes for preventing the exposure of the lamps through the dimmer, and a light intercepting plate across the top of the front of the flaring ring to screen the light rays above the top vane of the dimmer.



1,455,957. REPEATER SYSTEM. EDGAR D. JOHNSON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 18, 1918. Serial No. 212,462. 26 Claims. (Cl. 179—170.)

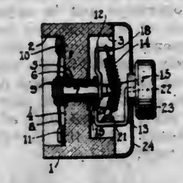
1. The combination of a line, a repeater adapted to be reversibly connected thereto, a relay for controlling the connection of said repeater to said line, and means comprising a relay and a vibratile contact controlled thereby whereby current derived from the output circuit of said repeater is effective to control the repeater connections.



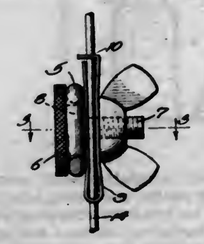
25. A repeating system comprising a relay having a vibratable contact, a circuit to be controlled thereby, an auxiliary relay assisting said first-mentioned relay, and a circuit comprising a contact operating continually while repeating and controlled by said relays.

1,455,958. SIGNALING SYSTEM. EDGAR D. JOHNSON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1918. Serial No. 213,522. 22 Claims. (Cl. 179—170.)

1. A repeater system comprising a line, a repeater therefor, a normally closed circuit in shunt to and short circuiting across said line, and means responsive to current impressed on said line for controlling said shunt circuit.



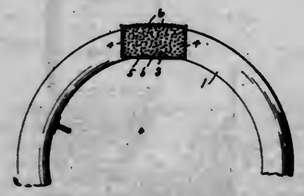
1,455,959. METHOD OF AND MEANS FOR BINDING THE EDGES OF REED FABRIC AND THE LIKE. MARSHALL B. LLOYD, Menominee, Mich., assignor, by mesne assignments, to Levi H. Greenwood and George A. Keyworth, both of Gardner, Mass., and William E. Holman, Leominster, Mass., trustees. Filed Aug. 20, 1920. Serial No. 404,799. 5 Claims. (Cl. 147—48.)



2. The method of making a binder strip of the class described that consists in providing a metallic strip, in providing a fibrous strip of less width than the metallic strip, superimposing the fibrous strip upon the metallic strip and folding relatively small marginal portions thereof over the fibrous strip.

1,455,960. ELECTRIC SWITCH. ALFRED E. MAAGE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 24, 1919. Serial No. 340,270. 9 Claims. (Cl. 200—67.)

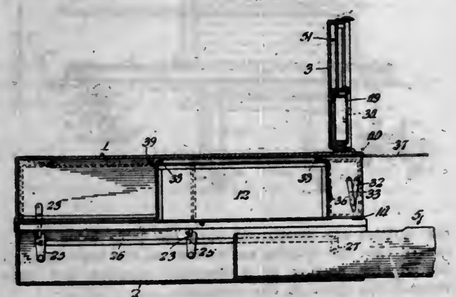
1. The combination with relatively movable members, one of the same being oscillatable, of a spring associated with the latter member to oscillate the same with a snap action upon reverse operations of the other of said members and to hold said oscillatable member against movement during a given initial movement of the other member in either direction and means acting upon said spring to prevent the same from being rendered inactive through relative positioning of said member.



1,455,961. PICTURE HANGER. AUGUST J. MAIER, Chicago, Ill., assignor to Dexter Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 19, 1922. Serial No. 569,311. 3 Claims. (Cl. 40—145.6.)

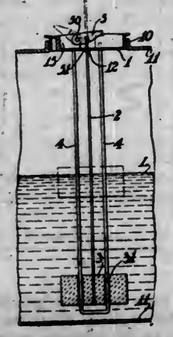
1. A hanger including a screw eye; a headed bolt having a threaded stem passing through the loop of the screw eye; a clamp formed of strip metal folded into U-form and having one end portion bent toward the other, this clamp being formed with registering holes in its sides through which said bolt stem passes and with a hole in its bight and another in the bent end portion; a wire passing through the latter two holes; and a nut upon the bolt stem for operating the clamp.

1,455,962. LEAK DETECTOR FOR TIRE TUBES. HERBERT M. MATTHEWS, Worton, Md. Filed Aug. 23, 1922. Serial No. 583,869. 1 Claim. (Cl. 73—51.)



A leak detector for tire tubes, comprising a thin piece of resilient metal having the sides thereof bent and the edges turned, and provided with a number of apertures therein forming a number of burs on the outer surface.

1,455,963. LITHOPONE AND METHOD OF MANUFACTURE. WALTER F. MEISTER, Collinsville, Ill. Filed July 25, 1921. Serial No. 487,503. 8 Claims. (Cl. 134—78.)

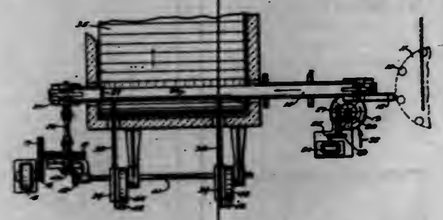


6. The process of manufacturing lithopone which consists in adding a small percentage of zinc sulphate to a mixture of commercial lithopone.

1,455,964. WARDROBE TRUNK. FRANK W. MEYER, Oshkosh, Wis., assignor to The Oshkosh Trunk Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Feb. 14, 1921. Serial No. 444,664. 11 Claims. (Cl. 190—18.)

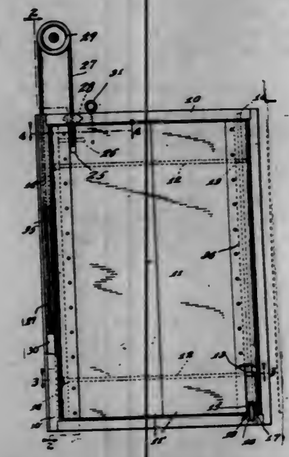
11. A trunk, comprising two hinged together sections, garment-retaining means in each of said sections, said means being slidably mounted in their respective sections and adapted to be withdrawn from and inserted back into the trunk through openings provided in said sections when the sections are closed together, one of said sections having its opening at one end, a lid for closing said opening, and locking means for said lid and sections.

1,455,965. LIQUID-LEVEL GAUGE. JOHN B. MULLALLY, Seattle, Wash. Filed Oct. 25, 1921. Serial No. 510,250. 2 Claims. (Cl. 73—82.)



1. A liquid level gauge comprising a perforated cap securable in the top of a tank, a float within the tank, a measuring rod secured to the float and projecting upward through the perforation in the cap, a locking bar pivoted by one end to be swung in a vertical plane, said bar having a transverse slot engageable with the rod, whereby the buoyancy of the float, acting through the rod, maintains the slot and the rod in locked position with the rod depressed within the tank.

1,455,966. MECHANISM FOR CONVEYING HOT GLASSWARE. MICHAEL J. OWENS, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 6, 1921. Serial No. 505,748. 9 Claims. (Cl. 198—81.)

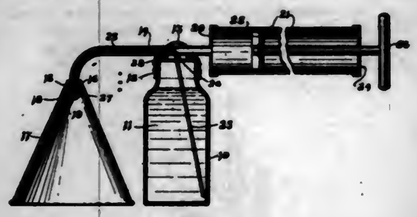


1. In apparatus for transferring hot glassware, the combination of an inclined chute down which articles are carried by gravity, a horizontally traveling conveyor, a table beneath the chute onto which the articles are discharged from the chute, said table being rotatable

about a vertical axis and in substantially the same horizontal plane as said conveyor, and means to guide articles from the table onto the conveyor, the point at which

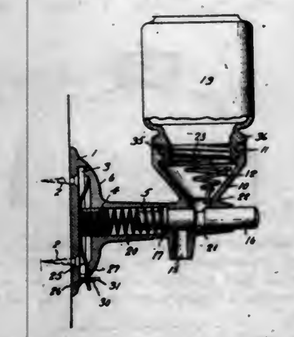
the articles are discharged onto the table being so arranged that the articles are carried on the table through the greater portion of a complete rotation and pass beneath the chute to the conveyor.

1,455,967. DOOR. HENRY H. PALS, Meservey, Iowa. Filed Mar. 8, 1922. Serial No. 541,938. 4 Claims. (Cl. 20—16.)



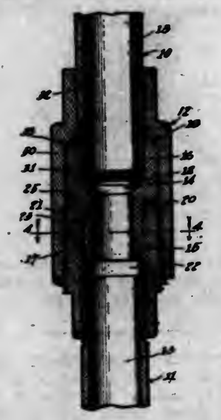
1. A swinging door having a plurality of hinge eyes secured at one edge, a hinge pin extending through said eyes and secured at its opposite ends in a supporting frame, and a U-shaped strip of sheet metal covering said hinge connection and secured to the sides of the door.

1,455,968. INSERTIBLE-TOOTH SAW. ALBERT E. PROCTOR, Bellingham, Wash. Filed Jan. 15, 1921. Serial No. 437,395. 1 Claim. (Cl. 143—141.)



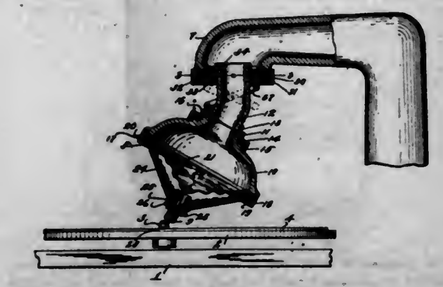
The combination of a saw blade having teeth receiving apertures located between tongue and backing elements of the saw blade, with the forward edges of the tongues being curved, said tongues being resilient and provided at their outer ends with curved rear edges, said back elements being rigid and provided with recesses communicating with the apertures and in opposed relations to the curved portions of the respective tongues, and teeth having shank elements with rearwardly protruding portions to respectively seat within the aforesaid apertures and recesses, one of the exposed edges of the teeth lying in the same plane as the adjacent edge of the backing element, and the other exposed edge of the teeth being curved and continuous with the curvature of the forward edge of the tongue.

1,455,969. EMBALMING-FLUID ATOMIZER. JOSEPH A. RAYDER, Philadelphia, Pa., assignor to The Necrosan Co., Inc., New York, N. Y. Filed Apr. 9, 1921. Serial No. 459,905. 1 Claim. (Cl. 299—89.)



An atomizer for embalming fluids comprising an air pump, a reservoir for the embalming fluid, a cap for said reservoir having an upwardly extending portion, a cone shaped spreader having an internal hemispherical chamber near the apex thereof, an air pipe passing through said upwardly extending portion of the reservoir having one end connected to said air pump and the other end connected to said spreader, and a fluid carrying pipe having a triangular internal cross section, one end of said fluid carrying-pipe terminating within said hemispherical chamber and the other end thereof extending into the reservoir.

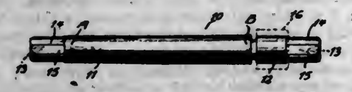
1,455,970. DISPENSING DEVICE. MORRIS C. REBEK, Cleveland Heights, Ohio. Filed Dec. 6, 1920. Serial No. 428,470. 10 Claims. (Cl. 221—94.)



1. In a dispensing device of the character set forth, the combination of an invertible support, a container removably supported thereby, and a lock for securing the container against removal from the support when the support is in normal position, said lock being rendered ineffective by the inversion of the support.

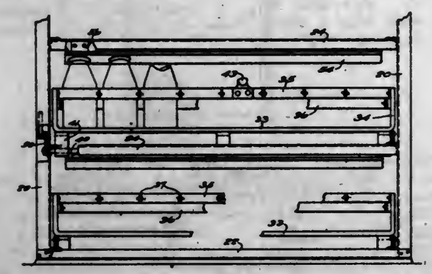
1,455,971. COUPLING. ADOLPH BICKENBACKER and WILLIAM KAMMERER, Los Angeles, Calif. Filed July 21, 1921. Serial No. 486,480. 3 Claims. (Cl. 285—122.)

1. A device for connecting two members comprising, two parts, one screw threaded on the end of each member, and a sleeve for connecting said parts the sleeve having screw threaded engagement with one of said parts, the screw threaded engagements between the members and parts being alike and opposite to that between the sleeve and the part.



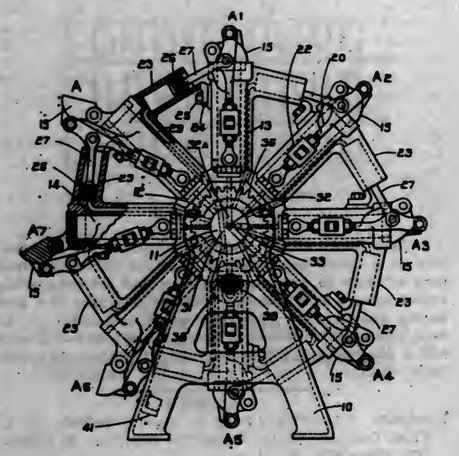
1,455,972. SOUND-BOX STRUCTURE. CARL SCRABIC, Urbana, Ohio. Filed Apr. 28, 1920. Serial No. 377,221. 3 Claims. (Cl. 274—24.)

1. In a talking machine, a tone arm, a sound box connected with the free end of said tone arm, the connection between said tone arm and sound box being formed to constitute an annulus mounted for rotation in a bearing connected with said tone arm, a ring member located within said annulus and pivotally mounted with respect thereto and an extension formed upon the upper end of said sound box and having pivotal connection with said ring member, the pivotal connection between said ring member and sound box being located substantially at right angles to the pivotal connection between the annulus and ring member.



1,455,973. COMBINATION MANDREL AND GAUGE. FRANK J. SIKONOVSKY, Chicago, Ill. Filed Apr. 24, 1922. Serial No. 556,301. 3 Claims. (Cl. 82—48.)

1. A device of the character described comprising the combination in a spindle of a tapered mandrel portion intermediate the ends of said spindle adapted to have work fixed thereon for turning, and a cylindrical gauge portion adjacent the large end of said tapered mandrel

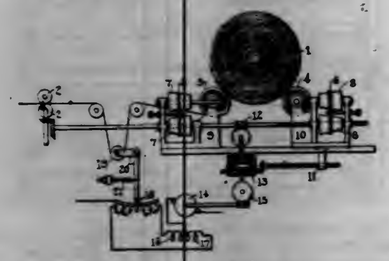


portion, said gauge being of a diameter larger than the small end of said tapered mandrel portion but smaller than the large end thereof.

1,455,974. CONTAINER AND HOLDER THEREFOR. FAUSTIN J. SOLON, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 1, 1921. Serial No. 481,762. 5 Claims. (Cl. 248—53.)

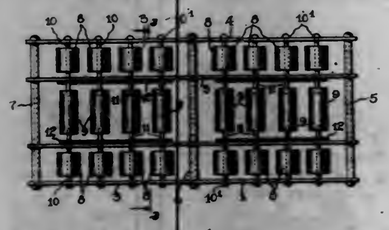
1. The combination of a rack or frame, a holder mounted thereon, a container carried by said holder, said holder being tiltable about an axis beneath the container to swing the container from an upright position, to a forwardly and upwardly inclined position, means to arrest the container at said positions, the container having an inclined open upper end, and an inclined closure device positioned to close the container as the latter swings from a tilted to an upright position.

1,455,975. APPARATUS FOR PUFFING OR DISINTEGRATING MATERIAL. ARTHUR R. SPENCER and WILLIAM J. PLEWS, Cleveland, Ohio. Filed Sept. 24, 1919, Serial No. 325,923. Renewed Oct. 19, 1922. Serial No. 595,675. 21 Claims. (Cl. 99—2.)



2. In a machine of the character described, a rotary member having a plurality of substantially radially dis-

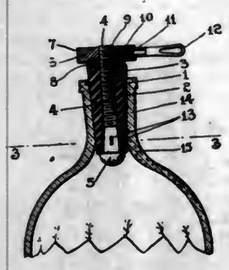
posed treating chambers, and means for supplying a treating fluid to the different chambers as the rotary member is moved through its cycle of movement.



20. In a machine for treating materials, a rotary member having a plurality of substantially radially disposed chambers, each with a hinged cover at one end, means for supplying material to each chamber as it reaches a given position, means for causing the closure of a cover when it reaches another position, means for supplying a treating fluid to the chamber following the closure thereof, and means acting when the chamber reaches another position for causing the cover to be released so that it may be suddenly opened by pressure in the chamber.

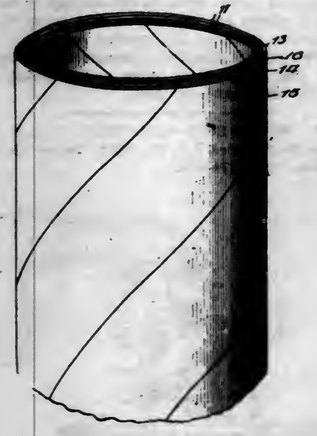
1,455,976. TENSIONING MEANS FOR WEB ROLLS AND OTHER MATERIALS. WILLIAM C. STEVENS, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 1, 1920. Serial No. 378,162. 14 Claims. (Cl. 242—66.)

1. In a device for tensioning material as drawn from or wound upon a roll, in combination, spaced supports for such roll, said supports being relatively movable for varying that pressure component due to gravity which is normal to the contacting portions of such roll and said supports.



1,455,977. CONVEYER. JESSE L. WENTZ, Passaic, N. J. Filed Jan. 6, 1920. Serial No. 349,833. 4 Claims. (Cl. 193—35.)

1. In a device of the character described the combination of a frame comprising a plurality of longitudinal bars arranged in pairs and a plurality of lateral spacing braces, spaced shafts seated in the longitudinal bars and having end sections projecting beyond the inner bar of each pair of bars, rollers mounted loosely on said shafts and a pin engaging a plurality of said shafts to prevent their rotation.

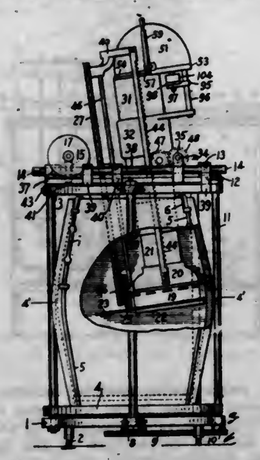


1,455,978. STOPPER. JESSE L. WENTZ, Passaic, N. J. Filed Dec. 22, 1921. Serial No. 524,121. 3 Claims. (Cl. 215—54.)

1. In a device of the character described, the combination of an expansible stopper, a bolt therein provided with a bur to prevent its rotation in the stopper and having a longitudinal key slot, a nut on the bolt adapted

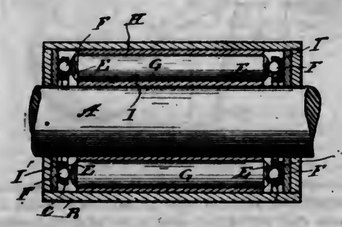
to expand the stopper and a locking device concealed within the nut and including a pin adapted to engage the key slot and means for releasing the pin.

1,455,979. MOISTUREPROOF FIBER CONTAINER GEORGE W. WHEELWRIGHT, Bloomfield, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 18, 1919. Serial No. 290,958. 1 Claim. (Cl. 93—94.)



A composite body for a moisture-proof container consisting of an inner body formed of two plies of paper-like material spirally wound and united together, an outer body formed of two plies of paper-like material spirally wound independently of the winding of said inner body, a fused cement uniting the outer plies of said outer body, and a cylindrically continuous and impervious layer of fused cement entirely enclosing the side of said inner body and permanently uniting said outer body to said inner body.

1,455,980. DISPENSING APPARATUS FOR SEMI-SOLID OR PLASTIC MATERIALS. HARRY W. WILLIAMS, Dayton, Ohio, assignor to Charles F. Gardner, Dayton, Ohio. Filed June 27, 1921. Serial No. 480,684. 45 Claims. (Cl. 221—102.)



1. In an apparatus of the character described, a support for a container, a discharge device to remove the material from said container, one of said parts being rotatable relatively to the other, and means to cause said discharge device to move into said container as it discharges the material therefrom.

10. In an apparatus of the character described, a support for a container, a discharge device to remove material from said container, one of said parts being rotatable relatively to the other, and means for pivotally supporting said discharge device to permit it to follow the contour of the wall of said container.

29. In an apparatus of the character described, the combination with a delivery cup and a piston mounted in said delivery cup, of an indicator comprising a rotatable member, an operative connection between said rotatable member and said piston, and means for adjusting said connection to cause different amounts of movement to be imparted to said rotatable member by a given movement of said piston.

1,455,981. LUBRICATING SYSTEM FOR ROLLER BEARINGS. JOEL V. ZUPNIK, Cleveland, Ohio. Filed Apr. 3, 1922. Serial No. 549,281. 2 Claims. (Cl. 64—62.)

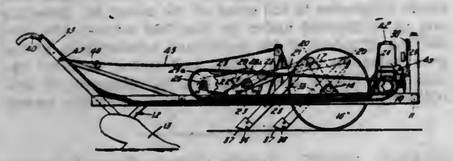
1. The combination with a shaft and housing, of a cage within said housing, comprising, spaced ring plates and connecting tie rods therefor, said ring plates provided with radial slots having bevelled edges, balls radially movable in said slots and projecting therethrough, rollers mounted upon opposed balls in said cage, inner and outer sleeves, enclosing said rollers, and porous washers adjacent to said ring plates in said housing, with which said protruding parts of said ball make contact.

1,455,982. PROJECTION PICTURE SCREEN AND PROCESS OF MAKING SAME. FRANK J. ADAMS, New York, N. Y., assignor, by mesne assignments, of one-half to Edgar J. Marston, Greenwich, Conn., and one-half to H. Armour Smith, Yonkers, N. Y. Filed Apr. 14, 1920, Serial No. 373,962. Renewed Aug. 2, 1921. Serial No. 489,198. 14 Claims. (Cl. 91—68.)

1. A screen for the exhibition of projected pictures, having a reflecting surface of paraffine of such a character as to diffuse substantially all incident light rays.

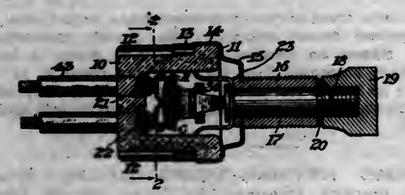
4. A screen for the exhibition of projected pictures fireproofed with ammonium salts and having a surface of paraffine.

5. A flexible starch-loaded screen for the exhibition of projected pictures having a surface of paraffine.



13. The process of making a picture projection screen, consisting in subjecting a flexible fabric to a fireproofing process, thereafter treating the same with a solution of starch, drying the same, and thereafter coating or impregnating it with paraffin wax.

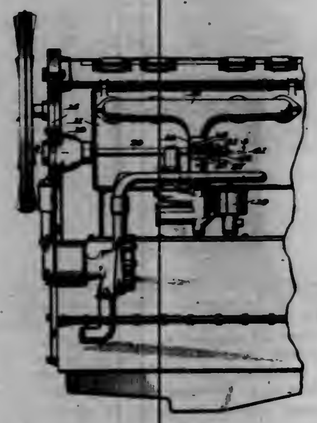
1,455,983. CIRCULAR BOX FOR CIGARS. AARON H. BALLIET, Allentown, Pa. Filed Dec. 26, 1919. Serial No. 347,283. 4 Claims. (Cl. 217—1.)



1. A cylindrical box comprising two walls of separate thin sheets having opposite edges of each sheet extending parallel to the axis, abutting, spaced circumferentially from the abutting edges of the other sheet and, throughout the greater part of their lengths having the edges free from fastening devices intended to hold the edges to each other or to the other sheet, in combination with uniting means holding the sheets at the top and bottom of the box.

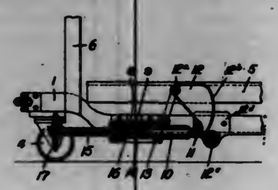
1,455,984. TRACTOR CULTIVATOR. JAMES T. BARKLEW, Monterey Park, Calif. Filed Sept. 11, 1918. Serial No. 253,494. 10 Claims. (Cl. 180—8.)

1. In tractor mechanisms, a frame, a pivoted diagonal pusher leg movable with relation to the frame; and mechanism, to which the pusher leg is pivoted, mounted on the frame for moving the pusher leg longitudinally; the longitudinal center of gravity of said mechanism and frame being substantially in vertical alignment with the medial position of the upper end of said pusher leg.



1,455,985. ELECTRIC SWITCH. RALPH A. BELMONT, New York, N. Y., and JOHN B. DOWNING, Newark, N. J., assignors to Beaver Machine & Tool Company, Newark, N. J., a Corporation of New Jersey. Filed Apr. 19, 1921. Serial No. 462,666. 11 Claims. (Cl. 200—76.)

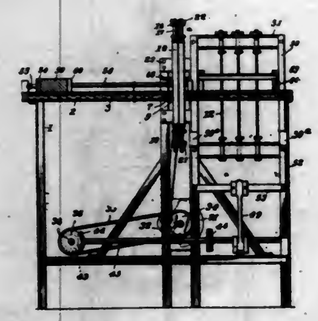
1. In an electric switch, terminals, a reciprocating member, means for actuating the same, and a contact



member carried by the reciprocating member and having overlapping resilient arms for contacting with the said terminals.

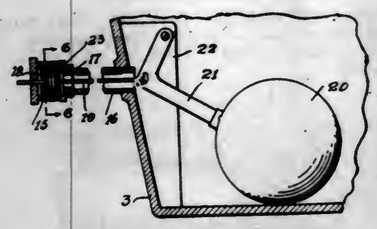
1,455,986. HYDROCARBON MOTOR. WALTER E. BLAINE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 8, 1917. Serial No. 185,141. 6 Claims. (Cl. 264—20.)

1. The combination with a hydrocarbon motor having gearing at one end thereof, an intake manifold at one side with a depending stem and a valve for controlling the flow of explosive mixture in said stem; of automatic means responsive to the speed of the motor for actuating said valve disposed under the manifold between the stem and the cylinders of the motor and substantially at the same elevation as the valve, and means to drive the automatic means from said gearing disposed at substantially the same elevation as the automatic means.



1,455,987. TRUCK. JOSEPH CYRILLE EMILE BOURASSA, Montreal, Quebec, Canada. Filed Nov. 8, 1919. Serial No. 336,565. 3 Claims. (Cl. 254—5.)

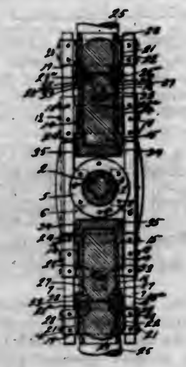
1. In a truck of the class described, a main frame, a superposed frame, swinging links directly connecting said frames, an abutment on the main frame, a cam pivotally suspended from the superposed frame so as to allow its face to rest on said abutment, and means pressing on the cam to cause said face to travel on said abutment.



1,455,988. ICE-CREAM-CUTTING MACHINE. SILAS D. BRACKEN, Johnstown, Pa. Filed Mar. 15, 1922. Serial No. 543,906. 8 Claims. (Cl. 107—21.)

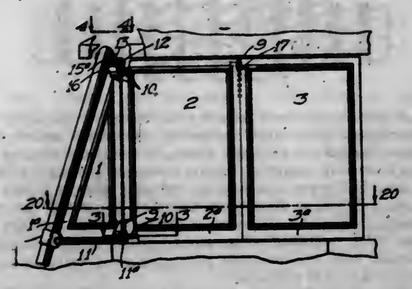
1. An ice cream cutting machine including a frame, a table supported by the frame and adapted to receive a slab of ice cream and provided with means for circulating a temperature controlling medium to prevent the slab of ice cream from freezing to the table, and a vertical movable cutter operated through the table, said temperature controlling means being located in advance and in rear of the cutter.

7. An ice cream cutting machine, including a frame, a table supported by the frame, transverse and side cutters, a front slide movable lengthwise of the machine, a rear slide movable transversely of the machine, said slides having beveled portions arranged to overlap, and means for guiding the slides.



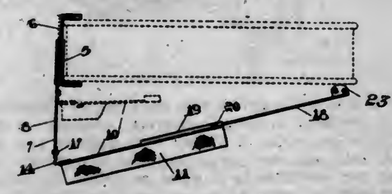
1,455,989. HOG-WATERING TROUGH. THURMAN CARMICHAEL, Marysville, Mo. Filed Feb. 1, 1922. Serial No. 533,317. 1 Claim. (Cl. 137—104.)

In a device of the class described, in combination, a liquid receptacle, an inlet pipe to said receptacle, a filter having one end secured to said inlet pipe, the other end of said filter being provided with a bearing opening, a valve rod extending through said filter and pipe and reciprocally mounted in the opening, a valve seat formed by narrowing the mouth of said inlet pipe adjacent the said filter, a valve disc permanently fastened to said valve rod and adapted to coact with the seat for opening and closing the valve, said filter including ribs onto which a screen of fine mesh is permanently fastened for the purpose of keeping out foreign matter, and float means to actuate the said valve.



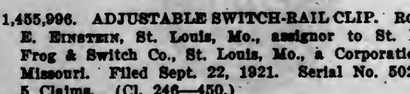
1,455,990. ADJUSTABLE-PITCH PROPELLER FOR AIRPLANES. SAMUEL W. CARTER, Washington, D. C. Filed Aug. 18, 1921. Serial No. 492,040. 4 Claims. (Cl. 170—163.)

1. The combination with a bearing sleeve disposed on the butt of a propeller blade, of means for securing said sleeve on said butt, said means comprising oppositely disposed blocks extending through openings in the sleeve and into registering recesses in the butt, marginal flanges carried by the blocks and engaging the sleeve for limiting



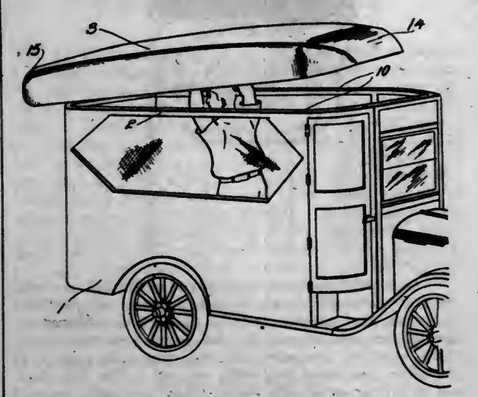
the inward movement of the blocks, and bolts extending through the butt and connecting together the oppositely disposed blocks.

1,455,991. COMBINED WIND DEFLECTOR, SUNSHADE, AND SIDE INCLOSURE FOR VEHICLES. CLARENCE E. CHILDS, Palo Alto, Calif. Filed Jan. 14, 1920. Serial No. 351,382. 22 Claims. (Cl. 296—45.)



5. A vehicle top side inclosure, including a multiple axis supporting means, a panel member secured to a portion of said multiple axis supporting means at only one of the normally upper corners of said panel member, a socket means secured to the vehicle adapted to receive the free end of said panel member for supporting the lower end when said panel member is in a vertical position.

1,455,992. SHOULDER REST FOR VIOLINS AND THE LIKE. OLIVER S. COLBENTSON, Toronto, Ontario, Canada. Filed June 2, 1921. Serial No. 474,552. 8 Claims. (Cl. 84—278.)



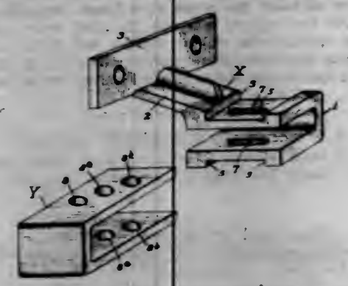
5. A shoulder rest for violins and the like comprising a clamp; a shoulder rest support carried thereby adjustable on the clamp to and from the back of the violin; a plate on said support forming a shoulder rest; a pad on said rest adjacent the support; a hinge connecting the plate and the support whereby the plate may rock on an axis longitudinal of the violin; and spring means tending to hold the distant end of the plate in contact with the back of the violin with which the device is used.

1,455,993. NECKLACE-FASTENING DEVICE. PATRICK JOSEPH CONWAY, Providence, R. I. Filed June 30, 1922. Serial No. 571,978. 3 Claims. (Cl. 24—123.)

1. In a fastening device, a tubular body, sleeves adapted to screw into said body, said sleeves being hollow to receive the ends of a necklace cord so that the cord may be tied by the respective ends on the inside thereof.

1,455,994. VEHICLE TOP AND BOAT. JOHN A. COWAN, Kansas City, Mo. Filed July 15, 1921. Serial No. 484,860. 2 Claims. (Cl. 296—137.)

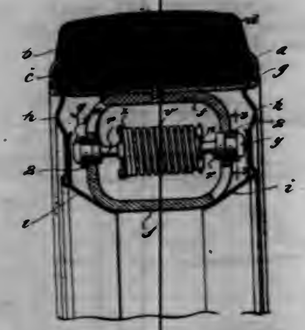
1. The combination with a vehicle having an inclosing body comprising side walls, and end walls, and a boat, the shape and size of which conforms to the contour of the upper edge of the body so that the boat can be applied to the top of the body to constitute a roof, the boat being removable therefrom to function as such.



1,455,995. BLEACHING EARTH. CARL CRAMER, Zurzach, Switzerland. Filed Feb. 27, 1922. Serial No. 539,714. 2 Claims. (Cl. 252.)

1. A process for obtaining bleaching earths having a high bleaching effect by treating aluminium hydro-silicates with an acid, consisting in mixing the aluminium hydro-silicates with dilute hydrochloric acid and emulsifying the resulting mixture intensely in the cold.

1,455,996. ADJUSTABLE SWITCH-RAIL CLIP. ROBERT E. EINSTEIN, St. Louis, Mo., assignor to St. Louis Frog & Switch Co., St. Louis, Mo., a Corporation of Missouri. Filed Sept. 22, 1921. Serial No. 502,322. 5 Claims. (Cl. 246—450.)

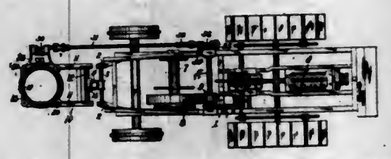


3. An adjustable switch clip, comprising a stationary part that is adapted to be connected to a movable switch rail, and a transversely adjustable element on said part

having provision for enabling a switch rod to be connected to same at a number of points, said element being

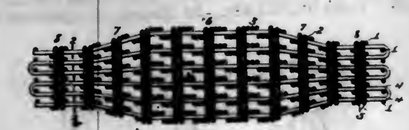
so constructed that it can be reversed end for end for the purpose described.

1,455,997. SPRING RIM. PETER EISENBACH, Detroit, Mich. Filed Apr. 17, 1922. Serial No. 553,913. 11 Claims. (Cl. 152—37.)



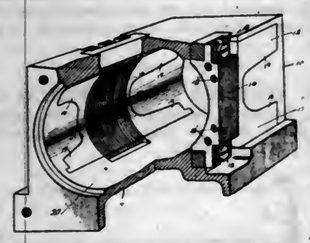
1. In a traction wheel, a composite spring rim comprising a tire channel, a pair of flanged rings, one arranged in concentric relation within the other, compression spring elements connecting the same and tending to resist eccentric movement of one ring with respect to the other, the outer ring being secured to the tire channel, a pair of outer side spring rings detachably secured to the tire channel, a pair of inner side spring rings secured to the inner first mentioned ring, the side rings at each side having spring contact, but in sliding relation, to permit the eccentric movement of the parts of the wheel and at the same time housing the first mentioned rings and the springs.

1,455,998. CALLING-DEVICE ATTACHMENT. FREDERICK W. FAHRENFELD, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 1, 1920. Serial No. 378,242. 8 Claims. (Cl. 179—90.)



1. A tensioned protecting ring for a calling device, formed from steel and having a groove adapted to engage the outer edge of said device under its own tension, to protect the finger-hole dial and prevent the bending or damaging of said dial.

1,455,999. ATTACHMENT FOR PIPE-PULLING MACHINES. LOUIS W. FETZER, Findlay, Ohio, assignor to The Traction Machine Company, North Baltimore, Ohio, a Corporation of Ohio. Filed Mar. 13, 1922. Serial No. 543,346. 6 Claims. (Cl. 255—35.)



1. In combination, a support, a horizontally disposed bracket frame projecting from and carried by the support, a second frame adjustably mounted on the bracket frame, an annular member mounted on and guided by the second frame for rotary movements, and means for imparting rotation to the annular member.

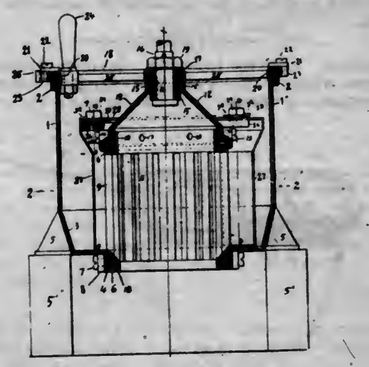
1,456,000. CONVEYER BELT. WILLIAM C. FISHER, Middletown, Conn., assignor to Russell Manufacturing Company, Middletown, Conn. Filed June 5, 1919. Serial No. 302,009. 1 Claim. (Cl. 139—9.)

A woven conveyer belt consisting of a plurality of interwoven plies and containing the same number of plies throughout, each ply having a maximum amount of warp thread material in its central portion, a less number of warp threads in its side portions, and a number of warp threads in the portions of the belt between said central portions and side portions which is less than the number of warp threads in said central portion and greater than the number of warp threads in the said side portions.

1,456,001. MAGNETO. HARRY FORREST GEIST, Sumter, S. C. Filed Sept. 2, 1919. Serial No. 321,065. 9 Claims. (Cl. 171—209.)

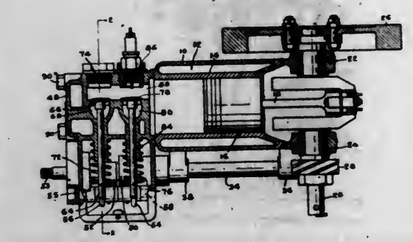
1. In a wound armature type magneto, the combination of a revoluble armature, carrying windings, a field structure comprising a frame, field magnets and pole shoes, said pole shoes being composed of magnetic material and substantially I shape to reduce the central polar magnetic areas without reducing the length of the polar tip edges.

6. In a wound-armature type magneto, the combination of a field structure comprising field magnets and pole



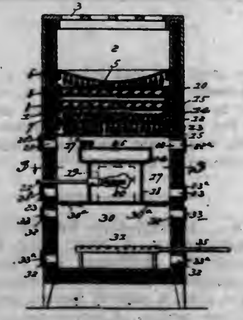
shoes, said shoes being composed of central laminated portions and end portions provided with laterally extended polar tips; and an armature comprising a core carrying primary and secondary windings, said core comprising a laminated web portion of a width substantially equal to that of the laminated portions of said field pole shoes, and extended pole faces of a length substantially equal to that of said polar tips.

1,456,002. MACHINE FOR SETTING FASTENERS. SYLVESTER L. GOOKIN, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed June 15, 1918, Serial No. 240,202. Patent No. 1,371,364, dated Mar. 15, 1921. Divided and this application filed June 30, 1920. Serial No. 392,910. 10 Claims. (Cl. 218—15.1.)



4. In a fastener-setting machine, two raceways constructed and arranged to carry different styles of fasteners, a single hopper arranged to supply both raceways, said types of fasteners being adapted to become nested within one another, said hopper being constructed and arranged to supply fasteners of only one style to one of the raceways, and an agitator constructed and arranged to stir up the mass of fasteners and thereby to disengage those fasteners which have become nested.

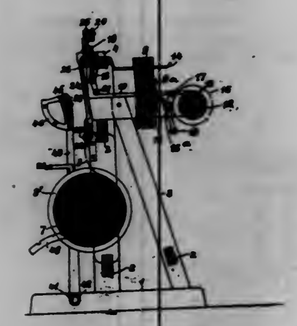
1,456,003. GRAIN-CUTTING MACHINE WITH AUTOMATIC SCOOPS. DAVID GUELBAUM, Syracuse, N. Y. Filed Jan. 24, 1923. Serial No. 614,589. 5 Claims. (Cl. 83—6.)



1. A grain cutting machine, comprising a grain hopper with an offset flanged top supporting the rim of a hand wheel and having a tapered bottom with an open neck in centre, a stationary slotted cylinder fastened inside of said hopper and a rotating slotted cylinder with sharp cutting edges inside of said stationary cylinder, a cone shaped cover with its top fastened to the hub of said hand wheel and holding fast in its bottom the top of said rotating cylinder, scoops for thrusting the grains into the slots of said stationary cylinder, means for supporting said scoops and automatically adjusting them to the direction of rotation of said hand whel, substantially as and for the purpose specified.

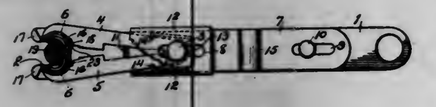
1,456,004. INTERNAL-COMBUSTION ENGINE. GEORGE E. GUNTHER, St. Paul, Minn. Filed Apr. 12, 1920. Serial No. 373,137. 2 Claims. (Cl. 123—82.)

2. An internal combustion engine comprising a casing, a cylinder within said casing, a piston within said cylinder, driving connections associated with said piston at one end of said cylinder, a shaft driven by said connections, a head member detachably secured to said casing at the other end of said cylinder whereby access may be had to the latter, inlet and outlet valves having stems in said head member, springs surrounding said valve-stems, a cam shaft for operating said valves, said cam shaft being mounted in said head member and detachably connected to said first-mentioned shaft, rocker-arms interposed between said cam shaft and said valve stems, a rod upon which rocker-arms are mounted, a bearing for said cam-shaft detachably secured to said head member, said bearing having a flange for retaining said rod when the bearing is secured in place, and a cap detachably secured to said head member whereby access may be had to said springs and said rocker arms.



1,456,005. INCUBATOR. JACK HARRIS, Oklahoma, Okla. Filed July 24, 1922. Serial No. 577,139. 6 Claims. (Cl. 119—35.)

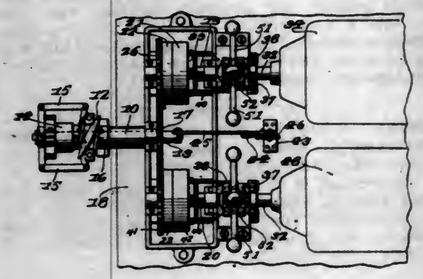
1. In an incubator, a casing having a hen compartment at its upper end including a nest, an egg tray compartment below the nest compartment, a heat com-



partment in the lower portion of the casing including a heater, for keeping the interior of the incubator warm and at the proper temperature to hatch the eggs.

1,456,006. MACHINE FOR UNITING TOGETHER THE THREADS OF TWO WARPS. ROBERT HARTMANN, Uster, Switzerland. Filed Mar. 25, 1921. Serial No. 455,433. 20 Claims. (Cl. 28—49.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a machine for uniting the threads of two warps, the combination of two pairs of clamping bars for holding the warps vertically side by side, a knotting mechanism situated straddlewise over the clamping bars, a carriage carrying the knotting mechanism and being guided by the clamping bars serving for holding the warps, means for causing the carriage to travel intermittently and across the length of the warps, a beam supporting the clamping bars for the old warp and removably mounted on the machine framing, in such a manner, that this beam together with the clamping bars, and the parts carried by the latter can be lifted off the machine framing and placed upon a loom for the purpose of knotting a fresh warp therein.

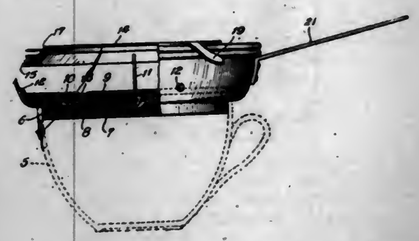


1,456,007. VALVE-STEM-KEY TOOL. FREDERICK C. HARTSON, Rosedale, Kans., and GEORGE A. DONATH, Kansas City, Mo. Filed Apr. 28, 1921. Serial No. 465,307. 13 Claims. (Cl. 29—86.1.)

1. A valve stem key tool comprising a shank having in one end a notch adapted to receive a valve stem, two jaws pivoted to said shank and having means for gripping a valve key and applying it to a valve stem disposed in said notch, and means for opening and closing said jaws, substantially as set forth.

1,456,008. AEROPLANE PROPELLER. ALFRED NUANES, Albuquerque, N. Mex. Filed Feb. 24, 1922. Serial No. 538,928. 2 Claims. (Cl. 244—25.)

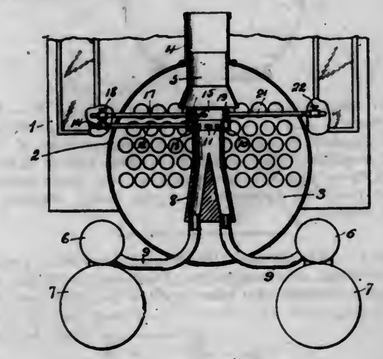
1. In an aeroplane driving mechanism, a propeller shaft having a gear, a pair of motors each including a divided shaft one portion of which has a gear engaged with the propeller shaft gear, a clutch element on the last-named gear, a governor for each motor including a rotatable hollow shaft, a rod slidable through the hollow shaft, driving connections between the divided shaft and the hollow shaft, a rock shaft, a clutch element slidable on the gear carried portion of the divided shaft, con-



nections between the slidable rod and the rock shaft, and connections between the slidable element and the rock shaft.

1,456,009. AUTOMATIC LUBRICATING DEVICE FOR REMOTE MOVABLE AND OTHER PARTS. JOHN V. RICE, Jr., Bordentown, N. J., assignor to Rice Gas Engine Company, Bordentown, N. J., a Corporation of New Jersey. Filed Aug. 28, 1920, Serial No. 406,723. Renewed Mar. 13, 1923. 6 Claims. (Cl. 184—6.)

6. The combination with a moving rod or the like mechanical part, having a chamber thereof of a differential character, a plug in the outer and larger part of said chamber, said plug having a cavity therein and an opening leading to the cavity, a primary spring-provided ball valve controlling said opening, a free pumping member in the part of the chamber of smaller diameter, said member having a cavity therein and a passage leading from the cavity in the plug, and a secondary spring-provided ball valve controlling the passage in the plunger, said valves operating automatically and alternately during the reciprocations of the parts to lift the lubricant and feed it forward for use while the mechanism is running.



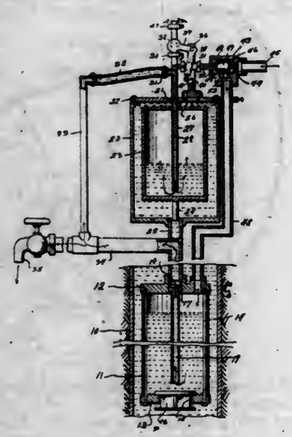
1,456,010. COFFEE INFUSER. ISAAC D. RICHHEIMER, New York, N. Y. Filed Mar. 27, 1922. Serial No. 547,210. 5 Claims. (Cl. 53—3.)

1. A coffee infusing device comprising a receptacle open at the top and having a perforated bottom, and a

cover adapted to engage said top for closing the receptacle, said cover having a substantially flat central portion of extended area, a depressed ring between the central portion and the edge of the cover, and an annular shoulder between the depressed portion and the central portion, said annular shoulder forming a support for the receptacle when the cover is arranged in inverted position and spacing the bottom of the receptacle from the central portion of the cover.

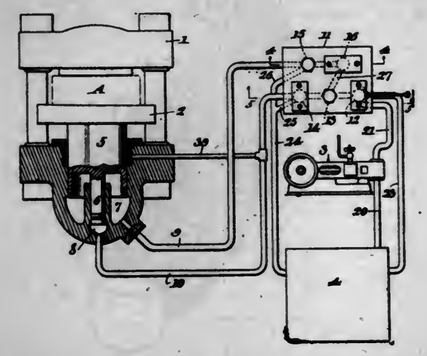
1,456,011. GAS GUARD AND LUBRICATOR FOR STEAM ENGINES. JOHN P. RYDER, Kansas City, Mo. Filed Dec. 13, 1920. Serial No. 430,368. 5 Claims. (Cl. 121—137.)

1. In an apparatus of the kind described, the combination with the boiler, steam chest and exhaust conductor of an engine, of means by which steam from the boiler may be forced through the exhaust conductor toward the steam chest, substantially as set forth.



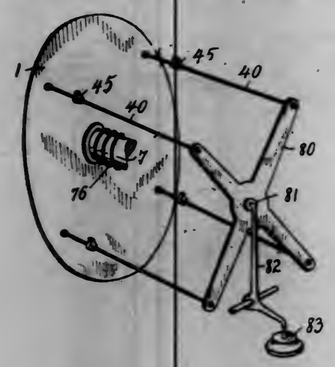
1,456,012. CORN-SNAPPING MACHINE. EDWARD SAUNDERS, Denver, Colo., assignor of forty-nine one-hundredths to Harry Buxton, Denver, Colo. Filed May 4, 1922. Serial No. 558,457. 3 Claims. (Cl. 56—63.)

1. A corn snapping machine, comprising a framework, an axle, and a pair of wheels upon which said framework is supported, a pair of forwardly and downwardly projecting members spaced to form a slot between them, and having their rear ends pivotally mounted on said axle, said members adapted to straddle a row of corn stalks, a sickle near the rear end of said slot, said sickle being adapted to sever an ear of corn from the stalk, means for moving said sickle, an elevator, means for operating said elevator, a roller carried by the forward ends of said members, and means for adjusting the height of the front ends thereof.



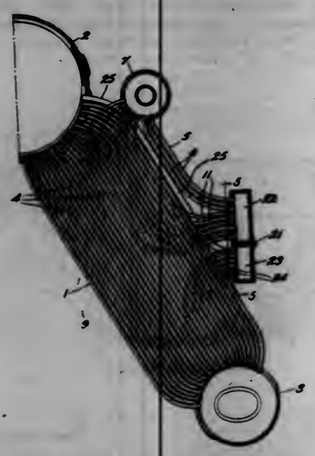
1,456,013. PNEUMATIC PUMP. THOMAS E. SMYTHE, Grand Rapids, Mich. Filed July 30, 1921. Serial No. 488,593. 14 Claims. (Cl. 103—248.)

1. In pneumatically operated mechanism, a fixed liquid filled tank, a hollow air-tight float therein, a fixed liquid receiving tank, and means operated by the full rise of the float causing the discharge of a portion of the liquid in the receiving tank into the float to thereby compress the air in the upper portion of the float and cause the



float to sink, and means operated upon the full downward movement of the float causing the filling of the receiving tank and permitting the discharge of water from the float by the air compressed therein.

1,456,014. MEANS FOR OPERATING PRESSES. FRANCIS E. STEVENSON, Mount Gilead, Ohio, assignor to The Hydraulic Press Manufacturing Company, Mount Gilead, Ohio. Filed Nov. 19, 1921. Serial No. 516,508. 13 Claims. (Cl. 138—17.)

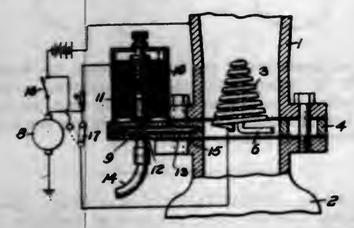


1. The combination of small and large rams working in small and large cylinders respectively, and a fluid-circulating system for applying pressure thereto comprising a pump, a reservoir, a valve casing, a line of communication from the pump through the valve casing to the small cylinder, valve in said line freely opened by pressure, a line of communication to the large cylinder branching from said first line, a spring-closed valve therein which opens only after a predetermined pressure has been reached in the first line, and a line of communication branching from said second-named line between the spring-pressed valve and the large cylinder and leading to the reservoir, a valve therein freely opened by suction from the large cylinder but automatically closed as soon as the spring-pressed valve is opened.

1,456,015. SELF-INDICATING TARGET. ANTON VANGEN, Vestmarken, Norway. Filed Aug. 29, 1922. Serial No. 585,051. 2 Claims. (Cl. 124—15.)

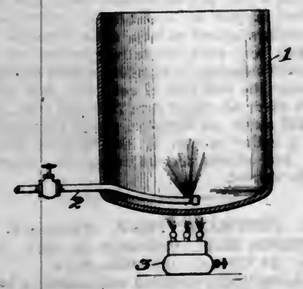
1. A self-indicating target comprising a target section, and an auxiliary section behind the latter, both capable of axial and tilting movement, a plurality of parallel rods connected to the sections near the outer portions thereof, and an indicating device operable by the axial movement of the auxiliary section.

1,456,016. LIQUID HEATER AND VAPORIZER. CHARLES E. WARD, Charleston, W. Va. Filed Mar. 14, 1921. Serial No. 452,044. 7 Claims. (Cl. 122—478.)



1. In a steam boiler the combination of an upper and a lower drum; a set of steam generating tubes joining said drums inclined to a horizontal plane and so arranged as to provide a plurality of open-ended lanes extending lengthwise of said tubes and transversely of said drums; an upper and a lower superheater receptacle, said lower receptacle being disposed sufficiently above said lower drum as to occupy substantially the same vertical plane as said lower drum; a set of superheater tubes joining said superheater receptacles arranged in a plurality of rows and adapted to enter and occupy a portion only of the length of said lanes; and means adapted to occupy another portion of the length of said lanes and to prevent hot gases from passing therethrough, substantially as described.

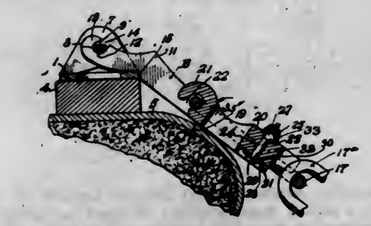
1,456,017. ATTACHMENT FOR SLOP JARS AND THE LIKE. CHARLES W. WEAVER and ALICE H. WEAVER, Denver, Colo.; said Charles W. Weaver assignor to said Alice H. Weaver. Filed Feb. 17, 1922. Serial No. 537,253. 2 Claims. (Cl 215—37)



1. In combination, a vessel, a cover adapted to be applied thereto, said cover having an outwardly extending flange adapted to contact with the upper edge of the vessel, a resilient ring U-shaped in cross section applied to said flange and adapted to separate the lower surface thereof from the upper edge of the vessel, whereby a seal is formed.

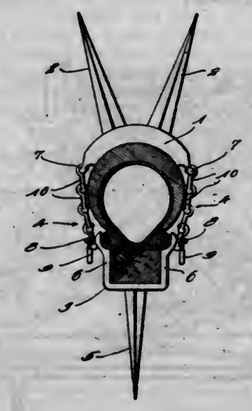
1,456,018. INTERNAL-COMBUSTION ENGINE. EDWIN L. WIEGAND, Pittsburgh, Pa. Filed July 2, 1920. Serial No. 393,552. 2 Claims. (Cl. 123—122.)

1. The combination with an internal combustion engine of an electric starting motor, of means for spraying an inflammable fluid into a pipe connected to the combustion chamber, an electrically controlled means for controlling the spraying means, an electrically heated device, arranged in said pipe intermediate the point of entrance of the spray and the engine and a switch for controlling said several mechanisms.



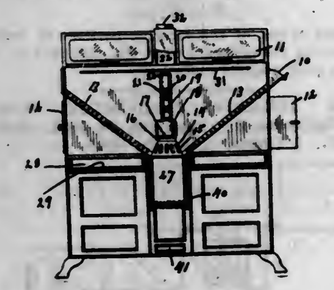
1,456,019. PROCESS FOR EXTRACTING OIL. HARTLEY A. WENTWORTH, Deer Island, New Brunswick, Canada. Filed Oct. 4, 1920. Serial No. 414,525. 1 Claim. (Cl. 87—12.)

A process for extracting oil comprising putting twenty-five gallons of fish matter into a receptacle, then injecting



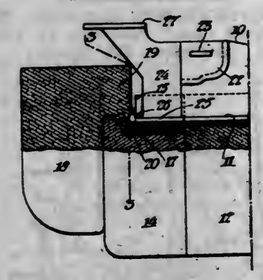
live steam into the fish matter and heating said fish matter to the boiling point, and then shutting off the steam, then thoroughly stirring a mixture of ten pounds of seventy-six per cent caustic soda in three gallons of water in the steam treated fish matter, then adding to the mixture one gallon of sixty degrees of commercial sulphuric acid by pouring the acid in very slowly while continually stirring the mixture, and then allowing the mixture to stand undisturbed for a period, the oil then being removed, all substantially as described.

1,456,020. HAME TUG. THOMAS W. GRAHAM, Blue Mountain, Miss. Filed Jan. 29, 1920. Serial No. 354,952. 9 Claims. (Cl. 54—30.)



1. A trace connection for a hame tug including a web portion, a boss thereon terminating at one end in a hook, the boss being of a shape and dimensions to substantially fill the opening of a trace chain link engaged with the said hook.

1,456,021. AUTOMOBILE WHEEL LOCK. DANIEL A. HEDGLIN, San Francisco, Calif. Filed Feb. 18, 1921. Serial No. 445,970. 2 Claims. (Cl. 70—90.)

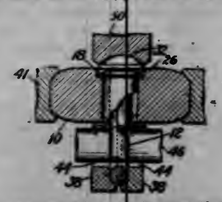


1. An automobile wheel lock of the type specified comprising a substantially arcuate tire tread engaging member for transverse disposition on the tire, said member having comparatively small heads at its opposite ends spaced from the body portion and connected thereto through the medium of necks, ground-engaging means carried by said tread member, a substantially U-shaped wheel rim engaging member having comparatively long side portions or arms having their extremities shaped to engage the tire rim, eyes carried by said extremities, connecting chains having their end links engaged with the aforesaid heads and said eyes respectively, padlocks for co-operation with said eyes to connect the adjacent end links therewith, and a spur integral with the intermediate or connecting portion of the wheel rim engaging member, said spur being intended for disposition between the spokes of the wheel and having its free end directed toward the hub of the wheel, said spur serving to prevent rotation of the device in the manner described.

1,456,022. DESICCATING AND INCINERATING RANGE. NEVIL MONROE HOPKINS, New York, N. Y. Filed May 25, 1921. Serial No. 472,563. 6 Claims. (Cl. 126—222.)

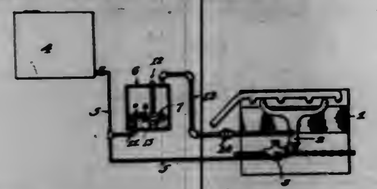
1. In a cook stove, adapted to desiccate garbage, the combination of a lower body portion; an enclosed garbage desiccating chamber above said body portion; a chute for receiving the garbage located in said chamber; a compartment in said chamber below said chute; a member located in said chamber provided with perforations through which hot gases may pass into said chamber; and a baffle disposed in the upper portion of said chamber around which said gases may escape.

1,456,023. FURNACE ARCH CONSTRUCTION. LOUIS H. HOSBEIN, Chicago, Ill., assignor to M. H. Detrick Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1918. Serial No. 224,749. Renewed May 9, 1921. Serial No. 468,047. 12 Claims. (Cl. 110—95.)



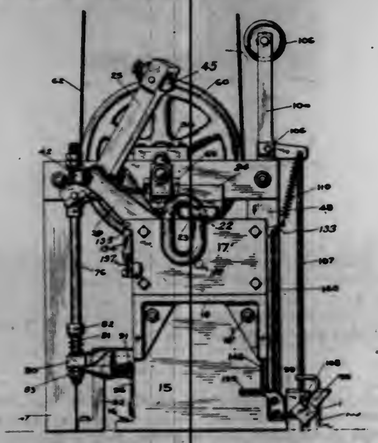
6. In an end bracket for arch bars, a body having a basal brick-supporting flange extending longitudinally of and beyond one end of the body, the extension of said flange having at its outer end an up-standing brick-locking projection, and said body having means whereby the bracket may be affixed to an arch bar.

1,456,024. METHOD OF ASSEMBLING BUTTONS. ALBERT LATHAM, Beverly, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed Dec. 6, 1919. Serial No. 342,968. 15 Claims. (Cl. 79—2.)



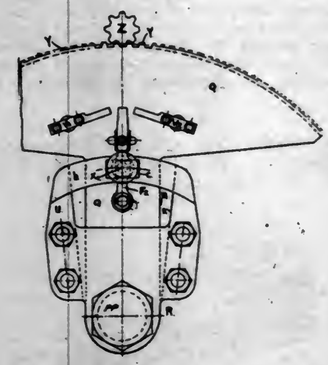
1. The method of assembling a button having a body portion and securing portions, which consists in bring-

ing the securing portions into co-operation within the body portion, and exerting pressure upon the opposite



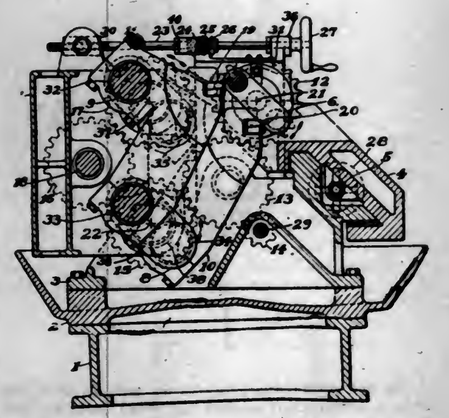
extremities of one of the securing portions to expand it while leaving the elements over the exposed face of the button in their original condition.

1,456,025. AUXILIARY CARBURETOR. HARRY M. LEE, Chillicothe, Ill. Filed Feb. 20, 1922. Serial No. 538,120. 2 Claims. (Cl. 123—134.)



1. The combination with the intake manifold of an internal combustion engine and a fuel tank for supplying fuel to the carburetor of the engine, of a second tank a pipe connecting the first named fuel tank with the said carburetor, a branch pipe connecting said pipe with the said second tank, a valve to control the flow of fuel through said branch pipe, a float in said second tank in control of the valve for maintaining a substantially fixed level of the fuel, a compartment in said second tank separate from that having the float but communicating therewith, a pipe depending at one end into the fuel of said compartment and extending into the atmosphere at the other end, and a conduit connecting the said second tank above the fuel with the intake manifold.

1,456,026. CHAIN-WELDING MACHINE. THOMAS C. LUCE, Stratford, Conn. Filed June 18, 1919. Serial No. 305,170. 53 Claims. (Cl. 59—31.)

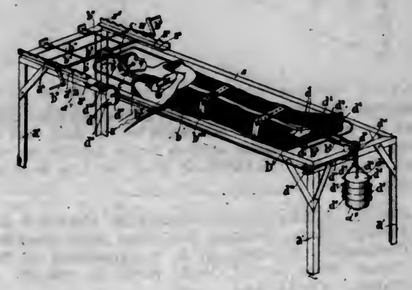


1. In a chain welding machine, an anvil, two vertically swinging hammers mounted to deliver blows upon the same face of work on said anvil, and means to selectively operate either of said hammers.

1,456,027. AUTOMATIC CIRCUIT CLOSER. JOHN MACKINTOSH, Paisley, Scotland. Filed Aug. 24, 1920. Serial No. 405,662. 1 Claim. (Cl. 200—17.)

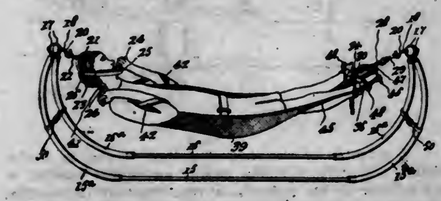
A movable member, spaced electric contacts carried thereby, a switch finger pivotally mounted on said movable member for movement between and to either of the contacts, yieldable means to normally hold said finger out of contact, and means to limit the extent of movement of said movable member and to also move said finger into contact with one of said electric contacts according to the direction of movement of said movable member.

1,456,028. MACHINE FOR TURNING CRANK PINS OF CRANK SHAFTS. KARL FREDERICK MARX, Detroit, Mich. Filed Nov. 22, 1920. Serial No. 425,870. 4 Claims. (Cl. 82—9.)



1. In a metal working machine, means for causing a piece of work to move in a circumferential path, a tool, an angular tool holder having a short arm and a long arm with the tool at the juncture of said arms, and means engaging an end of each arm of said angular tool holder for maintaining said holder vertical and for causing said tool in its holder to travel in a circumferential path having an eccentric relation to the first mentioned path so that the tool may constantly operate upon the piece of work.

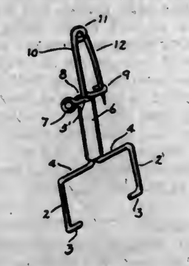
1,456,029. AUTOMATIC PACKAGE SEPARATOR FOR CONVEYER SYSTEMS. THOMAS M. MILLS and JOHN T. CLARK, Fresno, Calif.; said Mills assignor to said Clark. Filed Aug. 22, 1922. Serial No. 583,621. 11 Claims. (Cl. 193—35.)



1. A conveyer table comprising a plurality of sets of rollers, the rollers of each set being so mounted that a plane passing centrally through all of said rollers is slightly inclined to the horizontal.

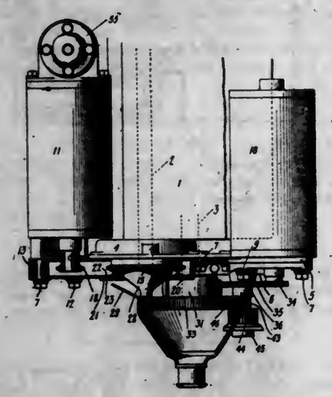
1,456,030. APPARATUS FOR PHYSICAL CULTURE. WALTER DAVID MOLBY, Baldwin, Kans. Filed Mar. 16, 1921. Serial No. 452,878. 11 Claims. (Cl. 46—69.)

2. An apparatus for physical culture comprising a frame, a pair of coaxially and freely pivoted supports in the frame adapted to engage the head and feet of the body of the operator for suspending his body and permitting of the turning and twisting of the body by exercising contortions of the operator, and means for exerting a tension on one support to stretch the body.



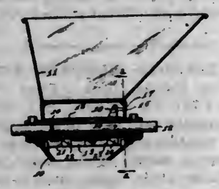
1,456,031. PHYSICAL-CULTURE APPARATUS. WALTER DAVID MOLBY, Baldwin City, Kans. Filed Sept. 3, 1921. Serial No. 498,352. 11 Claims. (Cl. 46—69.)

1. In physical culture apparatus, a frame having resilient spaced upright end portions, and freely pivoted means carried by said end portions for engaging the opposite extremities of the body of the operator for suspending his body between said upright portions and permitting the free twisting bending and turning of the body by the exercising contortions of the operator.



1,456,032. SEWING ACCESSORY. VIRGINIA VESTA MOORE, Los Angeles, Calif. Filed May 16, 1922. Serial No. 561,299. 4 Claims. (Cl. 242—136.)

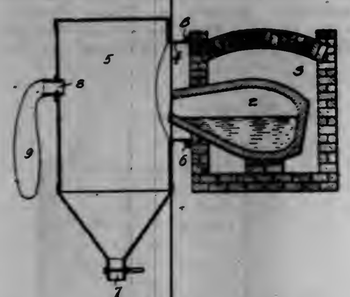
1. A spool holder comprising a pair of shank members provided with spool hooking end portions, one of the shanks having a thread guide at one end, the other shank being provided with a safety pin portion, and



means for fastening the shanks in substantially closed parallel position.

1,456,033. ELECTRIC STARTING AND GENERATING APPARATUS. WILLIAM B. MOSES, Portland, Me. Filed Mar. 30, 1917, Serial No. 158,547. Renewed Oct. 4, 1922. Serial No. 592,442. 20 Claims. (Cl. 290—37.)

6. In apparatus of the character described in combination, a two unit starting and generating system comprising means extending outwardly at opposite sides of the front of an engine adapted to support the units, said means having rear attaching faces, a generator unit mounted on said means with an end abutting one of said faces, a motor unit mounted on said means with an end abutting another of said faces, and power transmission devices for connecting said units with the crank shaft of the engine.



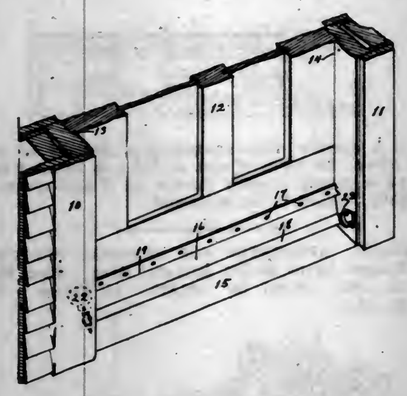
1,456,034. FEED CUTTER. ALBERT G. NEWMAN, Stanhope, Iowa. Filed Sept. 27, 1921. Serial No. 503,646. 1 Claim. (Cl. 83—6.)

In a feed cutting mill, a device for cutting ears of corn or the like comprising a rotary body portion, a

series of cutting blades extending outwardly from said body portion and said blades being arranged spirally around the body portion, a stationary coacting cutting member comprising a body portion and a series of blades, the alternate ones of said blades being elevated above the other, said parts being so arranged and proportioned that when an ear of corn or the like enters between the blades, one of the rotating blades will first engage the ear of corn and tilt it to position so that part of the ear of corn is resting upon the lower stationary blades and a part on one of the upper stationary blades so that when the cut is completed the ear will be cut through at an angle divergent to a line at right angles to the longitudinal axis of the ear of corn.

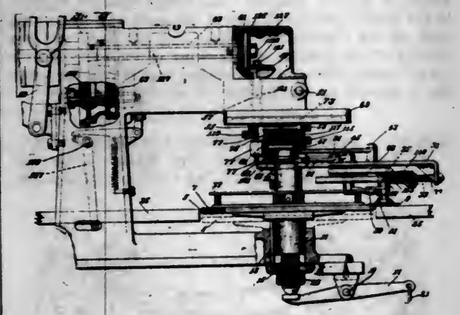
1,456,035. METAL DUST AND PROCESS OF MAKING THE SAME. MINTON H. NEWELL, San Francisco, Calif., assignor to The Alloys Company, San Francisco, Calif., a Corporation of California. Filed Sept. 23, 1918. Serial No. 255,314. 9 Claims. (Cl. 75—153.)

1. A process for manufacturing metal dust, comprising vaporizing the metal and condensing the vapor in the presence of a limited regulated supply of oxygen.



1,456,036. ENVELOPE FASTENER. EUGENE F. NISSEN, Alameda, Calif. Filed May 18, 1920. Serial No. 382,431. 3 Claims. (Cl. 229—78.)

1. An envelope fastener including a disk having radial outwardly projecting peripheral points, foldable outwardly, other points formed within the periphery and foldable inwardly; and aligned strips cut from the body of the disk having points extending outwardly beyond the peripheral edges of the disk, and foldable thereon.

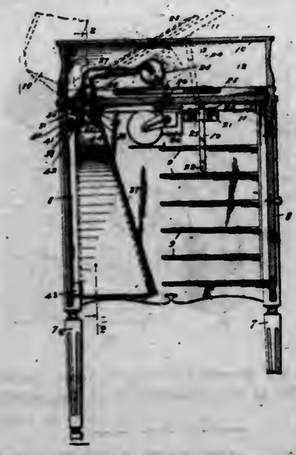


1,456,037. THRESHOLD WEATHER STRIP. GEORGE P. RASCK, Des Moines, Iowa. Filed Oct. 31, 1921. Serial No. 511,731. 2 Claims. (Cl. 20—67.)

1. The combination with a door casing, door and threshold, of a weather-strip comprising a metallic strip secured at its upper margin to the lower portion of said door, said metallic strip being resilient and normally standing at an angle away from the door, said metallic strip being formed at its lower margin with a recurved loop opening toward the door, a compression strip substantially T-shaped in cross-section having its leg flange mounted in said loop and its head directed toward the door, and curved guides carried by the door casing and adapted to be engaged by end portions of said loop

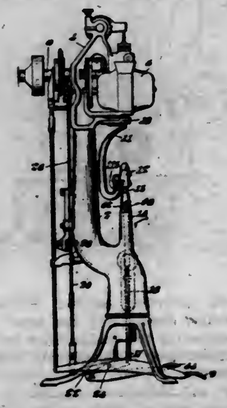
when the door is closed, and said guides being so curved and the weatherstrip so positioned on the door that the head of the compression strip is forced against the door and also against the threshold when the door is closed.

1,456,038. SOLE-CUTTING MACHINE. EUGENE J. RAY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 11, 1918. Serial No. 262,106. 21 Claims. (Cl. 12—24.)



1. A machine of the class described, having in combination, a matrix, a clamp having an outline similar to but smaller in its dimensions than that of the matrix, means for producing relative movement of approach between the clamp and the matrix to force a portion of a sheet of stock into the matrix and for holding the clamp and matrix from relative rotation, a cutter, and means for causing the stock along the entire edge of the matrix to be severed by the cutter.

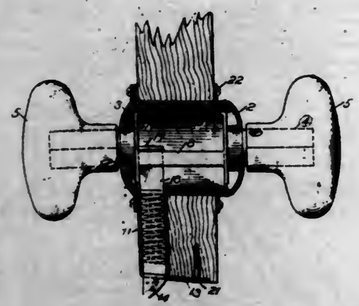
1,456,039. PHONOGRAPH. GEORGE M. RENTZ, Wells, Minn. Filed Nov. 21, 1921. Serial No. 516,850. 3 Claims. (Cl. 274—2.)



1. The combination with a cabinet having a displaceable table top, of a tone arm mounted on the table top, a sound amplifier with which the tone arm has communication through a passageway in the table top, and

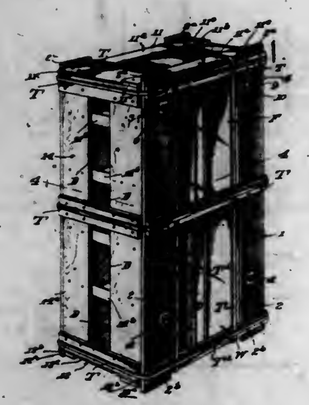
yielding means entirely suspending the sound amplifier from its receiving end within the cabinet and under

strain to lift the same, said sound amplifier being arranged to be engaged by the table top and depressed thereby to form a tight joint therebetween.



1,456,040. WORK SUPPORT. WILLIAM THOMAS BUCKINGHAM ROBERTS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 12, 1920. Serial No. 358,023. 20 Claims. (Cl. 1—41.)

1. In a machine of the class described, the combination of a supporting member, a horn normally freely rotatable on the supporting member, means for mounting the supporting member for up and down movement to adjust the horn, and a latch for securing the horn to the supporting member to enable the supporting member and horn to be adjusted by manipulation of the horn.

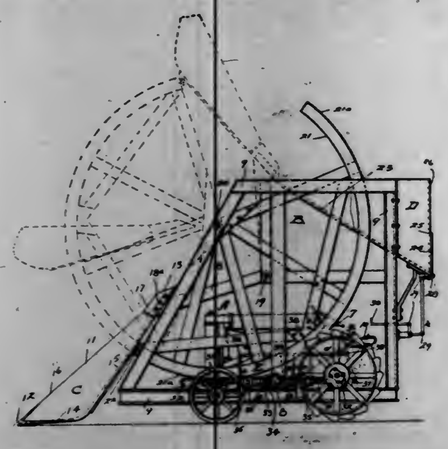


1,456,041. DOOR LOCK. WALTER R. SCHLAGE, Berkeley, Calif., assignor to Schlage Manufacturing Company, San Francisco, Calif., a Corporation of California. Filed Apr. 12, 1920. Serial No. 373,042. 14 Claims. (Cl. 292—169.)

1. In a lock of the character described a cylindrical shaped elongated housing open at one end and closed at the other, the closed end of said housing adapted to project through the door in which it is mounted, an escutcheon plate adapted to be secured to the door and form a closure for the open end of the housing, a second escutcheon plate slidable over a closed end of the

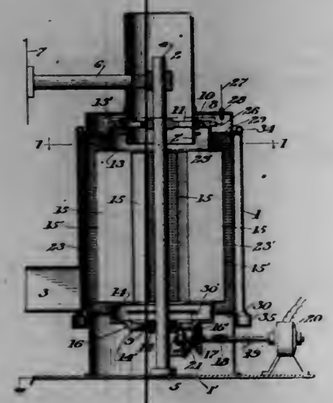
housing and also adapted to be secured to the door, a spindle extending through the first named escutcheon plate and the closed end of the housing and journaled in said respective members, a latch carried by the housing, and means actuated by the spindle for retracting and extending the latch.

1,456,042. SHIPPING CRATE. FRED A. SCHMITZ, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed July 23, 1921. Serial No. 486,968. 15 Claims. (Cl. 217—52.)



1. A crate of the class described comprising a plurality of separate crate frames arranged for assembling about the article to be shipped, binders for holding the said frames in assembled relation, and fasteners connecting a frame and the article.

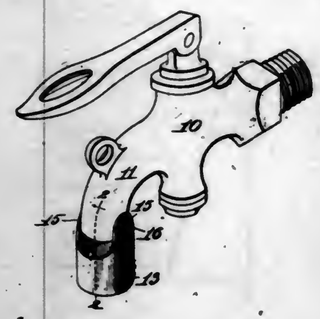
1,456,043. MUCKER. ELMER WILLIAM SMITH, Los Angeles, Calif., assignor of one-half to Elizabeth O. Allen, Los Angeles, Calif. Filed Jan. 21, 1921. Serial No. 438,876. 10 Claims. (Cl. 214—78.)



1. A mucker of the character described comprising a skip mounted for elevating and lowering movements, and

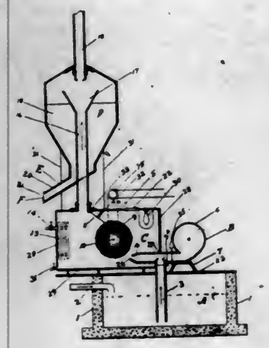
means having slidable contact with the skip, said means being capable of movement from one extreme position to

another in which said skip is caused to occupy scooping, load-retaining, and dumping positions.



1,456,044. POSITIONED ELECTRODE. WILLIAM W. STRONG, Mechanicsburg, Pa., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 23, 1918. Serial No. 263,944. 15 Claims. (Cl. 183—7.)

1. Apparatus for the separation of suspended particles from gases, comprising means defining a passage for the gas, electrical means operative to force particles suspended in the gas across the gas stream toward the walls of the passage and movable mechanical means operative to force the said particles in the same direction.



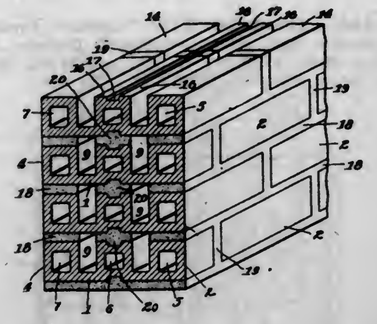
1,456,045. DRIP CUP. ARTHUR J. WILKIN, Los Angeles, Calif. Filed Nov. 11, 1920. Serial No. 423,299. 4 Claims. (Cl. 137—111.)

2. The combination with a faucet provided on the lower portions of its nozzle with oppositely disposed indentations, of a drip-receiving cup positioned below the discharge end of said nozzle, oppositely disposed ears projecting upwardly from said drip cup and portions of

which ears are pressed inwardly to form trunnions that are journaled in the indentations in the nozzle of said faucet.

1,456,046. APPARATUS FOR AND METHOD OF TREATING SEWAGE. JOHN P. BALL, Chicago, Ill. Filed Feb. 14, 1921. Serial No. 445,038. 6 Claims. (Cl. 71—8.)

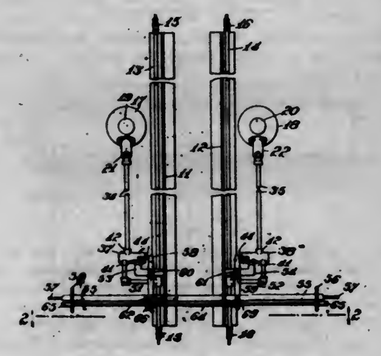
1. The herein described method which consists in atomizing a sludge, discharging the same into a closed chamber and subjecting the sludge laden current to light, heat and agitation and independently drawing off the separated portions.



1,456,047. RECORD FOR GRAMOPHONES AND THE LIKE. PAUL BALKE and GUSTAV LEYSIEFFER, Troisdorf, Germany. Filed Nov. 18, 1921. Serial No. 516,224. 2 Claims. (Cl. 154—43.)

1. A gramophone record comprising a body of base material having a superficial coating receiving the sound groove and comprising a vehicle of gelatinized cellulose derivative and a fibrous filler.

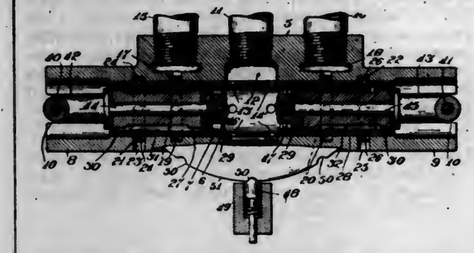
1,456,048. BRICK. HARRY P. BARR, East Orange, N. J., assignor to Charles P. Fiske, Newton, Mass. Filed June 24, 1918. Serial No. 241,531. 6 Claims. (Cl. 72—41.)



1. Channel brick of the kind described, comprising a connecting body portion having formed thereon three

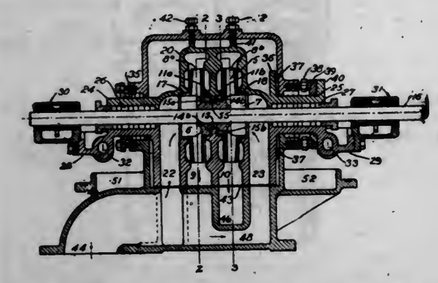
vertically extending wall sections of equal length, each section being cored and producing with said body portion

two open channels the exposed faces of the outer wall sections being of standard brick size.



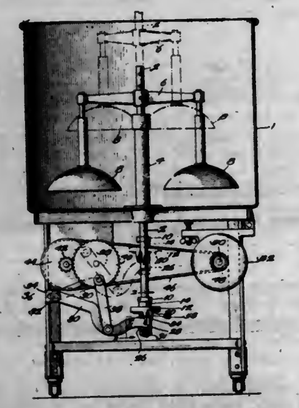
1,456,049. CONTROLLING MECHANISM FOR DUMP CARS. JAMES D. BENBOW, Aurora, Ill., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Jan. 20, 1919. Serial No. 272,099. 24 Claims. (Cl. 105—265.)

1. A control mechanism for compressed air operated dump cars comprising fluid pressure operated devices at opposite sides of the car for tilting the car bed in opposite directions, and a single control member adapted to be operated from either side of the car to admit fluid pressure to either of said devices to control the tilting of the bed in either direction.



1,456,050. AIR-CONTROLLING VALVE MECHANISM. JAMES D. BENBOW, Aurora, Ill., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Feb. 17, 1919. Serial No. 277,633. 16 Claims. (Cl. 277—57.)

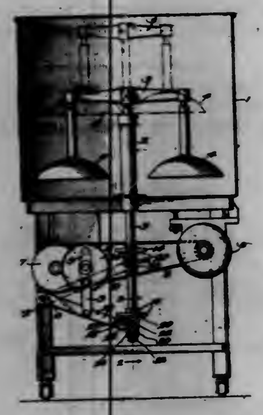
1. The combination with a supply pipe and outlet pipes, of a valve comprising a chamber having an inlet communicating with said supply pipe, and outlet ports communicating with said outlet pipes, respectively, valves in said chamber at opposite sides of said inlet and exposed to the pressure therein, said valves being separately movable against the pressure in said chamber to connect one or the other of said outlet ports with said inlet, an



operating device, and connections movable thereby independently of each other for so moving either of said valves.

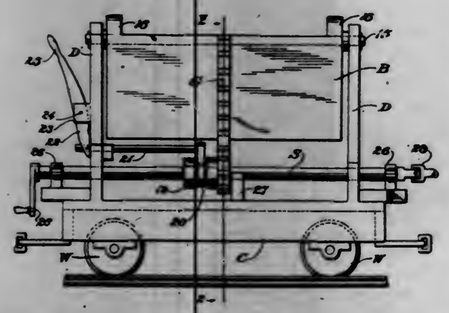
1,456,051. CENTRIFUGAL PUMP. WILLIAM DOUGLAS CARTER, East Orange, N. J. Filed May 14, 1920. Serial No. 381,455. 34 Claims. (Cl. 103—106.)

1. In a multiple service pump having impellers assembled on a shaft, a casing surrounding the impellers, shaft bearings supported by the casing on each side of the impellers, and another casing surrounding and supporting the first casing.



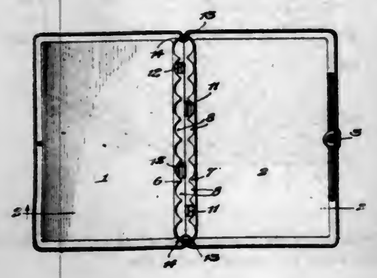
1,456,052. WASHING MACHINE. HOWARD S. CRAVER, Chicago, Ill., assignor of one-half to Henry S. Judd, Chicago, Ill. Filed Sept. 29, 1922. Serial No. 591,234. 11 Claims. (Cl. 259—144.)

1. A washing machine having a clothes receptacle, a vertical shaft provided with clothes engaging elements,



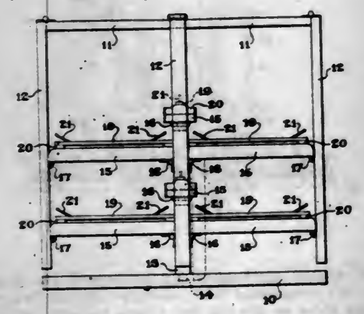
the shaft being movable vertically and angularly, a power device for supporting the shaft and reciprocating it vertically, and a clutch interposed between the shaft and the supporting power device and controlled by the variations in pressure of the shaft on said supporting power device, said clutch including an angularly movable driving element and a cooperating angularly movable driven element connected to the shaft for moving it angularly.

1,456,053. WASHING MACHINE. HOWARD S. CRAVER, Chicago, Ill., assignor of one-half to Henry S. Judd, Chicago, Ill. Filed Oct. 17, 1922. Serial No. 595,080. 3 Claims. (Cl. 259—144.)



1. A washing machine having a clothes receptacle, a shaft which is vertical and angularly movable and provided with clothes engaging elements, a clutch including two friction elements, the upper one being fastened to the shaft and the lower one loosely mounted on it, and a power device for oscillating the lower friction element and simultaneously reciprocating it vertically.

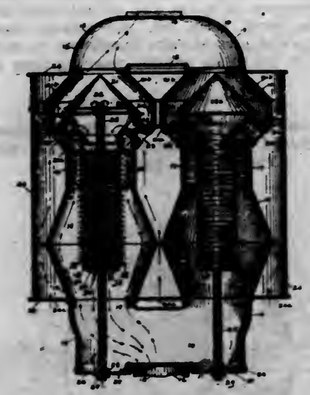
1,456,054. DUMPING MINE CAR. OLIVER WINFORD CROOKS and ELMER HARRY CROOKS, Big Creek, Calif. Filed Dec. 22, 1921. Serial No. 524,186. 4 Claims. (Cl. 105—270.)



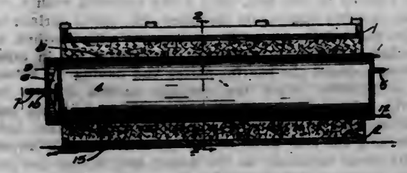
1. In combination, a dumping mine car including a movable body, mechanical means for moving the body to effect a dumping of its contents, means on the car for positively actuating the first means and mechanical means adapted to operatively connect said means with similar means of another car body to effect simultaneous actuation of the second car body.

1,456,055. CIGARETTE CASE. LEONARD DAHLGREN, Attleboro, Mass., assignor to Filikwik Company, Attleboro, Mass. Filed Feb. 21, 1921. Serial No. 446,770. 7 Claims. (Cl. 206—41.)

3. In a cigarette case, movably connected front and back members, and a holder composed of a pair of sections hinged together to receive the cigarette therebetween, each end of each section having means of substantially identical construction formed to interengage and to snap into and out of engagement with each other.



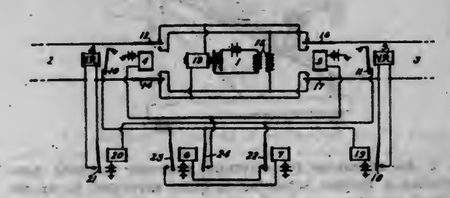
1,456,056. ROOST. DAVID J. FOSHEE, Red Level, Ala. Filed June 5, 1922. Serial No. 565,797. 2 Claims. (Cl. 119—22.)



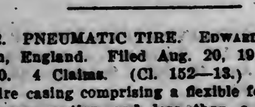
1. A roost comprising a base, a standard mounted for rotation thereon, a plurality of horizontally arranged platforms having one end hingedly secured to the standard, means supporting the opposite ends of the platforms and rotatable with the standard and a roost bar supported by each of the platforms.

1,456,057. FUEL ECONOMIZER. WILLIAM G. GRIFFIN, Washington, D. C. Filed Dec. 21, 1921. Serial No. 523,907. 25 Claims. (Cl. 110—58.)

1. The combination with the exhaust conduit of a furnace, of an expansion chamber forming a part thereof for the passage of the products of combustion, means contained within the chamber for supplying fresh air in combustion-supporting quantities to the products of combustion exiting through the conduit, said means being further adapted to initiate a return current of such mixture through the conduit to the furnace along a path axially related to the conduit.

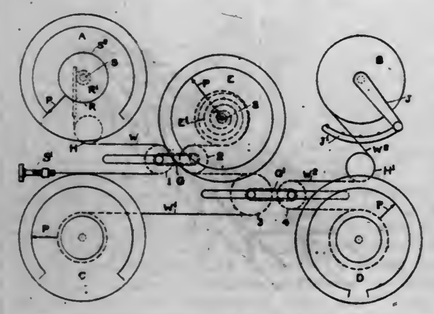


1,456,058. CORE FOR MAKING PIPES AND THE LIKE. FRANK S. HALE, Long Beach, Calif. Filed May 11, 1921. Serial No. 468,481. 3 Claims. (Cl. 26—128.)



1. A core for a mold comprising a flexible casing of fabric material, an elastic air receptacle within the casing adapted to inflate the same to extend said core, and ropes extending within said casing through an open end thereof and connected to the opposite end of said casing.

1,456,059. SIGNALING SYSTEM. EDGAR D. JOHNSON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 18, 1918, Serial No. 212,461. Renewed Aug. 28, 1920. Serial No. 406,731. 22 Claims. (Cl. 179—170.)

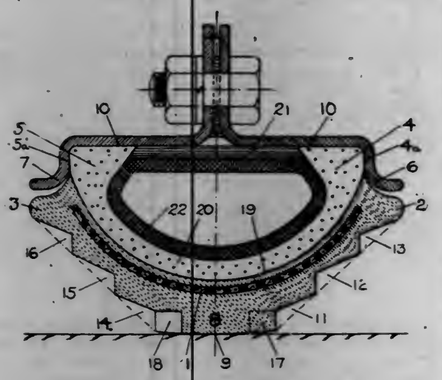


1. The combination of two lines, a repeater therebetween, a relay for each of said lines, said relays controlling the connection of said repeater to said lines, and a shunt circuit about each of said relays for rendering said relays at times inoperative, each of said shunt circuits being controlled by the other relay.

1,456,060. CONTAINER FOR CIGARETTES AND THE LIKE. GILBERT L. JOHNSTONE, Manhasset, N. Y. Filed Nov. 5, 1920. Serial No. 421,831. 8 Claims. (Cl. 206—41.)

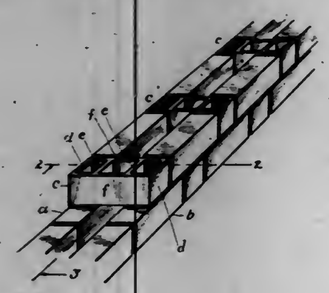
1. A blank for a container comprising a sheet of material having scores formed therein to define an end portion of the container, and a partially detached portion located between said scores in the space defined thereby to serve as a pushing tab, such portion extending outwardly beyond one of said scores.

1,456,061. CALCULATING MACHINE. THOMPSON JOWETT, London, and CECIL EDWARD SQUIRE, Sheffield, England. Filed Dec. 9, 1918. Serial No. 265,896. 6 Claims. (Cl. 235—61.)



1. A calculating machine comprising a plurality of dials, a corresponding number of rotatable drums, indicators attached to and adapted to move with said drums, a pulley mounted upon a movable carriage, a flexible lead passing over said pulley and having its ends wound upon two of said drums each to each, and a second flexible lead having one end wound upon a third of said drums and having connections with said movable carriage such that rotation of said third drum tends to effect movement of said carriage and vice versa.

1,456,062. PNEUMATIC TIRE. EDWARD BRICE KILLEN, London, England. Filed Aug. 20, 1920. Serial No. 404,840. 4 Claims. (Cl. 152—13.)



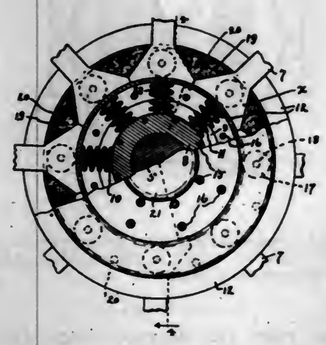
4. A tire casing comprising a flexible foundation, arcuate in cross section and less than a semi-circle and having inextensible base beads, and an outer cover on said foundation and approximately triangular in cross-section and extending on said foundation from side to side, said cover having a blunt narrow extreme apex on its center line and endless grooves spaced apart and

arranged on the portions of the tread of the cover between said blunt apex and the sides, the sides of said

grooves being angularly related when the tire is in normal condition and forming step-like annular shoulders on the tread of the tire.

1,456,063. WALL CONSTRUCTION. HARRY R. KREITZER, Seattle, Wash. Filed Feb. 14, 1921. Serial No. 444,764. 2 Claims. (Cl. 72—102.)

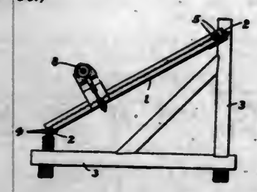
1. A wall consisting of two parallel courses of wall members spaced apart so as to provide a space of substantial width between the courses, and transverse bonding members connecting said courses, the ends of said bonding members being supported in said courses, said bonding members being made of hollow tile consisting of longitudinal vertical webs, transverse end webs and other transverse webs intermediate the ends, the intermediate webs being supported on the inner-edge portions of said courses, thereby leaving the air space between said courses unobstructed except by the longitudinal webs of said bonding members.



1,456,064. PROCESS AND APPARATUS FOR MAKING SULPHURIC ACID. WILLIAM F. LAMOREAUX, Isabella, Tenn. Filed Aug. 16, 1921. Serial No. 492,673. 16 Claims. (Cl. 23—1.)

12. In a process of making sulphuric acid by oxidation of sulphuric dioxide in presence of water, the method of accelerating the reaction between liquid and gaseous phase components, which consists in alternately and repeatedly dispersing the liquid phase into a gaseous phase and recollecting the same.

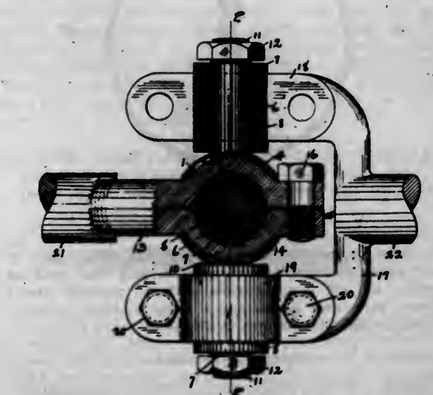
1,456,065. MANUFACTURE OF SULPHURIC ACID. WILLIAM F. LAMOREAUX, Isabella, Tenn. Filed May 29, 1922. Serial No. 564,454. 11 Claims. (Cl. 23—1.)



1. In a process of oxidizing sulfur dioxide to sulfur trioxide in presence of water, the method comprising dispersing the liquid phase into the gaseous phase, the amount of water present being insufficient to unite with the whole of the sulfur trioxide resulting from the oxidation.

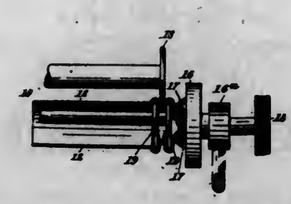
1,456,066. RESILIENT VEHICLE WHEEL. GEORGE H. LANTZ, Omaha, Nebr. Filed Sept. 11, 1919. Serial No. 323,178. 1 Claim. (Cl. 152—45.)

The combination with an axle provided with a hub, of a pair of connected, annular bearing-plates outwardly of and secured to the hub, each being provided with a circular chamber opening on its inner side, spiral springs between the bearing-plates in engagement with the hub, an annular spoke-holder approximately of U shape in cross-section between the bearing-plates and having its bottom in engagement with the springs, spokes having inwardly divergent terminals engaging each other and engaging the bottom of the annular spoke-holder, bolts traversing the side walls of the spoke-holder and inwardly divergent terminals of the spokes and having end portions entering and normally disposed centrally of the circular chambers of the bearing-plates, spacing-blocks approximately of V-shape between and engaging the inwardly divergent terminals of the spokes, and pins traversing the sides of the annular spoke-holder and the spacing-blocks, said annular spoke-holder having bearings on the sides of the spokes outwardly of the inwardly divergent terminals thereof.



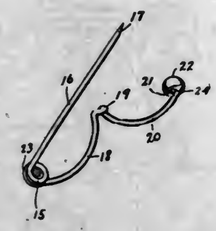
1,456,067. APPARATUS FOR SCREENING GRANULAR MATERIALS. RICHARD A. LEAHY, Bonne Terre, Mo. Filed Mar. 28, 1921. Serial No. 456,431. 4 Claims. (Cl. 83—56.)

1. An apparatus for screening granular material, comprising a flexible screening medium arranged in an inclined position and held under longitudinal tension, the side edges of said medium being free to vibrate, and means connected directly to said screening medium at a point intermediate its ends and extending transversely



across the entire width of same for vibrating said medium upwardly and downwardly so as to impart a comparatively slow downward movement to said screening medium followed by an accelerated upward movement that is suddenly arrested, thereby causing the particles of material on said screening medium to be thrown upwardly with a force proportional to the masses of said particles.

1,456,068. KNUCKLE JOINT. HUGH C. LORD, Erie, Pa. Filed Jan. 17, 1921. Serial No. 437,747. 15 Claims. (Cl. 64—102.)



12. A joint comprising an outer sleeve; an inner sleeve; a rubber insert secured to the surfaces of said sleeves; a mounting; a pin extending through the inner sleeve and into the mounting, said inner sleeve having a tapered and serrated edge; and means on the pin for forcing the serrations into engagement with the mounting, the serrations indenting the mounting to lock the inner sleeve with the mounting.

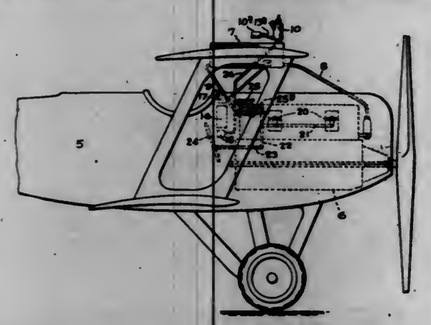
1,456,069. METHOD OF PRODUCING CORRUGATED, EXPANSIBLE COLLAPSIBLE ELEMENTS. HARRY C. MALLORY, Bellport, N. Y., assignor, by mesne assignments, to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 23, 1920. Serial No. 368,115. 16 Claims. (Cl. 153—73.)

1. The method of making a corrugated elastic element which consists in taking a hollow cylindrical blank having a closed end, securing an inelastic disk within the closed end of said blank whereby to reinforce said closed end, and securing said blank by its reinforced end to a support, and then subjecting said blank, while upon said support, to the action of suitable dies to form corrugations or folds therein, substantially as specified.

1,456,070. SAFETY PIN. WILLIAM W. MAXEY, Venice, Calif. Filed July 21, 1922. Serial No. 576,544. 4 Claims. (Cl. 24—161.)

1. A safety pin comprising a penetrating tongue, a keeper, a coil for normally urging the tongue to disengaging position with the respect to the keeper, a hook between the keeper and coil adapted to engage the tongue when the latter is in engagement with the keeper, and portions connecting the hook with the keeper and coil, said portions being continuously curved from the hook to the keeper or coil.

1,456,071. ATTACHING DEVICE FOR NONSKID CHAINS. CHARLES MOSS, New York, N. Y. Filed June 24, 1920. Serial No. 391,388. 1 Claim. (Cl. 152—14.)

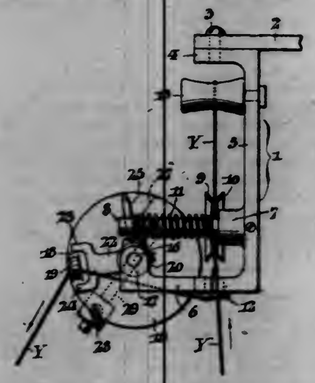


An attaching device for non-skid chains comprising a clamp composed of two plates, said plates being curved outwardly in opposite directions to complementally fit about a spoke of a wheel, the outside faces of such curved plates having straps to receive the non-skid chain, one of said plates having at one end an outwardly and radially projecting lug, said lug having a slotted flange projecting angularly therefrom and lying at substantially a tangent to the plates but being spaced from the plates, the corresponding end of the companion plate having a rounded heel engaging the adjacent face of said lug and being further provided with a curved tongue adapted to fit slidably through the slot in said flange, the convex side of said curved tongue being away from the companion plate, radially projecting flanges at the opposite ends of said plates, a hinged bolt carried by one of these flanges, the opposing flange being slotted to receive the bolt, such opposing flange having its corners turned outwardly away from the flange carrying the bolt, and a bolt engaging element confined by said outwardly turned corner potrions.

1,456,072. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES OR THE LIKE. SANFORD A. MOSS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 15, 1920. Serial No. 417,179. 6 Claims. Cl. 123—170.)

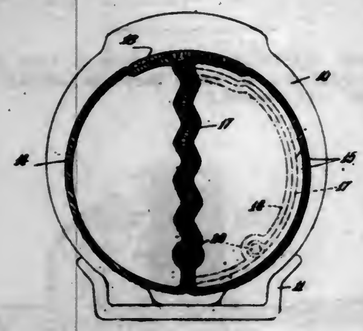
1. The combination with an aeroplane having an internal combustion engine, and a hermetically sealed liquid cooling system therefor comprising a radiator through which cooling liquid circulates and conduits connecting the radiator to the engine, of means for preventing the occurrence of abnormal operating conditions in the radiator due to high altitudes comprising valve means asso-

ciated with the system and adapted to open outwardly whenever the altitude atmospheric pressure falls be-



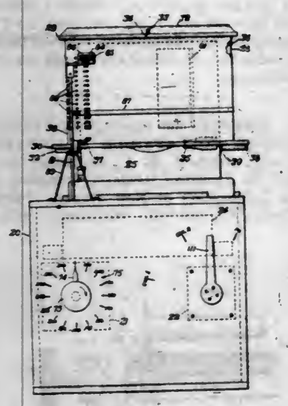
low the pressure in the radiator by more than a predetermined amount, and to open inwardly to prevent the formation at any altitude of a vacuum in the radiator.

1,456,073. PHOTOGRAPHIC-PRINTING DEVICE. ASHLEY G. OGDEN, Baltimore, Md. Filed Mar. 14, 1921. Serial No. 452,381. 17 Claims. (Cl. 95—73.)



1. The combination with a mount in the form of a wooden board having stiffening edges running across its grain, of a resilient surface thereon adapted to serve as a backing for a sensitized plate.

1,456,074. YARN-TENSION DEVICE. ALBERT M. PIGNON, Norristown, Pa. Filed Sept. 27, 1921. Serial No. 508,484. 8 Claims. (Cl. 242—149.)

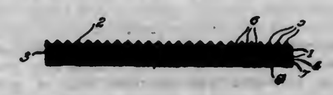


1. A yarn tension device comprising, means for applying tension to yarn while feeding the same to textile machines, means responsive to variations in drag impressed upon the yarn controlling the tensioning means to compensatively vary the tension, and means to restrain said responsive means against spasmodic actuation.

1,456,075. AUTOMATIC PUNCTURE-CLOSING DEVICE FOR PNEUMATIC TIRES. MICHELL ROSE, New York, N. Y. Filed July 27, 1922. Serial No. 577,933. 3 Claims. (Cl. 152—22.)

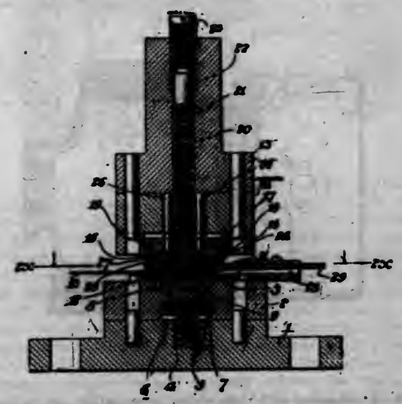
3. A pneumatic tire comprising a shoe, and a pair of inner tubes arranged side by side in said shoe, and an annular web of tough flexible material inserted freely between said inner tubes, and a metal annulus to which the inner edge of said web is attached.

1,456,076. MEASURING AND TESTING OF INDUCTANCES. CHARLES WILLIAM ROBBINS, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 18, 1921. Serial No. 478,692. 15 Claims. (Cl. 175—183.)



3. In an inductance measuring apparatus, the combination with a bridge circuit of a test specimen, a variable inductance, a multiple scale associated therewith, a plurality of fixed inductances, means for connecting in the circuit one or more of said fixed inductances, an index connected to said means to indicate directly upon said scale the total inductance connected in the circuit, and compensating resistances automatically cut out or into the circuit whenever said fixed inductances are cut in or out whereby the total effective resistance in the circuit will be held constant.

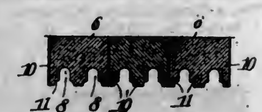
1,456,077. PAPER-ROLL TRACK FOR PAPER MACHINES. WILLIS H. SANBURN, Springfield, Mass. Filed Nov. 15, 1919. Serial No. 338,320½. 2 Claims. (Cl. 193—41.)



1. The combination with a paper machine including a take-up roll adapted to receive the finished product and companion take-up tracks normally spaced from the machine, of companion tracks slidable on said take-up tracks and adapted to bridge the space between said take-up tracks and machine, and means carried by the take-up tracks for elevating said shiftable tracks into horizontal alignment with the take-up tracks, so as to receive the take-up roll.

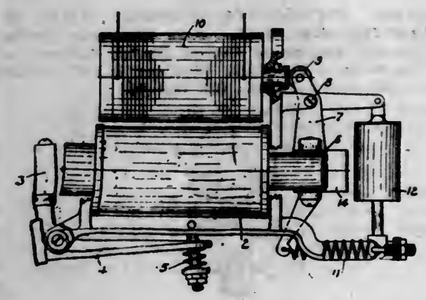
1,456,078. TUBE AND TIRE REPAIR MATERIAL. ALBERT E. STEPHENSON, Dallas, Tex. Filed Oct. 21, 1922. Serial No. 595,973. 2 Claims. (Cl. 152—26.)

1. A tire patch including alternately superposed layers of rubber and fabric, the outer layer being formed of rubber, the upper layer being formed with alternately raised and depressed surfaces, the bottom layer having applied thereto a layer of quick-cure gum containing an adhesive, and a protecting layer of fabric covering said adhesive layers.



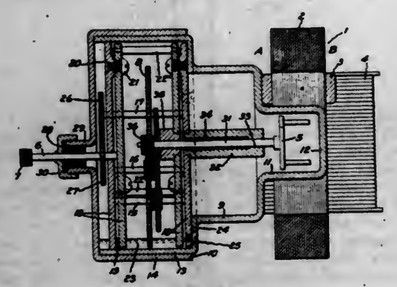
1,456,079. METHOD AND MECHANISM FOR CONTINUOUSLY PRODUCING AND SETTING RIVETS. HENRY STUBNER, Philadelphia, Pa. Filed Mar. 19, 1921. Serial No. 453,822. 8 Claims. (Cl. 78—46.)

1. The method which consists in placing an apertured device and a blank in contact, and punching a part clear out of said blank and expanding it in the aperture of said device by a continuous operation.



1,456,080. PAVEMENT, AND METHOD OF LAYING THE SAME. EDWARD H. TREMBS, Tampa, Fla. Filed Nov. 26, 1915. Serial No. 63,446. 8 Claims. (Cl. 94—11.)

8. A paving element comprising a body of asphaltic material having thin layers of protective material upon its opposite faces, said layers being arranged to terminate a substantial distance below the top of the body and

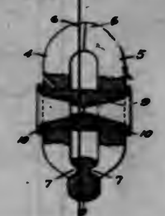


also below the wear surfaces of the adjacent pavement parts between which the body is fitted.

1,456,081. ELECTRIC REGULATOR. WILLIAM A. TURNAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed July 17, 1919. Serial No. 311,454. 13 Claims. (Cl. 171—229.)

12. In a regulator, in combination, a variable resistance element, a magnetic circuit, said circuit having a member for automatically gradually adjusting the magnetic reluctance of said circuit, said circuit having a member provided with means for operating said resistance element.

1,456,082. MOTOR DRIVE. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, a Corporation of Maine. Original application filed Sept. 1, 1920, Serial No. 407,487. Divided and this application filed Jan. 17, 1922. Serial No. 530,005. 5 Claims. (Cl. 172—36.)

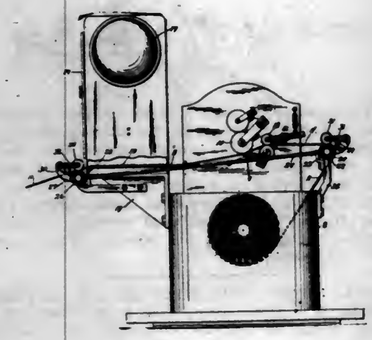


1. A motor drive comprising a motor having a stationary part nad a rotating element, a gear case enclosing the rotating element of the motor and held within the inner periphery of the stationary part of said motor, a cover for said case having an aperture, a power shaft extending through said aperture, and means supported in said case for transmitting motion from the rotating element to the power shaft.

1,456,083. INSULATING MATERIAL AND METHOD OF MAKING THE SAME. HOWARD F. WEISS, Madison, Wis., assignor to C. F. Burgess Laboratories, Madison, Wis., a Corporation of Wisconsin. Filed Aug. 12, 1919. Serial No. 317,060. 15 Claims. (Cl. 154—44.)

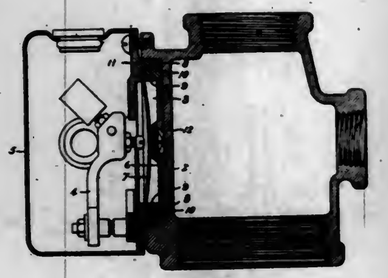
1. The method of manufacturing composite insulating material, which comprises coating the adjacent surfaces of two liners with adhesive, and cementing a body portion of loosely bound and heterogeneously arranged fibers between said coated surfaces sundry of said fibers being of sufficient length to reach from one liner to the other to secure the liners together.

1,456,084. SUPPORT FOR OVERHEAD WIRES OF ELECTRIC RAILWAYS. HANS WESTPHAL, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Oct. 7, 1922. Serial No. 593,151. 2 Claims. (Cl. 191—43.)



1. In a wire-supporting device, the combination of a pair of clamps which are arranged to hold a wire between them with a rivet which passes through the clamps and is turned over at its ends to unite them, said rivet having a wall which increases in thickness from the ends toward the center.

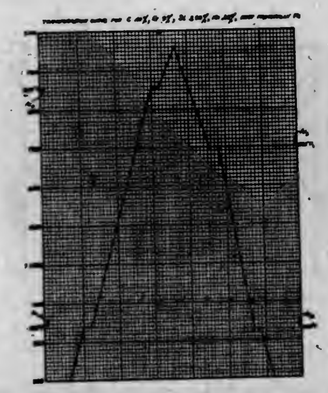
1,456,085. ELASTIC-FLUID TURBINE. JAMES WILKINSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 29, 1921. Serial No. 525,666. 8 Claims. (Cl. 253—77.)



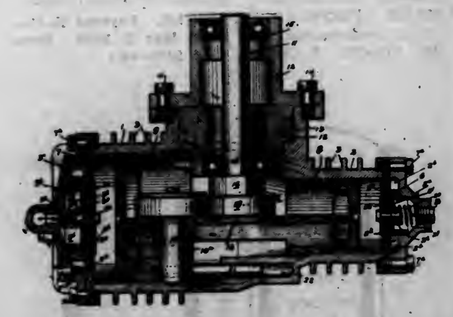
1. In an elastic fluid turbine, a carrying member and blades projecting radially therefrom, the ratio of pitch to width being substantially uniform throughout the length of the blades.

1,456,086. EXHIBITING DEVICE. RICHARD D. WYCKOFF, New York, N. Y. Filed May 16, 1919. Serial No. 297,541. 2 Claims. (Cl. 88—28.)

1. The combination with an automatic printing machine provided with strip feeding rollers, of a projector associated therewith and provided with a guideway for supporting the strip in projecting position and means operated by the strip feeding rollers for feeding the strip through said guideway, said means including drawing-out rollers for the strip located at the exit end of the guideway, a roller engaged by the strip and driven thereby and driving connections from said roller to the drawing-out rollers.



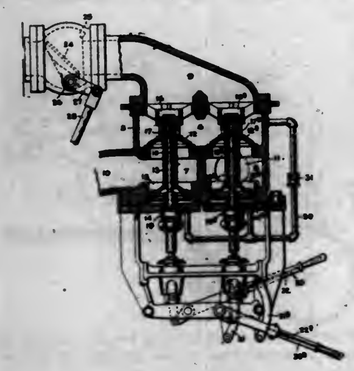
1,456,087. DIAPHRAGM SWITCH. CHARLES C. ABBOTT, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 11, 1919. Serial No. 310,271. 5 Claims. (Cl. 297—9.)



1. A pressure cell comprising a metallic cup, a buckling diaphragm secured thereto to form a leak proof joint and a cover securing the diaphragm to the cup and removable without breaking said joint.

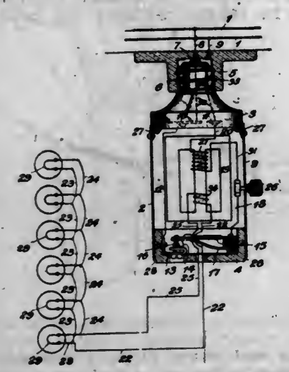
1,456,088. HEAT-TREATED STABLE-SURFACE ALLOY STEEL. PERCY A. E. ARMSTRONG, Loudonville, N. Y. Filed Dec. 12, 1919. Serial No. 344,294. 7 Claims. (Cl. 75—1.)

1. An alloy steel of substantially high surface stability, having the ground mass fixed substantially solid solution by heat treatment, containing chromium about 3% to 10%, silicon about .5% to 7%, chromium and silicon together about 5% to 13%, carbon over about .05% and under 1/10 of the chromium and silicon taken together, and the principal portion of the remainder iron.



1,456,089. AIR COMPRESSOR. DEXTER C. BAKER, Oakland, Calif., assignor to Baker-Hansen Manufacturing Company, Oakland, Calif. Filed Apr. 7, 1921. Serial No. 459,220. 4 Claims. (Cl. 230—27.)

1. An air compressor, comprising a pair of co-axially arranged cylinders, a pair of rectilinear pistons connected end to end adapted to work in said cylinders and having a common driving means, said driving means including a shaft having an eccentric head presented transversely to the axis of the pistons, and a rocking yoke pivotally mounted to one of the pistons and connected to the eccentric head whereby the eccentric rotation of the eccentric head may be converted into a reciprocating movement of the pistons, said pivotal mounting for the rocking yoke on one of the pistons comprising a transverse pin confined within the walls of the piston, and a longitudinal guide rod for the pistons having one end transversely anchored in the end of said pin and with its opposite end received in a guiding opening in the walls of the compressor crank case.

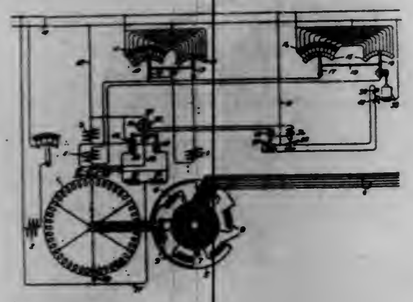


1,456,090. VALVE MECHANISM. FRANK S. BENNETT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 14, 1920. Serial No. 358,733. 4 Claims. (Cl. 137—139.)

1. In a valve structure, the combination of a casing having a seat, a main valve adapted to engage said seat, a cylinder, a balancing piston for the main valve, which piston is located in said cylinder, conduit means connecting the admission side of the valve casing to

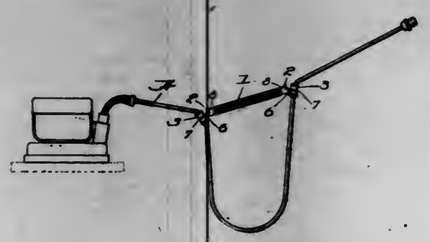
said cylinder, a pilot valve in said conduit means, and additional conduit means independent of the pilot valve connecting the valve casing on the admission side of the main valve to said cylinder.

1,456,091. ELECTRICAL APPARATUS FOR ILLUMINATING AND DECORATING CHRISTMAS TREES AND SIMILAR USES. JAMES H. BETTS, Brightwaters, N. Y. Filed Feb. 12, 1919. Serial No. 276,476. 2 Claims. (Cl. 177—347.)



1. A low voltage multiple lamp decorative lighting system for use with alternating current, comprising a plug adapted for insertion in a standard lamp socket in a lighting circuit, said plug having the usual contacts, a casing carried by said plug, a transformer having a line voltage primary and a low voltage secondary winding within said casing, said primary winding being connected to the plug contacts, a pair of leads connected to said secondary winding and extending outside said casing, and a plurality of low voltage miniature decorative lamps connected in parallel across said leads.

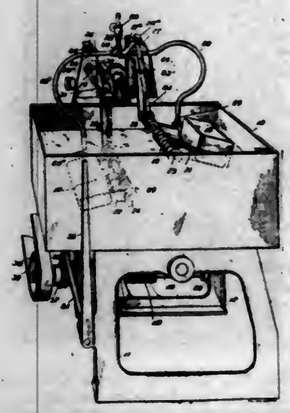
1,456,092. DYNAMO-ELECTRIC MACHINE. JOSEPH L. BURNHAM, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 30, 1920. Serial No. 420,780. 7 Claims. (Cl. 171—228.)



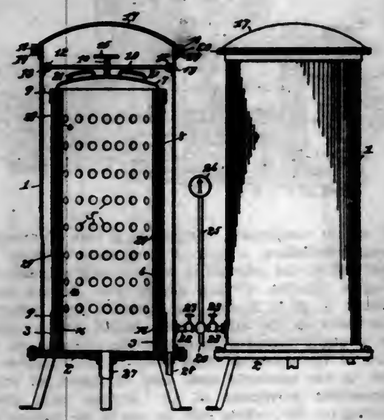
5. In a dynamo-electric machine, an armature winding provided with a commutator, an anti-sparking wind-

ing connected in series with said armature winding, an auxiliary anti-sparking winding, and means for controlling the effect of said auxiliary winding comprising a pair of mechanically opposed electromagnets, means

affecting these electromagnets in accordance with the difference of voltage from heel to toe of said brushes, and means affecting one of these electromagnets in accordance with the current flow in said armature.



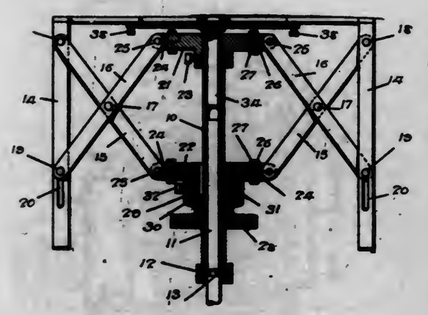
1,456,093. SLACK-TAKE-UP DEVICE FOR ELECTRIC-IRON CORDS. AXEL CARLSON, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 7, 1920. Serial No. 428,850. 2 Claims. (Cl. 24—115.)



1. In a cord take-up device, a cord grip comprising two members having each a cord seat parted at a plane longitudinal with respect to said seat, and a spring clip clasping the two member for holding them together gripping the cord, said clip having its clasping wings extended through the parting plane of the two grip members at opposite sides of said cord seat, and beng open at one side for lateral entry upon and disengagement from the two grip members.

1,456,094. CAN-TESTING APPARATUS. GEORGE W. CHALMERS, Summit, Ill., assignor to Corn Products Refining Company, New York, N. Y., a Corporation of New Jersey. Filed May 29, 1919. Serial No. 300,618. 20 Claims. (Cl. 73—51.)

1. A can testing apparatus comprising a tank adapted to contain a quantity of water; can supporting devices adapted to alternately submerge cans in the water, means for operating said devices whereby one can enters the water at the time another emerges therefrom, and means for introducing air into said cans under pressure comprising a valve arranged so as to be constantly above the water level, and mechanism connecting said valve with the operating means of the can supporting devices whereby said valve is moved automatically to its open and closed positions.

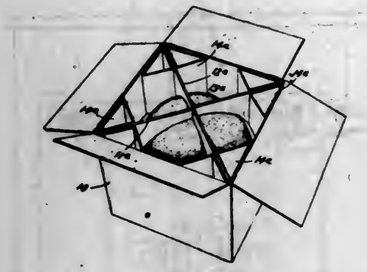


1,456,095. PRESSURE OIL FILTER. FRANCIS E. COLLINS, Conshohocken, Pa. Filed May 3, 1920. Serial No. 378,450. 2 Claims. (Cl. 210—44.)

1. In a filter of the character described, a casing, a base, a circular hub formed with said base and projecting into the casing, a tube having its lower end threaded into said hub, said tube being perforated, ribs arranged in spiral form around the exterior of the tube, a filtering member adapted to fit over said ribs and be thereby spaced from the tube, a removable clamping bar located within the casing, a clamp screw threaded through said bar and bearing upon the top of the filtering member, and a cover adapted to be secured oil tight upon the casing.

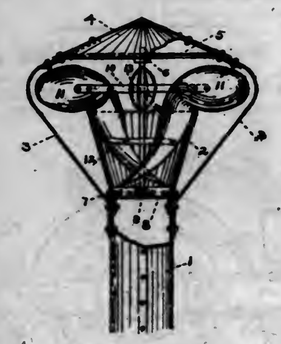
1,456,096. BOX FORM OR MANDREL. MOSES B. DISKIN, New York, N. Y. Filed Apr. 28, 1922. Serial No. 557,148. 13 Claims. (Cl. 93—59.)

1. An adjustable box form comprising side bars disposed around the axis of the form and having edges extending outwardly away from said axis to define the outline of the form, and adjustable means supporting said bars for adjustment toward and away from said axis to adjust the form for boxes of different sizes having the same shape.



1,456,097. WEATHER STRIP. SILAS DIXON and ALBERT S. BALDRIDGE, Oklahoma, Okla. Filed July 16, 1918. Serial No. 245,240. 1 Claim. (Cl. 20—69.)

A weather strip of flexible metal consisting of a first and a second wall, said walls being at substantially a right angle to each other, substantially parallel walls inclined with respect to and extending from the side edges of said walls, and a flange extending outwardly from one of said parallel walls in a plane substantially parallel to the first wall and intersecting the second wall.

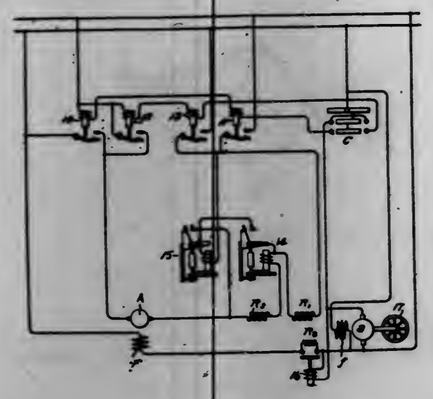


1,456,098. PACKING CASE. LEROY C. DOANE, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,262. 2 Claims. (Cl. 206—65.)

1. In a packing device, the combination of an angular container, partition members extending from corner to corner of said container and members each having a plurality of faces registering with those of said container

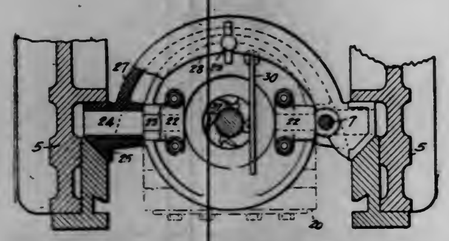
at one of said corners and shaped to receive an end portion of and to support one of said partition members.

1,456,099. DRAFT DEVICE FOR CHIMNEYS. LOUIS DUFEK, Tacoma, Wash. Filed Apr. 4, 1922. Serial No. 549,497. 3 Claims. (Cl. 98—2.)



1. A device of the class described, comprising a body, a vertical shaft pivoted in supports therefor, a spider fixedly connected with the shaft and rotatable above the body, a member at the outer terminal of each arm of the spider adapted to engage air currents, a pair of said members, oppositely disposed, each having a downwardly extending reversely curved blade, and means for mounting said device to a chimney, whereby the lower terminals of said blades will be located adjacent the outlet thereof.

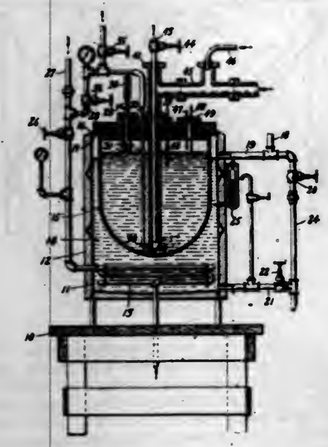
1,456,100. TIME-ELEMENT CIRCUIT CONTROLLER. JOHN EATON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 15, 1920. Serial No. 351,730. 3 Claims. (Cl. 175—320.)



1. A time element device comprising a circuit controller, an electric motor the rotating element of which has a relatively large inertia controlled by said controller, an electromagnetic switch, and connections between the said motor, the winding of said switch and the said controller, whereby the switch winding and motor are simultaneously operatively energised responsive to

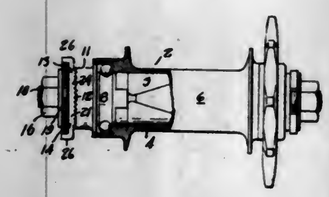
the operation of the controller, and the switch is maintained energized responsively to the generated voltage of

the motor when the motor and the switch winding are disconnected from the source of supply by the subsequent operation of the controller.



1,456,101. TURNING AND THREADING MACHINE. JAMES A. EDEN, Jr., Springfield, Mass., assignor to Walter H. Foster, New York, N. Y. Filed Oct. 1, 1920. Serial No. 414,024. 5 Claims. (Cl. 10—87.)

1. A machine of the class described having a blank holder and a cutter head and means for feeding one of said parts toward and away from the other, and a holder in which said cutter head is pivotally mounted on a line transverse to its axis so that it can be turned from its working position to a more convenient position for easily, quickly and accurately adjusting or setting tools in said head.

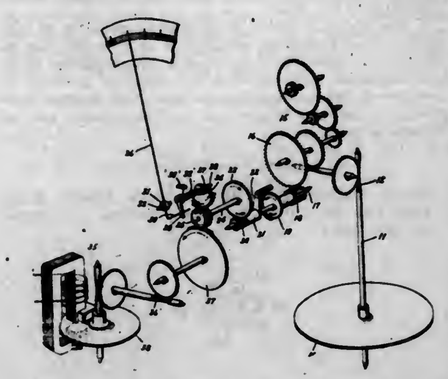


1,456,102. CHEMICAL APPARATUS. BEN BAKER FOOTE, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Sept. 18, 1920. Serial No. 411,210. 2 Claims. (Cl. 23—3.)

1. A chemical precipitation apparatus comprising a kettle, conduits leading thereinto for reagents which will react to produce a precipitate, a delivery tube extending upwardly from the lower portion of said kettle and having an open end aperture disposed above the bottom of said kettle, and another tube extending through said delivery tube into said kettle and having an end

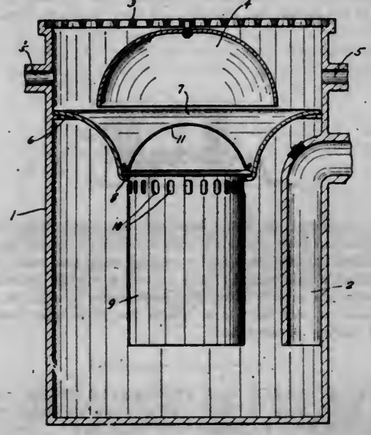
aperture smaller in diameter than said delivery tube and located adjacent to the lower end thereof.

1,456,103. MEANS FOR HOLDING THE STATIONARY ELEMENT OF A COASTER BRAKE. CHARLES GOODCHILD, Oakland, Calif., assignor of one-half to John J. McGinley, Oakland, Calif. Filed Apr. 7, 1921. Serial No. 459,341. 3 Claims. (Cl. 192—6.)



1. In a device of the class described, a member adapted to be fixed to the stationary brake element of a coaster brake and arranged to be pressed against the inner face of the tips of one of the rear fork legs of the vehicle frame, and a pair of oppositely disposed outwardly extending arms provided on said member adapted to fit over and engage the outer edges of said tips.

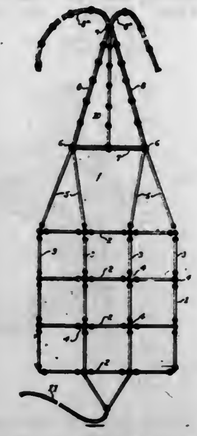
1,456,104. DEMAND METER. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Oct. 6, 1919. Serial No. 328,732. 2 Claims. (Cl. 171—34.)



2. In a demand meter, a maximum indicator, a driver for said indicator, a shaft for said driver, a gear fixed on said shaft, a spring urging said gear in a direction to move the indicator driver in a forward direction, a meter

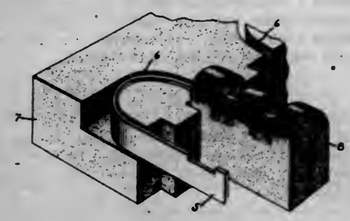
armature, means for permitting forward movement of said driver only as said armature rotates, a mutilated

gear for periodically returning the driver and its gear to an initial position, and a constant speed mechanism driving said mutilated gear.



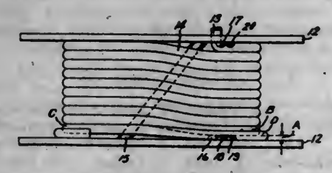
1,456,105. GARAGE DRAIN. JOHN HEINKEL, St. Louis, Mo. Filed Jan. 13, 1922. Serial No. 528,989. 2 Claims. (Cl. 182—10.)

1. A device of the class described, comprising an intake casing, provided with means for connection with a main drain; a grating for said intake, removably supported therein; a bell-shaped spreader supported just beneath said grating; a chute supported beneath said spreader, and possessing a diameter greater than that of the spreader; and a receptacle supported in the lower end of said chute, provided with a series of openings near the top thereof.



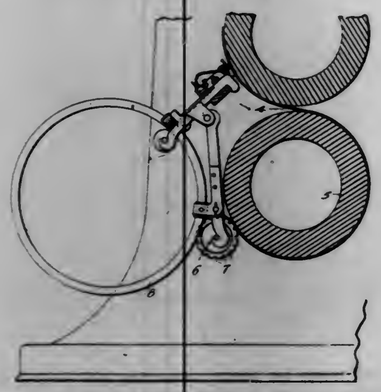
1,456,106. FIRE-RESCUE DEVICE. HARRIETTE E. HODGSON, New York, N. Y. Filed June 16, 1921. Serial No. 477,874. 3 Claims. (Cl. 227—11.)

1. A fire-rescue device comprising a net to which a number of persons may cling, said net comprising three or more vertical members spaced apart and of sufficient flexibility to permit rolling, and a plurality of horizontal members spaced apart and intersecting said vertical mem-



bers, and means for fixedly connecting said vertical and horizontal members at their intersections; and means connected to said net by which it may be hoisted.

1,456,107. ELECTRIC RESISTANCE FURNACE. CARL L. IPSEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 28, 1921. Serial No. 473,226. 7 Claims. (Cl. 204—64.)



1. An electric resistance furnace comprising a furnace wall, flat metal strips mounted in said wall, the longer transverse axis of said strips extending vertically, refractory insulators mounted on said strips abutting said wall, and resistance heaters mounted on said insulators.

1,456,108. COIL AND SPOOL CONSTRUCTION. SVEND E. JOHANNESEN, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 6, 1920. Serial No. 356,583. 8 Claims. (Cl. 175—21.)

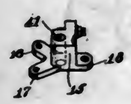
5. In a coil, a spool body, a compound conductor of circular shape formed of two electrically independent conductors mechanically united wound thereon, flanges for said spool body, and projections carried on those surfaces of said flanges which are adjacent the turns of wire, for supporting the end turns.

1,456,109. RUBBER-TIRE-FORMING ROLLER. ROBERT MCCLENATHEN, Cuyahoga Falls, Ohio, assignor to Kelly Springfield Tire Co. Filed Oct. 10, 1919. Serial No. 329,858. 2 Claims. (Cl. 154—9.)

1. In a device of the character described, the combination of a rotary rubber-sheeting drum, a revolvable annular wheel rim and supporting means, and a transfer roller interposed between and contacting with both the sheeting drum and the wheel rim, said transfer roller having a gum-retaining affinity greater than the rubber-sheeting drum but less than the wheel rim, whereby sheeted rubber stock is transferred from the drum to the wheel rim when the former is rotated.

1,456,110. SEAL FOR ELECTRIC DEVICES. GEORGE M. J. MACKAY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 21, 1921. Serial No. 438,899. 6 Claims. (Cl. 173—311.)

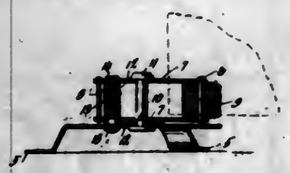
6. A seal for electric devices comprising the combination of a core of nickel-iron alloy having a lower coefficient of expansion than lead glass and provided with a coating of copper, a layer of lead glass surrounding said core and a shell of steel having the inner surface thereof coated with a flux, compressively surrounding said glass layer, the contiguous surfaces of members adhering to each other in a gas-tight condition.



1,456,111. CLAY PRODUCT AND PROCESS OF PREPARING SAME. EDWARD GOODRICH ACHESON, New York, N. Y. Filed Oct. 5, 1920, Serial No. 414,914. Renewed Mar. 15, 1923. 2 Claims. (Cl. 252.)

1. In a process of treating clay bearing materials, the steps comprising subjecting the clay particles, freed from grit, to attrition in presence of a deflocculating agent whereby a portion of the same is transformed into a colloidal state, and then precipitating the colloidal particles in presence of the residual fine material and collecting the product.

1,456,112. REFLOCCULATED PRODUCT AND PROCESS OF PREPARING SAME. EDWARD G. ACHESON, New York, N. Y. Filed Nov. 25, 1921. Serial No. 517,824. 3 Claims. (Cl. 252.)

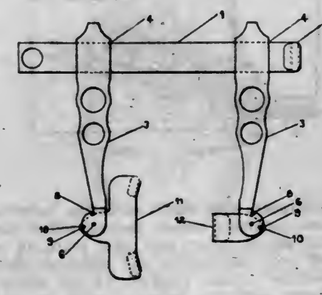


1. The herein described novel product prepared by subjecting a solid material susceptible of deflocculation to attrition in presence of an organic deflocculating agent and thereafter re-flocculating the colloidal material in presence of the residual fine material, said product comprising an intimate mixture of non-deflocculated and re-flocculated particles.

1,456,113. MAGNETO. BUTLER AMES, Lowell, Mass. Filed Feb. 10, 1919. Serial No. 276,005. 3 Claims. (Cl. 200—30.)

1. A magneto comprising a rotor, a pair of switch members, a disk secured to the end of the rotor transversely of the axis of the rotor for supporting one of said switch members, and a lug disposed in the central region of said disk for supporting the other of said switch members, said lug having a plurality of arms extending outwardly in divergent directions for securing the lugs to said disk.

1,456,114. COMBINED DOOR STOP AND HOLDER. WALTER C. BEACHAM, Clayton, Mo. Filed Nov. 25, 1921. Serial No. 517,671. 2 Claims. (Cl. 292—216.)



1. A device of the character described including an upstanding base provided with recesses, a frame pivotally mounted on said base and equipped with abutment rollers, a cylinder mounted in said frame, a spring pressed ball mounted in said cylinder and engageable in any one of the recesses of said base, and means to adjust the tension of said spring pressed ball.

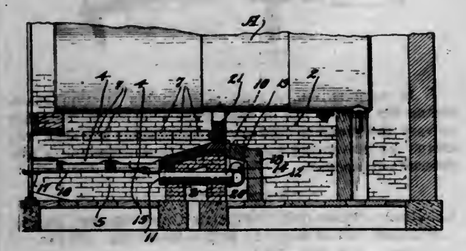
1,456,115. PATCH FOR PNEUMATIC TIRES. JULIUS I. BERG, Berg, N. Dak. Filed June 13, 1922. Serial No. 568,025. 2 Claims. (Cl. 152—26.)

1. A detachable patch for wheel casings comprising a plate curved in conformity with the contour of the outer surface of the casing and provided with a lip along its entire length adapted to grip the wheel rim, a pair of flat-headed screws with scored ends, rubber gaskets between said heads and the inner surface of the casing, and nuts for drawing said plate and screws firmly together squeezing the casing between them, apertures being provided for the screws in said plate.

1,456,116. SURGICAL RETRACTOR. ALFRED N. BESSESEN, Sr., Minneapolis, Minn. Filed Aug. 8, 1921. Serial No. 490,666. 2 Claims. (Cl. 128—20.)

1. A device of the character described, comprising a longitudinal handle member, a pair of depending arms removably positioned upon said handle, a pivotally mounted hook upon the lower end of each depending arm, and an integral hook upon one end of the handle member.

1,456,117. VEHICLE SPRING. JOHN BILAN, Flint, Mich. Filed Oct. 13, 1922. Serial No. 594,321. 1 Claim. (Cl. 267—27.)



In vehicle springs, the combination with a vehicle axle and chassis bar, of a spring member centrally supported upon said axle and including separate leaf sections, the opposite ends of each of the leaf sections having eyes formed therein, and a depending hood member carried by said chassis bar and engaging over said spring member, the side walls of said hood having suitably spaced perforations therein for alinement with the eyes of the leaf sections of the spring whereby securing means are received therethrough for rigidly securing said hood member to the leaf sections of the spring.

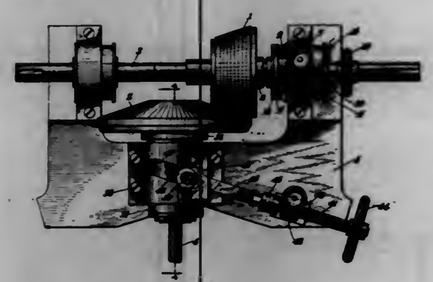
1,456,118. DETACHABLE FASTENER. CHARLES FRANCIS STANHOPE BILBROUGH, Burnham-on-Crouch, England. Filed May 10, 1920. Serial No. 380,851. 3 Claims. (Cl. 24—106.)

1. A detachable fastener of the class described consisting of a body wire bent to form a closed loop and the leg portions extending from the loop being disposed parallel, one of the same being provided with a keeper eye, said leg members both terminating in outwardly extending semi-circular portions, one of said semi-circular portions terminating in a penetrating point and the other of said portions terminating in a holding finger provided with a keeper recess.

1,456,119. STEAM-BOILER FURNACE. JOHN J. BRIDGEFORD, Philadelphia, Pa. Filed June 1, 1921. Serial No. 474,116. 2 Claims. Cl. 110—75.)

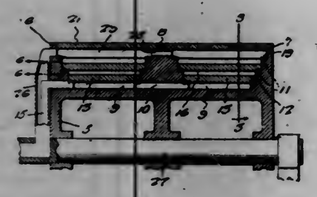
1. In a furnace having side walls, a bridge wall and grate in front of the bridge wall, said bridge wall including a forward extension inclining upwardly from the level of the grate and forming a deflecting surface for directing the gases of combustion toward the boiler, a wall on top of said bridge wall extending upwardly into close proximity to the crown sheet of the boiler and providing a narrow uniform passage therebeneath toward which the deflecting surface aforesaid directs products of combustion, a wall rising from the floor of the combustion chamber in the rear of and spaced away from the bridge wall connecting at its top with the latter to form a super-heating chamber, an air conduit extending from the ash pit through the bridge wall into the super-heating chamber and having lateral branches therein, and a flue extending longitudinally of each side wall above the grate and communicating at regularly spaced intervals with the space above the same, said flue joining the lateral branches aforesaid.

1,456,120. MAGNET FRAME. JAMES BURKE, Erie, Pa., assignor to Burke Electric Company, a Corporation of Pennsylvania. Filed Nov. 6, 1919. Serial No. 336,212. 3 Claims. (Cl. 171—252.)



1. The method of forming an electric motor or generator frame comprising bending strips of metal stock to the

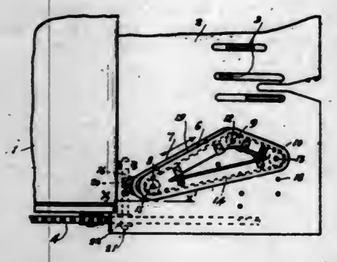
form of the field frame in a circumferential direction, welding said strips together at a joint at right angles to



the axis of the frame, and internally boring said frame to size and true the surfaces.

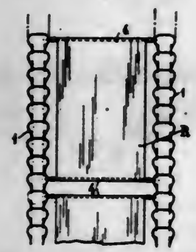
1,456,121. ADJUSTING MECHANISM FOR FRICTION GEARS. WILLIS S. CHANDELL, Elsmere, N. Y., assignor to Albany Paper Mill Machinery Company, Inc., Albany, N. Y., a Corporation of New York. Filed July 10, 1922. Serial No. 573,903. 10 Claims. (Cl. 74—26.)

1. In combination, a pair of engaging friction gears, means for moving one of said gears relative to the other to vary the pressure between their engaging surfaces, and means for preventing said pressure from exceeding a predetermined amount.



1,456,122. TURBINE. WILLIAM JOHN EDNEY, Sutton, England. Filed Sept. 1, 1922. Serial No. 585,781. 5 Claims. (Cl. 253—79.)

1. A turbine comprising a drum, a band spiraled around the drum to form a continuous duct of several convolutions, means closing the duct at the sides, an inlet chamber formed conjointly by the band and drum structure at the inner end of the duct, an outlet chamber formed conjointly by the band and drum structure at the outer end of the duct and inlet and outlet conduits connected with said chambers.



1,456,123. ATTACHMENT TO BINDERS. THOMAS DURRANT, Harptree, Saskatchewan, Canada. Filed July 1, 1919, Serial No. 307,960. Renewed Mar. 23, 1923. 1 Claim. (Cl. 56—470.)

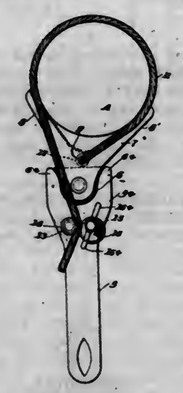
An attachment for binders comprising a worm shaft journalled to the underside of the binder deck and equipped at one end with a sprocket meshing with a chain forming part of the binder mechanism, a pivot shaft passing through the deck and equipped at its lower end with a worm wheel meshing with said worm shaft, a swinging conveyor frame comprising a pair of spaced upper and lower triangular shaped plates perforated at one corner to receive the upper end of the pivot

shaft therethrough, stud shafts extending between said plates at the remaining corners thereof, rollers mounted on said stud shafts and on said pivot shaft, an endless belt trained over said rollers, and releasable fastening means insertable through apertures in said binder deck and engageable with the conveyor frame to hold the latter in any adjusted position to which it may be swung on the pivot shaft.

1,456,124. APPARATUS FOR MOVABLE PUBLICITY. HENRI FRANÇOIS ETIENNE SYLVAIN DUSSERIS, Paris, France. Filed May 2, 1922. Serial No. 558,024. 2 Claims. (Cl. 40—28.)

1. In apparatus of the class described, a plurality of endless chains, cross members between the chains to act as supporting means for advertisements, perforated projections on the extremities of said cross members, and loops having hooked ends to engage the one end into one of said perforations and the other into a link of one of the chains.

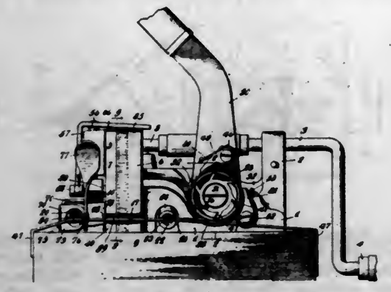
1,456,125. INTERNAL-COMBUSTION ENGINE. HERMAN JOSEPH FLEDDERMAN, Tulsa, Okla. Filed Aug. 25, 1920. Serial No. 406,002. 2 Claims. (Cl. 74—85.)



1. An internal combustion engine comprising a cylinder, a piston therein, a rod rigidly secured to said piston, the lower end of said cylinder being provided with means providing a gas tight connection between the lower end of the cylinder and said rod, a cross head in the form of an inverted cup rigidly secured to the lower

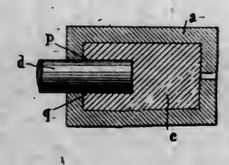
end of said rod and gradually and uniformly decreased in diameter toward its upper end to form an oil baffle, a

tubular guide depending from the lower end of said cylinder and receiving said cross head, and a connecting rod secured to said cross head.



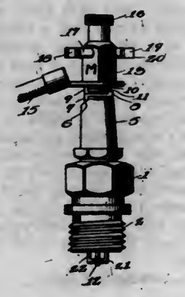
1,456,126. CAP WRENCH. GEORGE B. FRIDAY, Pittsburgh, Pa. Filed June 5, 1922. Serial No. 566,109. 4 Claims. (Cl. 81—3.1.)

1. A wrench comprising a handle, a jaw pivotally supported at one end of the handle, a flexible clamping member secured at one end to the jaw, means on the handle for limiting the pivotal movement of the jaw relatively to the handle, a post on the handle, and an eccentric member pivotally mounted on the handle adjacent the post, said post and eccentric member providing an adjustable clamp for said flexible clamping member.



1,456,127. WIRE TENSIONING AND TWISTING MACHINE. ALEC J. GERARD and PARVIN WRIGHT, Chicago, Ill. Filed Mar. 7, 1922. Serial No. 541,777. 5 Claims. (Cl. 140—93.)

1. In a wire tying machine the combination of a frame provided with a plurality of wire receiving slots; twisting means comprising a slotted post and rotatable slotted means carried by said frame adapted to twist the wire; means adapted to insure the alinement of the slots of said twisting means with the slots of said frame at the completion of the twisting operation; and means

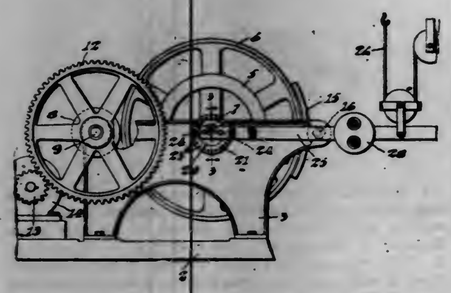


movable longitudinally of said post adapted to positively disengage the twisted wire from said post at the end of the twisting operation, substantially as described.

1,456,128. MANUFACTURE OF EXTRUDED METAL SECTIONS. MARCEL ADOLPHE HARDY, Hennebont, France. Filed June 14, 1921. Serial No. 477,451. 2 Claims. (Cl. 207—10.)

1. A method of manufacturing extruded metal sections, comprising exerting pressure on a mass of metal to be worked, said pressure being applied on an area whose diameter is substantially less than that of a container in which the metal is placed; whereby a heat insulating layer of said metal is formed between the interior surface of the container and a means for exerting said pressure.

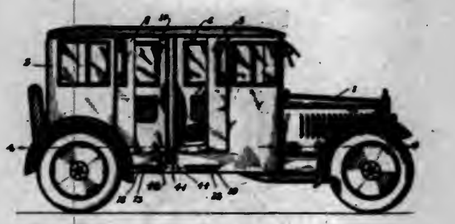
1,456,129. SPARK PLUG. WILTON F. JENKINS, Richmond, Va. Filed June 23, 1920. Serial No. 391,112. 8 Claims. (Cl. 123—169.)



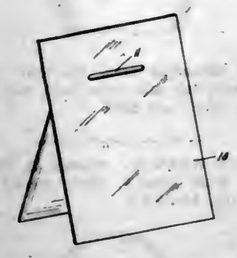
1. A binding screw for spark plugs, etc., with noncircular portions for scraping a clean contact seat on a terminal plate, when screwing it into place.

1,456,130. BELT BUCKLE. EMIL L. JOHNSON and OLOF LUNDSTEN, Attleboro, Mass. Filed Feb. 15, 1922. Serial No. 536,666. 2 Claims. (Cl. 24—78.)

1. A separable belt buckle comprising a body having a front plate with rearwardly turned edge walls said walls being provided with inwardly-turned flanges having elongated openings therethrough, means in said body for binding one end of the belt in adjusted position therein, and a separate bail member to which the opposite end of the belt is attached and means for engaging said flange openings by which its end of the belt may be releasably connected to the buckle body.



1,456,131. HOIST. DAVID PERCY KARCHER, Somerville, Mass. Filed Dec. 21, 1920. Serial No. 432,174. 1 Claim. (Cl. 254—186.)



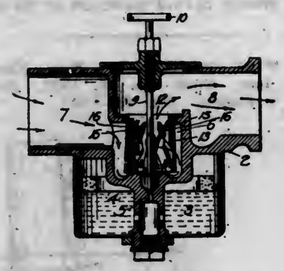
A hoisting mechanism of the character described comprising, in combination, a hoisting drum, a wheel fast with said drum, a friction roll mounted to engage the periphery of said wheel to drive said wheel and drum, a shaft supporting said roll, bearings supporting said shaft at opposite sides of the point of engagement of said roll with said wheel, a brake shoe mounted to engage the periphery of said wheel at a point remote from the engagement therewith of said roll, a relatively stationary shaft on which said drum and wheel are rotatably mounted, two eccentrics secured to said stationary shaft at opposite sides of said drum and supporting said shaft, two additional eccentrics within which, respectively, the first eccentrics are mounted, a frame in which said additional eccentrics are supported for angular adjustment, means for securing said additional eccentrics in various positions of angular adjustment, and an operating lever secured to said shaft to rock said shaft and the eccentrics secured thereto relatively to the second pair of eccentrics, whereby said rocking movement will effect a bodily transfer of said drum and wheel toward or from said roll and brake.

1,456,132. COMBINED DOOR AND STEP STRUCTURE. MISERE KHAN, Cincinnati, Ohio. Filed June 10, 1922. Serial No. 567,339. 8 Claims. (Cl. 280—166.)

5. In a conveyance having operating mechanism of the class described, a pivotally mounted curved arm having a jointed handle adapted to be pushed inwardly or pulled outwardly to operate said mechanism and when in outward position to drop down out of the way against the body of the car.

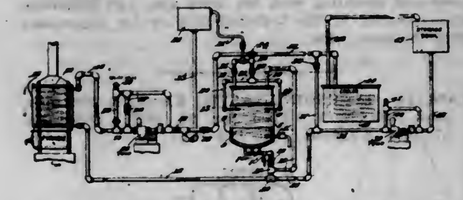
1,456,133. COMBINED ADVERTISING DEVICE AND TEMPORARY SAVINGS BANK. RICHARD D. KNIGHT, Providence, R. I.; Grace P. Knight executrix of said Richard D. Knight, deceased. Filed Apr. 28, 1920. Serial No. 377,292. 4 Claims. (Cl. 229—8.5.)

1. A combined advertising device and savings bank comprising a front display plate having a coin-receiving slot therethrough, and a coin-retaining envelop having two end flaps extending in opposite directions and secured to the back of said plate on opposite sides of said slot to receive coins passed through the slot into its mouth which is thus held open.



1,456,134. ATTACHMENT FOR CANDLESTICKS AND CANDLEHOLDERS. EVA JOSEPHINE LAKE, Greensburg, Pa. Filed Apr. 29, 1922. Serial No. 557,308. 1 Claim. (Cl. 67—23.)

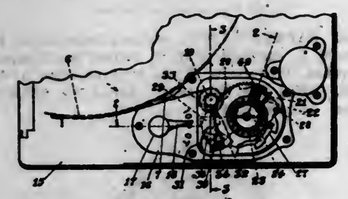
An attachment of the class described including a stiffening element provided with a body portion having a centrally located opening and a flange upstanding from its edge, a skirt supported on the upstanding flange



of the stiffening element, and a bracing element encircling the lower edge of the skirt in the manner and for the purpose specified.

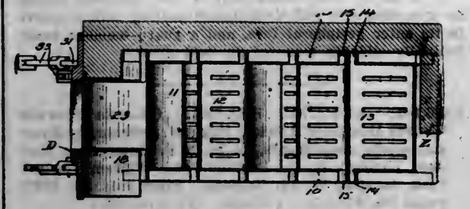
1,456,135. FUEL MIXER. KNUT F. LIDHOLM and ADOLPH E. HEDWALL, Denver, Colo. Filed Aug. 16, 1920. Serial No. 403,702. 3 Claims. (Cl. 48—180.)

1. A fuel mixer for internal combustion engines comprising an open-ended duct having a plurality of spirally twisted blades extending convergingly inwardly from its wall.



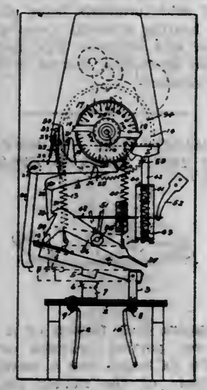
1,456,136. APPARATUS FOR HEATING AND COOLING. JOHN W. F. MACDONALD, Brighton, Mass., assignor to The Merrill Process Company, a Corporation of Massachusetts. Filed Dec. 5, 1918. Serial No. 265,386. 3 Claims. (Cl. 257—10.)

1. Apparatus for subjecting material to different temperatures comprising a container for the material having a jacket through which liquid may be circulated, two systems of conduits each having a common connection to the inlet and the outlet of said jacket, pumps operable respectively to circulate liquid through the respective conduit system, a heater for supplying heat to the liquid in one of said conduit systems, means for cooling the liquid in the other conduit system and means operable selectively to establish communication between either of said conduit systems and said jacket and simultaneously to cut off communication of the other system with said jacket whereby in shifting from one circulating system to the other the liquid contained in the jacket will be displaced and circulated with the liquid of the system in which communication with the jacket is established.



1,456,137. CAMERA-SHUTTER-OPERATING MECHANISM. GLENN J. MACDOWELL and MASON H. JONES, Chicago, Ill., assignors to Super Reflex Company, Chicago, Ill. Filed Sept. 1, 1920. Serial No. 407,289. 7 Claims. (Cl. 95—58.)

1. In a photographic camera of the character described a shutter, a shutter operating mechanism comprising a flexible member secured to said shutter, a shaft journaled in said camera and provided with a winding reel or spool thereon to which said flexible member is secured, spring means for actuating said shaft to wind said flexible member on said reel or spool, and means for adjusting the tension of said spring means, whereby the speed of said shutter may be adjusted, said tension adjusting means comprising a ratchet wheel, a sector gear actuating said shaft, a spring having its opposite ends secured to move with said ratchet wheel and said sector



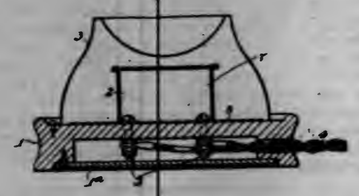
gear respectively, means for turning said ratchet wheel, and means for holding said ratchet wheel in any desired position.

1,456,138. AUXILIARY FEED BLOCK FOR FURNACES. VASIL MACKAY, Washington, D. C. Filed Oct. 30, 1919. Serial No. 334,589. 3 Claims. (Cl. 110—39.)

1. In combination with a furnace having a fuel opening therein, a dead plate secured in the furnace adjacent the fuel opening and having a recess therein and a socket on each side of the recess, side beams having their forward ends received in the sockets, a fuel supporting and feeding member pivotally carried by the side beams and received in the recess of the dead plate, grate bars pivotally carried by the side beams, and means for operating the grate bars and fuel supporting and feeding member.

1,456,139. AUTOMATIC TIME SWITCH. EMIL A. MEYER, Houston, Tex. Filed Oct. 3, 1921. Serial No. 505,209. 8 Claims. (Cl. 200—39.)

8. The combination with an electrical switch, of means to close and open the switch at adjustable time inter-

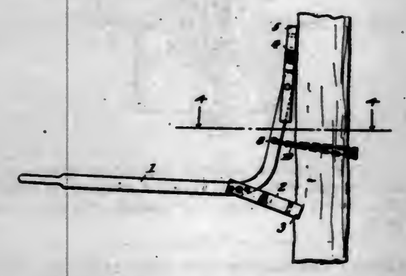


vals, means to move the closing means out of the path of opening movement of the switch and means to operate the last named means at fixed time intervals.

1,456,140. SAFETY CATCH. EUGENE MORSHOUSE, Providence, R. I., assignor to B. A. Ballou & Company, Incorporated, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 20, 1922. Serial No. 537,842. 5 Claims. (Cl. 24—157.)

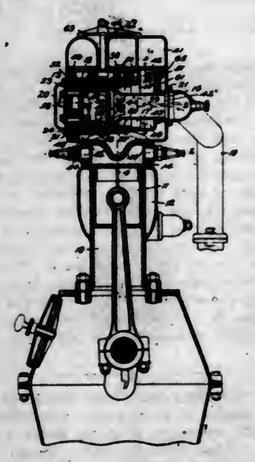
1. A safety catch comprising a body member having an attaching base and hook-shaped portion with a groove in its outer peripheral face, and a guard member longitudinally slidably mounted in said groove.

1,456,141. ELECTRIC HEATER. CHARLES HOWARD WALTER MORRISON, London, England, assignor, by direct and mesne assignments, to M. & P. Enterprises Limited, London, W. 1, England, and William Herbert Peak, London, W. 14, England. Filed July 10, 1922. Serial No. 573,955. 1 Claim. (Cl. 219—43.)



An electric heating appliance consisting of a base, upright conductor legs on the upper side of said base, terminal elements for the line wires and constituting means for fastening the conductor legs to the base, the binding ends of said terminals being disposed on the base, resistance heating elements detachably secured to the upper ends of said conductor legs, and a metal cover having a cup-like depression therein overlying said resistance heating elements.

1,456,142. BOBSLED. OTTO J. NIENOW, Merrill, Wis. Filed Feb. 13, 1922. Serial No. 536,263. 1 Claim. (Cl. 280—27.)

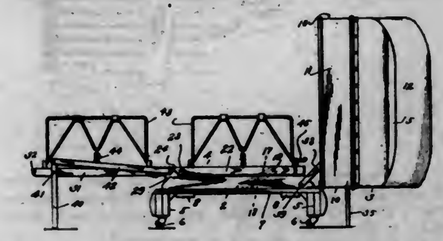


In a sled, runners each formed of a single casting and having a web portion provided with upstanding arms intermediate its length and a marginal flange extending transversely of the runner beyond its inner and outer side faces, the portion of the flange extending beneath the runner being reduced intermediate the length of the runner to provide a seat, a ground-engaging strip secured in said seat, ribs extending from the portions of the flange extending along the inner edges of said arms, and a cross bar for connecting said runners having each end provided with side grooves for receiving said ribs when the end portions of the cross bars are fitted between said arms, and strips carried by said arms and extending across the end portions of the cross bar to prevent upward movement of the cross bar.

1,456,143. WIRE TIGHTENER. FRED NESS, Lake Andes, S. Dak. Filed Feb. 20, 1922. Serial No. 538,010. 2 Claims. (Cl. 254—82.)

1. In a fence-tool of the character described, the combination with an L-shaped operating-lever, a brace arm pivoted at the bend in the L-shaped operating-lever, a dog pivoted to the upper end of the L-shaped operating-lever and operating with the brace arm, and adjustable means carried by the L-shaped member for engagement with the fence wire.

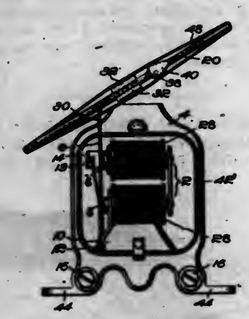
1,456,144. GAS-ENGINE VALVE. BARNEY R. NYHAGEN, New York, N. Y. Filed Apr. 28, 1920. Serial No. 377,190. 6 Claims. (Cl. 123—75.)



1. In internal combustion engines, a power cylinder, a piston operating therein, a valve head mounted on said cylinder and defining therewith, an explosion chamber above the piston, an intake manifold, an exhaust manifold, a plurality of telescopically connected valve sleeves, the head having a chamber in which said sleeves are adapted to reciprocate, said head having a combined inlet and exhaust port leading to the power chamber, the outer sleeve having a port adapted to register with said inlet and exhaust port, the inner valve sleeve having a port adapted to register with said first and second named ports, said outer sleeve valve serving, when in one position, to close the aforesaid port of the head, the inner sleeve valve having an ejecting piston operatively co-acting with the exhaust manifold and with the inlet and exhaust ports of the outer sleeve and valve head respectively for forcing the exhaust gas into said exhaust manifold, and mechanism for reciprocating said sleeve valves in time with the movements of the piston in said power cylinder.

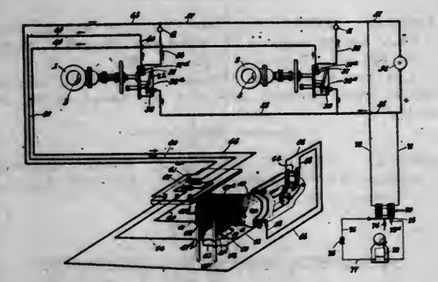
1,456,145. FERRULE FOR BOILER TUBES. JOSEF PEČINKA, Deutsch-Wagram, Austria. Filed Apr. 22, 1912. Serial No. 692,315. 1 Claim. (Cl. 285—47.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A boiler tube ferrule comprising a cap of a refractory material provided with an inner circumferential groove having a tapering side wall provided with an annular recess for the reception of the correspondingly shaped end of the boiler tube protruding from the boiler, and a ring within said annular recess for connecting the end of the tube within and with said ferrule, substantially as described.



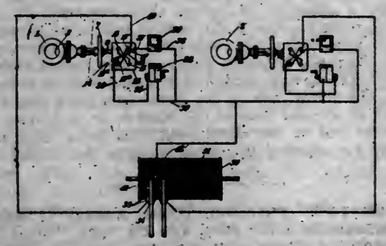
1,456,146. COUCH BED. BURTON C. POSTON, Chillicothe, Ohio. Filed Jan. 26, 1921. Serial No. 439,947. 1 Claim. (Cl. 5—16.)

In a couch-bed, a base, a housing member formed to include an internal chamber normally disposed above said base, a hinge connection between one of the lower edges of said housing member and said base and capable of permitting said member to be swung to assume a position substantially to one side of said base, and a foldable bed frame capable of occupying said chamber when said housing member assumes its normal position and to be extended to produce a bed structure when said member is elevated to occupy an open position, legs mounted in the housing, and means for pivotally connecting the legs and base to cause said legs to slide when the housing member is swung in either direction.



1,456,147. AGITATING DEVICE. TRACY JACKSON PUTNAM, Boston, Mass. Filed Jan. 9, 1920. Serial No. 350,846. 3 Claims. (Cl. 259—75.)

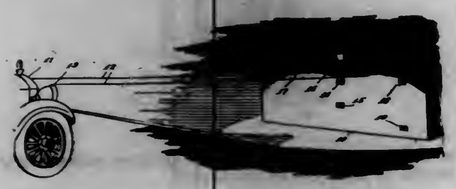
1. Apparatus for agitating liquids comprising, in combination, a vessel adapted to hold liquids, said vessel having unequal axes, means for supporting said vessel with its long axis at an acute angle to the supporting means, and means for causing vibration of the supporting means



whereby the contents of the vessel are given a circulatory motion to agitate them thoroughly.

1,456,148. RECORDING APPARATUS FOR VALVES AND THE LIKE. CHARLES E. RENSHAW, East Orange, N. J. Filed July 24, 1919. Serial No. 313,042. 36 Claims. (Cl. 234—1.5.)

2. In an automatic sprinkler system for fire prevention, a valve for controlling the supply of the sprinkling fluid, means for indicating a particular position of the valve, and means for causing said indication to be repeated so long as the valve is in said position.

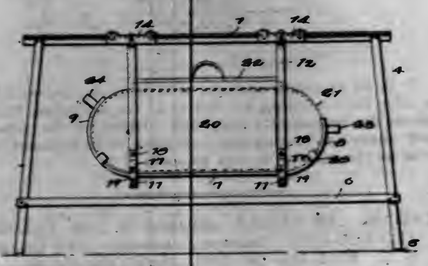


1,456,149. RECORDING APPARATUS FOR VALVES AND THE LIKE. CHARLES E. RENSHAW, East Orange, N. J. Filed July 29, 1919. Serial No. 313,966. 8 Claims. (Cl. 234—17.5.)

1. In a recording apparatus for valves and the like, the combination of a valve, a manually operable device,

a recording means and a signal, and connections such that a record can be made by manual operation of such device when the valve is in a desired position, but preventing the operation of the signal, and such that the signal will be operated by manual operation of such device when the valve is in an undesirable position, but the making of a record will be prevented.

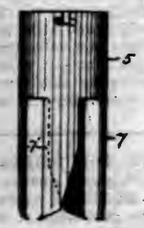
1,456,150. HEADLIGHT PHOTOMETER. CHESTER S. RICKER, Indianapolis, Ind. Filed Jan. 12, 1921. Serial No. 436,672. 7 Claims. (Cl. 88—23.)



1. A headlight photometer, comprising a screen having a plurality of windows arranged to receive light at predetermined angles from a headlight at a predetermined distance from the screen, and means for illuminating said windows from the rear to individually predetermined values.

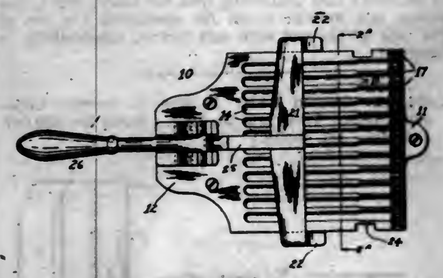
1,456,151. METAL POLISH. WILLIAM ALBERT RUDDELL, Asbury Park, N. J. Filed Dec. 28, 1921. Serial No. 525,447. 3 Claims. (Cl. 148—22.)

1. A metal polishing composition comprising a mixture of tripoli powder, oxalic acid, salt, borax, water, and alcohol.



1,456,152. CHURN. THOMAS J. SEARCY, Eldorado Springs, Mo. Filed May 19, 1922. Serial No. 562,144. 3 Claims. (Cl. 259—91.)

1. In combination, a frame, legs for supporting said frame, a plurality of rocker arms supported on said frame, trunnion rods in the ends of said arms, a pair of cradle rods extending in parallel spaced relation with each other and provided with upwardly curved ends, a churn tank having curved ends situated in said cradle rods, the curved ends on the cradle rods being greater in length at one end than at the other so as to prevent the adjacent end of the churn tank from being lifted, and means for securing the churn tank to the cradle rods.

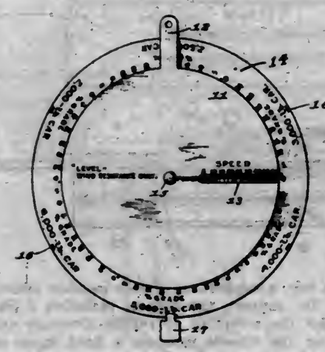


1,456,153. DRILLING TOOL. HERMAN L. SEEGER, Indianapolis, Ind. Filed Aug. 29, 1921. Serial No. 496,252. 5 Claims. (Cl. 255—67.)

1. In a tool for the purposes specified, a substantially cylindrical member having a plurality of spaced apart slots extending in from one end of said member first obliquely and then nearer at right angles with said end

forming tongues to retain the earthen core which tongues are sharpened at their outer ends to form cutters, and means for manually operating said member.

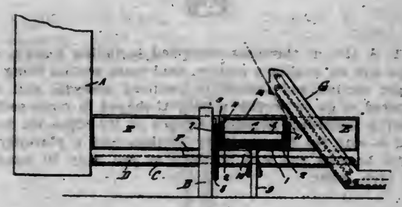
1,456,154. MACHINE FOR LOADING CARTRIDGE BELTS AND THE LIKE. JOHN H. SHAW, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Nov. 23, 1918. Serial No. 263,900. 29 Claims. (Cl. 86—48.)



13. A loading device comprising a bed, means thereon to position a plurality of links in overlapping relation and a plurality of cartridges, and means to limit movement of the links.

14. In a device of the character described, means for supporting a pair of links in position to be coupled by a cartridge, means for effecting the insertion of the cartridge in the coupling connection in said links, and means for limiting the movement of said second named means.

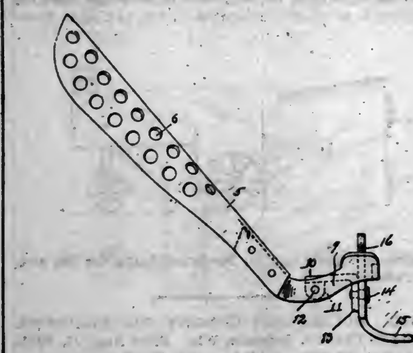
17. In a device of the character described, means for supporting a pair of links in position to be coupled by a cartridge, and means for effecting the insertion of the cartridge into coupling connection with said links.



1,456,155. INDICATOR. HAROLD WHITING SLAUSON, New York, N. Y. Filed May 24, 1920. Serial No. 383,834. 8 Claims. (Cl. 235—88.)

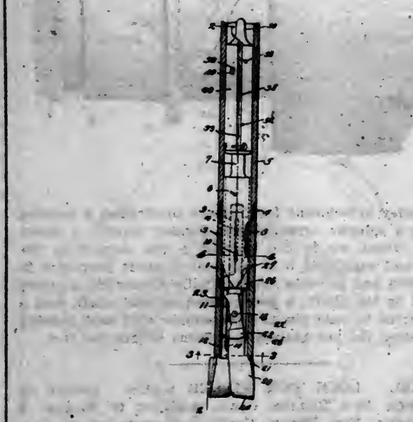
1. A device for indicating the magnitude of a resultant quantity incident to the motion of a vehicle which is a function of the inclination of the path of motion of the vehicle and another variable quantity, comprising a member carried by the vehicle and responsive to the force of gravity, and a member carried by the vehicle and movable relative to said first mentioned member in response to changes of inclination of said vehicle, one of said members having thereon a series of resultant indicia of which inclination and another variable quantity are factors arranged to correspond in one direction with their inclination components and in another direction

with their other variable quantity components and the other of said members having indicia thereon representing said other variable quantity components arranged to register with the resultant indicia of which they are factors.



1,456,156. ATTACHMENT FOR COMBINED HARVESTERS AND THRASHERS. WALTER ROGER TANDY, Abilene, Tex. Filed Nov. 7, 1921. Serial No. 513,504. 2 Claims. (Cl. 198—233.)

1. The combination with the laterally extending platform and conveyor of a combined harvester and thrasher, of a rearwardly extending platform hingedly connected at its front end to the back portion of the laterally extending platform, a wheel supporting the rear portion of the hinged platform, an endless conveyor carried by the hinged platform, a ground engaging wheel, a structure carried thereby and mounted for up and down movement independent of the hinged platform and means for transmitting motion from said last named wheel to the conveyor on the hinged platform.

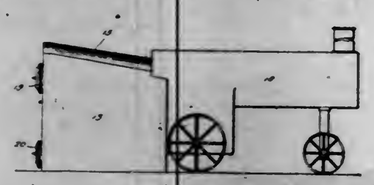


1,456,157. LID LIFTER. FREDERICK G. TREUBIG, Ozone Park, N. Y. Filed Apr. 6, 1922. Serial No. 550,134. 4 Claims. (Cl. 294—13.)

1. In a lid lifter, a handle, a yoke rigid with the handle, a member oscillatably mounted in the yoke, fingers pivotally connected to the member and extending above and below the yoke, the said fingers having camming outer

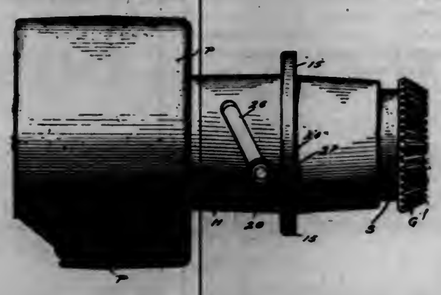
edges adapted to engage the yoke as the yoke and member move relative to each other during the lifting operation.

1,456,158. WELL DRILL. JESSE F. TUNNELL, Dallas, Tex. Filed May 10, 1921. Serial No. 468,214. 8 Claims. (Cl. 255—76.)



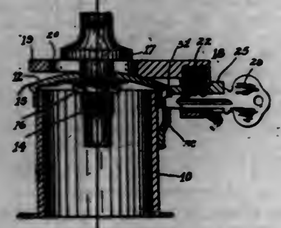
1. A well drill including a casing mounted for rotation and having an opening in one end, a body slidable within the casing, pivotally mounted bits connected to and slidable independently of the body, said bits being insertable through the opening in the casing, cooperating means upon the bits and casing for limiting the movement of the bits from the casing, means movable with the body and relative to the bits for wedging between the bits and the walls of the opening to hold the bits in engagement with the end of the casing, and means carried by the bits and cooperating with said holding means for shifting said bits out of engagement with the end of the casing when the body is raised relative to the bits.

1,456,159. FURNACE. SAMUEL ALLEN USHER, Chunky, Miss. Filed June 8, 1920. Serial No. 387,421. 1 Claim. (Cl. 110—88.)



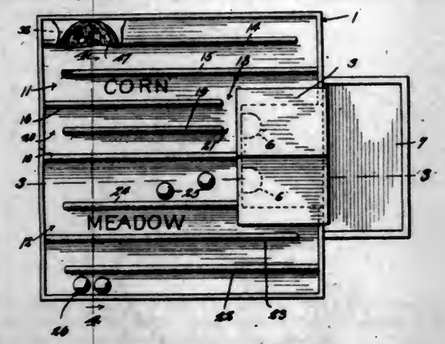
The combination with a boiler, of a removable auxiliary furnace including a top wall, end wall and side walls, the latter extending beyond the end of the top wall to receive the end of the boiler furnace within the open end of the auxiliary furnace with the end wall of the former abutting the edge of the top wall of the latter and with

the side walls of the auxiliary furnace overlapping the side walls of the boiler, a transversely arranged grate supporting bar within the auxiliary furnace and abutting the boiler, a grate, doors located in the end wall above



and below the grate and an insulated lining for the auxiliary furnace.

1,456,160. PULLEY ATTACHMENT FOR TRACTORS. HENRY C. UTTECH, Lebanon, Wis. Filed Aug. 25, 1921. Serial No. 495,228. 1 Claim. (Cl. 74—7.)

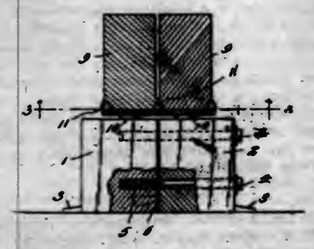


A pulley attachment for tractors comprising a housing having a spirally arranged slot formed therein, a sleeve loosely fitted within the housing, a pin carried by the sleeve and extending into said slot, a shaft journaled in the sleeve and movable longitudinally therewith, a pulley carried by the shaft, a gear carried by said shaft, and a nut carried by said pin and cooperable with said housing for locking the pin against movement within the slot.

1,456,161. LOCK FOR FILLER CAPS. HENRY G. VOIGHT, New Britain, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 27, 1918. Serial No. 224,963. 17 Claims. (Cl. 70—60.)

1. A radiator filler tube, a cap therefor, a separate member mounted upon the outer face of said cap but secured thereto from the under surface of the cap, and key-controlled means for locking the cap to the filler tube against manual removal, said key-controlled means carried by and retained in its operative position by said separate member.

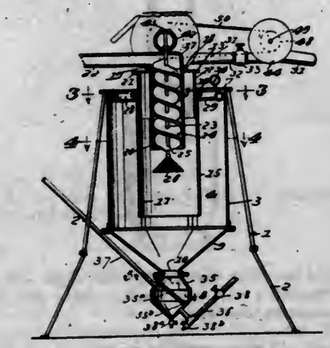
1,456,162. GAME. CHARLES W. WALKER, Apollo, Pa. Filed July 15, 1921. Serial No. 485,044. 3 Claims. (Cl. 46—61.)



1. In a toy, a support, a tiltable member mounted to swing on the support, the support including a platform adapted for the reception of rolling elements and discharging on the tiltable member, a fixed figure on the support, a cover for the figure, and means for connecting the cover operatively with the tiltable member, whereby the said member will raise the cover with respect to the figure when said member is tilted in one direction, and lower the cover with respect to the figure when said member is tilted in an opposite.

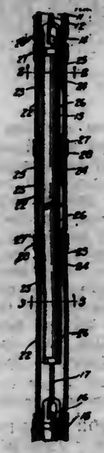
1,456,163. TIRE. HUGH B. WALTON, Deer Park, Wash. Filed Nov. 10, 1922. Serial No. 600,073. 2 Claims. (Cl. 152—1.)

1. A tire of the class described including a main section and an auxiliary section, said main section being the inner section and formed of resilient material and constructed so as to provide a body U-shaped in cross section having inwardly extending flanges on its edges for forming a seat for the auxiliary section, and a plurality of bolts bracing the side portions of the body in relation to each other.



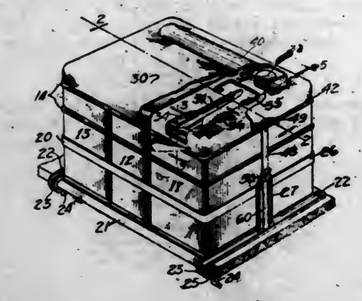
1,456,164. SAW-SETTING DEVICE. ELIJAH E. WASHBURN, Casper, Wyo. Filed May 19, 1922. Serial No. 562,082. 1 Claim. (Cl. 76—59.)

A saw setting device comprising base blocks arranged side by side and having vertical sockets in parallelism, rolls of steel or other appropriate hard metal arranged above and spaced from the base blocks and having



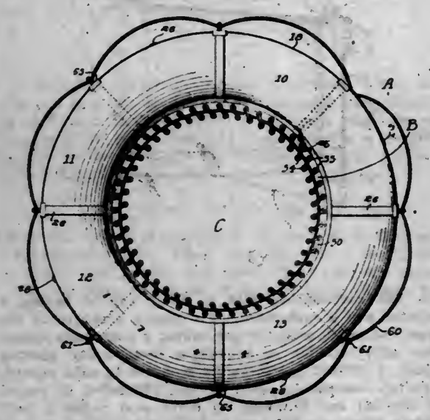
stems removably arranged and freely rotatable in the said sockets and also having meshed teeth at their lower ends, and headed screws extending through one of the base blocks and engaging threaded sockets in the other base block, whereby the blocks may be adjustably spaced apart to space the peripheries of the rolls and so that shims can be interposed between the base blocks.

1,456,165. ORE SEPARATOR. STEPHEN H. WHITNEY, San Francisco, Calif., assignor of one-fourth to Albert A. Eddie, San Francisco, Calif. Filed Oct. 21, 1919. Serial No. 332,223. 7 Claims. (Cl. 83—82.)



1. A device of the character described including a support, a pressure support mounted in the tank, a pressure supply pipe leading to the tank, a cylinder disposed concentrically within the tank and providing a separating chamber, a conducting tube disposed concentrically within the chamber, a rotatably mounted feeding screw disposed through the tube, a conical deflector loosely suspended from the lower end of the screw and positioned within the chamber, an outlet conducting pipe leading from the separating chamber, means mounted at the top of the chamber near the outlet for removing metallic particles from the ore, and means at the bottom of the tank for receiving heavy particles.

1,456,166. OIL-WELL PUMP. CHARLES E. WILCOX, Anaheim, Calif. Filed Dec. 27, 1921. Serial No. 524,887. 8 Claims. (Cl. 74—108.)



1. A working barrel for an oil well pump comprising: a series of liners each adapted to fit on a pump plunger; and means for supporting said liners so as to leave a space around said plunger, and between said liners.

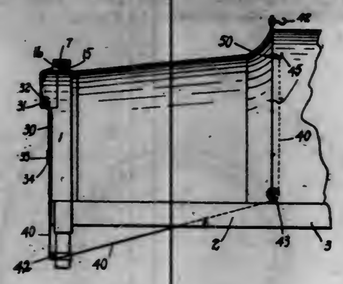
1,456,167. EMERGENCY UNIT. OZRO N. WISWELL and SCOTT E. ALLEN, Los Angeles, Calif., assignors to Swingspout Measure Co., Los Angeles, Calif., a Corporation of California. Filed Aug. 4, 1921. Serial No. 489,842. 8 Claims. (Cl. 224—29.)

1. In combination: a plurality of containers each having a swinging spout; means for holding said containers together; and a single means for locking all of said swinging spouts in their closed positions.

1,456,168. PNEUMATIC LIFE RAFT. CHARLES C. WITMER and BECKWITH HAVENS, Hammondsport, N. Y., assignors to "Airships Incorporated," Hammondsport, N. Y., a Corporation of New York. Filed Nov. 17, 1921. Serial No. 515,931. 11 Claims. (Cl. 9—11.)

1. A pneumatic raft comprising an annular flexible body formed from balloon cloth, a plurality of partitions dividing the body into a plurality of independent air compartments, and perforated partitions arranged in each compartment, whereby the washing back and forth of fluid in said compartments during change of load thereon is prevented.

1,456,169. LATCH. WILLIAM S. WITTEN, Chicago, Ill. Filed Apr. 5, 1920. Serial No. 371,188. 8 Claims. (Cl. 292—238.)



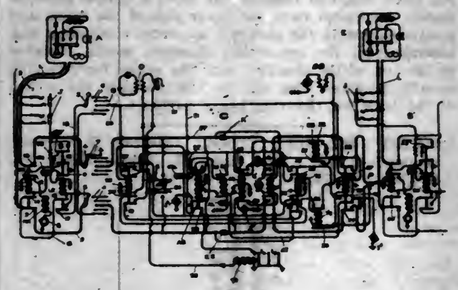
4. A latch comprising a casing adapted to be secured to a door a short distance back from the edge thereof, a pendulous bar mounted in said casing, a horizontally-disposed latching-bolt mounted on the lower end of said

pendulous bar and movable freely between the oppositely-disposed walls of said casing, and an extension from the

edge of said casing substantially to the edge of the door adapted to support the latching-bolt adjacent to the co-operating keeper.

1,456,170. RADIATOR CURTAIN. CHARLES C. WOODBERRY, Cincinnati, Ohio. Filed Apr. 2, 1921. Serial No. 458,035. 4 Claims. (Cl. 257—132.)

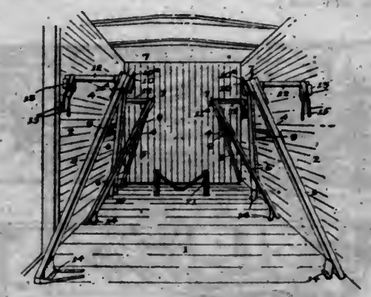
1. The combination with a motor vehicle having a radiator and a dash-board, of a canopy arranged at the upper end of the radiator and having a lower edge spaced from said radiator to provide a downwardly opening mouth, a curtain rod rotatably mounted in said canopy, a curtain connected to said rod and adapted to be wound on the rod and unwound to cover said radiator, said curtain being adapted also to move through said mouth, and curtain actuating means connectd to the curtain and extending to the dash-board to permit the operator of the vehicle to actuate the same.



1,456,171. INTERNAL-COMBUSTION ENGINE. MILLARD F. WOODWARD, Alexandria, La. Filed Apr. 17, 1922. Serial No. 553,495. 1 Claim. (Cl. 74—108.)

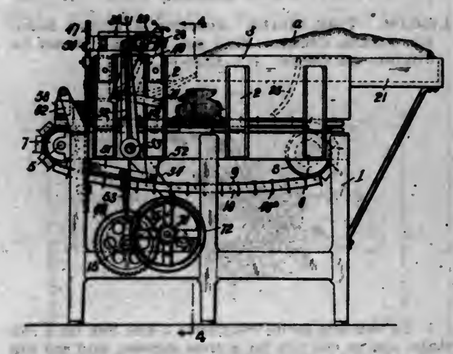
In combination with a cylinder and its piston, a bushing fitting in the cylinder and engaged by the piston, a beveled seat in the lower end of the cylinder, the bushing having its beveled lower end engaging the seat, the upper end of the bushing having a reduced part forming a shoulder and the cylinder having an annular recess at its upper end, the bottom of which is flush with the shoulder and notches communicating with said recess, a ring fitting in the recess and engaging the shoulder, ears on the ring engaging the notches, bolts passing

through the ears into the cylinder, the upper end of the cylinder having a key slot therein and a key on the bushing engaging said slot.



1,456,172. TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 16, 1919. Serial No. 271,886. 16 Claims. (Cl. 179—27.)

1. A telephone system including calling and called subscribers' lines, a link circuit, an automatic switch for connecting said calling subscriber's line and said link circuit, manually controlled means for connecting said link circuit to said called subscriber's line, a source of signaling current, a source of busy current, automatic means responsive to the connection of said link circuit to said called subscriber's line to either connect the signaling current to the called subscriber's line or the busy current to the calling subscriber's line dependent upon the idle or busy condition of the called subscriber's line, a supervisory lamp for said link circuit, and means for automatically flashing said supervisory lamp responsive to a single actuation of the switchhook at the calling substation.

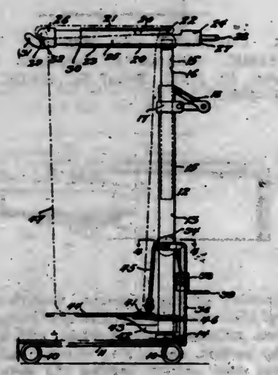


1,456,173. SYSTEM FOR LOADING AUTOMOBILES IN FREIGHT CARS. RICHARD E. BAUS, Detroit, Mich., assignor to The Studebaker Corporation, a Corporation of New Jersey. Filed Mar. 15, 1918. Serial No. 222,583. 13 Claims. (Cl. 105—368.)

11. A structure for loading freight cars with automobiles, having in combination, a pair of inclined frames adapted to support the automobile at the top which acts

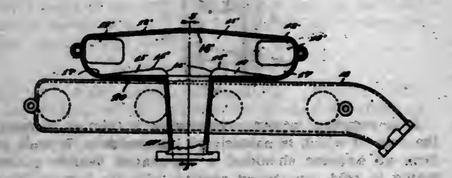
as a tie between the two halves of substantially a longitudinally split horse.

1,456,174. MOLDING MACHINE FOR PLASTIC MATERIALS. FRANK E. BEAM, Toledo, Ohio, assignor to The Automat Molding & Folding Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 10, 1922. Serial No. 550,984. 14 Claims. (Cl. 31—65.)



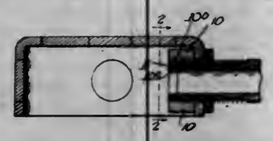
1. In a machine of the class described, means forming a channel for receiving the material to be pressed into shape corresponding to the cross-sectional shape of a portion of the channel, a curved presser plate mounted in the channel over the material for rolling movement lengthwise of the channel, and mechanism operable to impart predetermined reciprocatory movements to the blade.

10. In a machine of the class described, means forming a molding channel, an endless conveyor means movable in the bottom of the channel longitudinally thereof, means for periodically advancing the conveyor means, means operable to press plastic material in column form in the channel on the top of the conveyor means, and means periodically operable to sever the formed column into sections.



14. In a machine of the class described, a continuously rotating shaft, means forming a molding channel, an endless conveyor means movable lengthwise of the channel and having the upper flight thereof forming the channel bottom, means connecting said shaft and conveyor means and operable to impart a predetermined advancing movement to the conveyor means at each rotation of the shaft, a member mounted in the channel for rolling pressing coaction with material therein, means operable at each rotation of the shaft to impart a rolling material pressing movement to the member, means operable by the shaft at each rotation thereof to sever a section from the forward end of the formed material column, and means operable to move a severed section transversely from the conveying means after each severing action.

1,456,175. BAG HOLDER. WILLIAM J. BORLASE, Philadelphia, Pa. Filed June 27, 1922. Serial No. 571,239. 12 Claims. (Cl. 83—26.)

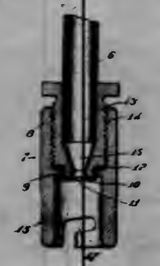


3. In a bag holder, supporting means over which the open end of a bag can be turned; and means for stretching said open end of the bag to hold the mouth in an open position, said stretching means having a portion adapted to be flexed, by the bag, into holding position with said first means.

1,456,176. FUEL MANIFOLD. ROBERT W. A. BREWER, Indianapolis, Ind. Filed June 23, 1921. Serial No. 479,887. 17 Claims. (Cl. 123—122.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

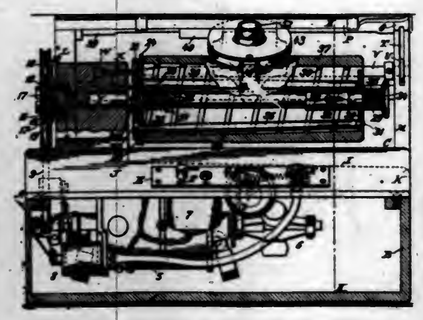
1. A fuel induction pipe for multi-cylinder internal combustion engines, substantially T-shape in form, and means for locally heating a limited portion of the wall of such structure closely adjacent the junction between the main stem and branches, said heated portion being a surface upon which liquid particles from the fuel stream will contact, and the local heating means comprising movable conduction elements.

1,456,177. SHOULDERED NUT OR BUSHING AND METHOD OF MAKING SAME. WILLIAM P. CROCKETT, Chicago, Ill. Filed Jan. 10, 1921. Serial No. 436,054. 6 Claims. (Cl. 29—155.5.)



1. An article of the character described, comprising a body internally threaded throughout its free bore and a shallow solid ring permanently engaging throughout its side-surface in the mouth or end of said body-bore.

1,456,178. COUPLING AND METHOD OF MAKING THE SAME. WILLIAM P. CROCKETT, Chicago, Ill. Filed Jan. 10, 1921. Serial No. 436,055. 6 Claims. (Cl. 29—155.5.)

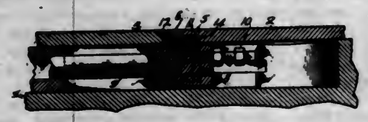


1. A coupling of the character described comprising an integral sheet metal element shaped to form a lengthwise-seamed cylindrical stem-portion and a lengthwise-split clamp portion, and a ring element surrounding the root of the stem portion holding the stem-seam closed and constituting a flange or collar between the stem portion and the clamp portion.

1,456,179. COUPLING. NORMAN W. CUMMINS, Bridgeport, Conn., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed May 29, 1920. Serial No. 385,151. 4 Claims. (Cl. 285—166.)

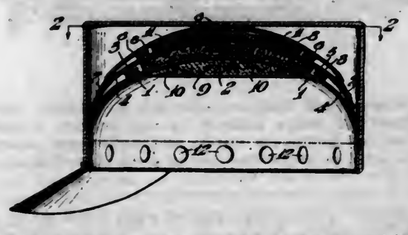
1. A coupling member comprising a tubular member, the bore of which is constricted intermediate its ends to form an annular shoulder, a cup-shaped flexible gasket seated in said constricted portion with its bottom lying in a plane beyond said constricted portion, and provided with an aperture, the edge of said gasket being provided with a flange resting against said shoulder, and a follower having screw-threaded engagement with said tubular member for holding said flange against said shoulder, the inner end of said follower being provided with an extension extending through said constricted portion of the bore, and supporting the bottom of said gasket, the said follower being provided with a bore larger than the aperture in the bottom of said gasket.

1,456,180. MACHINE FOR RECORDING AND REPRODUCING SOUND. FRANK W. DOWNE, San Francisco, Calif., assignor to Mechanical Perfecting Corporation. Filed June 20, 1916. Serial No. 104,656. 12 Claims. (Cl. 274—17.)



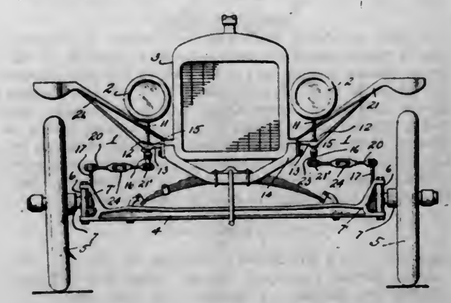
1. In a machine of the class described, a record cylinder, means for supporting and rotating said cylinder, a movable carriage by which said cylinder is moved to any desired position, a sound reproducing stylus, a back-spacer in conjunction with said carriage, whereby said carriage may be moved backward and any desired part of the record repeated, and a forward spacer in conjunction with said carriage whereby said carriage may be moved forward and any desired part of the record omitted.

1,456,181. TIRE CHAIN. RUDOLPH W. EVANS, Hamilton, Ontario, Canada. Filed Oct. 27, 1921. Serial No. 510,762. 12 Claims. (Cl. 152—14.)



1. An anti-skid device comprising a side link for a side chain, and an end link for a cross member, said end link operatively embracing a side portion of the side link and means embracing the companion side portion thereof for preventing the side portions of the side link from spreading, said means having connection to the opposite side portion through the medium only of said end link.

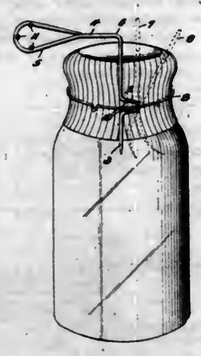
1,456,182. MARGINAL PRINTING. ADDISON J. GALLIEN, Upper Montclair, N. J., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Sept. 3, 1921. Serial No. 498,196. 5 Claims. (Cl. 101—378.)



1. The combination with a printing plate support, of a plate stop on the support and normally spacing two adjacent plates to form a margin space therebetween, and a pair of plates on the support, one of said plates having an extension projecting entirely across the margin space and providing an unbroken printing surface in such space.

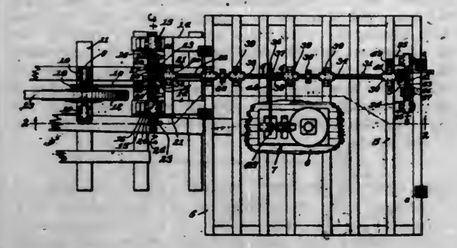
1,456,183. HEAD-PROTECTION ATTACHMENT FOR CAPS, HATS, OR OTHER HEADGEAR. GEORGE B. KNIGHT, Camden, N. J. Filed Nov. 10, 1921. Serial No. 514,177. 4 Claims. (Cl. 2—192.)

1. In a head protecting attachment for an article of head-gear, a hollow body adapted to fit the head, crossed resilient strips having their ends secured to said body and their crossed portions spring-supported, a coiled spring seated on the outer face of said body about the crown thereof, and coiled springs of resilient material connected with said face and seated elevated on said spring.



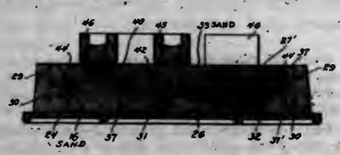
1,456,184. DIRIGIBLE HEADLIGHT MOUNTING. HARRY C. LOGAN, Rockbridge, Ohio. Filed Feb. 23, 1921. Serial No. 447,145. 1 Claim. (Cl. 240—62.)

The combination with a steering mechanism of a vehicle including rearwardly extending horizontal arms, of vertical rods having their lower ends rigidly secured to the arms intermediate the ends thereof, brackets carried by the vehicle frame, lamp supporting rods journaled vertically intermediate their ends in said brackets, crank arms having their forward ends rigidly connected with the lower ends of the lamp supporting rods, adjustable sectionalized links having their inner ends pivotally connected to the inner ends of the crank arms and their outer ends similarly connected to the upper ends of the vertical rods, the pivotal connection of the lamp supporting rods and knuckles of the steering mechanism being in direct alignment.



1,456,185. TOOL FOR REMOVING TIES FROM BOTTLE NECKS. ALLEN C. MEEKER, Madrid, N. Y., assignor of one-half to Webster E. Griffith, Madrid, N. Y. Filed Jan. 6, 1923. Serial No. 611,113. 4 Claims. (Cl. 65—46.)

1. A tool for removing ties from bottle necks comprising a member adapted to be interposed between the tie and the bottle neck and having a curved portion conforming to the shape of the bottle neck for guiding the tool



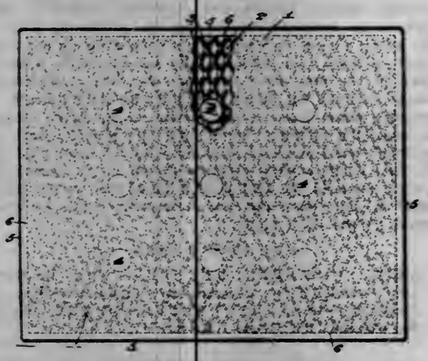
to operative position, the said member adapted to engage the tie to sever it when the tool is rotated.

1,456,186. SHAFT DRIVE FOR COMBINATION DRILLING AND WELL PULLING. LOUIS RALPH MORRIS, Taft, Calif. Filed Apr. 25, 1922. Serial No. 556,388. 7 Claims. (Cl. 255—19.)

1. In a shaft drive for combination drilling and well pulling, the combination with a derrick of a shaft rotatably mounted therein and projecting outside of the derrick, an outboard bearing for the projecting end of the shaft, a shaft extending at a right angle to the first shaft, a bevel gear loose on the second shaft, a bevel gear on the first shaft engaging the first gear, clutch means between the loose gear and the second shaft, a sprocket wheel loose on the second shaft, clutch means between the sprocket wheel and the second shaft, a sprocket wheel on the first shaft, a second bevel gear on the first shaft, a third shaft journaled in the derrick at a right angle to the first shaft, a bevel gear on the third shaft in mesh with the last bevel gear, and a sprocket wheel on the third shaft.

1,456,187. CAST-STEEL TIRE MOLD. JOHN H. MULLOY, Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed June 10, 1921. Serial No. 476,410. 9 Claims. (Cl. 22—193.)

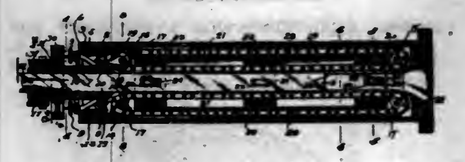
1. A pattern of the core-box type for annular castings of tire mold sections having at least two substantially



rigid parts for separately deriving shapes in complementary sand copes and drags defining when assembled a molding cavity, one of said parts being provided with an annular groove approximating the shape of the inner face of the tire mold section and the other being provided with a projection approximating the shape of the outer face of the tire mold section.

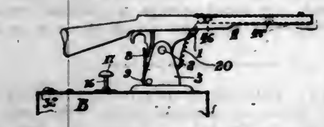
1,456,188. IGNITION DEVICE. CHARLES S. NOE, Chicago, and JOHN KAUFMAN, Fox Lake, Ill. Filed Mar. 19, 1920. Serial No. 367,269. 9 Claims. (Cl. 158—76.)

1. In a device of the character described, the combination of a head, a nozzle for compressed air mounted in said head and longitudinally adjustable therein, said head having a tapering bore and the nozzle having a tapering portion entering said tapering bore in spaced relation thereto, an oil conduit communicating with said tapering bore and with the interspace between said bore and said nozzle, the head being provided with another bore in alinement with the first named bore and terminating in a constricted port, and a discharge nozzle mounted in said other bore provided with a constricted opening in alinement with said port and air nozzle having a passage tapering in a direction opposite to that of the bore of the head.



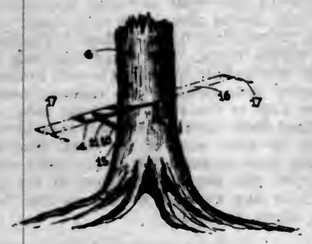
1,456,189. BINDER'S PRESSBOARD. ELBRIDGE W. PALMER, Long Island City, N. Y., assignor to J. F. Tapley Co., Long Island City, N. Y., a Corporation of New York. Filed Apr. 26, 1921. Serial No. 464,723. 15 Claims. (Cl. 100—24.)

1. A built up sheet metal press-board for bookbinders' use comprising top and bottom sheets, and a peripheral frame therefor, the edges of which project beyond the planes of said top and bottom sheets.



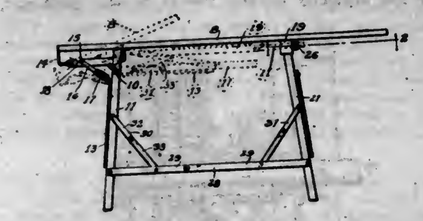
8. A built up sheet metal press-board for bookbinders' use comprising top and bottom sheets, a peripheral frame therefor having an internal peripheral flange inserted between said sheets, and spacers located at different points between said sheets.

1,456,190. FEEDING DEVICE FOR TACK-MAKING MACHINES. GEORGE A. PARKER, Brockton, Mass. Filed July 14, 1921. Serial No. 484,677. 5 Claims. (Cl. 10—174.)



1. In a blank feeding mechanism, a rotatable blank holder, and means actuated by the rotation of said holder for feeding the blanks, said means being adjustable so as to control the rate of speed of said blanks.

1,456,191. AIM-PRACTICING APPARATUS. WILLIAM GRAHAM PATERSON, Glasgow, Scotland, assignor to The Flash Gun Limited, Glasgow, Scotland. Filed Sept. 26, 1921. Serial No. 503,184. 21 Claims. (Cl. 124—15.5.)



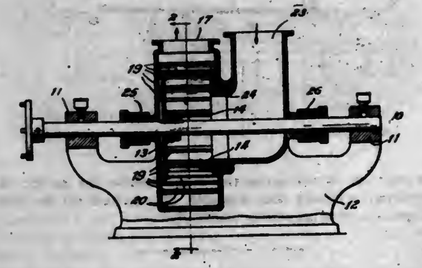
1. Aim practicing apparatus comprising, in combination, a gun mounted for movement in a plurality of different planes, locking means for locking the gun against movement in each of said planes, each of said locking means embodying co-operating and interengaging elements, one of which elements of each locking means is movable with the gun, the other respective elements being carried by the gun mounting, and means responsive to the pulling of the trigger, to cause the respective said elements to interengage to lock the gun in position.

1,456,192. SAW SUPPORT. WILLIAM G. PEACOCK, Enderby, British Columbia, Canada. Filed May 16, 1922. Serial No. 561,443. 3 Claims. (Cl. 143—163.)

1. A saw support comprising a body member having one end formed for engagement around a tree trunk, means extended from the said end of the body member for attaching the latter to the tree trunk and a bracing member carried by said body member provided with a tree trunk penetrating extension.

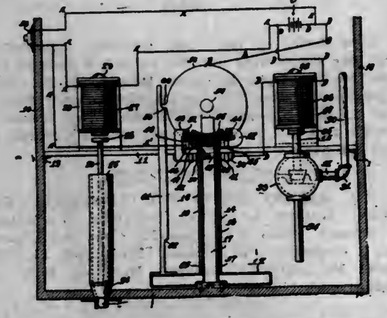
1,456,193. FOLDING IRONING BOARD. HERBERT PIKE, Chicago, Ill. Filed Feb. 27, 1922. Serial No. 539,350. 1 Claim. (Cl. 68—10.)

In a device of the class described, the combination with a supporting frame including a pair of front supporting legs and a pair of rear supporting legs, of an ironing-board mounted on said rear legs for tilting movement and adapted for detachable engagement with the upper portion of said front legs, a guide member having a recess in its upper surface longitudinally mounted on the lower surface of the rear portion of said board and spaced therefrom, a spring-actuated yoke mounted on the upper portion of the rear legs astride said guide member and normally in engagement with its recess.



1,456,194. COMBINATION FLOOR LAMP, TABLE LAMP, AND PEDESTAL. JOSEPH ROSENBERG, Chicago, Ill. Filed Jan. 9, 1922. Serial No. 527,930. 10 Claims. (Cl. 240—81.)

1. An article of the character described embodying a sectional pedestal embodying a supporting base, means detachably securing the sections together above the base, a lamp proper connected with one of the sections, and an additional base carried by the lamp carrying section for supporting the latter when the lamp carrying section is detached from the other section, the said additional base being concealed within the pedestal when the said sections are secured together.

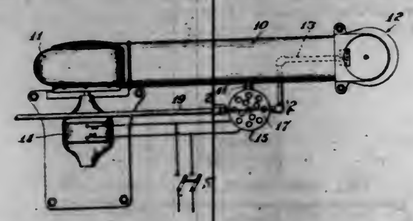


1,456,195. CONDENSER AND VACUUM PUMP. BENJAMIN SKIDMORE, Jr., Chicago, Ill. Filed Jan. 20, 1921. Serial No. 438,595. 7 Claims. (Cl. 230—14.)

1. An apparatus of the character described embodying a casing having an inlet for liquid and an outlet, a rotor in the casing and of a diameter smaller than the interior of the casing to form a space therebetween, a plurality of spaced stationary blades arranged intermediate the casing and the rotor and dividing the casing into two passages having communication with each other between adjacent blades, said casing having an inlet for delivering fluid to the rotor, the said rotor blades

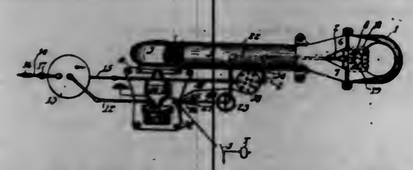
being circumferentially spaced at the periphery of the rotor to operate upon the liquid adjacent the periphery of the rotor to form a spray of the liquid, thereby creating a large condensing area for the vapor delivered to the rotor.

1,456,196. MAGNETIC CONTROL OF FLUSH TANKS. CHARLES H. STAATS, Collingdale, Pa. Filed June 3, 1922. Serial No. 565,695. 6 Claims. (Cl. 4—5.)



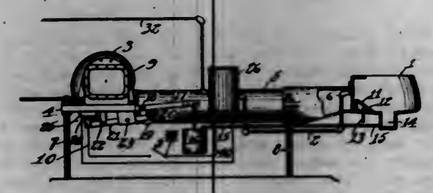
1. An apparatus of the class described, comprising a tank, a float, a vertical guide post, means secured to said float and adapted to travel up and down said post in unison with said float, a valve controlling the water discharge, a valve controlling the water supply, electromagnetic means to control the action of said valves, a disc mounted within said tank, an electric circuit to energise the magnet controlling the discharge valve to open said valve, means to break said circuit and close said valve when it has discharged, an electric circuit to energise said disc and the magnet controlling the supply valve, and means to cause said disc to automatically open said supply valve when the discharge valve closes and to break said circuit and close said valve when the tank has filled to a predetermined level, substantially as described.

1,456,197. FUEL-OIL CONTROL APPARATUS. HUDSON A. TREDMAN, Galesburg, Ill., assignor to Winslow Boiler & Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1921. Serial No. 444,136. Renewed Mar. 15, 1923. 6 Claims. (Cl. 158—36.)



1. In a device of the class described, a fuel-oil burner, a fuel-oil pipe line, an air-blower to deliver air to the

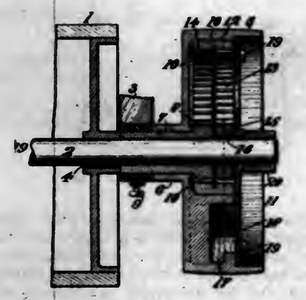
burner, an electric motor for the air-blower, and an electrically operated valve normally closing the pipe



line and in circuit with the motor while the motor is operating, whereby the supplies of air and oil to the burner art synchronously controlled.

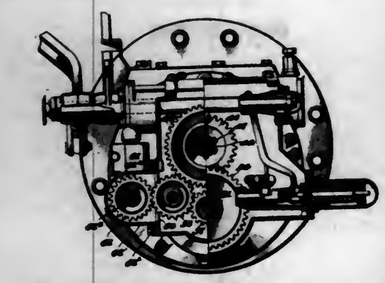
1,456,198. OIL-BURNING SYSTEM. HUDSON ALVA TEDMAN, Galesburg, Ill., assignor to Winslow Boiler & Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1921, Serial No. 479,222. Renewed Mar. 15, 1923. 5 Claims. (Cl. 158—36.)

1. In a device of the class described, a burner, a fuel-oil line discharging into the burner, a vacuum tank in the line, means in the burner to vaporize the oil, an air pump controlling the flow of oil from the tank, a blower to feed combustion air to the burner, means to ignite the fuel, and a motor to synchronously control the blower and pump.



1,456,199. SAFETY DEVICE FOR OIL-BURNING SYSTEMS. HUDSON A. TEDMAN, Galesburg, Ill., assignor to Winslow Boiler & Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1921, Serial No. 479,223. Renewed Mar. 15, 1923. 11 Claims. (Cl. 158—36.)

1. In a device of the class described, a burner having a fuel-oil line, a blower to feed air to the burner, an electrically controlled cut-off valve located in the oil line and included in an electric circuit, and automatic connections between the valve and the burner to permit the former to close the oil line when the burner fails to function.

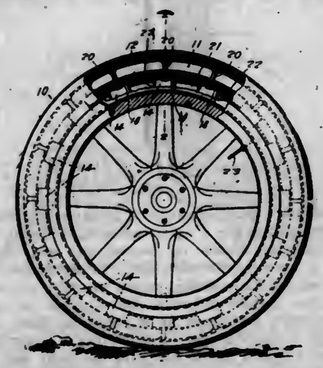


1,456,200. REDUCTION GEAR. HERBERT E. TWOMLEY, Riverside, Calif., assignor to George D. Parker, Riverside, Calif. Filed Mar. 1, 1922. Serial No. 540,182. 9 Claims. (Cl. 74—35)

1. A reduction gear including a rotatable shaft, a drive and a driven part mounted thereon, one free to rotate thereon and the other to rotate therewith, one of said parts provided on its interior with an eccentrically located annular guide, an internal ring gear within said part and annularly movable therein on said guide and

through which said shaft extends, a pinion keyed to the shaft and intermeshing with said ring gear, a second ring gear rotatable with the first, and a pinion intermeshing with said second ring gear.

1,456,201. AUXILIARY PUMP FOR MOTOR VEHICLES. JESSE G. VINCENT, Detroit, Mich., assignor, by mesne assignments, to Kellogg Manufacturing Company, Rochester, N. Y., a Corporation of New York. Original application filed Jan. 31, 1916, Serial No. 75,414. Divided and this application filed Nov. 27, 1918. Serial No. 264,435. 14 Claims. (Cl. 230—27.)

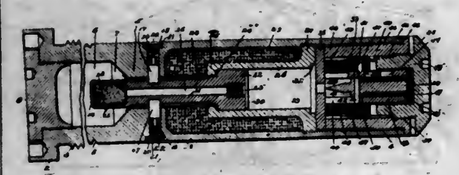


1. In combination, a motor vehicle transmission casing formed with an opening in one side, a shaft in the transmission casing having a driven gear thereon mounted adjacent to said opening, a pump having a gear casing partitioned from the pump mechanism and secured to the transmission casing over said opening, a shaft mounted in the pump gear casing outside of the transmission casing and parallel with the shaft in the transmission casing, a gear slidingly mounted on said pump shaft and means for sliding said gear into and out of mesh with said gear in the transmission casing.

3. In combination, a motor vehicle transmission casing formed with an opening in one side, a pump secured to the casing over said opening, a countershaft in the casing, a gear on the countershaft, a gear on the pump shaft wholly outside the casing, a gear extending through said opening and connecting the other gears, one of said gears being slidable into and out of driving position, and means to hold said slidable gear at either end of its movement.

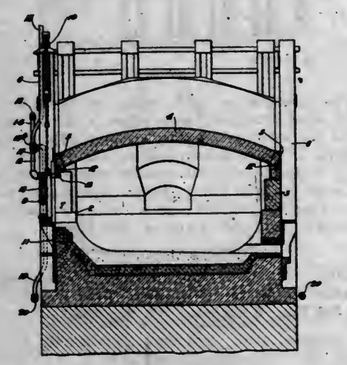
9. In an automobile tire pump adapted to be secured to the side of the transmission case of an automobile and be driven from one of the gears of the transmission gearing, comprising a pump gear-housing and a crank-case secured to one another but separated by a partition, a crank-shaft extending from said crank-case through said partition into said gear-housing, the gear-housing having a flanged opening in a substantially vertical plane parallel with said shaft, and said crank-case having an opening in a substantially horizontal plane also parallel with said shaft, a gear on said shaft located in said gear-housing and arranged to be driven from one of the gears of the transmission gearing, a pump cylinder mounted on said crank-case and in alignment with the opening therein, the axis of the pump cylinder being substantially vertical, a piston within said cylinder, and a driving connection between said piston and said crank-shaft.

1,456,202. TIRE. THOMAS E. WARE, Little Rock, Ark., assignor of one-sixth to James K. Riffel, one-sixth to Frank H. Dodge, one-sixth to James M. Stewart, and one half to Elva Ware, all of Little Rock, Ark. Filed May 20, 1922. Serial No. 562,362. 3 Claims. (Cl. 152—22.)



3. A solid tire provided interiorly with an annular passageway, metallic cups engaged against the outer wall of the passageway, radially extending cylinders circumferentially spaced within said tire, pistons mounted within the cylinders and having stems engaging said cups, flexible linings for said cylinders having their upper ends secured to said pistons, a plate secured to the inner face of said tire and to which said cylinders are attached and through which the inner ends of the cylinders open, removable cylinder heads carried by said plate closing the inner ends of said cylinders and maintaining the lower ends of said flexible linings in position, connections between said flexible linings, and an inflating valve communicating with one of said connections.

1,456,203. UNDERFRAME FOR CARS. ROBERT R. WEAVER, Chicago, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed June 5, 1922. Serial No. 565,858. 6 Claims. (Cl. 105—416.)

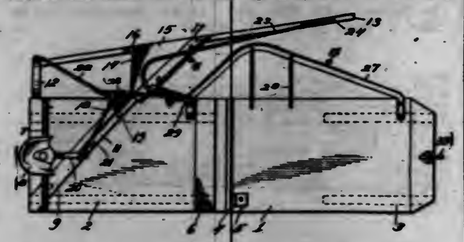


1. A center sill for a car comprising side walls spaced apart and presenting upwardly converging portions, and a member having top and bottom flanges surmounting at its lower flange the top portion of the structure comprising said side walls, and secured thereto.

1,456,204. BASE FUSE. JOHN H. WOODBERRY, U. S. Army. Filed Sept. 20, 1919. Serial No. 325,277. 15 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

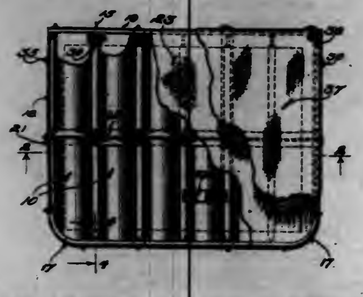
7. In a fuse, the combination, with a normally-restrained firing pin carrying a radial projection and releasable by an axial turning movement, of a casing in which said firing pin reciprocates, and having a longitudinally-extending slot in which the firing pin projection moves when the firing pin reciprocates, said slot being provided with an offset portion in which said projection normally rests, a locking-dog reciprocable in said slot and normally holding said projection in said offset portion of the slot, a locking-sleeve encircling said casing and carrying said locking-dog and provided with an annular circumferential shoulder, and centrifugally-movable leaf-springs normally bearing against said shoulder and preventing movement of said locking-sleeve.

1,456,205. FURNACE-DOORWAY CONSTRUCTION. SAMUEL G. WORTON, Duquesne, Pa. Filed Oct. 13, 1921. Serial No. 507,406. 4 Claims. (Cl. 263—44.)



1. A furnace having a side wall with an opening therein, a door frame around said opening, a metal skewback supporting member lying back of the door frame and above the opening, and at least one cooling pipe separate from the door frame, located back of the latter and below the skewback supporting member so as to protect said member.

1,456,206. CORN HARVESTER. WILLIAM F. ZIEGLER, Salina, Kans. Filed Jan. 3, 1921. Serial No. 434,408. 1 Claim. (Cl. 56—100.)



In a corn harvester, the combination with a sledge, of an inverted V-shaped guide overhanging at one side thereof, a beam extending divergingly forward with respect to said sledge, a plate connecting the sledge and beam and provided with an upwardly projecting transverse butt-board portion, a cutting blade bridging the space between the sledge and beam and extending forwardly and outwardly toward the latter, an upright adjacent the inner end of the blade, a guide extending up-

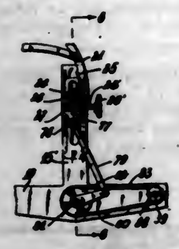
wardly and rearwardly from a point adjacent the front end of the beam toward the upright, then downwardly

and forwardly to form a pocket, and then upwardly and rearwardly to the upright, and means for securing the end of said guide to said upright.

1,456,207. PNEUMATIC-CUSHION SEAT. JOSEPH M. ADAMSKI, Milwaukee, Wis. Filed Apr. 4, 1922. Serial No. 549,494. 5 Claims. (Cl. 155—179.)

1. The combination of a series of horizontal tubes lying in substantially the same plane, a pair of oppositely disposed flat metallic portions gripping adjacent ends of said series of tubes, means securing said portions to each other, a second pair of flat metallic portions gripping the other ends of said series, means securing said second pair of portions together, all of said portions lying in substantially the same plane as said tubes.

1,456,208. QUICK-ACTING WRENCH. CHARLES JOHN ARMSTRONG, Austin, Tex. Filed June 5, 1922. Serial No. 565,792. 5 Claims. (Cl. 81—133.)

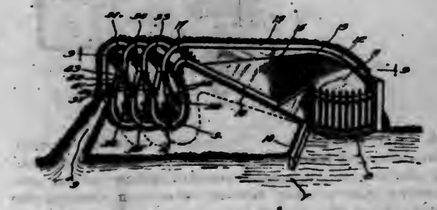


1. A wrench comprising a shank provided with a rack, a fixed jaw at one end of the shank, a handle at the other end, a movable jaw on the shank, a pair of toothed wheels in engagement with the rack and having trunnions supported by the movable jaw, a yoke pivoted on the trunnions of one of the wheels, and having slots receiving the trunnions of the other wheel, the slots being inclined and serving in conjunction with said other wheel to lock the yoke in its closed position.

1,456,209. BURGLAR ALARM. CLARENCE B. ATWOOD, Chicago, Ill. Filed June 15, 1922. Serial No. 568,531. 3 Claims. (Cl. 116—89.)

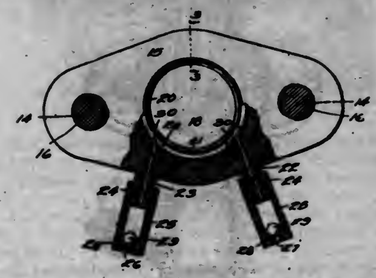
1. A burglar alarm comprising a barrel carried by a fixed part and having a cartridge seat, a spring-pressed plunger movable within the barrel and adapted when released to explode the cartridge, the upper end of the plunger being bent laterally, means provided on the barrel and the plunger whereby the plunger is given a partial rotative movement as it rises and falls, a lever carried by a movable part and having a laterally disposed foot adapted to engage with the bent end of the plunger when the movable part is raised to carry the plunger with it, said lever being swingable to move the foot into and out of engagement with the bent end of the plunger, and means whereby at a certain point in the upward movement of the movable part the connection between the foot and the bent end of the plunger is automatically released due to the partial rotation of the plunger.

1,456,210. AERIAL VEHICLE. CARLOS O. BARRERA, Tuckahoe, N. Y. Filed Aug. 17, 1922. Serial No. 582,352. 3 Claims. (Cl. 244—14.)



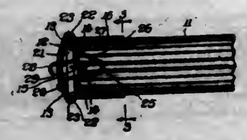
3. In an aeroplane, a front plane hinged on a transverse horizontal axis, a rack member on said plane concentric to the hinge axis thereof, a pair of slidable blocks movable concentric to said hinge axis, a shaft carried by said slidable blocks, gears on said shaft meshing with said rack members, a rod extending fixedly between said blocks, a bracket fixed to said rod, a worm pinion carried by said bracket and engaging said worm gear, and means for adjusting said blocks, said means including a rock shaft, a pair of arms fixed thereto, and links connecting said arms and blocks.

1,456,211. APPARATUS FOR TREATING RUBBER. WILLIAM H. BINES, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Dec. 29, 1920, Serial No. 433,840. Divided and this application filed July 8, 1921. Serial No. 483,156. 9 Claims. (Cl. 18—12.)



1. An apparatus for the preparation of raw rubber comprising a device for forming the rubber, said device placing the rubber under internal tension, and means for compressing the rubber prior to the final setting thereof.

1,456,212. ART OF POWER GENERATION. JAMES A. BISHOP, Denver, Colo. Filed Sept. 29, 1921. Serial No. 504,163. 3 Claims. (Cl. 61—19.)

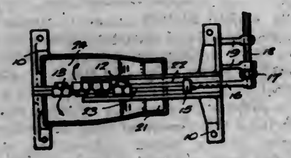


1. An installation for the generation of power from a stream of water flowing down grade, including a relatively broad and shallow intake canal in communication with said stream, a transfer canal in communication with said intake canal and having a downwardly inclined floor and converging side walls so proportioned that the cross sectional area of water in said transfer canal on vertical transverse planes decreases throughout the length of said transfer canal in the direction of flow, whereby the rate of water flow through the transfer canal increases, a delivery canal in communication with the transfer canal, a vertical wheel chamber in communication with the delivery canal, a water wheel within said wheel chamber, mounted for rotation on a vertical axis, and means for delivering water from said wheel back to the flowing stream at a down grade point with respect to the intake, substantially as described.

1,456,213. CARBURETOR ATTACHMENT. CHARLES D. BOWLES, Des Moines, Iowa. Filed July 30, 1921. Serial No. 488,546. 1 Claim. (Cl. 48—180.)

A carburetor device, comprising a fuel passage having an annular chamber projecting into the path of travel of fuel passing through said passage, said chamber having its outer surface inclined to direct the fuel from the wall of the passage inwardly and having an annular slot located to admit air from said chamber to said passage for picking up the fuel on said surface, and means for admitting air to said chamber from the atmosphere, having an air inlet opening and a valve for coacting with said opening subject to actuation according to the degree of vacuum in the passage.

1,456,214. CURTAIN FIXTURE. JAMES H. BOYD, Chicago, Ill. Filed Nov. 10, 1921. Serial No. 514,161. 3 Claims. (Cl. 156—22.)



3. In a curtain fixture, the combination of a round hollow curtain rod having at each end an inwardly extending annular lip, supporting brackets for said rod each having a socket member adapted to receive an end of said rod, said socket member comprising a circular body and an apertured cap on the outer end of said body, and a snap hook in each of said socket members automatically engaging with the annular lip of said rod under an inward movement of the latter, said snap hook having a free end extension passed through the aperture of said cap by manipulation of which said hook may be disengaged from said lip.

1,456,215. PROCESS OF MANUFACTURING ACORN NUTS. HARRISON M. BRIGHTMAN, Columbus, Ohio, assignor of one-fourth to G. F. Brightman, one-fourth to H. L. Brightman, and one-fourth to J. H. Brightman, all of Columbus, Ohio. Filed Oct. 28, 1921. Serial No. 510,987. 5 Claims. (Cl. 10—86.)

1. The herein described process of manufacturing acorn nuts which consists in first forming a tubular nut blank with one end reduced on a taper and with a thin walled extension beyond said reduced end, internally threading the blank throughout its length, and then spinning the extension inwardly to close one end of the nut.

1,456,216. FEEDING AND SORTING DEVICE. HARRISON M. BRIGHTMAN, Columbus, Ohio, assignor of one-fourth to G. F. Brightman, one-fourth to H. L. Brightman, and one-fourth to J. H. Brightman, all of Columbus, Ohio. Filed Oct. 28, 1921. Serial No. 510,988. 2 Claims. (Cl. 10—165.)

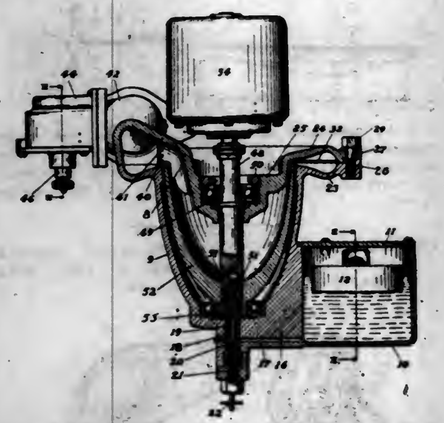
1. A feeding and sorting device including a horizontally disposed feed trough, a plunger working within one end of the feed trough to force articles from the opposite end of the feed trough, a rib extending through the feed trough and beyond the last named discharge end thereof and presenting a bearing edge for the support of the articles centrally between the sides of the feed trough, an inclined feed plate having portions thereof disposed

at opposite sides of that portion of the rib beyond the discharge end of the trough to receive articles falling laterally from bothe sides of the rib, and a feed chute with which the lower portion of the feed plate connects.

1,456,217. SHAFT-STRAIGHTENING APPARATUS. HARRISON M. BRIGHTMAN, Columbus, Ohio, assignor of one-fourth to G. F. Brightman, one-fourth to H. L. Brightman, and one-fourth to J. H. Brightman, all of Columbus, Ohio. Filed Nov. 28, 1921. Serial No. 518,246. 6 Claims. (Cl. 153—37.)

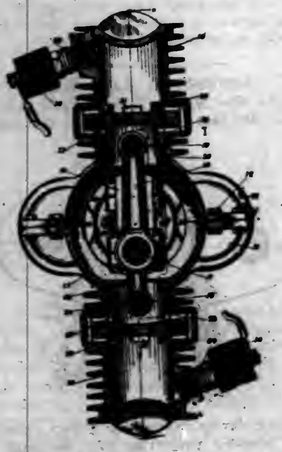
1. A shaft straightening apparatus including a revoluble holder through which the work passes, a series of adjustable work encircling members rotatable, and revoluble with, the said holder, and work feed means at opposite ends of the holder having simultaneously controlled reversing means as described.

1,456,218. CONVEYER APPARATUS. HARRISON M. BRIGHTMAN, Columbus, Ohio, assignor of one-fourth to G. F. Brightman, one-fourth to H. L. Brightman, and one-fourth to J. H. Brightman, all of Columbus, Ohio. Filed Jan. 3, 1922. Serial No. 526,787. 6 Claims. (Cl. 212—95.)



1. A conveyer apparatus including a horizontally movable elevated carrier having an article engaging member, and a flexible hoisting connection extending along the path of movement of the carrier, with which the carrier has movable engagement at spaced points and with which the said article engaging member has movable engagement between the said points of engagement of said carrier, said hoisting connection being anchored at one end adjacent to one end of the path of movement of the carrier, means for controlling the hoisting connection, located at its opposite end adjacent to the opposite end of the path of movement of the carrier, including winding means for varying the effective length of the hoisting connection and a brake for holding the same in adjusted position, and means extending along the path of movement of the carrier and manually shiftable at a plurality of points therealong for independently controlling action of said winding means and said brake.

1,456,219. CARBURETOR. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Feb. 10, 1919. Serial No. 276,169. 9 Claims. (Cl. 261—88.)

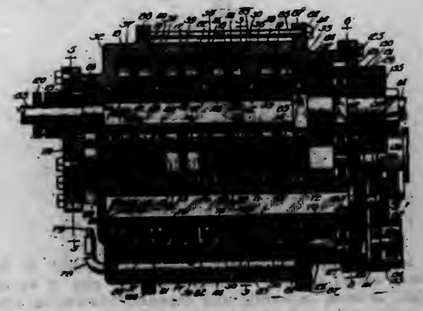


1. In a carburetor, a rapidly rotating element, means for producing a thin film of oil upon said rotating element, an annular hollow casing surrounding said rotating element and open towards the latter, the rapid movement of the rotating element throwing oil in the form of spray into said annular casing, a partition across said casing at one point, said casing having an air inlet on one side of said partition and an engine intake on the other side thereof.

4. In a carburetor, a rapidly rotating element, means for producing a thin film of oil upon said rotating element, an annular hollow casing surrounding said rotating element, and open towards the latter, the rapid movement of the rotating element throwing oil in the form of spray into said annular casing, a partition across said casing at one point, said casing having an air inlet on one side of said partition and an engine intake on the other side thereof, and having openings in its outer periphery in a line opposite the opening towards the rotating element.

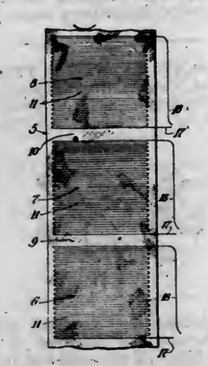
9. In a carburetor, a horizontally rotating element, means for producing a thin film of oil upon said rotating element, a horizontal annular hollow casing surrounding said rotating element, and open towards the latter, the walls of said casing being arranged to provide a passage constructed towards the center in order to limit the sectional area of the passage while providing considerable radial distance for the centrifugal travel of spray thrown from said rotating element, said annular casing having air inlet openings along its outer periphery opposite said constricted passage and an engine intake.

1,456,220. TWO-CYCLE ENGINE FOR BICYCLES. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed May 29, 1919. Serial No. 300,655. 18 Claims. (Cl. 180—33.)



1. In a motor driven bicycle, a fixed shaft, a gas engine having revolving cylinders and a revolving crank case mounted to revolve around said shaft, a wheel hub also mounted to rotate around said shaft, and a train of gears, through which said hub is adapted to be driven by said engine, said train of gears being enclosed within said crank case.

1,456,221. WINDSHIELD. FRED EUGENE BROWN, Indianapolis, Ind., assignor to Zenite Metal Company, Indianapolis, Ind., a Corporation of Indiana. Filed Mar. 22, 1920. Serial No. 367,972. 5 Claims. (Cl. 296—92.)

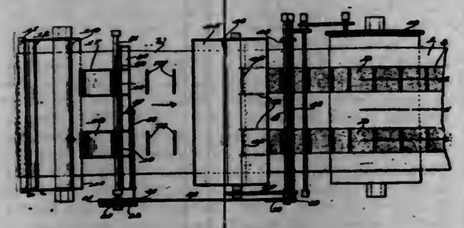


1. In a wind shield, a main body, a segmental bearing-member movably carried on said body, a trunnion member journaled in and movable with said bearing-member and contacting with said main body, and a clamping member arranged to act upon said bearing member to clamp the same upon the trunnion member and the trunnion member against the main body.

1,456,222. ROTARY ENGINE. THOMAS CHARLTON, Chicago, Ill., assignor, by mesne assignments, to George M. Studebaker, South Bend, Ind. Filed Dec. 30, 1918. Serial No. 268,860. 15 Claims. (Cl. 121—71.)

1. In a rotary engine, the combination of a power shaft, a plurality of driving disks thereon, a piston member on the peripheral portion of each driving disk and having piston portions extending from both of the faces thereof, an abutment shaft extending parallel to the power-shaft, a pair of abutment disks on the abutment shaft corresponding to each driving disk, the abutment disks of each pair embracing the peripheral portion of the corresponding driving disk beween their peripheral portions, and extending towards the axis of the driving shaft as far as the corresponding piston portion, there being a gate notch in each abutment disk for the corresponding piston portion, each gate notch aforesaid extending toward the axis of the abutment shaft radially as far as the outer face of the corresponding piston block, and a casing for the driving disks, pistons and abutment disks, said casing comprising a series of sections serving to provide circular piston chambers for the accommodation of the piston members in their circular travel, and also serving to provide a longitudinally extending bearing chamber concentric with the driving shaft, bearings in said chamber for supporting the driving shaft intermediate the driving disks, the abutment disks of each pair extending across the corresponding piston chambers, and serving to divide them at a point lying within the plane of the shafts, means causing the two shafts to rotate in synchronism, and for bringing the notches of the abutment disks into said plane at the time of arrival of the corresponding pistons therein, there being a port in the wall of each piston chamber at each side of said plane, valve mechanism in conjunction with said ports, and means for actuating said valve mechanisms in synchronism with the rotations of the power shaft.

1,456,223. ELECTRICAL BLANKET AND THE LIKE. WILLIAM F. CRADDICK and CHARLES M. UHLIG, Chicago, Ill., assignors to Vit-O-Net Mfg. Co., Chicago, Ill., a Corporation of Washington. Filed Apr. 7, 1922. Serial No. 550,449. 9 Claims. (Cl. 219—48.)

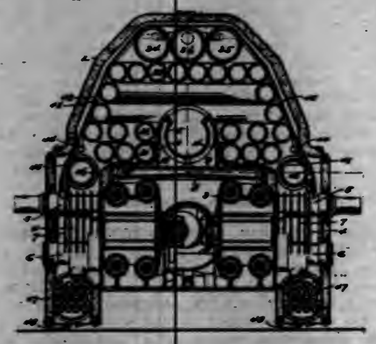


1. As a new article of manufacture an electric blanket or the like comprising a fabric and facings therefor, said fabric consisting of body warps, border warps at each side, wefts, and an insulated wire, the wefts being woven throughout the entire width of the fabric from one extreme end to the other, and from one extreme selvage to the other extreme selvage, and the wire being woven only within the body warps and terminating at points within both ends of the fabric, whereby there is produced a fabric consisting of a central portion containing insulated wire woven into the fabric together with an integral continuous border of wireless fabric completely surrounding the wire containing body portion, the sheets of facing material lying against the faces of the fabric and reaching over the border portion, and a line of stitching joining the sheets of facing material to the wireless border portion, substantially as described.

1,456,224. METHOD AND MACHINE FOR MAKING PREPARED ROOFING. ANDREW E. CURRIER, Millis, Mass., assignor to Baker Rubber Cement Co., Boston, Mass., a Corporation of Massachusetts. Filed May 6, 1921. Serial No. 467,329. 4 Claims. (Cl. 91—67.9.)

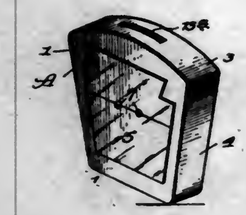
2. The herein described method which consists in applying cementitious binder to a continuously moving backing web, applying comminuted material at intervals in the length of the web and also at intervals transversely thereof, and severing the web longitudinally at

intervals widthwise thereof to produce a plurality of roofing strips each having a longitudinally extending surfaced portion and an unsurfaced portion coated with binder, at one side of such surfaced portion.



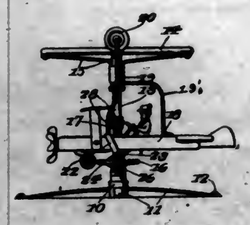
3. Apparatus of the kind described comprising means for continuously advancing a web of felt or the like, means for applying cementitious binder to the entire surface of the web, means for depositing comminuted material upon the web at predetermined intervals both lengthwise and widthwise thereof as markings to constitute a given design, and means for continuously applying surfacing material of another color over continuously extending lengthwise portions of the web, while leaving adjacent lengthwise extending portions unsurfaced but coated with such cementitious binder.

1,456,225. SEPARATOR FOOT FOR PRESS FEEDERS. JOHN G. DIXON, Chicago, Ill., assignor of one-half to Gustave T. Hultman, Chicago, Ill. Filed Jan. 21, 1922. Serial No. 530,760. 7 Claims. (Cl. 294—64.)



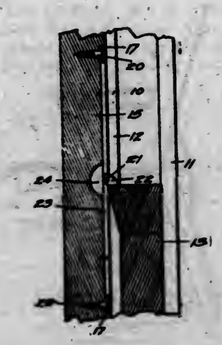
1. The combination with a vertically reciprocable separator foot of the character described, of means carried by said foot for adjusting the extent of the suction area in the sole thereof.

1,456,226. STEAM-POWER PLANT. JOHN A. DOBLE, San Francisco, Calif., assignor to Doble Laboratories, San Francisco, Calif., a Corporation of California. Filed June 19, 1919. Serial No. 305,285. 17 Claims. (Cl. 60—27.)



1. The combination with a steam boiler casing, of a steam engine having cylinders and a crank case arranged within said boiler casing, the engine cylinders being in direct thermal contact with the gases of combustion in said boiler casing.

1,456,227. SAVINGS BANK. CHARLES FISHER, Chicago, Ill., assignor to The Automatic Recording Safe Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1921. Serial No. 478,625. 16 Claims. (Cl. 232—4.)

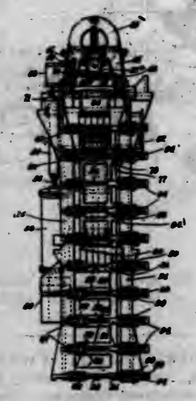


1. A savings bank comprising a pair of open-sided casing sections, the outer section having a lateral peripheral flange adapted to receive the inner section, a locking member secured to the inner surface of the main wall of one of the sections, a co-acting movable locking member secured to the inner surface of the main wall of the other casing section, said last mentioned section having a key-receiving perforation through its main wall through which a key may be operated to actuate said movable locking member, and coin-admission means extending thru the peripheral flange of the outer casing section.

1,456,228. MERRY-GO-ROUND. JOSEPH A. FRANKLIN, Rensselaer, N. Y. Filed May 17, 1921. Serial No. 470,318. 1 Claim. (Cl. 46—27.)

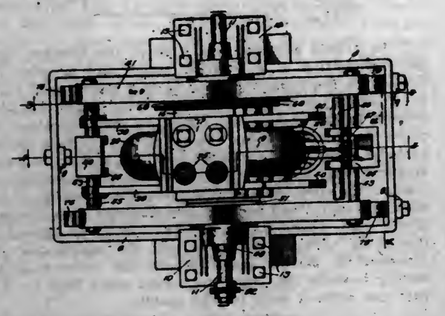
A toy comprising a post, radial legs carried by the lower end of the post for supporting the post in an upright position, upwardly and outwardly extending arms on the upper end of the post, a horizontally disposed circular track secured to the last-named arms and encircling the upper end of the post, a rotatable collar on the post, an arm carried by the collar and extending radially away from the post, a car carried by the outer end of the said arm, a vertical arm carried by the car, a grooved wheel on the upper end of the vertical arm engaged on the circular track, a transverse crank shaft carried by the car and extending to a point adjacent the lower end of the post, a gear fixed on the post, a gear on the crank shaft engaging said post gear, and an angle arm loosely connected with the post and the shaft adjacent the gears thereof.

1,456,229. WINDOW STOP. LESLIE FAY, Des Moines, Iowa. Filed Feb. 9, 1922. Serial No. 535,215. 2 Claims (Cl. 292—202.)



2. In combination with a window frame and an upper and lower window sash slidably mounted relative to each other in said window frame, means for limiting the amount of movement of the window sashes relative to each other, comprising a finger pivotally mounted on one of said window sashes, a projection on said finger adjacent to its pivot, said finger being capable of being swung on its pivot to position where the projection will be received in a recess formed in the sash having the finger thereon, said projection being arranged so that when in the recess it permits the free movement of the window sashes and when not in the recess being interposed in the path of one of the window sashes for limiting its movement, the finger being arranged to swing on its pivot only when the window sashes are in their closed position.

1,456,230. SIGN. SAMUEL H. FURRY, Lancaster, Ohio. Filed May 16, 1921. Serial No. 470,118. 3 Claims. (Cl. 40—125.)

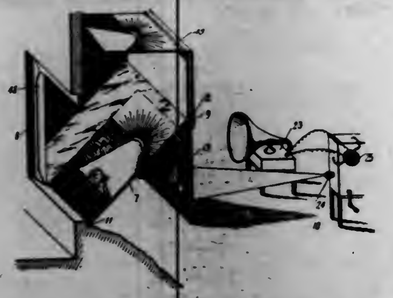


1. A sign comprising a rectangular open frame, a foraminous sheet arranged to close the opening formed by said frame, letters carried by each side of said sheet to provide each side with a caution indication, means for illuminating said indications, and electrically operated audible and visual signaling devices supported by the frame for directing attention to said indications, said means for illuminating said indications being independent of said letters, said sheet having openings for said signaling devices.

1,456,231. CASTING APPARATUS. JOHN H. GOSS and EDWARD L. WOLFF, Waterbury, Conn., assignors to Scovill Manufacturing Company, a Corporation of Connecticut. Filed Mar. 6, 1917. Serial No. 152,536. 34 Claims. (Cl. 22—57.)

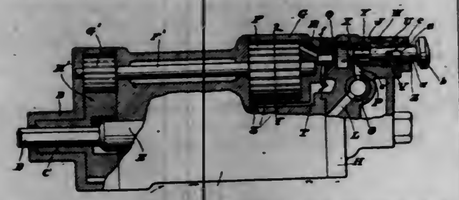
13. In metal casting apparatus, and in combination a support, a bracket pivotally carried by said support, and a plurality of cooperating mold sections pivotally secured to said bracket.

1,456,232. ROTARY ENGINE. AMBROSE EVERTS GREENE, Corning, Calif. Filed Apr. 17, 1919. Serial No. 290,811. 17 Claims. (Cl. 123—43.)



1. In combination, a shaft; a member fixed on said shaft; cylinder heads on opposite sides of said member; an engine cylinder attached to each cylinder head; a lever pivoted on said shaft; pistons carried on said lever and disposed in said cylinders; a lever mounted eccentrically to said shaft; connecting links connecting the last-mentioned lever with the first mentioned lever and said member adapted to effect relative oscillatory movements between the cylinder heads and pistons; and counterweights on said links, member and first-mentioned lever.

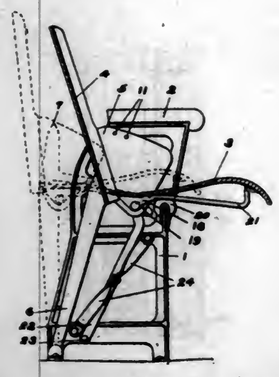
1,456,233. ILLUSION APPLIANCE. LOUIS E. HAMMOND, Hackensack, N. J., and HERMAN A. SMITH, Yonkers, N. Y.; said Hammond assignor to Edgar J. Marston, Greenwich, Conn. Filed June 6, 1919. Serial No. 302,152. 9 Claims. (Cl. 88—24.)



4. In an illusion appliance, the combination with a translucent screen facing the spectators, of means for

projecting moving pictures directly on said screen, a scenic background disposed in front of and above said screen, means for concealing said background from the

direct vision of the spectators, and means for showing said background to be apparently behind said moving pictures.

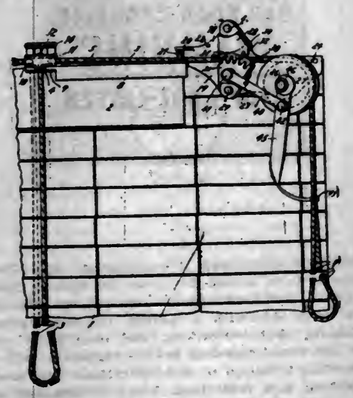


1,456,234. HAND-REGULATING VALVE FOR ROTATION MOTORS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 23, 1922. Serial No. 545,991. 3 Claims. (Cl. 251—137.)

2. In a fluid actuated rock drill of the hammer type, the combination of a rotation motor and a valve for controlling the supply of fluid to said motor, said valve comprising a casing, a cylindrical valve cage removably secured in said casing and affording communication between the fluid supply and the motor, a valve stem having an inner valve head, a reduced neck and a shank movable longitudinally in said cage, a spring for normally retracting the stem and a stop limiting the movement of the stem, the valve head being of less diameter than the bore of the cage, whereby fluid may continually be applied to the motor through the valve and the supply may be increased by moving the stem and the valve head inwardly towards the motor to permit more fluid to flow past the reduced neck on the spindle.

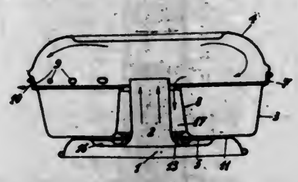
1,456,235. CHAIR. MERRILL W. HARD, Detroit, Mich., assignor of one-half to W. Lewis Mack, Chicago, Ill. Filed Aug. 18, 1919. Serial No. 318,178. 10 Claims. (Cl. 155—115.)

1. The combination with side pedestals, of a seat and a back, standards pivotally mounted on said pedestals and having tapered bearing portions at their upper ends and forwardly projecting slotted arms, pins on said pedestals engaging the slots of said arms, side members on which said back is rigidly mounted, provided with bearing plates at their upper edges having bearing recesses coacting with said bearing portions of said standards, pins on said standards engaging segmental slots in said side members whereby said members are retained on said standards, pivots for said seats disposed on said side members in front of their bearing point on said standards, links pivoted on said pedestals in front of said standards and engaging said seat pivots, seat supporting rollers on said pedestals, and channeled ways on the under side of said seat traveling on said rollers, said ways being forwardly inclined so that weight on the seat tends to carry the seat forward, and a support for the forward end of the seat.



5. A chair comprising side pedestals, standards pivotally mounted at their lower extremities on said pedestals, a seat having its rear portion suspended from the upper extremities of said standards and its forward portion resting on said pedestals, a back mounted on said seat, and means for limiting the movement of said standards relative to said pedestals.

1,456,236. PROTECTOR FOR ENGINE HOODS. BERNHARD HESS, Forest Park, Ill. Filed Feb. 9, 1920, Serial No. 357,332. Renewed Dec. 15, 1922. 7 Claims. (Cl. 180—69.)

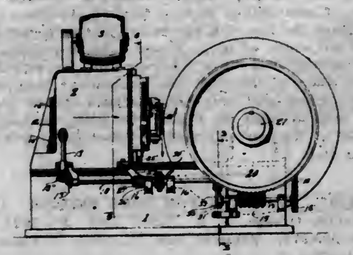


1. In combination with the wall of an engine hood having perforations, a protector plate secured to the inner surface of said wall and covering said perforations, and detachable clamps extending through said perforations and removably holding said plate to said wall.

1,456,237. CORD-GRIPPING APPLIANCE. AZEL C. HOUGH, Janesville, Wis. Filed June 10, 1921. Serial No. 476,481. 12 Claims. (Cl. 188—65.)

1. An appliance, of the class described, comprising a supporting member, segments pivotally connected with said member and having intermeshing teeth, said segments being provided with arcuate cord-gripping jaws eccentric to said teeth, and means to prevent the cord from getting between said teeth.

1,456,238. BAKING DEVICE. MILAN IVANCIC, deceased, late of Kilchberg, Switzerland, by Alma Ivancic, administratrix, Kilchberg, Switzerland. Filed Jan. 8, 1921. Serial No. 435,849. 1 Claim. (Cl. 53—6.)

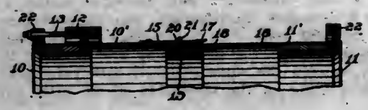


A baking device comprising a pan having an opening in the bottom and an inner wall rising from the bottom and around said opening, a lid on the pan, and a base on which the pan is mounted, said base having a tubular projection passing through the said bottom opening of the pan, said pan and base being so constructed and arranged as to carry off the gases from the interior of the pan.

1,456,239. TOY. EDGAR R. JONES, Kansas City, Mo. Filed July 28, 1919. Serial No. 313,737. 2 Claims. (Cl. 46—45.)

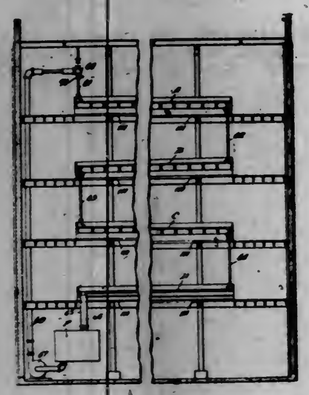
2. In a device of the character described, a handle, a tractor wheel mounted directly upon the forward end of said handle, a second wheel mounted directly on the handle at the rear of the tractor wheel, a single belt running around said wheels to transmit motion from the tractor wheel to said second wheel, radial arms fixed to the second wheel to rotate therewith, figures fixed to said radial arms, a connecting rod pivotally connected at its forward end to the tractor wheel, a bracket fixed to the rear end of said connecting rod and slidably engaging the handle, and a figure associated with the connecting rod.

1,456,240. GEAR-CUTTING MACHINE. FRANK WARDEN JUAY, Milwaukee, Wis. Filed June 9, 1921. Serial No. 476,188. 10 Claims. (Cl. 90—9.)



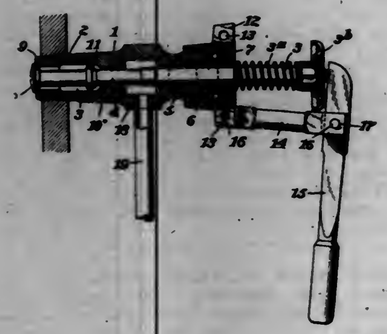
2. A gear cutting machine comprising a rotatable gear-blank carrier, a pair of alternately reciprocative cutters, guides therefor arranged to direct the cut upon the blank transversely thereof and in a line advanced relative to the line defining the walls of the teeth, whereby each cut across the face of the blank is uniform throughout, and related driving means between the cutter and blank carrier for imparting movement to both during a cutting operation.

1,456,241. HOLDER FOR CRAYONS OR THE LIKE. EMIL KROUTL, Budweis, Czechoslovakia. Filed Aug. 25, 1921. Serial No. 495,440. 3 Claims. (Cl. 120—17.)



3. A holder for an adjustable crayon or the like, comprising in combination an inner sleeve provided with a longitudinal slot, an outer sleeve slidably located round the said inner sleeve, a toothed rod slidably arranged within the inner sleeve, the forward end of the toothed rod being reduced in cross-section and the adjustable crayon being adapted to rest against the said reduced forward end, a spring catch on the inner sleeve and a second spring catch on the outer sleeve adapted to engage the teeth of the toothed rod, a spiral spring located in the inner sleeve one end of which is connected to the rear end of the toothed rod, whilst its other end is secured to a knob inserted into the rear end of the said inner sleeve, the said knob being furnished with a pin extending through a recess in the outer sleeve, whereby when rotating the outer sleeve with respect to the inner sleeve the toothed rod is disengaged from the hold of the catches.

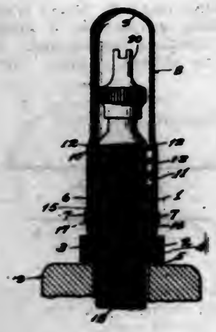
1,456,242. DRUM AND TRAP COMBINATION. ULYSSES G. LEEDY, Indianapolis, Ind., assignor to Leedy Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 5, 1921. Serial No. 490,070. 5 Claims. (Cl. 84—411.)



1. A bass drum comprising telescopic shells separable from one another to expose the interior of each shell throughout its entire diameter, each carrying a drum head and independent tensioning means, and separable means for holding said telescopic sections in drum forming relationship with each other.

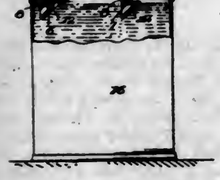
1,456,243. FLUSHING SYSTEM FOR STARCH TABLES. ADOLPH W. H. LENDERS, Cedar Rapids, Iowa, assignor, by mesne assignments, to Penick & Ford, Ltd., Incorporated, a Corporation of Delaware. Filed Dec. 24, 1917. Serial No. 208,636. 3 Claims. (Cl. 127—23.)

1. Method of removing starch from settling tables which consists in maintaining a quiet flow of a flushing liquid over the upper surface of the starch to gradually thin down the starch body until it has been removed.



1,456,244. VALVE. EDWARD S. MCGEE, Rock Hill, S. C. Filed Dec. 2, 1921. Serial No. 519,551. 6 Claims. (Cl. 251—27.)

6. A valve including a body having an outlet, a valve stem reciprocable therethrough, two valve surfaces carried by said stem, two valve seats in said body, the distance between the seats being greater than the distance between the valve surfaces, both valve seats and surfaces being on the same side of the valve outlet.

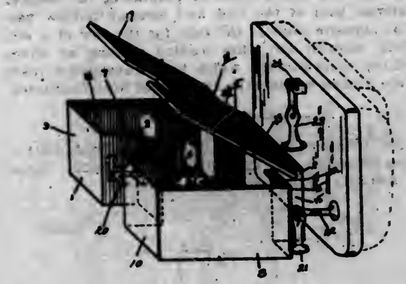


1,456,245. DUST CAP. EDWARD B. MANG, Los Angeles, Calif. Filed Mar. 14, 1919. Serial No. 282,744. 5 Claims. (Cl. 152—12.)

2. In combination with a nipple having lateral lugs, a cap provided with angular slots for said lugs; said slots being provided with notches to receive the lugs; said cap being provided with a spring chamber, and a coil spring in the cap to engage the nipple to move the

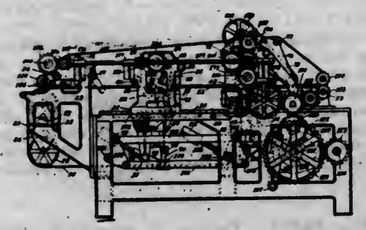
cap to seat the lugs in said notches, said spring being held sufficiently tight in the chamber to prevent accidental dislodgment therefrom.

1,456,246. CAN OPENER. GEORGE E. MARSHALL, San Diego, Calif. Filed July 1, 1921, Serial No. 481,817. Renewed Mar. 30, 1923. 1 Claim. (Cl. 220—51.)



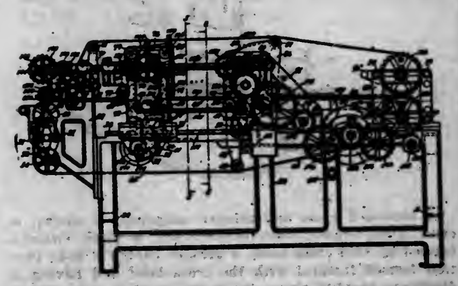
A can opener comprising a flat elongated body, and blades having reduced attaching shanks connected to said body adjacent the ends of the same, said blades being formed with edges arranged at right angles to the plane of the body and with diagonally extending can cutting edges, said cutting edges terminating laterally of the edges of said shanks thereby forming shoulders adapted to engage the top of a can to retain the opener in position, the width of each of said attaching shanks being substantially less than the opening formed by each blade whereby the body may be moved longitudinally when applied, said body constituting a closure extending over said openings for closing the same, the body being formed at its rear end with an offset defining a handle and a stop.

1,456,247. SEAT BOX FOR FORD SEDANS. HORATIO MILLER, Orange, N. J. Filed Sept. 28, 1921, Serial No. 503,976. Renewed Mar. 27, 1923. 1 Claim. (Cl. 224—29.)



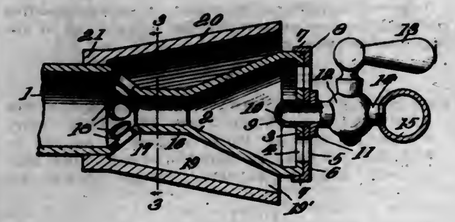
A seat box, having two corner recesses on one side thereof and a recess located centrally on the other side

thereof, said recesses extending from the top to the bottom of the box, a latch in one of said recesses,



normally extending across said recess, and adapted to engage a leg standing upright therein, said latch being mounted to swing to release said leg.

1,456,248. MACHINE FOR FORMING BOX BLANKS. CHARLES L. MOYER, Chicago, Ill., assignor to Morris Paper Mills, Chicago, Ill., a Corporation of Illinois. Filed Apr. 29, 1921. Serial No. 465,433. 26 Claims. (Cl. 93—36.)



1. In a blank folding machine of the character described, the combination with a frame, of die mechanism mounted thereon for breaking the corners of the blank, upper and lower belts for conveying the blank to and beyond the field of operation of said die mechanism, and means for arresting the travel of the blank while said die mechanism is operating thereon.

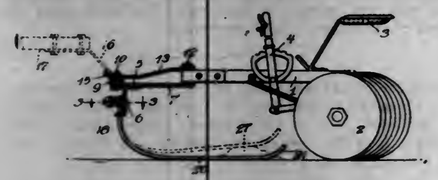
1,456,249. MACHINE FOR FORMING BOX BLANKS. CHARLES L. MOYER, Chicago, Ill., assignor to Morris Paper Mills, Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1922. Serial No. 527,218. 22 Claims. (Cl. 93—36.)

1. In a blank folding machine of the character specified, the combination with a frame, of mechanism including swinging folding devices mounted thereon for bending and breaking the corners of the blank, means for conveying a blank into the field of operation of said bending and breaking mechanism, means for arresting the travel of the blank while said mechanism is operating thereon, and means for discharging the blank from the field of operation of said mechanism.

1,456,250. GAS AND AIR MIXER. CHARLES MUNSNER, Chicago, Ill., assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Jan. 3, 1922. Serial No. 526,821. 6 Claims. (Cl. 158—118.)

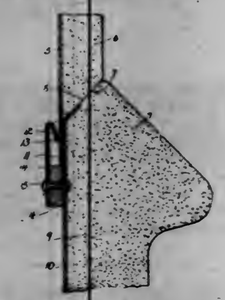
1. An air and gas mixer for gas burners, comprising an outwardly enlarged mixing chamber 2, provided at its outer end with an inwardly extending gas jet much shorter than the length of the mixing chamber, the outer end of the mixing chamber provided with air-inlet openings, a reduced portion 16 having its wall enlarged inwardly and provided with air-inlet openings, the outwardly enlarged wall formed into a mixing tube for the gas and air passing therethrough.

1,456,251. SHOE. LUKE E. MURPHY, Milwaukee, Wis. Filed Apr. 25, 1922. Serial No. 556,528. 1 Claim. (Cl. 24—140.)



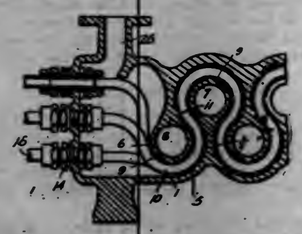
The combination of a shoe upper having a pair of spaced flies formed of an outer and an inner ply, a series of opposed hooks projecting into the space between the flies and having shanks positioned between the plies, and securing means extending through the shanks and through the inner ply and covered by the outer ply.

1,456,252. PROCESS OF COATING METALS WITH METAL PHOSPHIDES. SAMUEL PEACOCK, Wheeling, W. Va., assignor to Wheeling Steel & Iron Company, Wheeling, W. Va., a Corporation of West Virginia. Filed June 7, 1922. Serial No. 566,658. 5 Claims. (Cl. 148—6.)



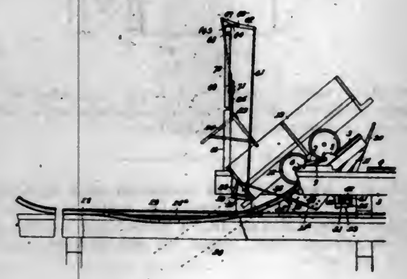
1. The process of coating metal shapes with protecting films which consists in making a mixture containing a phosphate compound and carbon mixed a viscous vehicle to form a paint; applying said paint to the metal surfaces to be protected; and heating said surfaces to a temperature sufficient to form a film containing a phosphide of the coated metal, substantially as described.

1,456,253. SPRING SUPPORT FOR HARROWS, ETC. HENRY PETERSEN, Mount Auburn, Iowa. Filed Apr. 20, 1922. Serial No. 555,718. 10 Claims. (Cl. 280—14.)



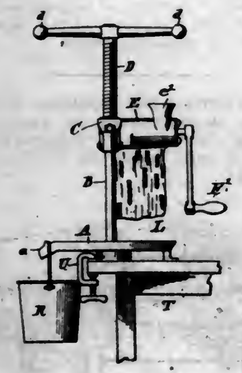
1. In an agricultural implement, a spring-supporting resilient wheelless support for the forward end of the implement-carrying member.

1,456,254. GAS-TIGHT JOINT FOR BOILER CASINGS REMOVABLY MOUNTED UPON FIREPOTS. JOHN PIERCE, Jr., Norwalk, Conn., assignor of one-half to Dickinson S. Cummings, Stamford, Conn. Filed Mar. 16, 1923. Serial No. 625,497. 2 Claims. (Cl. 110—1.)



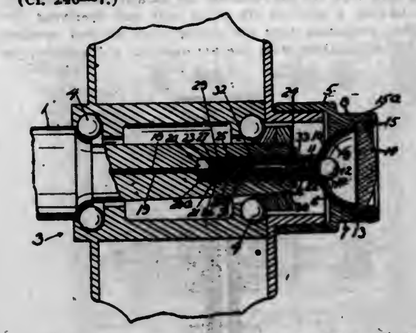
1. The combination with a firepot having a sheet-metal shell and a lining, of a removable boiler-casing comprising a sheet-metal shell, and a lining below the lower edge of which the shell extends to form a sealing-flange adapted to make close contact with the exterior surface of the upper edge of the firepot-shell, and an inwardly and downwardly projecting pressure-flange carried by the firepot and adapted to exert a constant inward pressure upon the said flange when the boiler-casing is applied to the firepot.

1,456,255. APPARATUS FOR HEAT EXCHANGE. EDWARD SHAW, Toronto, Ontario, Canada. Filed Jan. 25, 1918. Serial No. 213,766. 4 Claims. (Cl. 257—235.)



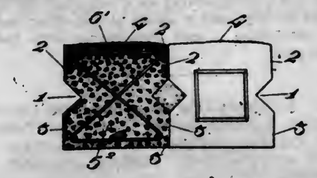
1. Apparatus for transferring heat from one fluid to another comprising a tube having a plurality of reverse bends formed longitudinally thereof without straight connecting portions whereby fluid flowing through the same at high velocity flows always in curved paths and is caused to exert a violent scouring action alternately against opposite sides of the walls of the tube, and a casing, in which the tube is enclosed, paralleling the bends of the exterior wall of the tube and forming narrow passages at opposite sides of the tube for the flow of a second fluid, whereby any films tending to form at either side of the walls through which heat transference takes place are broken up and the transfer of heat facilitated.

1,456,256. CAR-DUMPING APPARATUS. CLEMENT C. SMITH, Wheeling, W. Va. Filed Jan. 21, 1922. Serial No. 530,817. 12 Claims. (Cl. 214—47.)



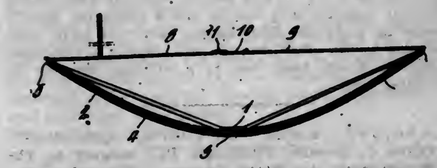
1. A car-dumping mechanism comprising a platform carrying rail sections for receiving a car thereon, said platform being rockable to and from inclined car-dumping position, and devices for chocking the wheels of cars surmounting said rail sections, said devices being shiftable from operative position only when the dumping position of the platform is assumed and being returnable to operative position with return movement of the platform.

1,456,257. PRESS. FRANCIS E. STEVENSON, Mount Gilead, Ohio, assignor to The Hydraulic Press Manufacturing Company, Mount Gilead, Ohio. Filed June 6, 1921. Serial No. 475,247. 1 Claim. (Cl. 100—44.)



A combined press and grinder comprising a saucer, a cross head, connections therebetween, a press element carried by said cross head, a grinder having a body portion formed integral with the cross head and having a discharge opening above the saucer, and means carried by the cross head and grinder body for suspending a receptacle for ground material therefrom.

1,456,258. LATERAL DIRIGIBLE LIGHT FOR VEHICLES. CARLTON E. STONER, Long Beach, Calif. Filed Apr. 20, 1921. Serial No. 462,938. 4 Claims. (Cl. 240—7.)

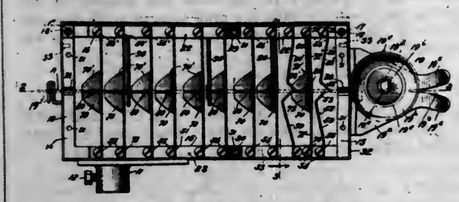


1. The annular hub cap for vehicle wheels set forth, threaded onto the hub and having a recess and a countersunk portion; a light projecting device in said recess; a lens seated in said counter sunk portion; and means to hold said lens in mounted position.

1,456,259. PAVING STONE. TAMEKICHI ITO, Tokyo, Japan, assignor of one-half to Kwatsuji Ikeda, Tokyo, Japan. Filed Dec. 31, 1920. Serial No. 434,245. 2 Claims. (Cl. 94—12.)

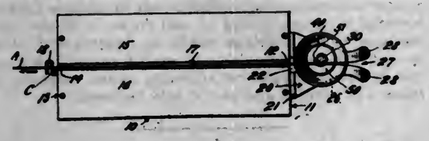
1. In a pavement, a plurality of stones each including a rectangular body having a V-shaped horizontal groove arranged in each longitudinal side and having the portions of the longitudinal sides above the grooves reduced, the lower portions of the longitudinal sides of each stone being adapted to intimately contact with the corresponding portions of the adjacent stones while the grooves and reduced sides are positioned opposite each other to form a draining passage, and the upper surfaces of the body of each stone being curved convexly, substantially as and for the purposes set forth.

1,456,260. COLLAPSIBLE KITE. RUSSELL A. TROMBLEY, Akron, Ohio. Filed May 26, 1921. Serial No. 472,690. 2 Claims. (Cl. 244—22.)



2. A collapsible kite comprising a vertical stick having a transverse connector near its upper end, said connector being provided in its opposite ends with sockets, a cross piece composed of two comparatively short sticks having their inner ends removably received in said sockets and being provided at their outer ends with holes, a covering for the sticks, a marginal cord connected to said covering and said vertical stick, and relatively short pieces of cord passing through the aforesaid holes, being connected at their outer ends to said first named cord and being detachably connected together at their inner ends.

1,456,261. YARN CLEANER. HENRY E. VAN NESS, Elmira, N. Y. Filed Mar. 29, 1922. Serial No. 547,596. 41 Claims. (Cl. 28—66.)



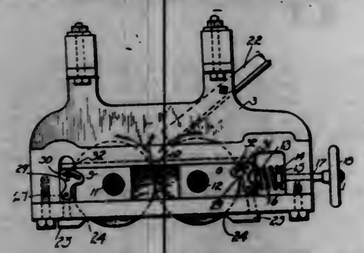
1. In a cleaner for removing particles from a traveling yarn, a blade having a portion of its edge adjacent to the yarn and resiliently held to permit free vibration of said portion of its edge, so that the blade is set into vibration by the impingement of particles projecting from the yarn and brushes particles from from the yarn by its vibration.

1,456,262. YARN CLEANER. HENRY E. VAN NESS, Elmira, N. Y. Filed June 8, 1922. Serial No. 566,722. 12 Claims. (Cl. 28—66.)

1. A yarn cleaner for removing particles from a traveling yarn, comprising an open frame having aligned recesses in its ends to permit the passage of the yarn longitudinally across the frame, a cover on said frame, and transverse deflecting blades yieldably mounted on said frame having their inner edges adjacent to the yarn and their upper edges spaced upwardly from the yarn and close to the lower surface of said cover.

1,456,263. TENSION DEVICE. HENRY E. VAN NESS, Elmira, N. Y. Filed July 20, 1922. Serial No. 576,249. 11 Claims. (Cl. 242—150.)

1. A tension device, comprising the combination of a frame containing aligned recesses in its ends to permit the passage of the yarn longitudinally across the frame, a plate projecting outwardly from the front end of the frame at the level of the bottoms of said recesses, said plate containing in its outer end an entrance recess aligned with the recesses in the frame, a stud projecting



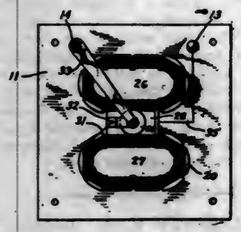
upwardly from said plate at one side of the center line of said recesses, and a rotary tension member seated on said plate about said stud and having a disc-shaped bottom and a flaring flange projecting upwardly and outwardly from the periphery of the bottom and extending over the inner end of said entrance recess and above the top of the frame.

1,456,264. SAFETY SNAP HOOK. HARRY BILLMEYER, Washingtonville, Pa. Filed Apr. 5, 1922. Serial No. 549,673. 2 Claims. (Cl. 24—233.)

1. A snap hook comprising a body having a ring loop with a socket in the end thereof, a leaf spring carried by the body and having its free end terminating adjacent to said socket and adapted to be depressed to contact with the inner face of the body, and a bell-crank lever having arms substantially at right angles to each other and pivotally mounted in the socket, the outer arm being adapted to normally extend outwardly from the socket and substantially parallel to the body and to rest upon the free end of the spring to depress the same, the inner arm of the lever extending across the space between the socket and the body, said lever being rockable to a position where the outer arm, bearing against the spring, forces the free end thereof against the inner face of the body and the inner arm extends substantially parallel to the free end portion of the spring and contacts with the ring loop to guide the ring into the space between said inner arm and the free end portion of the spring.

1,456,265. ATTACHMENT FOR BALING PRESSES. EDWARD BROOKS, Atlanta, Ga. Filed Dec. 22, 1919. Serial No. 346,442. 2 Claims. (Cl. 100—25.)

1. A rotary feeding and packing device comprising a frame, a rotatable roller journaled in said frame, means for scraping said roller, a pair of slidable bearings mounted in opposite sides of said frame, a second roller journaled in said bearings, means for rotating said rollers, an oscillating scraper for said second named roller carried by said bearings, and adjusting means connected between said scraper and one of said bearings.

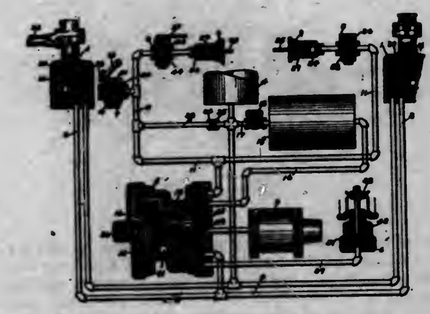


1,456,266. ATOMIZING OIL BURNER. RYERSON CRANE, Chicago, Ill., assignor to Ryerson Crane, Inc., a Corporation of Illinois. Filed Apr. 10, 1922. Serial No. 551,021. 1 Claim. (Cl. 158—76.)

An oil burner comprising a casing having two threaded aligning openings, one on each side, to admit air and oil respectively; a cross wall within the casing separating the two openings; said casing having two other aligning openings thru its ends at right angles to the air and oil openings; an oil conducting pipe extending thru the cross wall into the oil opening; an axially adjustable air pipe having a port at its outer end and overlying the oil pipe extending into the casing thru an end opening and communicating with the air opening, a check nut on

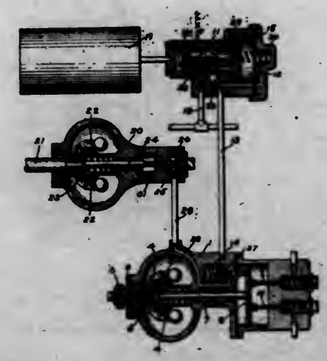
said air pipe to hold it in adjusted position and a valve stem threaded into the other end opening aligning with the air and oil pipes and extending into the oil pipe, having a valve on its inner end to close a nozzle at the end of the oil pipe operating as a valve for the discharge end of the air pipe and a nozzle at the outer end of the air pipe containing a port cooperating with the nozzle of the oil pipe.

1,456,267. VARIOMETER. HAROLD POTTER DONLE, Meriden, Conn., assignor to The Connecticut Telephone & Electric Company, Incorporated, Meriden, Conn., a Corporation of Connecticut. Filed Feb. 17, 1922. Serial No. 537,354. 9 Claims. (Cl. 171—119.)



1. A variometer coil member comprising an insulating plate having a central arm portion with extended slotted heads at opposite ends thereof and a conductor spirally wound in polygonal form zig-zag back and forth from one side to the other through said slots in a righthand direction on one head, and in a lefthand direction on the other head.

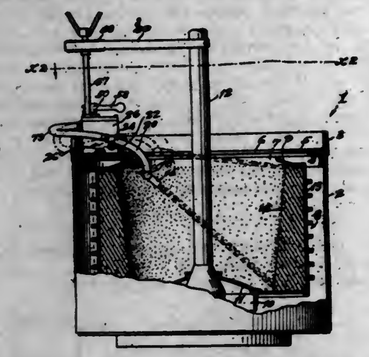
1,456,268. SAFETY CAR-CONTROL EQUIPMENT. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 8, 1921. Serial No. 476,072. 4 Claims. (Cl. 303—6.)



1. The combination with a straight air brake equipment including a straight air brake valve, a straight air pipe, a brake cylinder, and a source of fluid under pressure, of a reservoir adapted to be charged from said source,

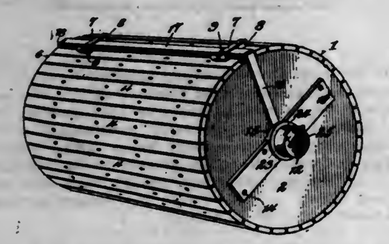
an emergency valve device having a piston subject to the opposing pressures of said source and the reservoir and a valve adapted to be manually operated by a passen-

ger for venting fluid from one side of and thereby operating said emergency valve device to supply fluid from said reservoir to the brake cylinder.



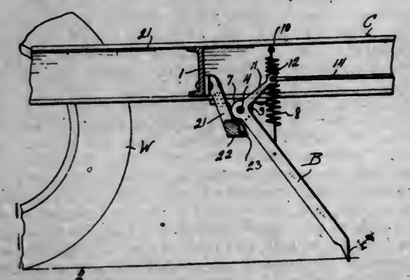
1,456,269. AUTOMATIC SPEED-CONTROL DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 15, 1921. Serial No. 477,847. 4 Claims. (Cl. 303—21.)

1. In a train speed control apparatus, the combination with a main speed governor device for determining the speed limit of the train, of an application valve device operated by a variation in fluid pressure for effecting an application of the brakes and an auxiliary speed governor device having a valve operative at a predetermined train speed for varying the fluid pressure on said application valve device.



1,456,270. SUGAR-WASHING AND WATER-MEASURING DEVICE. WILLIAM WALTER HARTMAN, Los Angeles, Calif. Filed May 19, 1919. Serial No. 298,824. 34 Claims. (Cl. 210—67.)

21. In an apparatus for washing sugar comprising a centrifugal basket having therein a wall of sugar, and a gyrating centrifugal shaft for rotating said basket; a nozzle for spraying the sugar in said basket, actuating means for moving said nozzle, means constituting a driv-



ing connection between said actuating means and said centrifugal shaft, and means for supplying a liquid wash to said nozzle.

1,456,271. ATTACHMENT FOR WASHING MACHINES. FRED HENSON, St. Louis, Mo. Filed Apr. 21, 1921. Serial No. 463,137. 9 Claims. (Cl. 68—18.)

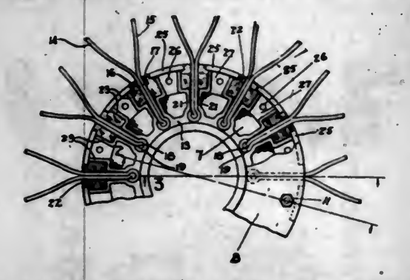
1. In a washing machine, a cylinder for containing articles to be washed, an axial support for the cylinder with a non-circular passage therein, driving means for the cylinder movable into and out of the passage, and obstructing means for the driving means movable into and out of the passage.

1,456,272. THEFT-PREVENTIVE DEVICE. ANDREW T. HOLDER, San Francisco, Calif. Filed Oct. 11, 1920. Serial No. 416,179. 1 Claim. (Cl. 188—31.)

The combination with a vehicle chassis, of a dog pivotally depending from and supported from the side of the chassis for swinging movement in a vertical direction, said dog when lowered extending forwardly and down-

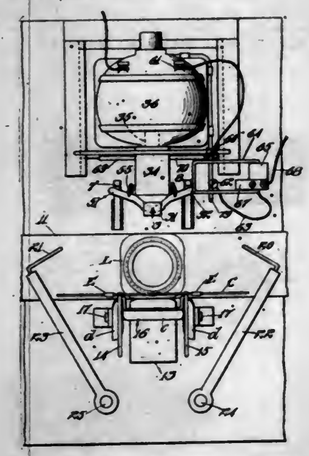
wardly and provided with a sharpened nose to engage with the ground to prevent forward movement of the vehicle, tensioning means for holding the dog normally elevated on its pivot, means for locking the dog in a lowered position, and an arm depending from and fixed to the side of the chassis and extending forwardly and terminating in a head at its lower end positioned substantially beneath the pivot of the dog, said head constituting an abutment for the dog to prevent the dog passing beyond a vertical center, the dog engaging face of the head having a notch into which the dog at a point below its pivot engages, the opposed walls of the notch acting to prevent lateral distortion of the dog, when the dog is moved suddenly toward the ground.

1,456,273. DISPLAY DEVICE. ELMER E. JOHNSON and JOSEPH KERSHAW, Joplin, Mo. Filed Sept. 7, 1922. Serial No. 586,716. 2 Claims. (Cl. 40—138.)



1. In a device of the character described, a substantially flat member having the simulation of an eye thereon, said member being provided with a slot adjacent said eye, an eyelid formed of similar material pivotally mounted on the back of said member and projecting through said slot, resilient means for normally retaining said eyelid in raised position, and a flexible element secured to said eyelid remote from said pivot whereby it may be lowered over the adjacent portion of said member to simulate winking.

1,456,274. PROCESS OF RENDERING METAL NON-OXIDIZABLE AND THE METAL. WILLIAM J. KEEP, Detroit, Mich. Filed June 4, 1915. Serial No. 32,107. 2 Claims. (Cl. 91—70.2.)

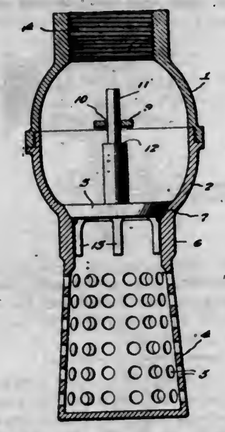


2. The method of producing a non-porous highly-refractory surface on steel, iron and like ferric compounds to produce a product wherein such metal forms the core of the product, and wherein the surface will resist heat temperatures in excess of those capable of reducing the metal forming the core, such method consisting in developing the surface from the core metal and aluminum by a stage operation in which the core metal is initially coated with molten aluminum by dipping the core metal in an aluminum bath and with both metals having a temperature value at least equal to that of the melting point temperature of the aluminum during the dipping operation, thereby producing a coating upon the core metal; then removing the coated core metal from the aluminum bath to produce an embryo product; then removing the excess of aluminum from the product by product manipulation, and then producing the surface by subjecting the embryo product to the action of heat of a temperature value considerably above that of the melting point of the bath aluminum and in the presence of air to provide a heat application differing in characteristic from that of the bath and for a period of time sufficient to complete the product, such completed product having the characteristics of a surface integrally and permanently united to the core of being non-porous and non-oxidized, and of heat resisting value greater than that required for the reduction of aluminum or of the metal of the core of the product.

1,456,275. VEHICLE WHEEL. ADELBERT F. KELLY, Spokane, Wash. Filed Dec. 2, 1920. Serial No. 427,826. 8 Claims. (Cl. 152—50.)

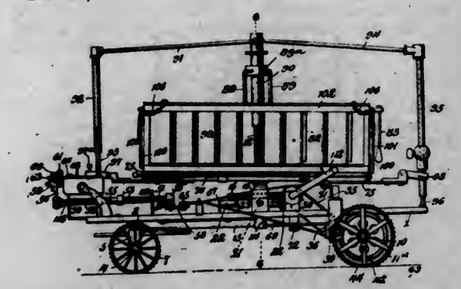
1. A wheel hub including a body member having an inner portion provided with a plurality of annularly disposed recesses, said member also being shaped to provide a plurality of channels, each channel extending outwardly from one of said recesses, spoke members having portions inwardly extending through said channels and terminally seated in said recesses, and resilient means carried by the hub adjacent its periphery yieldingly to resist distortion of said spoke members.

1,456,276. JAR-TRIMMING MACHINE. JOHN L. KIVLAN, Boston, Mass. Filed Jan. 12, 1921. Serial No. 436,761. 16 Claims. (Cl. 140—94.)



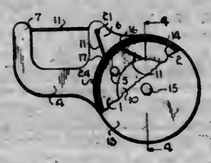
1. The jar trimming machine comprising bending mechanism to bend the substantially straight wire of the trimming around the neck of the jar and bring the ends thereof into juxtaposition, and a twister to twist the ends of the wire together and flatten the same against said neck.

1,456,277. VALVE. THOMAS JOHN MCKENZIE, Barberton, Ohio. Filed May 3, 1921. Serial No. 466,509. 1 Claim. (Cl. 103—220.)



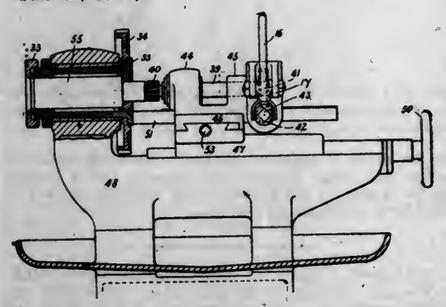
A foot valve of the character described comprising a two section body of bulbous form threadedly secured together, a tapered perforated extension depending from the lower section and converging upwardly, an imperforated part separating the perforated extension from the upper portion of the last mentioned section, a valve seat formed at the junction of the section and the imperforated part, a valve member designed to normally engage the seat, a cross bar arranged in the upper section and being provided with an opening in its center, a

stem rising from the valve member and being provided with a reduced portion designed to pass through the opening, a shoulder formed by the reduction and being



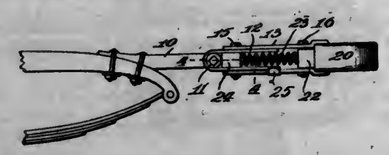
adapted to engage the cross bar to limit the upward movement of the valve member, guide means for the valve member and wrench engaging means for each section.

1,456,278. LOADING AND UNLOADING DEVICE. ALVA LARENCE OLIPHANT, Washington, Kans. Filed Dec. 19, 1921. Serial No. 523,497. 28 Claims. (Cl. 298—8.)



1. A device of the character described, comprising a wheeled supporting frame, a screw shaft mounted upon said frame, an auxiliary frame provided with a rack having a vertical and rotary movement on the shaft, which extends above the auxiliary frame, and means for rotating said screw shaft for imparting a vertical movement to the auxiliary frame and the rack, and an overhead means above the rack connected to the upper end of the screw shaft for bracing the same.

1,456,279. DENTAL FLOSS HOLDER. ARTHUR LOW PATTERSON, Albemarle, N. C. Filed Dec. 16, 1922. Serial No. 607,363. 6 Claims. (Cl. 132—92.)

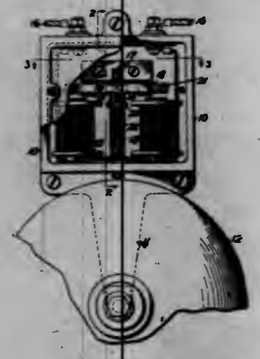


6. A dental appliance comprising a receptacle for containing a spool of dental floss, a removable cover for the receptacle, co-acting means embodied in the receptacle and cover for tensioning the floss as it is unwound from the spool, a body portion rigidly secured to the receptacle and having spaced extensions formed thereon, a cleat carried at the terminal of each extension and adapted to clamp the floss from the spool across the space between the extensions and hold the same taut, and an outwardly projecting, pointed tongue having its lower edge bevelled below the inner cleat to constitute a cutter for severing the used portion of the dental floss.

1,456,280. MILLING SCREW THREADS. GEORGE RICHARDS, London, England. Filed Feb. 5, 1917. Serial No. 146,692. 4 Claims. (Cl. 10—154.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

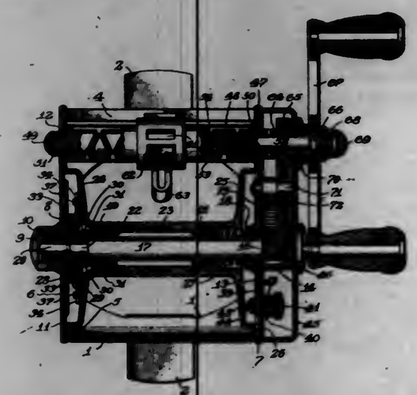
1. In a machine for cutting screw-threads by means of a hob, a shaft for rotating the hob, a shaft for rotating the work, mechanism interconnecting the two shafts for rotating the hob and the work normally at the same rotative speed, and means, forming a part of said mechanism, for slightly varying at will and within narrow limits the relative rotative speeds of two shafts.

1,456,281. BUMPER FOR MOTOR VEHICLES. FRANK K. ROGERS, Los Angeles, Calif. Filed Feb. 27, 1922. Serial No. 539,664. 1 Claim. (Cl. 293—55.)



A vehicle bumper comprising spaced supports, telescoping members horizontally extending therefrom with interposed helical springs, means consisting of engaged serrated surfaces for maintaining said members in variable angular relation to said supports, a transverse bar connecting said members, and a variably spaced bumper rail horizontally attached to said bar with a plurality of interposed helical springs.

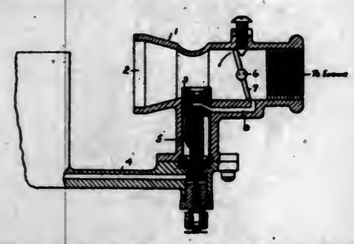
1,456,282. ALTERNATING-CURRENT ELECTRIC BELL. CURT J. ROHLAND, Seekonk, Mass., assignor, by mesne assignments, to Signal Engineering and Manufacturing Company, New York, N. Y., a Corporation of Massachusetts. Filed Apr. 12, 1916, Serial No. 90,757. Renewed Oct. 9, 1922. Serial No. 593,459. 5 Claims. (Cl. 177—7.)



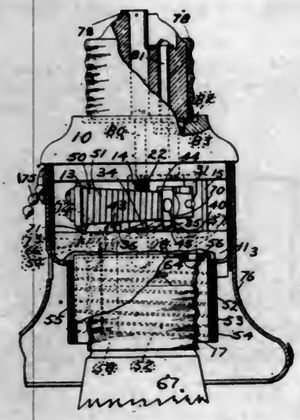
1. In a sound producing device, the combination with an alternating current electro-magnet, its armature, and a device to be vibrated, of a reciprocating plunger fixedly connected with the armature and movable therewith, a

coiled spring located on said plunger for forcing the armature away from the coils, said plunger having a screw thread, a nut fitting said screw thread and engaged

by the end of the spring, said nut constituting means by which the spring actuates the plunger, and a locking device carried by the armature and engaging the nut to hold it in its adjusted positions.



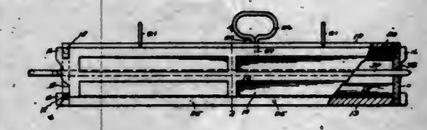
1,456,283. LEVEL-WIND ANTIBACKLASH REEL. WILLIAM SCHMID, Coldwater, Mich. Filed Feb. 18, 1921, Serial No. 446,142. Renewed Apr. 6, 1923. 11 Claims. (Cl. 242—84.5.)



10. In an anti-back lash reel having a spool shaft and spool, a head on said shaft, governor arms pivotally supported by said head and loosely engaging said spool, said governor arms establishing a driving relation between said spool shaft and spool so that the former may drive the latter and by being subjected to centrifugal force change the normal relation between said head and said spool, and cam means between said head and spool causing lateral movement of said spool for braking purposes when said governor arms are actuated by centrifugal force.

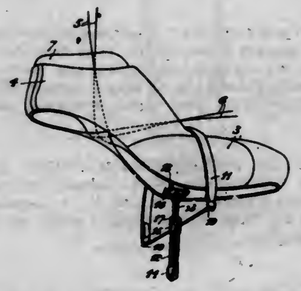
1,456,284. GOVERNOR FOR INTERNAL-COMBUSTION ENGINES. PAUL F. SHIVERS, Ludington, Mich., and JOHN F. LINDBERG, Chicago, Ill., assignors of one-half to Leddra W. Holt, Ludington, Mich. Filed Nov. 12, 1919. Serial No 337,519. 3 Claims. (Cl. 290—40.)

1. A governor for internal combustion engine-driven electric generating plants comprising a carburetor adapted to be connected to the engine and having an air passageway therein, a valve within the air passageway adapted to be turned continuously in one direction from substantially closed position to wide open position and again to substantially closed position, means normally maintaining the valve in substantially closed position and means to turn the valve in the aforesaid direction, the latter means being responsive to the voltage of the electric current generated by the generator.



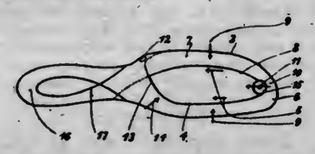
1,456,285. THERMOSTATIC LAMP DIMMING PULL SOCKET. RAYMOND D. SMITH, Milton, Mass., assignor to Tremont Products Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 3, 1920. Serial No. 421,554. 20 Claims. (Cl. 219—49.)

1. A pull socket switch structure embodying, in combination, a lamp receptacle; means to dim the lamp; a controlling switch; and a device operatively related to said switch, electrically governed thereby, and adapted when electrically energized to cause delayed circuit-breaking swith movement to extinguish the lamp; together with manual actuating means for establishing selective operative positions of said switch whereby the lamp may respectively be fully lighted, dimmed, or automatically extinguished a substantial period of time after manual actuation of said switch to energize said device.



1,456,286. FENCEPOST MOLD. HENRY W. SNOW, Dayton, Ohio. Filed Aug. 23, 1921. Serial No. 494,635. 2 Claims. (Cl. 25—121.)

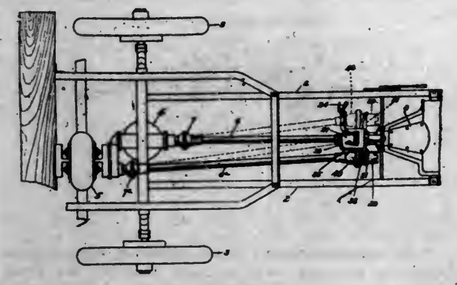
1. A post mold having removable sides, a top and ends, interlocking means between the sides and ends,



means carried by the top and sides for forming the molded post in an octagonal shape, a base for said mold, a sheet metal covering for said base, said base being provided with openings, and handles for engagement within said openings, whereby said base may be transported.

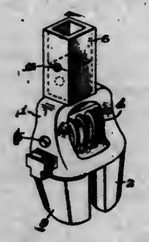
1,456,287. METHOD FOR PULLING OVER UPPERS. MARIUS METHILTUS SÖRENSEN, Vallerod, near Rungsted, Denmark. Filed May 28, 1919. Serial No. 300,244. 1 Claim. (Cl. 12—145.)

A method for pulling over foot-gear on the last consisting in placing the upper leather over the last, stretching a strap across the outer surface of the upper and pulling the ends of said strap in a direction away from the bottom of the upper to exercise a pressure on the upper between its stretched edges, said pressure acting in a direction against the upper side of the last, thus producing a friction between the upper and the last, maintaining this friction, and subsequently releasing the strap from the upper.



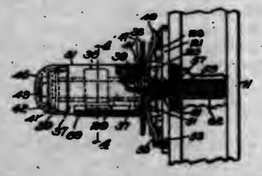
1,456,288. METHOD OF LASTING WITH WIRE. MARIUS METHILTUS SÖRENSEN, Vallerod, near Rungsted, Denmark. Filed July 12, 1919. Serial No. 310,445. 3 Claims. (Cl. 12—145.)

1. A method for lasting shoes consisting in arranging a tension-wire loop at the lower edges of the upper, contracting this loop to draw the lower edges of the upper toward each other, stopping the contraction of the loop in the longitudinal direction of the same after the toe portion has been lasted to a desired extent, and continuing without obstruction the contraction of the entire sides of the loop in a transverse direction only to last the side edges of the upper to a desired extent.



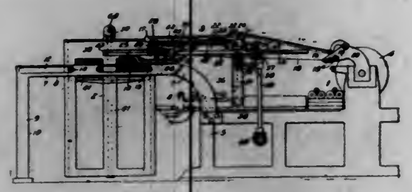
1,456,289. CLUTCH-SHIFTING MECHANISM. LEONIDAS P. STOREY, St. Paul, Minn., assignor to Waterous Fire Engine Co., St. Paul, Minn., a Corporation of Minnesota. Filed Apr. 8, 1922. Serial No. 550,760. 6 Claims. (Cl. 74—7.)

1. The combination, with a frame having a traction means and a transmission shaft connection and clutch member therefor, of differential and driven shafts, a support for said differential and driven shafts adjacent said transmission shaft connection, clutch members connected with said differential and driven shafts for alignment and engagement with the clutch member of said transmission shaft connection, and a lever having a forward and backward and lateral movement and connected



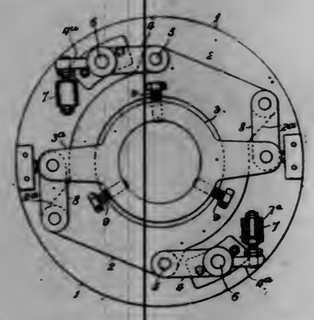
with said support for adjusting it in alignment with said transmission shaft clutch member and engaging the clutch members of said driven and differential shafts therewith.

1,456,290. ADJUSTABLE WRENCH. KARL G. TELL, Highland Park, Mich. Filed Sept. 19, 1921. Serial No. 501,514. 2 Claims. (Cl. 81—165.)



1. A wrench comprising a body member having a fixed jaw integral therewith, a reduced non-circular tang formed at the end of the body member opposite the fixed jaw, a movable jaw, a portion integral with said movable jaw having a rack formed thereon and adapted for sliding movement within a groove in said body portion, a worm mounted upon a pivot within said body portion in mesh with said rack, and a non-circular sleeve secured to said tang, the tang extending through a portion only of the interior of the sleeve whereby to provide a socket adapted to receive a handle member.

1,456,291. DELIVERING MATERIAL FROM ROLLS. WILLIAM M. WEMILDON, Ashland, Mass., assignor to Edward H. Angier, Framingham, Mass. Filed Aug. 6, 1920. Serial No. 401,742. 16 Claims. (Cl. 247—6.)

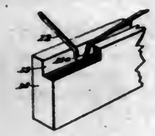


1. A machine of the class described comprising a rotating head, a rotary support for a roll of material thereon and means also carried by the head responsive to the centrifugal force due to the weight of such material to apply a braking force resisting rotation of such support.

1,456,292. PRINTING PRESS. WALTER E. AMBERG, Chicago, Ill., assignor to William O. Peterson and Bernard L. Engelke, both of Chicago, Ill. Filed Sept. 28, 1921. Serial No. 503,942. 48 Claims. (Cl. 271—84.)

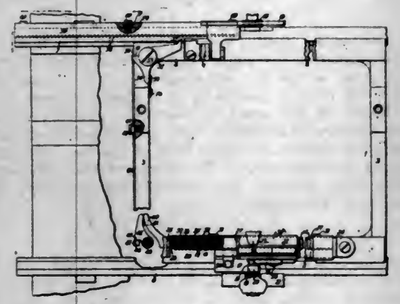
1. In a printing press, the combination with a press proper, a receiving table normally abutting said press proper, and means for adjusting said table longitudinally of the press proper, of a sheet delivery mechanism for delivering from the press proper to said receiving table, said mechanism being extensibly and contractibly adjustable in order to operate uninterruptedly irrespective of the position of said receiving table.

1,456,293. CHUCK FOR LATHES AND THE LIKE. CECIL DANIEL ANDREW, Buxton, England. Filed Nov. 12, 1921. Serial No. 514,495. 2 Claims. (Cl. 82—40.)



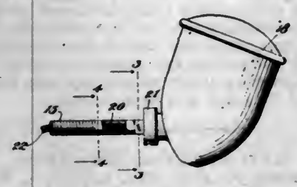
1. In a chuck for lathes and the like, a face plate, a driving member, spring controlled means for suspending said driving member from the face plate, and a dog suspended from said driving member.

1,456,294. TOOTH SEPARATOR. GEORGE M. ARROWSMITH, Kansas City, Mo., assignor to James W. Ivory, Philadelphia, Pa. Filed Dec. 17, 1921. Serial No. 523,001. 2 Claims. (Cl. 32—19.)



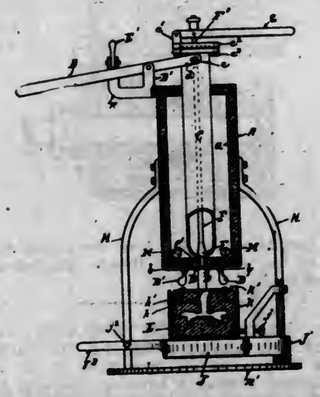
1. A tooth separator having a frame, a wedge movably mounted thereon, means for operating said wedge, and a bow on said frame, said wedge having an offset approximately right angular in the direction of its length correspondingly deflecting the wedge from the adjacent portion of the frame.

1,456,295. SEED-CORN DRIER. JOSEPH SMITH BAIN, Cedar Rapids, Iowa. Filed May 12, 1922. Serial No. 560,445. 4 Claims. (Cl. 34—26.)



1. In a seed-corn drier, a supporting bar having an upwardly opening groove therein to receive and hold the shanks of the ear-supporting spurs, and spurs provided with depending shanks to fit snugly in said groove, and to prevent the spurs from tipping or turning sidewise.

1,456,296. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed June 27, 1922. Serial No. 571,196. 23 Claims. (Cl. 197—63.)



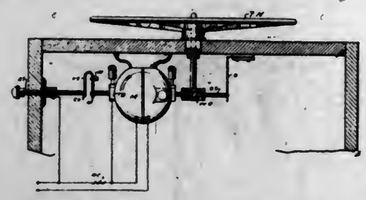
1. In a typewriting or like machine, the combination of a carriage, and two pairs of co-operative margin stops, the stops of both pairs operating simultaneously to stop the return movement of the carriage and thereby prevent a springing of part thereof by momentum.

1,456,297. LAMP SUPPORT. WILLIAM BERK, New York, N. Y., assignor to American Auto Lamp Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 3, 1921. Serial No. 489,500. 2 Claims. (Cl. 240—57.)

1. An automobile lamp having a reduced exteriorly threaded portion projecting therefrom, the lamp adjacent said threaded portion being provided with a relatively enlarged portion, the relatively reduced portion forming the shank and the relatively enlarged portion forming the head of the bolt, the lamp, head and shank having a passage therethrough serving as a conduit for an electric conductor.

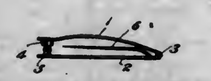
1,456,298. COMBINED FURNACE AND CRUCIBLE. WILLIAM T. CARNES, Kansas City, Mo., assignor to The Carnes Artificial Limb Company, Kansas City, Mo. Filed July 29, 1922. Serial No. 578,461. 3 Claims. (Cl. 22—70.)

1. In an apparatus of the class described, a furnace chamber, means to heat the same, an opening in each end of said chamber, means to support said chamber in a vertical position, a crucible adapted to be inserted into the upper end of said furnace chamber and extend downwardly therein, means to suspend said crucible therein and lower the same through the opening in the lower end of said furnace chamber, a nozzle on the lower end of said crucible, a valve to control the opening through said nozzle, and means to operate said valve.



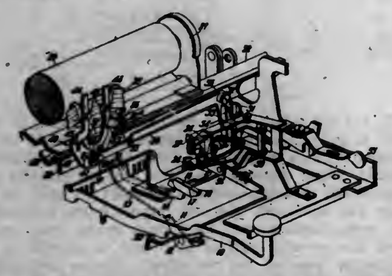
1,456,299. NECKTIE HOLDER. JAN CENOBY, St. Louis, Mo. Filed Sept. 25, 1922. Serial No. 590,391. 5 Claims. (Cl. 24—57.)

1. In a necktie holder, a collar engaging body, and a collar button engaging member slidably mounted on said body so as to maintain the relative angular position between them, said member having a button head receiving opening, the axis of which is substantially at right angles to said member and having a button shank receiving opening, the axis of which is disposed angularly to the axis of said head receiving opening.



1,456,300. MOTOR GOVERNOR. WILLIAM W. DEAN, Wilmette, Ill., assignor to Efficiency Electric Corporation, New York, N. Y., a Corporation of New York. Filed June 20, 1919. Serial No. 305,527. 1 Claim. (Cl. 175—355.)

In a motor governing system, the combination with an electric motor, a reed spring governor therefor, electric circuit controlling contacts operated by the said governor to control the speed of the motor, the said governor comprising a U-shaped reed, one arm of the said reed being secured to the said shaft, the other arm of the said reed being free and carrying an electric controlling contact, the

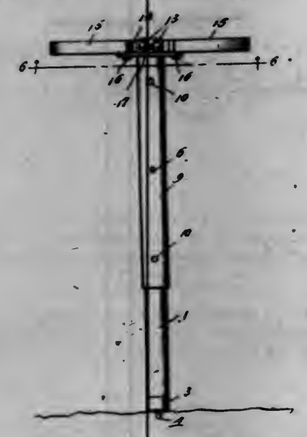


said controlling contact being mounted in line with the axis of rotation of the said shaft, and a centrifugal weight mounted on the secured arm of the said spring.

1,456,301. LINGERIE PIN. ELLA DIEFENBACHER, New Philadelphia, Ohio. Filed May 24, 1922. Serial No. 563,245. 2 Claims. (Cl. 24—259.)

1. A device of the character described comprising a pair of relatively movable arms hingedly secured together at one extremity, one member of a snap fastener carried by each of said arms at the free extremity thereof, said members being arranged to coact to fasten the free ends of said arms together and a prong extending longitudinally between said arms and attached to the lower of said arms.

1,456,302. TYPEWRITING MACHINE. WILLIAM A. DOBSON, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 28, 1920. Serial No. 384,863. 6 Claims. (Cl. 197—159.)



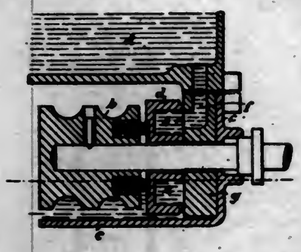
1. In a typewriting machine, the combination of a platen, a forked ribbon-vibrator, a guide for said ribbon-vibrator, a transverse lever to engage said vibrator centrally and operate the same, a stop for said lever, said stop being adjustably mounted on said guide, platen-shifting means, and a support for said lever and said guide, said support being shiftable with said platen.

1,456,303. ACIDPROOF MORTAR. PER GÖSTA EKSTRÖM, Stockholm, Sweden, assignor to Aktiebolaget Syrefast Murning, Stockholm, Sweden, a Corporation of Sweden. Filed Dec. 16, 1920. Serial No. 431,301. 3 Claims. (Cl. 106—30.)

1. Acidproof binding agent, containing a mixture of finely divided hard siliceous material, a lead oxid, and a magnesium silicate material, together with water glass.

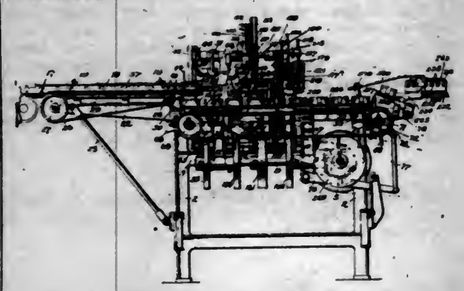
1,456,304. COMBINATION WALKING CANE. LEO FRITSCHKA, Detroit, Mich. Filed Apr. 4, 1922. Serial No. 549,468. 2 Claims. (Cl. 135—47.)

1. A cane constructed and arranged to be increased and diminished in length and having a combined handle and seat, said handle and seat being made up of a body, handle sections hingedly connected thereto, and plates detachably connected to the handle section and adapted when said sections are disposed horizontally to prevent movement of the same below the horizontal.



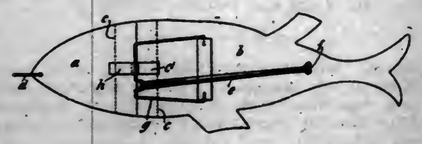
1,456,305. SAFETY CLASP FOR JEWELRY. EDWARD C. GRASSMAN, Newark, N. J., assignor to Harry C. Schick, Inc., a Corporation of New Jersey. Filed Dec. 2, 1922. Serial No. 604,470. 5 Claims. (Cl. 24—230.)

1. A clasp comprising a box-like body having an open end, a guard-hook device secured to one wall of and located within the open end of said body, a male fastener having closed means at its free end to straddle said guard-hook, mutually cooperative parts on said box-like body and said male fastener for normally interlocking the same together, said guard-hook device being spaced from the opposite wall of said body to provide an unobstructed passage for the direct endwise longitudinal movement of said male fastener into said body.



1,456,306. CENTRAL LUBRICATOR PROVIDED WITH A DISTRIBUTING ROLLER ROTATING WITHIN AN OIL RESERVOIR AND A DEVICE FOR OBTAINING A PERMANENTLY-UNIFORM OIL LEVEL WITHIN SUCH RESERVOIR. ARTHUR GRÜTZNER, Meissen-on-the-Elbe, Germany. Filed Aug. 30, 1921. Serial No. 497,039. 6 Claims. (Cl. 184—103.)

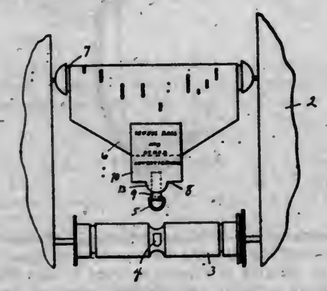
4. A lubricant apparatus comprising an oil reservoir, an oil box, an oil level controlling member, a ring having a plurality of pockets therein, there being a passage from the oil reservoir through the said oil level controlling member, and there also being a recess in the said oil level controlling member, a shaft upon which the said ring is loosely mounted, and means for turning the said ring from the said shaft and yieldingly maintaining the said ring in contact with the surface of the said oil-bevel controlling member whereby as the said ring turns oil is permitted to flow from the reservoir successively into



the said pockets and to flow from the said pockets into the said oil box when the oil therein falls below a predetermined level.

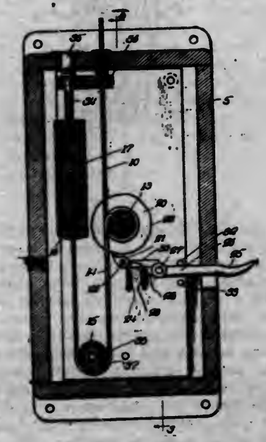
1,456,307. MACHINE FOR APPLYING STAMPS, LABELS, OR SEALING STRIPS TO PACKAGES. GEORGE WILBUR GWINN, New York, N. Y., assignor to Automatic Packing & Labeling Company, Durham, N. C., a Corporation of North Carolina. Filed May 20, 1914. Serial No. 839,835. 58 Claims. (Cl. 216—58.)

54. In a machine for affixing stamps or labels to packages, in combination, means for applying labels to packages, one by one in succession, with the end portions of the labels projecting beyond the sides of the package, means for applying an adhesive to the projecting portions of the labels and for extending the projecting end portions of each label down and against the sides of each package, a receiver for thereafter collecting a plurality of the packages arranged side by side in a bank, and wipers extending along said receiver for repeatedly pressing the end portions of the labels of the packages in the bank.



1,456,308. APPLIANCE FOR PLAYING FISHING GAMES. WILLIAM CHANCELLOR HAIGH, Porth, Wales. Filed Nov. 4, 1922. Serial No. 599,052. 4 Claims. (Cl. 46—56.)

1. An appliance for playing a fishing game comprising a fish form or image having at one end a device adapted to be engaged by a fish hook, and provided with a spring

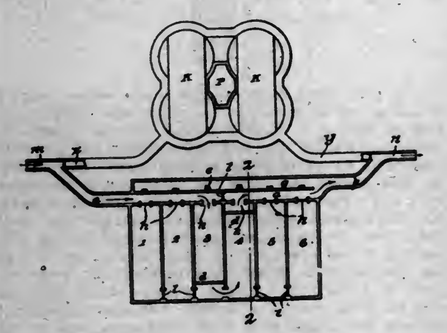


which is under tension when the image is at rest in the pond and which tends to cause the image to jump from the hook when engaged with the hook and when first suddenly raised.

1,456,309. SUBSTITUTE END FASTENER FOR MUSIC ROLLS. SAMUEL WILBUR HARRIS, Camden, N. J. Filed May 25, 1921. Serial No. 472,495. 2 Claims. (Cl. 84—162.)

1. A substitute end fastener for music rolls comprising two sheets fastened together throughout a portion of their length and adapted to be attached to a music roll sheet with the latter disposed between them and a tape carrying a ring secured between the portions of the sheets which are fastened together.

1,456,310. INDICATOR. NOAH S. HARTER, Waukegan Ill., assignor of one-third to A. T. Weaver and one-third to George F. Rummel, both of Chicago, Ill. Filed May 18, 1921, Serial No. 470,570. Renewed Apr. 14, 1923. 1 Claim. (Cl. 265—22.)



An indicator having a casing; a rotatable drum therein; a ratchet wheen in the casing and an index outside the casing rotatable with the drum; a closed coil spring within the casing having one end adjustably fixed; a cord extending into the casing, wound about the drum, secured thereto and extended therefrom into contact with the free end of the spring; a pawl yieldingly bearing on said ratchet wheel; a lever to release the pawl extending outside the casing; and means accessible thru a fixed wall of the casing to adjust the tension of the spring.

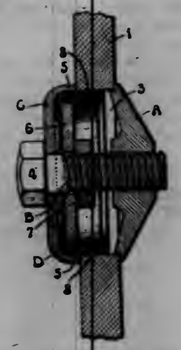
1,456,311. DEVICE FOR DRAWING THE ENDS OF A BAND OR BALE TIE TOGETHER. ROBERT L. HORSLEY, Memphis, Tenn. Filed Apr. 8, 1922. Serial No. 550,655. 1 Claim. (Cl. 254—67.)

In a device of the character described, a pair of blocks each having a body portion provided along one side with an outwardly-extending flange for passing through a loop formed at the end of a bale strap with the free end portion of the strap beneath the flange, the flange being provided with a recess opening through its outer side edge face and inner end face whereby a fastener clip for the ends of the strap may be passed into the recesses of the flanges of said blocks and engaged with the loops of the strap, and means for retaining the blocks in end to end relation to each other and moving the blocks towards and away from each other.

1,456,312. COMBINED SLUDGE SEPARATING AND DRYING BASIN. KARL IMHOFF, Essen, Germany. Filed Sept. 8, 1921. Serial No. 499,146. 2 Claims. (Cl. 210—2.)

1. In a sewage treating apparatus the combination of a sewage channel, a series of open porous bottomed shallow basins disposed side by side with their adjacent ends abutting said channel, gates connecting said basins with said channel and one with another, and movable baffle plates in said basins, said shallow basins serving in pairs and in alternatio as sludge settling basins and as sludge drying basins, their contents being exposed to light and air during both the settling and the drying operations.

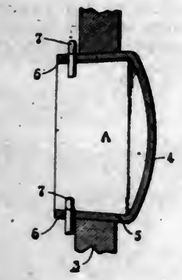
1,456,313. TIMING DEVICE. EMIL G. JOHANSON, Chicago, Ill. Filed July 15, 1918. Serial No. 245,037. 6 Claims. (Cl. 161—155.)



2. A timing device including an index; a motor for operating the index; and a clutch operatively connecting the motor with the index; in combination with a governor in actuating relation to the clutch to connect the motor

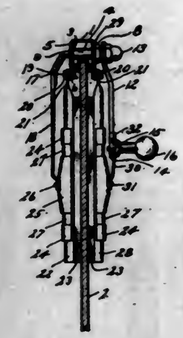
with and disconnect it from the index; and a brake to hold the index when disconnected from the motor, said

brake being operatively connected with the governor to be released thereby when the clutch is actuated to connect the index and motor.



1,456,314. BOILER PLUG. FREDERICK E. KEY, St. Louis, Mo. Filed Mar. 21, 1918. Serial No. 223,858. 2 Claims. (Cl. 220—25.)

1. A boiler plug comprising an inside anchor adapted to engage the inner face of the boiler wall to which the plug is applied, a tension member secured to and extending outwardly from said inside anchor, and a closure comprising a packing holder secured to said tension member and adapted to engage the outer face of the boiler wall, and a freely yieldable packing ring having an annular outer marginal portion secured to said packing holder and a free, flexible annular inner marginal portion conforming to and adapted to be seated against the wall of the opening to be closed, said packing ring being exposed to receive the outward pressure of the fluid, so that the fluid pressure will force said annular marginal portions into engagement with their seats and at the same time place the anchored tension member under tension.

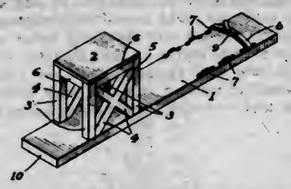


1,456,315. BOILER PLUG. FREDERICK E. KEY, St. Louis, Mo., assignor to Key Boiler Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed May 27, 1918. Serial No. 236,912. 2 Claims. (Cl. 220—25.)

2. In a device of the character described, the combination of a wall member having a tapering opening providing an annular tapering plug-receiving seat, a hollow sheet metal boiler plug closed at its inner end and open at its outer end, said boiler plug having a smooth annular conico-cylindrical peripheral portion conforming to and adapted to frictionally engage said annular tapering seat, said conico-cylindrical portion being so tapered as to decrease in diameter toward the open outer end of the plug, so that the plug, acting like a check valve, may be forced into frictional engagement with its seat by outward pressure on its closed inner end, the annular open outer end portion of the plug being adapted to pass through and extend from said opening, the last mentioned end portion comprising an annular wall provided with a transverse pin-receiving opening, and a safety de-

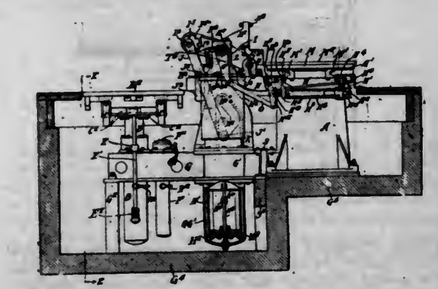
vice comprising a cotter pin extending entirely through said pin-receiving opening and projecting from the periphery of the plug at a point in front of said wall member so as to prevent inward displacement of said plug.

1,456,316. WINDSHIELD WIPER. FRANK KRITZ, Detroit, Mich., assignor to Kritz and Bauer, Detroit, Mich., a Copartnership. Filed Aug. 6, 1921. Serial No. 490,214. 2 Claims. (Cl. 15—256.)



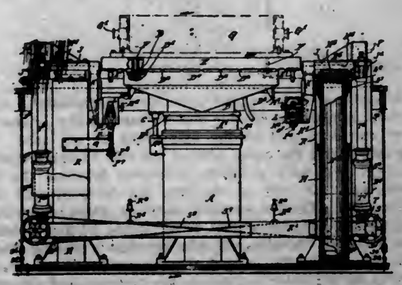
1. In a windshield wiping device wherein oscillatory wiper arms are adapted to be actuated from a rock shaft supported on a windshield frame:—a bearing for the rock shaft comprising a screwthreaded sleeve in which the shaft is journaled, a stamped clamping member at one end of said sleeve, said clamping member having an arcuate face, a perforated lug struck from the arcuate face of said clamping member and loosely supporting one of said wiper arms, another stamped clamping member on said sleeve having an arcuate face with an out-struck perforated lug to which the other wiper arm is loosely connected, and means on said sleeve screwthreaded for drawing said clamping members together and into clamping engagement with the windshield frame.

1,456,317. EXERCISER. WILLIAM E. LAUER, St. Louis, Mo., assignor, by mesne assignments, to Athletic Health Chair Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 18, 1921. Serial No. 493,216. 2 Claims. (Cl. 46—69.)



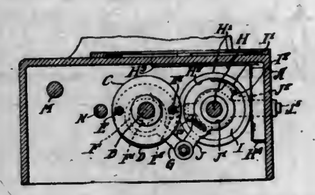
2. An exercising apparatus comprising a base, a seat rigidly supported by the base and so located thereon as to leave the base with a tilt-resisting portion to the rear of

the seat and a foot-supporting portion extending forwardly from the seat, foot-holding means on said for-



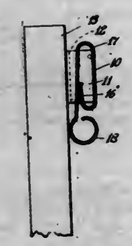
wardly-extending portion, said foot holding means comprising strap members extending transversely of the base, and anchoring means for said strap members.

1,456,318. ROLL-OVER MOLDING MACHINE. WILFRED LEWIS, Haverford, Pa., assignor to The Tabor Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 13, 1921. Serial No. 469,240. 7 Claims. (Cl. 22—33.)



1. In a roll over molding machine, mechanism for giving the desired movements to the pattern plate consisting of a pivoted roll over frame having an actuating lever in combination with means for raising and lowering the pivotal support for said frame, an upwardly extending bracket in line with the actuating lever of the frame having upper and lower stops and a guideway extending down from the lower stop and then upwardly on an incline towards the ramming side of the machine to the upper stop, a link depending from the end of the actuating lever and a stop engaging device secured to the lower end of said link and engaged in said guideway.

1,456,319. MOLDING MACHINE. WILFRED LEWIS, Haverford, Pa., assignor to The Tabor Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1922. Serial No. 529,447. 10 Claims. (Cl. 22—32.)

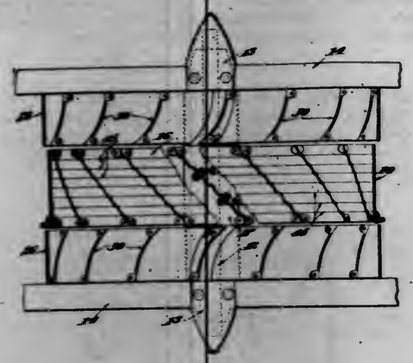


1. In a roll over jar molding machine of the trunnion type comprising a jarring machine, a roll-over plate and means for raising and lowering the roll-over plate situated on opposite sides of the jarring machine, the improvement which consists in the combination therewith of roll-over trunnions secured to the raising and lowering mechanism and locking mechanism for attaching and detaching the roll over plate to and from the trunnions.

1,456,320. FRICTION-CLUTCH MECHANISM. MICHAEL MCCANN, Glenmorris, N. Y., assignor to Frederick Osann Company, New York, N. Y., a Corporation of New York. Filed July 1, 1922. Serial No. 572,136. 5 Claims. (Cl. 74—53.)

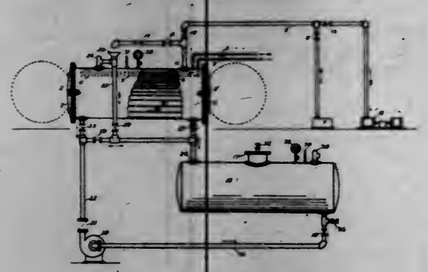
1. A friction clutch mechanism comprising in combination an annular rim, a disc fitting in said annular rim and having an elastic peripheral tongue attached to it at one end and a recess formed under the free end of the tongue and an actuating lever having a finger fitting in the angular recess beneath the tongue, and by turning which the tongue is wedged out against the rim.

1,456,321. ARTICLE-HOLDING CLIP. PATRICK W. MCGUIRE, Tottenville, N. Y. Filed June 1, 1922. Serial No. 565,212. 2 Claims. (Cl. 24—259.)



1. An article clip adapted for attachment to a support and comprising: a back plate or body portion having attaching means, a short tongue and a long tongue extending respectively from opposite ends of the body portion, each tongue being reversely folded back from the body portion so that the long tongue may contact with the short tongue, the latter being effective to increase the resilient action of the long tongue which terminates beyond the body portion in a holding portion to hold an article between itself and the support to which the clip is attached.

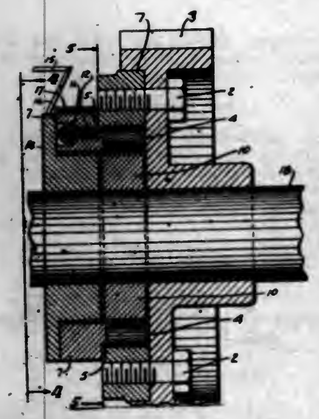
1,456,322. TURBINE WATER WHEEL. RODERICK WALLACE MCNEILL, Boston, Mass. Filed Nov. 16, 1920. Serial No. 424,384. 7 Claims. (Cl. 170—129.)



1. A turbine water wheel for use in generating power from tidal flow having a plurality of vanes across the surface of which the tide is caused to flow to cause ro-

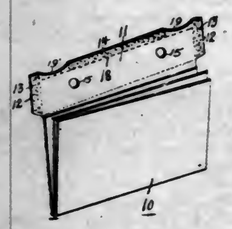
tations of the turbine water wheel, means for causing the flow of water across the surface of the vanes to be

deflected toward and away from the vanes, and means for transmitting the rotation of the vanes to an electric generator.



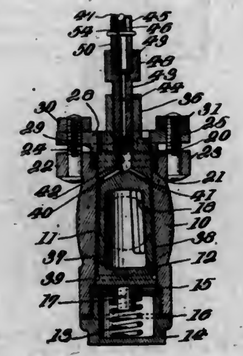
1,456,323. PROCESS FOR TREATING WOODS AND OTHER POROUS SUBSTANCES. FLOYD H. MCPHERSON, Los Angeles, and JOSEPH M. ABRAMS, San Francisco, Calif. Filed Nov. 23, 1921. Serial No. 518,229. 5 Claims. (Cl. 99—12.)

3. The method of treating wood products, consisting in heating the wood and exhausting the air moisture from the pores thereof, and forcing into the said pores a cement solution and retaining the pressure thereon after the enveloping cement solution has been drained off until the impregnated cement partially sets, substantially as described.



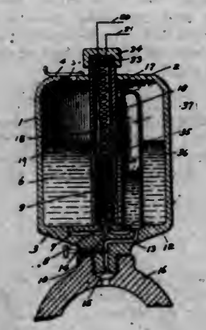
1,456,324. CLUTCH. WILLIAM MAIER, St. Louis, Mo. Filed Sept. 13, 1919. Serial No. 323,505. 1 Claim. (Cl. 192—27.)

A clutch mechanism comprising a spur gear of conventional form having a hub, a web extending therefrom and having a peripheral toothed portion which extends at right angles to said web on either side thereof, an annular member forming the immediate driving member of the clutch mechanism and having its peripheral surface closely fitting against the inner surface of the peripheral portion of said gear and abutting against the web of said gear, said annular member being detachably secured by means of bolts to said web, a driven shaft upon which the hub of said gear is rotatably mounted, an inner clutch ring keyed to said shaft adjacent to said web and having its periphery spaced from the inner surface of the first mentioned annular member, rollers positioned in said spaced, a cage for controlling said rollers, a second ring keyed to said shaft on the other side of said inner clutch ring from said gear, said second ring presenting an annular shoulder toward said gear, said roller cage having an annular portion seated on said shoulder, parallel projections on said cage extending into the space between the first annular member and the inner clutch ring for positioning and controlling said rollers, an arcuate recess



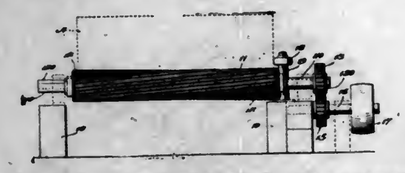
opening outwardly toward said second ring, a spiral spring located in said recess and resiliently connecting said second ring and said roller cage, and a manually controlled means for preventing said spring from causing said rollers to operatively engage said clutch member.

1,456,325. ENVELOPE. PHILIP W. MARKOWITZ, Brooklyn, N. Y. Filed Aug. 20, 1920. Serial No. 404,878. 1 Claim. (Cl. 229—92.7.)



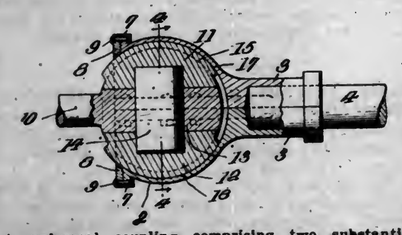
A combined envelope and letter sheet comprising a body portion, a combined closure and suspension flap extending from one edge and having extensions at the ends, the extensions and the outer edge of the flap having adhesive material and with severing punctures between the adhesive and the body of the flap, the faces of said flap within the adhesive covered portions being free from matter and the outer edge at the ends having recesses free from the adhesive, whereby the device may be folded and the closure flap sealed thereon and released by inserting an instrument through the recesses and severing the flap along the apertures, leaving the inner face of the flap free to serve as a suspension means.

1,456,326. PLUG COCK AND LUBRICATING MEANS THEREFOR. JESSE C. MARTIN, JR., San Francisco, Calif. Filed June 26, 1922. Serial No. 570,991. 8 Claims. (Cl. 251—93.)



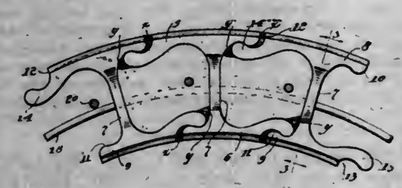
1. A plug cock comprising, in combination, a casing having a tapered seat, a plug fitting said seat, resilient means pressing said plug toward said seat, joint packing co-acting with the surface of the plug adjacent the small end thereof, means for compressing said packing whereby to relieve the friction between the plug and seat by compression of said resilient means, and means to lubricate the plug and plug seat surfaces.

1,456,327. LUBRICATING MECHANISM. SAWYER Y. MONCKTON, San Francisco, Calif. Filed Apr. 6, 1921. Serial No. 458,989. 8 Claims. (Cl. 184—65.)



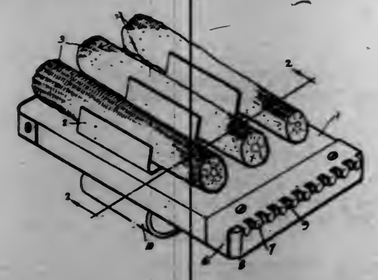
1. In a lubricating device, a chamber adapted to contain lubricant, an injector compartment and a resistance element therein, connections adapted to energise said resistance and thereby heat said compartment, a one-way valve between said chamber and said compartment, and a duct adapted to convey lubricant away from said compartment when the resistance is energized.

1,456,328. BOSSING MACHINE. JOHN MORAVEC, Vancouver, British Columbia, Canada. Filed Nov. 12, 1921. Serial No. 514,655. 22 Claims. (Cl. 144—208.)



1. In a bossing machine, a pair of cutters arranged to conjointly support a log longitudinally to themselves and to rotate the same.

1,456,329. UNIVERSAL JOINT. JASPER N. MORRIS, Hattiesburg, Miss. Filed May 12, 1922. Serial No. 560,294. 1 Claim. (Cl. 64—91.)

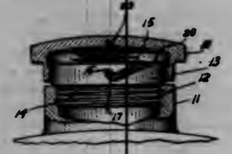


A universal coupling comprising two substantially hemispherical shells adapted to make driving connection with a first shaft and united in a plane parallel with the axis of said shaft, each of said shells having flanger openings, the flanges of which lie at right angles to the plane of connection of said sections, whereby said shells when united form an open-ended hollow sphere, a substantially spherical multi-sectional inner member housed in said joined sections and bodily shiftable relative thereto in a plane parallel with the axis of said shaft, means for preventing said inner member from rotating in said shells, said inner member including a detachable section projecting through the flanged openings of said sections and adapted to make driving connection with a second shaft, said detachable section being movable in a plane at substantial right angles to the plane of bodily movement of said spherical inner member, and a thrust ring connected to the flanges of said united sections.

1,456,330. WALL CONSTRUCTION. AUGUST J. MUELLER, Chicago, Ill. Filed Jan. 5, 1922. Serial No. 527,155. 4 Claims. (Cl. 72—29.)

1. A wall formed of blocks arranged in tiers, each block comprising an inner and an outer member spaced apart and connected by a transverse web, the adjacent ends of contiguous members forming said wall having interfitting extensions whereby recesses are provided interiorly and exteriorly of each inner and outer member, plastic keys inserted in said recesses to seal the same, and a filling of semi-fluid material poured into the space between said inner and outer members and retained therein by the keys to provide a monolithic structure.

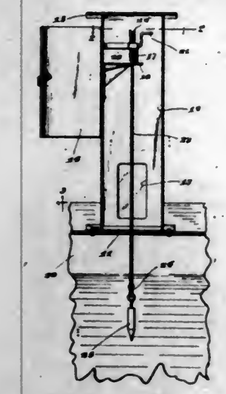
1,456,331. COB CURRYCOMB. WILLIAM MURPHY, Minneapolis, Minn. Filed Feb. 26, 1923. Serial No. 621,404. 6 Claims. (Cl. 119—86.)



6. In a curry comb the combination with a body of a hand strap carried by said body, a plurality of individual means for holding corn cobs in substantially one plane, and a toothed plate carried by one end of said body.

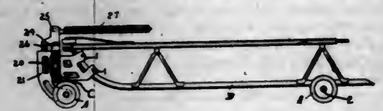
1,456,332. PROCESS OF DRYING AND PREPARING FERTILIZING MATERIALS. FREDERIC J. NASH, Brooklyn, N. Y. Filed Apr. 26, 1916, Serial No. 93,772. Renewed Oct. 27, 1922. Serial No. 597,405. 11 Claims. (Cl. 71—6.)

1. The process of drying peat, which consists in forming the peat into a stack of suitable shape, applying heat internally to the stack, while allowing air to circulate through the body of the stack, then shutting off the said air circulation, and continuing to apply heat to the stack until the drying is completed.



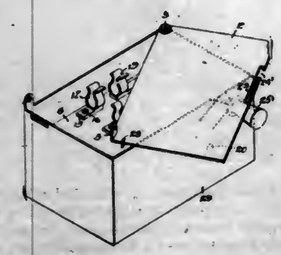
1,456,333. RADIATOR CAP. EINER M. NELSON, Providence, R. I. Filed Apr. 12, 1922. Serial No. 551,857. 2 Claims. (Cl. 220—24.)

1. A closure device for receptacles, comprising a short tubular bushing member threaded for a portion of its length to be screwed into the filling opening and also provided with grooves in its face leading from its upper edge downwardly on an angle and notched at their inner ends, and a cap-member fitting over said bushing and having pins set to enter said grooves by a relative rotation of the cap, a thin disk plate in said cap to engage the upper edge of the tube, and a spring acting between said plate and cap to lift said cap to cause its pins to enter said notches to releasably lock said cap in position.



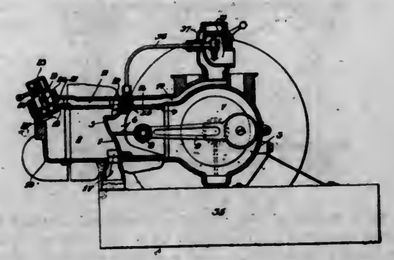
1,456,334. DEPTH GAUGE FOR TANKS. THOMAS E. PARROTT, Tulsa, Okla. Filed Dec. 8, 1920. Serial No. 429,115. 1 Claim. (Cl. 73—120.)

The combination with a liquid tank having an opening in its upper side, of a depth gauge including a housing mounted on the tank over said opening and having a sight opening in one side thereof a short distance above the lower end, a bracket mounted within the housing adjacent the upper end, a shaft supported on a bracket in vertical alignment above the tank opening, a wheel carried by the shaft, a crank on the shaft, a horizontal arm mounted in the housing adjacent the bracket and having its outer end longitudinally bifurcated and disposed beneath one side of the said wheel, and a scale carrying tape wound on the wheel and having a pointed weight on



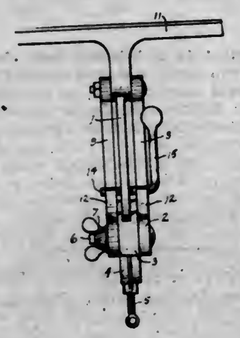
its free end and arranged to be passed through the opening of the tank into contact with the bottom of the tank, the scale of the tape being visible through the sight opening.

1,456,335. ATTACHMENT FOR HAND SLEDS. PETER R. PETERSON, Salt Lake City, Utah, assignor to Coaster Company, a Corporation of Utah. Filed Oct. 5, 1921. Serial No. 505,540. 2 Claims. (Cl. 280—8.)



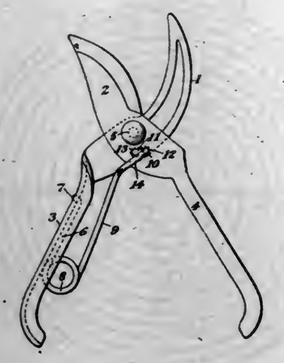
1. In a hand sled attachment the combination of wheels; roller bearings held therein by stub axles which are secured to clamp blocks adapted to engage the runners of the sled; a hingedly connected clamp block for each of the front wheels; a link connecting a leaf of the hinge portion of each of the front clamps; a cross head connecting the pins of the front clamp blocks; a swivel block mounted on said cross head; an arm of said swivel block pivoted in said link; and a handle to partially rotate said swivel block and thereby one leaf of the clamp block to turn the front wheels.

1,456,336. ELECTRIC SWITCH. WILLIAM T. PRINGLE, Philadelphia, Pa., assignor to V. V. Fittings Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 9, 1919. Serial No. 288,806. 18 Claims. (Cl. 200—50.)



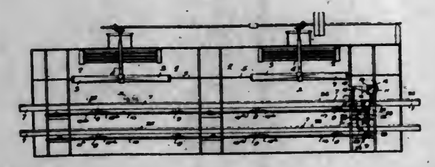
17. The combination of a container having a slidable cover; a barrier dividing the container into chambers; a switch in one of said chambers; fuse terminals in the other chamber positioned to be exposed when the cover is open; and switch-operating means including a handle projecting outside of the container and positioned to lock the cover closed until the switch is opened.

1,456,337. METHOD AND MEANS FOR CONTROLLING INTERNAL-COMBUSTION ENGINES. CYRIL GEORGE PULLIN, Isleworth, England. Filed July 20, 1920. Serial No. 397,563. 7 Claims. (Cl. 123—105.)



1. Means for controlling an internal combustion engine, comprising a spring-controlled valve member having a wire-drawing passage, and means for adjusting the tension of the spring, whereby the said wire-drawing tends to raise the internal pressure so as to close the said valve against the action of the said spring when a predetermined pressure, regulable by the spring, is reached.

1,456,338. SAW VISE. THEODORE RALFS, Davenport, Iowa. Filed May 19, 1921. Serial No. 470,772. 1 Claim. (Cl. 76—78.)

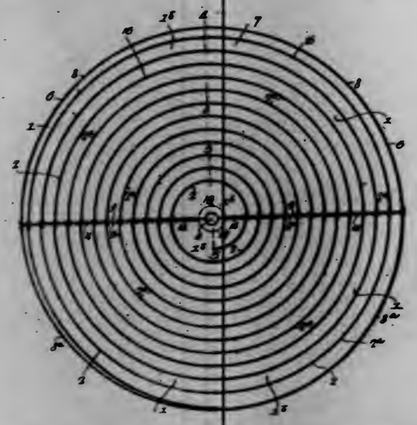


A device of the class described, comprising a screw clamp adapted to be secured on a work bench or like object, a clamping bolt in a portion of the clamp, an upwardly directed member pivoted with its lower end on said clamping bolt and forming a rear arm with a vise jaw at its upper end and two front arms parallel to the rear arm, a beam lever fulcrumed between the front arms and having at its upper end a vise jaw arranged to coact with the first mentioned jaw and its lower end depending between the front arms, a horizontally disposed crank-shaft journaled in the two front arms and engaged with the lever to swing it, and a hand lever fixed at one end of the crank-shaft for imparting rotary movement to the same.

1,456,339. MOVABLE-JAWED TOOL. FREDERIC H. RAUH, South Orange, N. J. Filed Aug. 30, 1922. Serial No. 585,119. 6 Claims. (Cl. 30—11.)

1. The combination, with a tool embodying cooperating cutting elements, of a compressible spring having one portion in fixed relation to one cutting element and another portion in adjustable relation to the other cutting element, for normally separating such cutting elements and for optionally preventing such separation.

1,456,340. CONVEYER FOR DRIERS. WALTER M. SCHWARTZ and HERMANN BOGATY, Philadelphia, Pa., assignors to The Philadelphia Textile Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 11, 1920. Serial No. 364,915. 2 Claims. (Cl. 198—219.)



1. The combination in means for intermittently feeding material through a drying apparatus, of a fixed rail at each side of the apparatus; a bar located at each side of the apparatus; loose rollers on said bars; a movable rail carried by the rollers of each bar; means for raising and lowering the bars with their rails; and means for reciprocating the movable rails, said rails being moved in one direction when raised to feed the material through the apparatus.

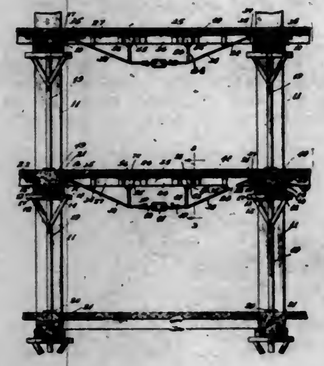
1,456,341. EXPLOSIVE COMPOSITION. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1920. Serial No. 404,610. 7 Claims. (Cl. 52—7.)

3. An explosive comprising a detonating agent, a salt containing available oxygen, and wood pulp impregnated with sodium chloride.

1,456,342. EVACUATOR. CORNELIUS C. STEWART, Philadelphia, Pa. Filed Nov. 17, 1920. Serial No. 424,801. 4 Claims. (Cl. 34—4.)

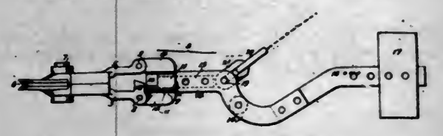
1. An evacuator comprising a hollow drum, the faces of said drum having correspondingly disposed spirally arranged grooves in the inside thereof, partitioning walls in said grooves, and openings in said drum for the admission and exhaust of a liquid.

1,456,343. ELECTRIC HEATING APPARATUS FOR WAVING OR CURLING THE HAIR. EUGÈNE FRANÇOIS SUTER, London, England. Filed Sept. 19, 1922. Serial No. 589,180. 4 Claims. (Cl. 219—24.)



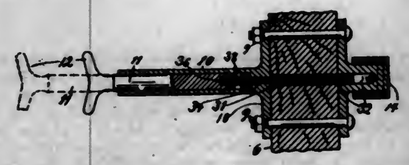
1. Electrical heating apparatus for waving or curling hair, comprising electrical heating elements and an enclosing casing therefor, said casing having a bore within which is received the hair to be treated, said bore being bounded by an openwork metallic lining.

1,456,344. METHOD OF DYEING TEXTILES. HENRY E. VAN NESS, Elmira, N. Y. Filed Oct. 7, 1922. Serial No. 592,964. 15 Claims. (Cl. 8—5.)



1. A method of dyeing textiles, comprising forming the textile to be dyed into a mass in a regular manner, and injecting a limited quantity of liquid dye into the mass under pressure so that the dye penetrates the mass along the line on which it is injected before any substantial portion of it is absorbed into the pores of the textile.

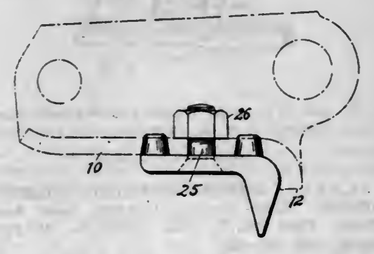
1,456,345. CONCRETE MOLD. JOHN A. TAGGART, Wilmette, Ill. Filed Oct. 20, 1919. Serial No. 331,862. 18 Claims. (Cl. 25—131.5.)



1. In a device of the character described, a mold for concrete construction consisting of a plurality of transverse longitudinal sections and a tension member directly interconnecting the ends of said built-up sections, the transverse longitudinal sections and tension member constituting a truss, said section serving as a strut member of the truss.

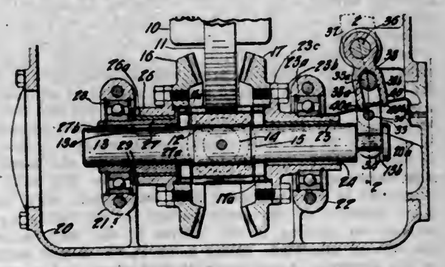
1,456,346. PULLEY-BLOCK CARRIER. THOMAS F. WEBSTER, Philadelphia, Pa. Filed Nov. 18, 1919. Serial No. 338,935. 1 Claim. (Cl. 254—190.)

The combination in a balanced rope sheave, of a carrier having two arms; a sheave mounted at one end of one arm and a counterweight on the other arm; a flexible support flexibly attached to the carrier at a single point substantially midway between the sheave and the counterweight so as to hold the sheave in a horizontal position, the flexible support consisting of two flexible members extending at an angle in respect to the longitudinal line through the carrier and attached to a support some distance from the carrier.



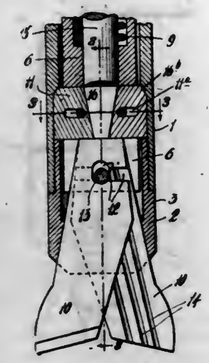
1,456,347. DIRECTION SIGNAL FOR AUTOMOBILES. OSCAR M. WEST, St. Paul, Minn. Filed June 29, 1922. Serial No. 571,778. 1 Claim. (Cl. 116—40.)

In a device of the class described a vertically disposed flat housing and means for securing the same to a stationary part of a vehicle near the driver thereof, a foldable and horizontally extensible signal arm of the lazy-tongs type normally contained in the housing, a slidable pushing and pulling handle mounted on the vehicle near the driver and a slidable, flexible operating rod or wire



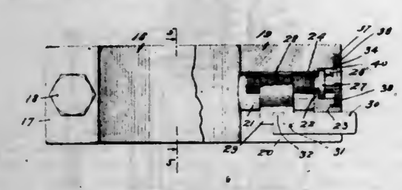
extended from the handle to the nearest links of the signal arm for extending or retracting the arm, and a metallic tube embracing said rod to guide it and cause it to slide easily, said flexible rod having each end provided with a head, a collar loosely embracing the rod near said head and threaded one into the slidable handle, the other into a slidable block pivoted to the said nearest links of the signal arm.

1,456,348. TRACK-BELT CALK. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed July 20, 1920. Serial No. 397,784. 2 Claims. (Cl. 305—10.)



1. In a track belt for track laying tractors, the combination with a track belt link having a bottom plate said plate being provided with openings and having an end thereof formed with a downwardly extending rib, of a calk having a face which engages with the bottom plate of the link and having an angular projecting portion at one end thereof, the outer surface of the angular projecting portion engaging with the inner surface of the rib on the link, said projection extending below the rib on the link, detachable means for securing the calk to the link, and means extending from said calks into the openings in said bottom plate to prevent twisting movement of the calk.

1,456,349. DIRECTION-CHANGING TRANSMISSION MECHANISM. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Apr. 14, 1921. Serial No. 461,286. 6 Claims. (Cl. 74—59.)

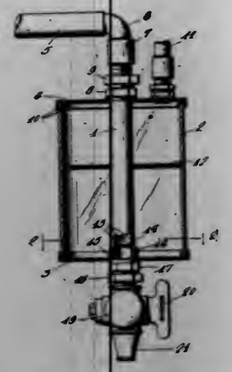


1. In mechanism of the character specified, the combination of two bearing supports, a bevel gear having a tubular hub which is rotatably mounted in one of said supports, a tubular sleeve which is rotatably mounted in the other of said supports, a bevel gear rotatably mounted upon said sleeve, a driving bevel gear engaging both of the bevel gears specified, a shaft which is rotatably fitted in the tubular hub of the first mentioned bevel gear and is also fitted within and has a tongue and groove engagement with said sleeve, a spur pinion fixed to said shaft between the two bevel gears, and means to selectively clutch the two bevel gears to said shaft.

1,456,350. COLLAPSIBLE ROTARY WELL DRILL. FREDERICK A. WIDMER, Corsicana, Tex. Filed Jan. 9, 1922. Serial No. 528,046. 3 Claims. (Cl. 255—76.)

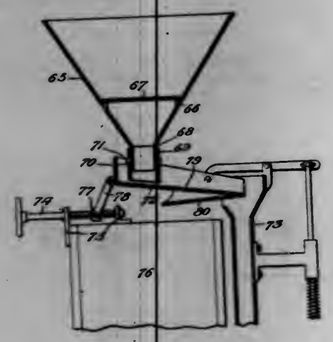
1. A drilling bit for rotary well drilling, in combination with the drill pipe, comprising a hollowed shank member to which the bits are removably attached, a plunger carried in the hollowed shank, a spring on the plunger, means for connecting the plunger to a cable, keys between the plunger and bits and so arranged that when the device is lowered into the well the plunger and shank will move the keys downward and apart and cause them to spread the bits into operative position and lock them therein.

1,456,351. BORING-BAR TOOL. WILLIAM AAB, New Ulm, Minn., assignor of one-half to Ferdinand Crone, New Ulm, Minn. Filed Nov. 11, 1920. Serial No. 423,472. 3 Claims. (Cl. 77—58.)



1. The combination with a holder, of a micrometer screw mounted in the holder against axial movement and having on its head an indicator, an annular scale circumferentially adjustable around the head of said screw for co-operation with its indicator, means for positively turning said scale and locking the same in different adjustments, a non-rotary traveling nut block on said screw, and a cutting tool mounted in the holder and connected to said block.

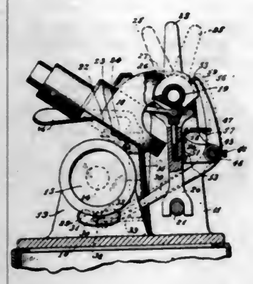
1,456,352. GASOLINE GAUGE AND STRAINER. ROBERT CELEY ALBURY, Tampa, Fla. Filed Oct. 10, 1921. Serial No. 506,683. 2 Claims. (Cl. 210—165.)



1. A gasoline gauge and strainer comprising a container having an outlet at its upper portion, an inlet pipe extending down through the container and having discharge openings spaced above its lower end and above the bottom of the container for conveying the material to be filtered into such container, said inlet pipe having a partition extending completely there across beneath said discharge openings and separating the portions of the pipe above and below said partition, said position

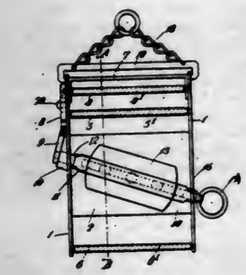
extending above the bottom of the container, said inlet pipe also having a drain opening at substantially the

bottom of the container leading to the portion of the pipe below said partition, and filtering means in the container, substantially as described.



1,456,353. MILL. DARIUS D. BABB, West Jefferson, N. C. Filed May 17, 1920. Serial No. 382,024. 1 Claim. (Cl. 83—8.)

In a mill, the combination with a vertically disposed hopper and chute, of a feed trough disposed horizontally therebetween with one end underlying the said hopper and its other end extending into the said chute, suspension means associated with the said chute for supporting one end of the said trough and being operable to impart vibratory movement through the said trough, a horizontally disposed adjusting screw rotatably supported below the hopper end of the said trough, and a link having one end pivotally supporting the hopper end of the trough and having its other end constrained to move along said screw for adjusting the inclination of the said trough.

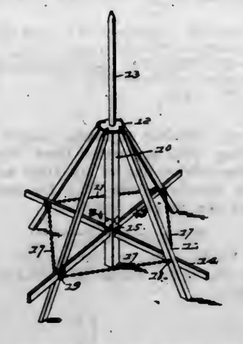


1,456,354. SAFETY EJECTOR FOR DICTAPHONES AND THE LIKE. FRANK W. BARROWS, Bridgeport, Conn., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Mar. 25, 1922. Serial No. 546,739. 16 Claims. (Cl. 274—17.)

1. In a machine of the character described, a record-support, means for removing a record therefrom, a sound-box adapted to be engaged with and disengaged from the record, and means adapted to prevent opera-

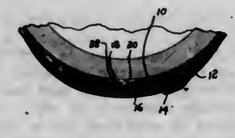
tion of said first-named means and rendered operative through engagement of the sound-box with the record.

1,456,355. SAFETY-RAZOR-BLADE-SHARPENING DEVICE. JACK BARTON, Parkmill, near Swansea, Wales. Filed Feb. 9, 1923. Serial No. 617,919½. 1 Claim. (Cl. 51—63.)



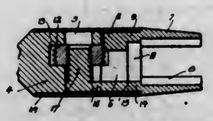
A sharpening device of the class described comprising a frame having side members connected by transverse plates, a pair of guide rollers journalled in each of the opposite ends of said side members, a substantially inverted U-shaped bar having a pair of rollers loosely mounted in its depending arms and pivotally secured to the side members, a toothed segment carried by said bar, a corresponding segment attached to one of the side members, means for positioning said last mentioned segment at an angle to the other segment with which it meshes, a blade holder operatively connected to the second mentioned segment, a strop passing over the rollers journalled in said bar down into engagement with the inner surfaces of the guide rollers in the frame and through an opening in the bottom of the said frame, the axis of said blade holder being at an oblique angle to the direction of movement of said strop, and a stud projecting through an opening in the upper segment for regulating the extent of oscillating movement imparted to the blade holder.

1,456,356. PORTABLE HAYRÁCK. ALVIS R. BENTLEY, Phil Campbell, Ala. Filed Feb. 8, 1922. Serial No. 534,923. 3 Claims. (Cl. 34—26.)



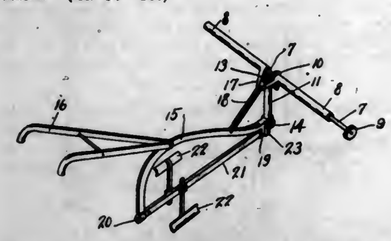
1. A hay rack having a central mast or standard, downwardly divergent leg members and radially disposed brace members hingedly connected at their inner ends to the mast or standard and at their outer ends to

the leg members, the upper extremities of the leg members being connected by a runner slidingly mounted upon



the mast or standard, and the brace and leg members being upwardly foldable into positions in substantially parallelism with the mast or standard.

1,456,357. VALVE PAD FOR INNER TUBES AND PROCESS OF MAKING SAME. JOSEPH A. BOWERMAN, Wilbraham, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 12, 1921. Serial No. 511,717. 6 Claims. (Cl. 154—14.)



6. In a method of making an inner tube, the steps which consist in cutting a hole in the rubberized fabric laminations of a valve pad so as to leave the edges of the hole unrubberized, building the pad into the unvulcanized ruber tube, locating the tube and pad together on a mandrel so that one end of the hole in the pad laminations is closed by the mandrel and the other by the tube rubber, and vulcanizing the tube and pad together, whereby gases from the fabric laminations are afforded a path into the pocket thus formed by the hole and are held there harmlessly during vulcanization.

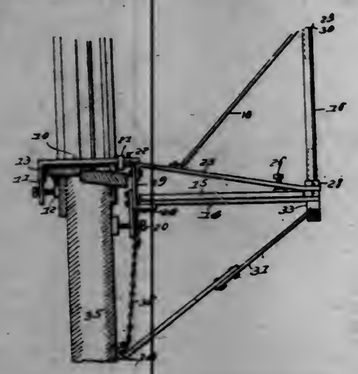
1,456,358. SOCKET WRENCH. GEORGE BROXTON, Pittsburgh, Pa. Filed Apr. 29, 1922. Serial No. 557,412. 5 Claims. (Cl. 81—165.)

1. In a socket wrench, a head provided with two parallel bores extending diametrically of the head, a jaw provided with a rack fitting into one of said bores, a jaw having a stud fitting into the other bore, and a member carried by the head and engaging said stud and rack for adjusting the jaws toward and away from each other by operating said member.

1,456,359. COTTON-CHOPPER ATTACHMENT FOR CULTIVATORS. SILAS O. BROWN, Sulphur Springs, Tex. Filed Apr. 6, 1922. Serial No. 550,076. 1 Claim. (Cl. 97—15.)

In a cotton chopper, the combination of an arched axle, ground wheels thereon, a gear carried by one of said ground wheels, a transverse shaft journaled in bearings on the upright portions of the arched axle and bearing a gear intermeshed with the first-named gear, a pendent swinging sleeve connected with said transverse shaft, a miter gear fixed to said shaft, an upright shaft journaled in the sleeve and having a miter gear intermeshed with the first-named miter gear, an additional miter gear on the lower portion of the shaft, a beam connected with said sleeve and capable of being swung laterally, handles on said beam, a retractile spring connected with the beam and adapted to yieldingly support the same, and a longitudinal shaft journaled in the beam and equipped with chopping means and having a beveled gear intermeshed with the beveled or miter gear at the lower end of the upright shaft.

1,456,360. AIR FILTER. ALFRED BUDIL, Berlin-Tempelhof, Germany. Filed Aug. 30, 1921. Serial No. 496,937. 10 Claims. (Cl. 183—49.)



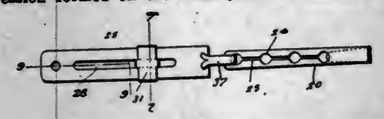
1. A gas filter comprising a plurality of perforate and imperforate plates alternating with each other in vertical zig-zag arrangement defining substantially V-shaped interspaces and a flange extending upwardly from the lower edge of each perforate plate to form a retaining wall for filtering material thereon.

1,456,361. CHAIN CONNECTOR. HORACE O. CLARK, Waukegan, Ill. Filed Apr. 13, 1921. Serial No. 460,897. 1 Claim. (Cl. 59—87.)

A link comprising two members disposed side by side, each member having spaced openings connected by a slot of less width than the diameter of either opening, the slot defining an interior lug disposed between the openings, each member having a lateral mouth disposed opposite to the lug and communicating with the slot, the lug of each member extending across the mouth of the other member and constituting a closure therefor, each member being provided with a tongue, projecting from the lug of said member, and extended into the mouth of said member.

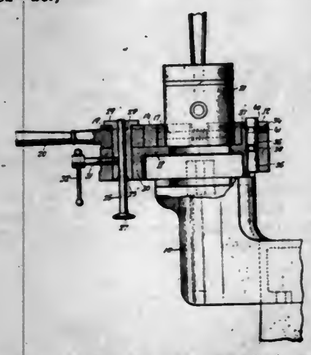
1,456,362. WINDOW SCAFFOLD. GEORGE L. CRESSON, Milwaukee, Wis. Filed Feb. 4, 1921. Serial No. 442,465. 4 Claims. (Cl. 304—27.)

1. A window scaffold having sill brackets provided with dependent inner ends carrying clamping screws, side bars supported by the outer ends of the sill brackets for supporting a floor or platform, braces for the outer ends of said side bars, and a guard carried by said side bars and having uprights rising respectively therefrom and connected by a cross bar, bolts being extended upwardly through the outer ends of the side bars and being engaged by the interiorly threaded lower ends of said uprights.



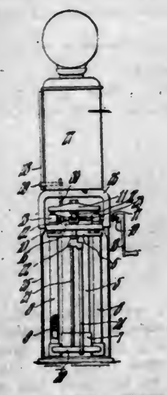
1,456,363. RAIL SPIKE. HERBERT O. CRIPPEN, Jacksonville, Fla. Filed Feb. 5, 1921, Serial No. 442,727. Renewed Mar. 8, 1923. 3 Claims. (Cl. 85—23.)

1. In combination with a spike, an anchoring element having a swinging connection with the spike and having a cam head portion moving in one direction by cam action with a rail, and having a penetrating shank portion moving in an opposite direction for engagement with a tie, and a clip for preventing relative movements of the spike and element in the initial driving of the spike.



1,456,364. OVERSHOE HOLDER. WILLIAM DALBERG, Deary, Idaho. Filed Feb. 15, 1921. Serial No. 445,205. 1 Claim. (Cl. 24—84.)

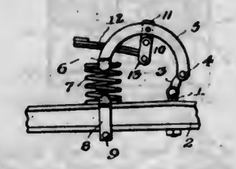
In a means for holding an overshoe on a shoe, a plate provided with a longitudinal slot disposed through its center thereof, the walls of said slot having opposed transverse notches forming rounded apertures thereby, a tongue provided at one end of said plate and formed thereon by said end being bent upon itself, a U-shaped member adjustably secured to the opposite end of said plate, a strip which is centrally bent upon itself to provide angularly disposed resilient jaws, a lug disposed on the inner face of one of the jaws, a cup-shaped depression formed on the other jaw and designed to re-



ceive said lug, slidable adjusting means between the jaws contacting with the outer faces thereof, said U-shaped member having one of its arms secured to said strip and its other arm engaging the body portion of said strip for the purpose specified.

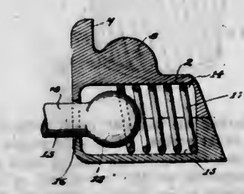
1,456,365. VISE. FRANK DANIELSON, Chicago, Ill. Filed Aug. 23, 1920. Serial No. 405,275. 14 Claims. (Cl. 81—26.)

1. A vise of the character described comprising a base, a pair of clamping jaws on said base, one of said jaws being movable relatively to said base, a hollow pivot pin mounted on said base and a cam for moving said jaw member on said pivot pin, said pivot pin having a hardened top surface whereby the same is adapted to serve as a guide for filing valve stems.



1,456,366. DISPENSING APPARATUS. JOHN B. DAVIS, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed June 20, 1921. Serial No. 478,977. 6 Claims. (Cl. 103—12.)

1. In combination, a pump, automatic means including a rotatable shaft for operating the pump, a con-



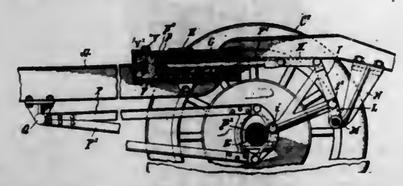
trolling device to start and stop the pump, a brake drum on said shaft, a brake shoe for said drum, and means for forcing said shoe against said drum to oppose said automatic means and retard the speed of operation of said pump.

1,456,367. SHOCK ABSORBER. GEORGE E. DENNIS, Waukesha, Wis. Filed May 7, 1920. Serial No. 379,620. 3 Claims. (Cl. 267—17.)

1. In a shock absorber for motor vehicles, the combination with a vehicle axle and leaf spring, of a pair of arcuate arms, means pivotally connecting said arms to said axle, a cross bar carried by the ends of said arms remote from their pivotal connection and being shaped to form a downwardly opening saddle, a bracket carried by said axle, a spring rest on said bracket, a spiral spring engaged between said cross bar and spring rest, a substantially U-shaped member carried by said arcuate arms intermediate their ends, clips pivoted to said U-shaped member and connected to said leaf spring.

1,456,368. RADIUS-ROD SHOCK ABSORBER. GEORGE E. DENNIS, Waukesha, Wis. Filed Nov. 19, 1920. Serial No. 425,243. 5 Claims. (Cl. 267—66.)

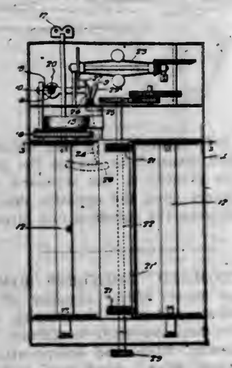
1. A shock absorbing attaching device for radius rods comprising a pair of detachably connected socket members recessed to form a radius rod receiving bore, and shock absorbing means in said bore, one of said socket members provided with a substantially semi-spherical enlargement on its crank case engaging surface.



1,456,369. THERMOPLASTIC COMPOSITION AND PROCESS OF COMPOUNDING THE SAME. EMILE DE STUBNER, New York, N. Y., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Dec. 14, 1918. Serial No. 266,792. 26 Claims. (Cl. 106—15.)

1. The process of introducing shellac into fibrous material to produce a thermoplastic composition which consists in first heating the said material with unsaturated fatty acids derived from drying oils and a resin of higher melting point than shellac, and then incorporating the shellac by the application of heat.

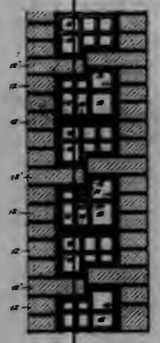
1,456,370. PROCESS OF MAKING WATERPROOF RIGID ARTICLES FROM PULP. WALTER HENRY DRAKE and JAMES JOSEPH DRAKE, Cleveland, Ohio. Filed Feb. 2, 1920. Serial No. 355,827. 8 Claims. (Cl. 92—54.)



1. The process of water-proofing an article composed of fiber, consisting in coating the fibers with aluminum resinate, depositing the coated fibers in the required form, and forcing through the fibrous mass a fluid heated to the temperature of melting of the aluminum resinate.

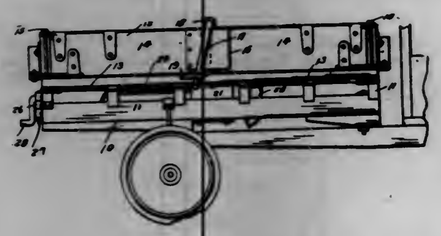
1,456,371. ELASTIC SUSPENSION FOR VEHICLES. LOUIS L. DRIGGS and LOUIS L. DRIGGS, Jr., New York, N. Y. Filed Mar. 27, 1920. Serial No. 369,295. 20 Claims. (Cl. 267—8.)

1. An elastic suspension for vehicles, comprising a hydraulic cylinder carried by the vehicle body, a piston mounted in said cylinder, a piston rod attached to said piston, a coil spring mounted in said cylinder and held under compression between one face of the piston and the opposite end of said cylinder, a frame carried by the axle, a hanger connected to the vehicle body, and a bell crank lever arrangement connected to said hanger and connecting said piston rod and said frame, the said cylinder and piston being so constructed and arranged that said spring and the liquid contained in said hydraulic cylinder coact to resist sudden pressures applied to said piston when the downward thrust of the chassis is increased, and means controlled by said liquid alone for checking the relative movement of the axle and the chassis when the downward thrust of the chassis on the axle is decreased, substantially as described.



1,456,372. PANORAMIC ATTACHMENT FOR CAMERAS. WILLIAM EDWARDS, Rock Springs, Wyo. Filed Nov. 22, 1921. Serial No. 516,981. 5 Claims. (Cl. 95—17.)

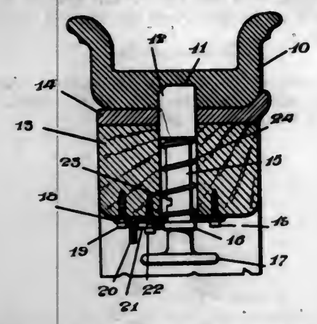
1. A panorama attachment for a camera comprising a case, spool supporting means therein, a motor for rotating one spool, said casing having a shutter controlled opening therein for exposing the film to the rays of light passing through the lens of the camera, means



for actuating the shutter and controlling the operation of the motor and means actuated by the movement of the film from one spool to the other for rotating the camera upon its tripod.

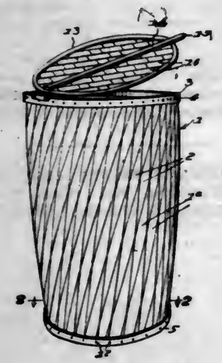
1,456,373. BUILDING BLOCK AND CONSTRUCTION. JOHN EISENMANN, Cleveland, Ohio, assignor to The Manell Building Block & Tile Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 19, 1920. Serial No. 367,064. 8 Claims. (Cl. 72—41.)

1. A backing or filling block for brick walls, said block having the full width of one bearing side formed in the same plane, and an offset in the other bearing side corresponding to half the depth of one course of the brick.



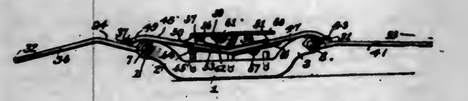
1,456,374. SIDE-DUMP VEHICLE. JOSEPH K. EXUM, Milltown, Ga. Filed June 20, 1922. Serial No. 569,675. 3 Claims. (Cl. 298—8.)

1. A vehicle body comprising a side including pivoted leaves, a standard disposed to engage the leaves at one side, and a latch pivoted to the standard and adapted to engage the leaves upon the opposite side, said leaves being confined between the standard and latch.



1,456,375. AUTOMATIC BOLTLESS RIM. ANDREW FORSMAN, Iron River, Mich., assignor of one-half to Archie Beauchamp and Emil Beauchamp, one-tenth to Hector McPhee, and one-tenth to Edward Greenwood, all of Iron County, Mich., and one-twentieth to A. E. Stuht, Iron River, Mich. Filed Dec. 2, 1921. Serial No. 519,475. 2 Claims. (Cl. 301—28.)

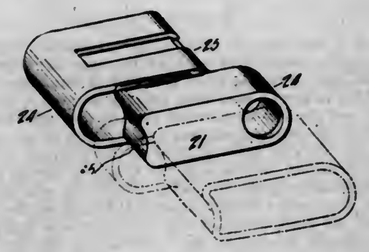
1. Rim locks of the class described comprising a felly; a metal rim mounted thereon; a demountable rim slidable on said metal rim; lug members comprising an end portion adapted to enter sockets in said demountable rim; shank portions having slots formed therein to receive locking slides adapted to hold said lugs out of engagement with said demountable rim and hand grips for the



disengagement of said lugs from said sockets, said lugs being radially slidable in the felly and said rims and springs normally holding said lugs in said sockets.

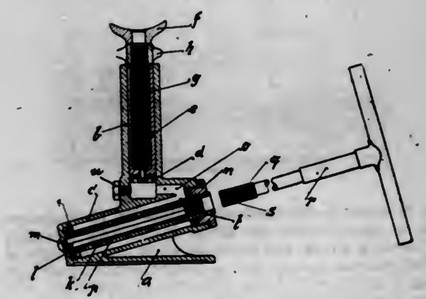
1,456,376. BASKET. HENRY R. GARRITSON, Kokomo, Ind. Filed July 8, 1922. Serial No. 573,580. 7 Claims. (Cl. 217—122.)

1. A basket having an annular body formed of interwoven long and short strips, all of said strips extending from the upper end to the lower end of said body, said short strips terminating at the lower end of said body, and said long strips being bent near their lower ends to provide inwardly projecting angular overlapping extensions, means for connecting said extensions together to form a bottom for the basket, and reinforcing means arranged at the upper end of said body.



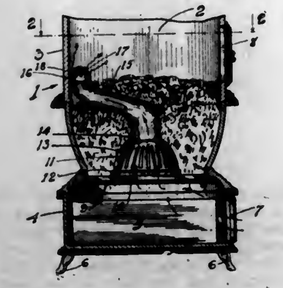
1,456,377. ANIMAL TRAP. KNUTE HARRIED, Sacred Heart, Minn. Filed Feb. 2, 1923. Serial No. 616,569. 3 Claims. (Cl. 43—81.)

3. An animal trap comprising a body portion, a pair of oppositely extending spring controlled jaws pivotally connected to said body portion, power exerting springs carried by the body portion and connected with said jaws, oppositely extending holding arms hinged together and connected to said jaws, and a trip pan arranged above



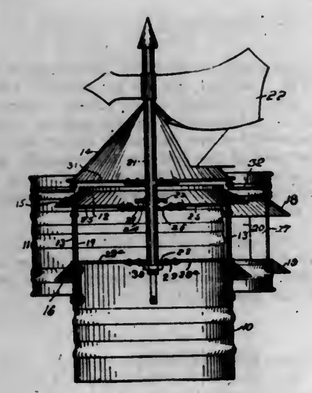
said arms and provided with means releasably engaging with certain of said arms for maintaining the jaws extended against the action of their springs, the hinged connection between said arms arranged below said pan and intermediate the ends of said arms whereby when said means is released from the arms these latter will impart a jumping action to the body portion.

1,456,378. TRACK BELT. CHRISTIAN F. HEINKEL, Cleveland, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed July 22, 1920. Serial No. 398,264. 7 Claims. (Cl. 305—10.)



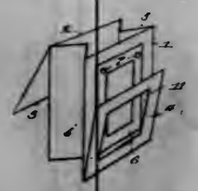
5. A track belt unit for track laying tractors comprising duplicate longitudinally extending cupshaped members secured side by side with their closed sides together, said members having substantially horizontal top and bottom portions, the adjacent top protions of which provide a continuous longitudinal roller bearing surface centrally of said unit.

1,456,379. JACK. FRIEDRICH ILSEMANN, Remscheid, Germany. Filed Jan. 22, 1921. Serial No. 439,320. 3 Claims. (Cl. 138—9.)



1. An improved hydraulic jack of the type in which an internally threaded pressure piston guided in the casing filled with incompressible liquid is operated by means of a spindle to be screwed into said piston comprising in combination a casing filled with incompressible liquid, a guide rod of unround cross section fixed in said casing, a pointed end of said rod, a hollow pressure piston movably mounted in said casing upon said guide rod and having internal threads in its boring, a screw spindle to be screwed into the boring of said piston having a cavity in its end designed to engage over the pointed end of said guide rod so that said spindle after it has been screwed into said piston pulls said piston forward or pushes the same back upon said rod according to the direction in which it is being turned.

1,456,380. SLACK-BURNING STOVE AND FURNACE. ROBERT E. JONES, Evergreen, Colo. Filed Sept. 1, 1922. Serial No. 585,758. 2 Claims. (Cl. 126—163.)



1. In a stove having a combustion chamber, an ash chamber and a grate, an auxiliary grate consisting of a semi-spherical member whose sides are provided with perforations and whose lower edge is provided with supporting lugs, said semi-spherical member having an opening in its upper sides, a tube secured in said opening and off-set with respect thereto, the end of said tube being provided with a convex, perforated cover.

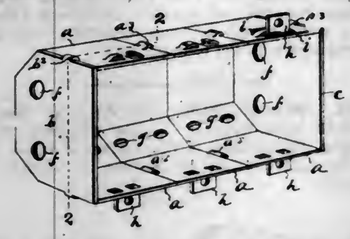
1,456,381. VENTILATOR. GEORGE C. JORDAN, Eau Claire, Wis. Filed May 4, 1921. Serial No. 466,655. 4 Claims. (Cl. 98—3.)

2. A ventilator having, in combination with an upright flue section, a revoluble cylindrical deflector of a diameter exceeding and surrounding the outlet of the flue section in spaced relation therewith and provided with a side outlet opening protected by upper and lower downwardly inclined guard flanges, said deflector being carried by an upright spindle arranged in axial relation with the flue section and mounted thereon, and a vane carried by said spindle and located above the plane of the deflector for positioning the latter with its opening at the leeward side of the flue section, a conical hood being attached to and carried by the spindle above and in spaced relation with the outlet end of the flue smection and serving as a support for said deflector, the hood being provided with a lateral opening at the side corresponding with the opening in the deflector and being provided with a protecting canopy.

1,456,382. BAKING OVEN. VICTORIA A. KINCANNON, New York, N. Y. Filed June 20, 1921. Serial No. 479,057. 2 Claims. (Cl. 126—275.)

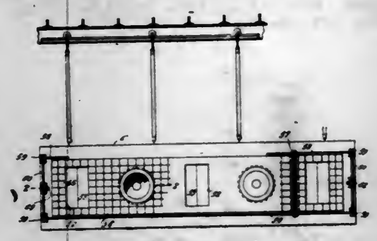
1. A foldable oven of the class described comprising a front wall, a door secured thereto, knobs on said door, and a bottom hingedly secured to said front wall and foldable against said door, the construction and arrangement being such that when in folded condition, the said knobs are distant from the said bottom, and legs detachably connected to said bottom.

1,456,383. COMBINATION HAMMER. FRANK J. KOCH, Hershey, Nebr. Filed Apr. 7, 1922. Serial No. 550,407. 1 Claim. (Cl. 7—3.)



A tool of the character specified, comprising a handle member having a head at one end formed in a side with a circular recess, said head constituting a hammer and a claw, and a complemental handle member having a circular enlargement at one end snugly fitting the circular recess in the head of the first-mentioned handle member and having an offstanding projection constituting a stop and a jaw and adapted to coact with the rear portion of the hammer head.

1,456,384. AUTOMOBILE BED. CARL KREY, Battle Creek, Mich. Filed June 3, 1922. Serial No. 565,531. 1 Claim. (Cl. 155—7.)

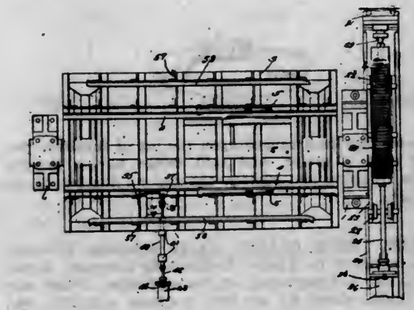


In combination with an automobile, a front seat having its back hingedly connected with the seat, the hinged means including circular parts pivotally connected together and these parts being provided with a pair of notches arranged at right angles but being adapted to register with the notches of the other part, bolts carried by the back and having portions engaging said registering notches to hold the back in upright or horizontal position, a pair of members pivotally secured intermediate of their ends to the back and having their outer ends operatively associated with the opposite ends of the bolts and their inner ends in overlapping engagement, a bracket carried by the overlapping ends, spring means supporting the bracket and a button engaging the bracket for the purpose specified.

1,456,385. FUSE BOX. ALFRED T. KVARNSTROM, Detroit, Mich. Filed July 30, 1920. Serial No. 400,088. 4 Claims. (Cl. 247—16.)

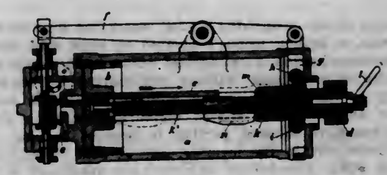
1. In a fuse box, a substantially U-shaped resilient metal section adapted to serve as the back and sides of the box, said U-shaped strip provided at one edge with projecting in-turned ears each adapted to form a pocket for an end piece to be received therein, and provided at the other side with depressions opposite and in line with said ears, an end piece adapted to be received in the pocket formed by said ears on the U-shaped section so as to be held securely therein, being forced into said pocket against the inward tension of said U-shaped section, an opposed end piece provided with inturned ears engaging said U-shaped section on the opposite end, the ears of said end piece adapted to be received in the depressions in the U-shaped section and adapted to be held thereon by the outward tension of the U-shaped section.

1,456,386. ROTATING SCRAPER FOR CLEANING THE SKIN OF VESSELS. ALBERT JOHN FREDERICK LEE, Montreal, Quebec, Canada. Original application filed Aug. 22, 1919, Serial No. 319,115. Divided and this application filed Dec. 15, 1919. Serial No. 344,996. 7 Claims. (Cl. 61—64.)



1. A closed submersible car adapted to be suspended from a vessel, means carried by the car for attaching the car to a wreck, and means movable longitudinally of the exterior of the car for scraping the plating of said wreck.

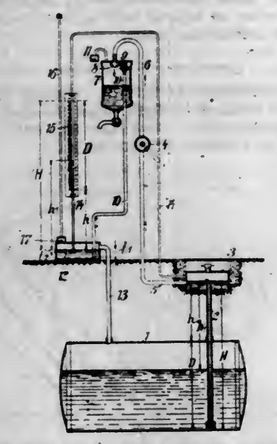
1,456,387. SCREW PROPELLER. HENRY LEITNER, Westminster, London, England. Filed Mar. 25, 1919. Serial No. 285,049. 2 Claims. (Cl. 170—159.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



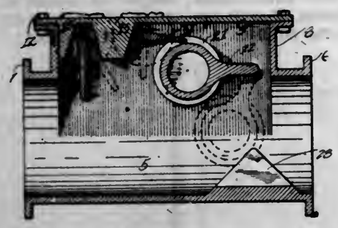
1. A hollow metal plural bladed propeller formed of a plurality of plates, each of which is shaped to form the leading side of one blade and the trailing side of another blade.

1,456,388. OSCILLATORY DUMP. DANIEL F. LEPLEY, Connellsville, Pa. Filed July 14, 1920. Serial No. 396,074. 10 Claims. (Cl. 214—52.)

1. The combination with an oscillatory dump and a track section thereon, of means carried by the dump for holding a car against movement along the track section, a stationary track section leading to the dump, means adjacent thereto for holding a car against movement on the stationary track section toward the dump, the track section on the dump being movable into and out of register with the stationary track section, and a means for simultaneously effecting three operations, namely, locking the dump against movement while the two track sections are in register, actuating the car holding means of the stationary track section to release the car held thereby, and actuating the car holding means on the dump to release the car held thereby.



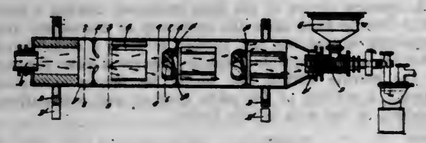
1,456,389. JIG-CONVEYER MOTOR. LUDWIG LINKOWSKI, Altenbochum, Germany. Filed Nov. 9, 1920. Serial No. 422,954. 14 Claims. (Cl. 121—164.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A motor suitable for jig-conveyers, said motor comprising a cylinder, a piston movable therein, a valve controlling the admission and exhaust of motive fluid to and from said cylinder, a valve-gear, means actuating said valve-gear to set said valve successively for the admission and for the cut-off, means actuating said valve-gear to set said valve for the exhaust, a regulating device adapted to secure automatically the same ratio of expansion for every per cent of cut-off, and means for actuating said regulating device during the operation of the motor.

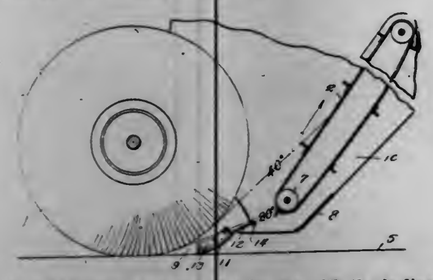
1,456,390. SAFETY DEVICE FOR PLANTS DELIVERING INFLAMMABLE LIQUIDS. MAX LUDWIG, Berlin-Lichterfelde, Germany, assignor to Martini & Hüneke Maschinenbau-Aktien-Gesellschaft, Berlin, Germany, a Corporation of Germany. Filed Aug. 31, 1921. Serial No. 497,429. 6 Claims. (Cl. 221—80.)

1. A device of the class described, comprising a storage tank, a pump having a suction connection to said tank to draw liquid therefrom, a saturating receptacle connected with the delivery port of the pump and having an air inlet, an intermediate container connected with said receptacle to receive air and liquid therefrom and also connected with the said tank, and a connection, normally sealed by the liquid in said container, to admit air to the suction connection of the pump and thus stop the liquid-drawing action of said pump, when the liquid-seal is broken.



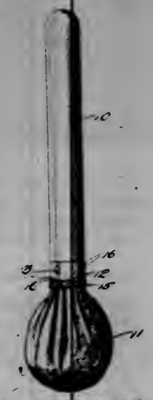
1,456,391. SURGE-RELIEF DEVICE. ROBERT E. MCLAUGHLIN, Tracy, Calif. Filed July 29, 1921. Serial No. 488,452. 5 Claims. (Cl. 137—71.)

1. In a device of the character described, the combination of a pipe, paddles mounted in said pipe, a valve mounted in said pipe, said paddles adapted to operate said valve for the purpose of admitting an auxiliary fluid to said pipe.



1,456,392. RETORT FOR THE TREATMENT OF CARBONACEOUS OR OTHER MATERIALS. FREDERICK DEACON MARSHALL, Westminster, London, England. Filed June 1, 1922. Serial No. 565,270. 13 Claims. (Cl. 263—22.)

1. A retort for drying, roasting, calcining or distilling carbonaceous or other materials, comprising a plurality of baffles or shelves disposed around the interior of the rotating cylinder or retort chamber, one end of said shelf being attached to the inner face of the retort chamber and the other end projecting inwards towards the interior, the arrangement around the periphery of the



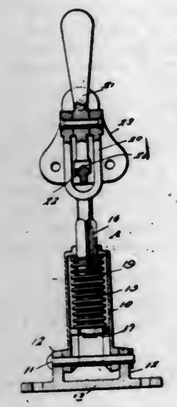
several shelves of each row being such that each shelf is disposed approximately along a chord of the retort chamber so as to deposit or shower the material raised by one shelf upon the surface of the shelf immediately in advance of it, at a point well beyond a vertical plane through the axis of the retort.

1,456,393. STREET SWEEPER. ELMER R. MARTIN, Elgin, Ill., assignor to Elgin Street Sweeper Co., Elgin, Ill., a Copartnership. Filed Mar. 30, 1921. Serial No. 456,992. 11 Claims. (Cl. 15—84.)

3. A sweepings confining shoe for use with the inclined conveyer of a street sweeper having a rotary broom, comprising a movably mounted dirt pan sloping downwardly under the broom and of relatively short width with respect to the length of the broom, and a side plate fast upon the dirt pan and projecting alongside one end of the broom.

1,456,394. CLEANING DEVICE. EDWARD FRANK MERRITT, East Boston, Mass., assignor of one-half to Frank L. Merritt, East Boston, Mass. Filed June 13, 1922. Serial No. 567,940. 1 Claim. (Cl. 15—211.)

A cleaning device of the type indicated, having a handle, a ferrule fixed upon the extremity of the handle and projecting beyond the end thereof to form a socket, and a flexible and collapsible moisture absorbent swab secured to the ferrule within the socket by lacing extending through a portion of the swab element and perforations provided in the wall of the ferrule.

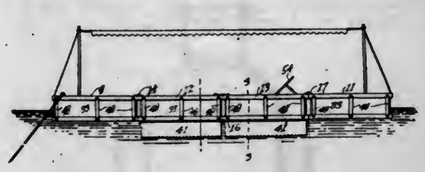


1,456,395. INSECTPROOF CUP FOR FURNITURE. WALTER MOLL and ADRIAN W. ANGEL, Evansville, Ind. Filed Aug. 14, 1922. Serial No. 581,812. 1 Claim. (Cl. 43—109.)

An attachment for the legs of articles of furniture comprising a cup member which is centrally bulged inwardly, and the wall between the center and the edge thereof rounded, said in-bulged portion being centrally provided with an opening surrounded by a flange whereby

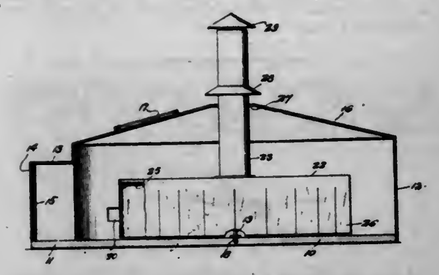
the same may be arranged upon the leg of furniture provided with a caster, and said flange having integral prongs to enter and sustain the cup on the leg of the furniture.

1,456,396. HOOD CLAMP. FRANK MUELLER, Scranton, Pa., assignor to Mueller Engineering Company, Scranton, Pa., a Corporation of Pennsylvania. Filed May 18, 1922. Serial No. 561,885. 1 Claim. (Cl. 292—66.)



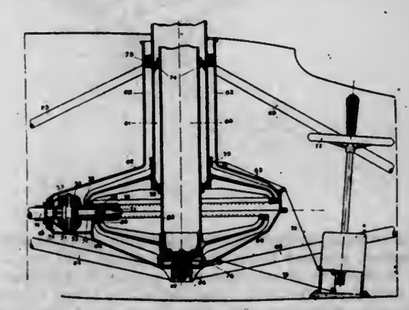
A hood clamp comprising a base, apertured lugs rising therefrom, a hollow member pivoted between said lugs, said member having a cylindrical outer surface and an angularly shaped inner surface and having a squared opening in the top thereof, a plunger slidable in said member and including spaced cylindrical portions and an intermediate squared portion to prevent turning of the plunger within the member, one of said cylindrical portions being threaded, an adjusting nut associated with said threaded portion and having a shape corresponding to the angular configuration of the interior of the member, the nut being held against rotation within the interior of said member, a spring surrounding the plunger and bearing against said nut and the upper end of said member, said spring being adjusted by the disconnection of said member from said base to permit the plunger to be depressed and rotated within the member but with respect to said nut, said rotation being effected by engagement of the other of said cylindrical portions of said plunger, within the squared opening of said member, a fork like terminal formed on the upper end of said plunger, and a handle pivoted on said fork.

1,456,397. FOLDING FLOAT. ANDREAS NIELSEN, San Juan Bautista, Calif. Filed June 19, 1922. Serial No. 569,413. 1 Claim. (Cl. 9—2.)



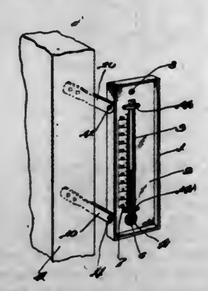
In a device of the character described, a series of collapsible floats comprising sections having a rigid deck and bottom, a flexible web extending between and secured to said deck and said bottom at the ends and sides, pivotal means for maintaining said deck and said

bottom in spaced relation to each other, means for injecting air into the interior of said float sections formed by said deck, said bottom and said web, and keel sections



hinged to the opposite sides of said float sections, said keel sections being braced when open against swinging on their respective hinges.

1,456,398. BROODER. DAVID E. NOLAND, Marshall, Ind., assignor of one-half to George Timothy Alward, Marshall, Ind. Filed May 19, 1922. Serial No. 562,192. 5 Claims. (Cl. 119—33.)

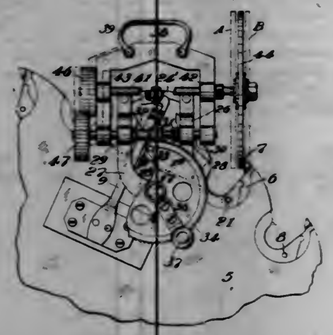


1. A brooder comprising a bottom, a side wall detachably mounted thereon and of cylindrical shape, a transparent door at the side wall, a frusto-conical top detachably mounted upon the side wall and provided with a sky light, a supporting post rising from the center of the base, a hover carried by said post and carrying a ventilating pipe extending through and beyond the top of the cover and a cap carried by the post and extending over the open end of the ventilating pipe in spaced relation thereto.

1,456,399. DIFFERENTIAL DRIVE FOR HELICOPTERS. RAUL PATERAS PESCARA, Barcelona, Spain. Filed Feb. 28, 1921. Serial No. 448,644. 2 Claims. (Cl. 244—19.)

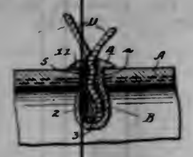
1. A helicopter, having two oppositely rotating propellers, shafts for the respective propellers, one shaft being arranged within the other, a housing for the lower ends of the shafts, a rotatable connection between the inner shaft and the housing, bearings between the shafts adapted to prevent relative axial movement thereof, said housing having a cylindrical extension concentric with and enclosing the shafts, a bearing between said extension and the outer shaft, annular gear racks connected to the respective shafts, and a differential drive mounted in the housing beyond said annular racks and having pinions meshing with the respective racks for driving the propellers.

1,456,400. THERMOMETER. WILBER A. PHILLIPS, Muskegon, Mich. Filed Feb. 14, 1922. Serial No. 536,478. 3 Claims. (Cl. 73—52.)



1. In a thermometer, a frame, a transparent panel carried by said frame and provided with a longitudinal slot, an indicating tube supported within said slot, said plate being graduated on each side surface along one edge of said slot, the graduations on one side of the plate being at the opposite side of the slot from the graduations on the opposite side of the plate.

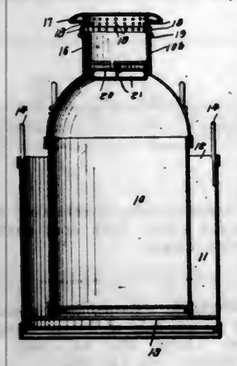
1,456,401. SPOOL AND THIMBLE RACK. BUREN D. POWELL, Kosse, Tex. Filed Apr. 16, 1921. Serial No. 461,815. 1 Claim. (Cl. 211—17.)



A rack having a base plate and flaps struck therefrom to form supporting fingers, each flap formed by cutting the base plate in substantially rectangular form, the base of the form being cut converging to form reentrant angles at either side, said cuts being spaced apart, the flap so formed being bent down away from the base plate and the side edges rolled to abutting position by bending in same downward direction that the sides of base of said flaps will engage base plate to maintain the fingers in position inclined upwardly from base plate.

1,456,402. SAW-SHARPENER. OSCAR RAMSEY, Anlauf, Oreg. Filed Apr. 4, 1922. Serial No. 549,647. 1 Claim. (Cl. 76—44.)

In a device of the character described, a substantially U-shaped frame adapted to engage the opposite sides of a saw, a depending substantially U shaped member secured to said first mentioned U shaped member, a worm gear mounted thereon, means for rotating said worm gear, a shaft secured on said second mentioned U shaped frame, a worm mounted on said shaft and adapted to be rotated by said worm gear, a yoke supported on said shaft, a grinding wheel supported on said yoke and adapted to be rotated by said first mentioned shaft.

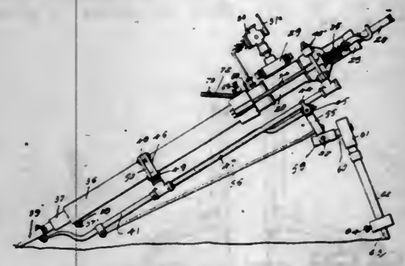


1,456,403. PROCESS OF REPAIRING OR CLOSING PUNCTURES IN PNEUMATIC TIRES AND PLUG FOR THAT PURPOSE. WILLIAM C. RANNEY, Elbridge, N. Y. Filed Mar. 25, 1920. Serial No. 368,588. 3 Claims. (Cl. 152—26.)

3. The herein described process of closing an opening through a fabric such as a pneumatic tire, which consists in inserting through the opening a plug having a hollow stem closed at its inner end and open at its other end, which consists in inserting the stem of the plug through the opening from the outside, then inserting a flexible fibrous material and cement into the stem of the plug and packing it therein on the inside of the fabric, thereby causing the inner portion of the stem to expand, and leaving the said packing within the stem to become set through the action of the cement.

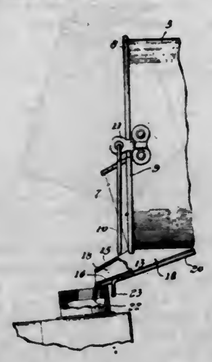
1,456,404. MILK CAN. FRANK J. RAUH, Bakersfield, Calif. Filed June 9, 1921. Serial No. 476,260. 1 Claim. (Cl. 31—14.)

A milk can having a cover consisting of a relatively long cylindrical wall open at its lower end and provided with an overhanging cap, the upper portion of the wall being perforated for ventilation, a pair of studs carried by said wall adjacent its lower end, a ring formed with slots to receive the studs and thereby secure the ring to the cylinder, a screen carried by said ring, and flat vertically disposed breaker bars carried by said ring below said screen and in supporting relation therewith,



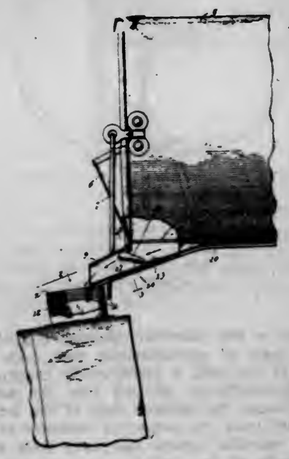
said bars being adapted to be gripped to rotate said ring to secure it in place or release it from the studs to permit its withdrawal from the cylinder.

1,456,405. SHUTTLE EYE. ADELARD E. RAVENELLE, Norwich, Conn. Filed Dec. 19, 1921. Serial No. 523,495. 1 Claim. (Cl. 139—46.)



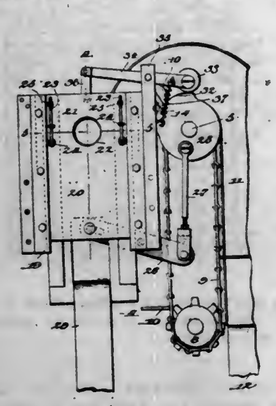
A shuttle eye having a longitudinally extending anchoring lug, said anchoring lug having a transversely rounded inner surface, said lug extending from said eye at one edge of the thread receiving slot thereof and being of a height sufficient to overlie the lower edge of the throat leading to the bobbin of a shuttle, and said lug being of substantial length and having its extremity sharpened to form an edge adapted to be driven into the wood of the shuttle to retain the eye in place.

1,456,406. DRILLING MACHINE. LEO A. REVOR, Lyon Mountain, N. Y. Filed Sept. 20, 1921. Serial No. 501,921. 18 Claims. (Cl. 255—51.)



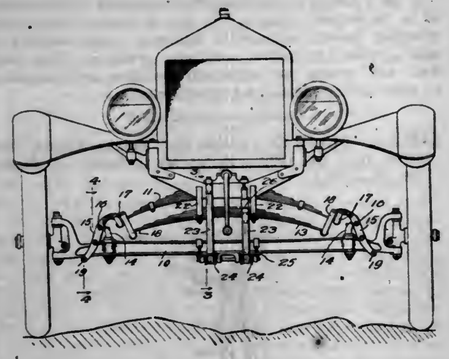
1. A drilling machine having a pressure operated drill mechanism, a tripod frame upon which the drill mechanism is mounted for movement in a path in alignment with that of the drill, one of the feet of the tripod having a thrust in alignment with the movement of the drill member, and means actuable by drill operating pressure for moving the drill mechanism away from said tripod foot.

1,456,407. BUCKET, PAIL, OR THE LIKE. ALBERT G. SCHERER, Chicago, Ill., assignor to The Excelsior Steel Furnace Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1921. Serial No. 490,441. 2 Claims. (Cl. 221—11.)



1. The combination with a receptacle having a discharge opening adjacent its top, a spout surrounding said opening and secured to the receptacle adjacent thereto, a reinforcing strap secured to said spout and extended down upon and secured to said receptacle, and a lateral projection upon the upper portion of said strap adjacent the lip of said spout.

1,456,408. SPOUT FOR BUCKETS. ALBERT G. SCHERER, Chicago, Ill., assignor to The Excelsior Steel Furnace Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 17, 1921. Serial No. 501,401. 3 Claims. (Cl. 221—11.)

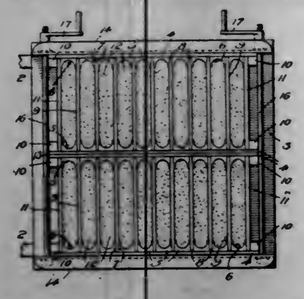


1. A spout for receptacles comprising a hollow casing open at opposite ends and suitably secured at one end to and communicating with a receptacle, and a baffle within said casing extending partly across the same in an oblique direction, whereby the stream of liquid passing through said casing is directed at an angle against a portion of the spout wall to cause an eddy in the stream and reduce the velocity of flow at the discharge end of the spout.

1,456,409. CAN-COVERING MACHINE. ALOIS J. STEINER, Hoboken, N. J. Filed Mar. 20, 1920. Serial No. 367,569. 8 Claims. (Cl. 113—14.)

1. In a machine for placing covers on receptacles, the combination of a plate, means for feeding a recpetacle on to said plate, means for feeding a cover over said receptacle and preventing upward movement of said cover, said means including a pair of members and lost motion means connecting said members, and means for raising said receptacle to insert its upper end into frictional engagement with said cover.

1,456,410. SPRING FOR AUTOMOBILES. HARRY R. WARREN, Wabuska, Nev. Filed Aug. 19, 1921. Serial No. 493,739. 2 Claims. (Cl. 267—45.)



2. The combination of a vehicle axle, a plurality of leaf-springs normally spaced from one another and from the axle, a single connection between the like ends of the springs and the axle, at each end thereof, comprising an arm secured to the axle, links between the arm and the spring ends, and a perch on the axle to which said arm is attached at a point between the axle and the links.

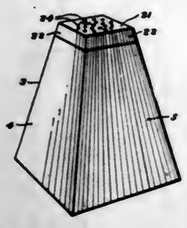
1,456,411. MULTIPLE-STAVE MOLD. JOHN WRIGHT WARREN, Elizabethton, Tenn. Filed Oct. 10, 1922. Serial No. 593,561. 3 Claims. (Cl. 25—121.)

1. An apparatus of the class described including in combination a freely portable platform, rockers support-

ing said platform and spaced apart, the space beneath said platform and between said rockers being unob-

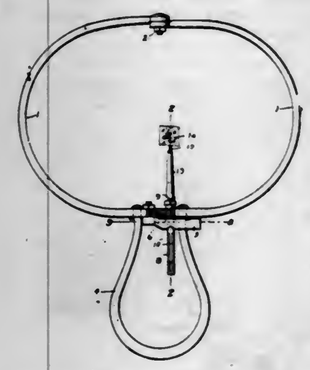
structed in order to permit a lifting truck to be inserted beneath the platform, and a series of removable molds carried by said platform.

1,456,412. CHAIN HOLDER. WILLIAM HENRY WATT, Jr., West Newton, Pa. Filed Feb. 6, 1922, Serial No. 534,544. Renewed Oct. 23, 1922. Serial No. 596,461. 3 Claims. (Cl. 152—14.)



1. In a device of the character described, a ring adapted to be secured about a hub cap, a circular supporting structure loosely mounted in said ring, a disc secured to said circular structure, members radiating from said disc, and means for detachably securing said members at their outer ends to an anti-skid chain.

1,456,413. FLYTRAP. JAMES F. WEBSTER, Colfax, Ind. Filed June 26, 1922. Serial No. 570,832. 1 Claim. (Cl. 43—119.)

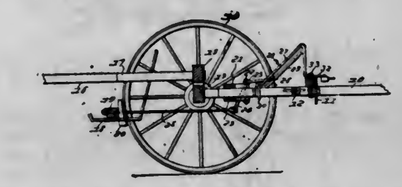


In a fly trap, the combination with a screen door, of a foraminous body carried thereby and forming an entrance compartment, one side of said foraminous body provided with a plurality of transverse inwardly extending leads, a confining compartment hingedly connected to the screen door by means of hinges, and a removable hinge pintle to permit detachment of the confining compartment from the screen door, and a plurality of leads leading into the confining compartment from said entrance compartment.

1,456,414. CASTER. HERBERT P. WEIERMAN, Philadelphia, Pa. Filed May 31, 1922. Serial No. 564,772. 1 Claim. (Cl. 229—17.)

As a new article of manufacture, a caster formed from a single blank of foldable material divided by creasings into four contiguous and equal sides, a securing flap extending from the edge of one of said sides, a pair of bottom elements extending from the ends of the extreme sides and provided with securing flaps so arranged that the flaps of one bottom element will join said element to the two middle sides and the flaps of the other bottom element will join said other bottom element along the creasing of the first said bottom element and the adjoining closure, said caster also including a perforated top section extending from the end of one of said middle sides and provided with securing flaps at its three free edges.

1,456,415. ANIMAL TRAP. JOSEPH R. WILSON, Salt Lake City, Utah. Filed Oct. 11, 1921. Serial No. 506,974. 9 Claims. (Cl. 43—88.)

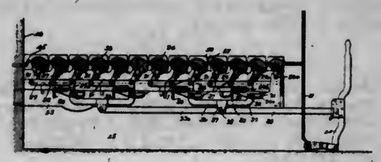


1. A trap of the character specified, comprising complemental jaws of approximately bow form pivotally connected at one end, a substantially U-shaped spring arranged approximately parallel with the axis of the jaws and having the opposite ends of the latter pivotally mounted upon the respective members of the said spring and movable towards and away from each other with the ends of the spring when expanded and contracted, a latch for holding the jaws open against the tension of said spring, and a locking mechanism in cooperative relation with said latch.

1,456,416. AUTOMATIC VEHICLE BRAKE. JOHN D. WORKMAN, Elliottsville, Pa. Filed Dec. 4, 1919. Serial No. 342,453. 1 Claim. (Cl. 188—122.)

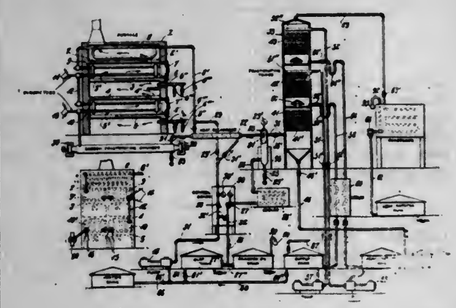
An automatic brake mechanism for vehicles having a draught gear consisting of a front axle, hounds ex-

tending forwardly from said axle, a brake beam extending transversely in rear of said axle, plates carried by the said hounds in advance of the front axle, a guide mounted upon the hounds, a draught element slidably mounted in said guide and extending rearwardly between said plates, a double tree, a clevis having a guide ring engaging the draught element and provided at its forward end with a hammer bolt engaging said double tree and draught element, a crank shaft having spindle portions and an intermediate arched portion of which



the former are mounted upon one of said plates and provided with terminal arms connected with said brake beam, and cams carried by the clevis in engagement with the intermediate arched portion of the crank shaft and disposed in inclined relation to the path of the draught element for imparting swinging movement in opposite directions to said crank shaft.

1,456,417. AIR MOISTENER. ALBERTO BEMENT, Chicago, Ill. Filed Jan. 21, 1921. Serial No. 438,869. 9 Claims. (Cl. 183—40.)



1. In an air moistener, a substantially thimble-shaped body of loose asbestos packing, means for admitting steam to the bore thereof, and retaining means for maintaining the packing in its thimble-shaped form while permitting the percolating of steam through the side portions thereof; the said retaining means including a tube of sheet asbestos and a foraminous metal tube both disposed outside of the said packing.

1,456,418. FURNACE GRATE. HENRY BENTON, Elizabethport, N. J. Filed Feb. 24, 1921. Serial No. 447,523. 2 Claims. (Cl. 126—177.)

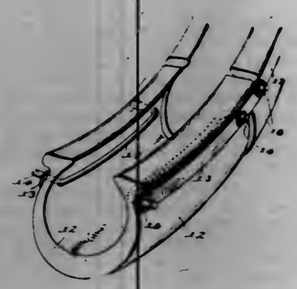
1. In a furnace grate, swingably mounted cross bars, grate bars above said cross bars and arranged parallel therewith, means supporting the grate bars for rocking movement on the cross bars, reciprocating operating means pivotally connected with the grate bars for shaking the same, and members on the cross bars, said operating means having clearance in said members on the cross bars in the shaking of the grate bars and engageable with said members by an excessive movement of said operating means for dumping the grate bars; together with means to adjustably secure said members on the cross bars to regulate the clearance and engagement of the operating means with said members.

1,456,419. PROCESS AND APPARATUS FOR THE PRODUCTION OF LOW BOILING POINT HYDROCARBONS. JOHN C. BLACK, Destrehan, La. Filed June 20, 1922. Serial No. 569,757. 25 Claims. (Cl. 196—25.)

13. In an apparatus for treating oil, a source of supply, heating coils and conpections between the supply and coils, an oil by-pass trap, a discharge tank and discharge connections from the coils to the trap and from the trap to the tank, said supply connections and discharge connections having a by-pass between them with a valve therein whereby the supply of oil may be switched from the supply to the discharge connections without passing through the coils or trap.

17. A process of cracking hydrocarbons which comprises forcing them through preliminary heating coils arranged in series relation relative to each other, where the hydrocarbons are heated to substantially the maximum temperature to be employed in the cracking operation, then passing them through a final heating coil wherein the temperature is maintained at the said maximum temperature and heat is supplied to the hydrocarbons to at least equal that rendered latent by the endothermic reaction of the cracking, thereby subjecting the hydrocarbon to a prolonged period of heating at said maximum temperature whereby substantially maximum conversion is obtained for the temperature employed and time of reaction, then passing the hydrocarbons to a carbon precipitating chamber wherein the rate of flow of the hydrocarbons is reduced to permit of the separation of the carbonaceous material of reaction while the hydrocarbons are maintained under sufficient pressure to maintain them in a liquid state whereby the carbonaceous material is deposited in a condition easily removed, then discharging them through a pressure regulating valve into a fractionating apparatus to separate the hydrocarbons of different boiling points.

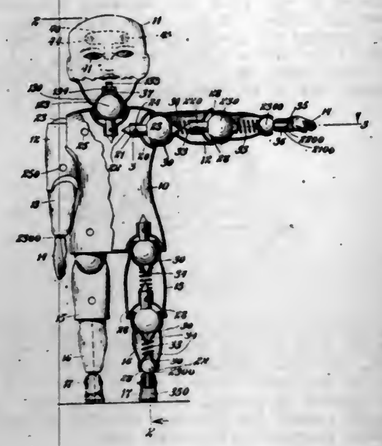
1,456,420. STORAGE-BATTERY CONNECTION. BAUCE B. BLACKBURN, St. Petersburg, Fla. Filed Jan. 11, 1921. Serial No. 436,618. 2 Claims. (Cl. 204—29.)



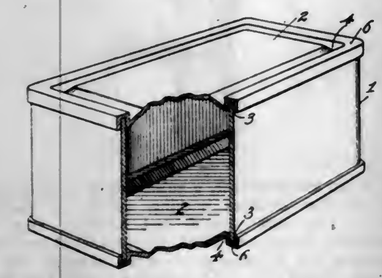
2. A battery connection comprising an arm having an upwardly opening cupped extension formed on the upper side of one end thereof, a vertically disposed pin ar-

ranged concentrically of said extension having a head formed on its lower end embedded in the bottom of said extension, the shank portion of said pin being bifurcated and having its opposite sides arranged in divergent fashion, the upper extremities of the bifurcated portions of said pin being arranged slightly below the upper

marginal portion of said cupped extension and a connector comprising a curved arm having a sleeve on one end thereof adapted to be engaged over the divergent bifurcated portions of said pin, the remaining end of said curved arm being arranged in a plane lower than the arrangement of the opposite end thereof.



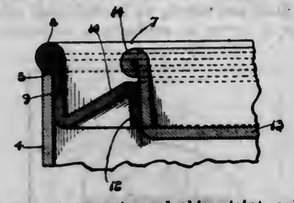
1,456,421. TIRE ARMOR. LAWRENCE C. BONIFACINO and MATILDA B. IRBY, Baltimore, Md. Filed Mar. 20, 1922. Serial No. 545,121. 2 Claims. (Cl. 152—16.)



2. A tire protector or armor consisting of a circumferential series of segmental protector sections to embrace the periphery of a tire, side rings connecting the protector sections in the circumferential series and each including a series of endwise overlapping and pivotally connected straps one strap to each of the protector sections, and means for connecting each strap to its respective protector section, said means including bars extending along the inner surfaces of the side walls of the protector sections, having outturned end extensions projecting through the side walls of the protector sections, the said strap sections having apertures to receive said extensions and said extensions having apertures and cotter pins through the apertures of the extensions to hold the strap sections in place.

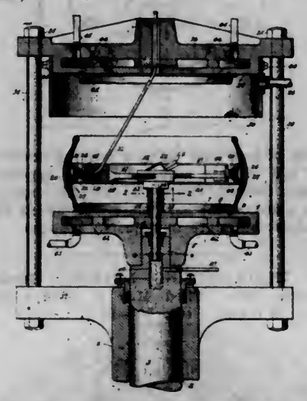
1,456,422. JOINTED DOLL. CHARLES CÁBANA, Buffalo, N. Y. Filed May 17, 1920. Serial No. 381,810. 13 Claims. (Cl. 46—40.)

2. A jointed doll comprising a member provided with a ball, a pair of limb sections of substantially semi-cylindrical form, and a substantially semi-spherical socket cup-section extending inwardly from and integrally connected with the outer end of each of said limb sections.



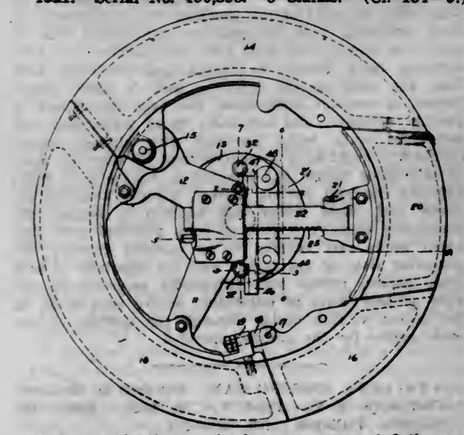
1,456,423. PAPER OR PULP CONTAINER. FREDERICK COATES, Wyoming, Ohio, assignor to The Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 29, 1920. Serial No. 377,702. 4 Claims. (Cl. 229—5.8.)

1. A paper or pulp container comprising a paper or pulp tube or shell having its head or end formed from a single piece of paper or pulp dished outwardly and having a preformed channel upon its edge adapted to receive and engage the edge and reverse side of said shell, and means for holding said head and shell from accidental disengagement, substantially as set forth and for the purposes specified.



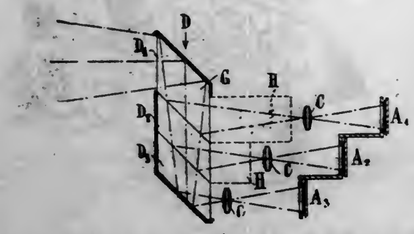
1,456,424. PAPER OR PULP CONTAINER. FREDERICK COATES, Wyoming, Ohio, assignor to The Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 21, 1920. Serial No. 390,615. 2 Claims. (Cl. 229—5.8.)

1. A paper or pulp container comprising a paper or pulp body having an inwardly beveled end, a paper or pulp cup shaped head having a tubular edge adapted to form wedging engagement with said beveled end and having an adhesive interposed between said body and



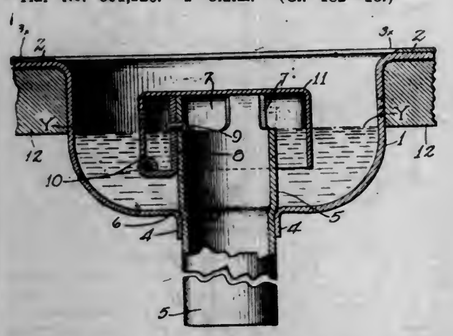
head to form a permanent non-leaking joint, substantially as set forth and for the purposes specified.

1,456,425. MACHINE FOR FORMING PNEUMATIC TIRES. BARTHOLD DE MATTIA, Clifton, N. J. Filed Feb. 4, 1920. Serial No. 356,209. 9 Claims. (Cl. 154—10.)



2. In a machine of the class described, in combination, a table or support, a cross-head co-operating therewith, means for raising or lowering the table or support, means for expanding a tire blank, and fluid pressure means to raise or lower the expanding means toward and from the upper surface of the table.

1,456,426. CORE AND CHUCK. PETER DE MATTIA and BARTHOLD DE MATTIA, Clifton, N. J. Filed Aug. 6, 1921. Serial No. 490,893. 6 Claims. (Cl. 154—9.)

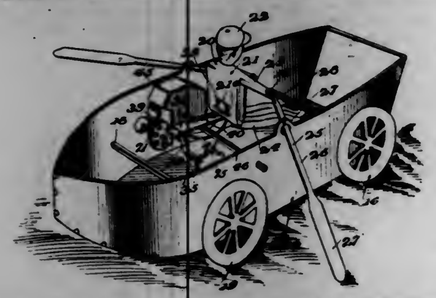


5. In combination, a chuck, a core supported thereon, a table or support for the chuck, a pair of notched studs carried by the table and projecting through openings in the chuck, a sliding bolt carried by the chuck, a clearance notch near one end of said bolt for clearing one of the studs so positioned that when brought into clearance position the opposite end of the bolt will clear the other stud.

1,456,427. OPTICAL SYSTEM FOR PHOTOGRAPHIC CAMERAS. SERGE MICHAEL DE PROCOUDINE-GORSKY, Nice, France. Filed May 11, 1922. Serial No. 560,227. 5 Claims. (Cl. 88—1.)

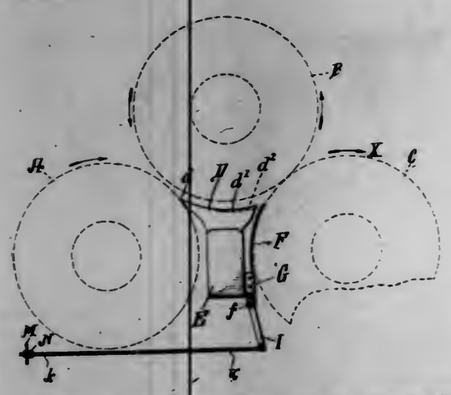
1. An optical system for a photographic camera comprising a sensitive medium a series of rhomboidal prisms forming a combination rhomboidal prism for reflecting the light rays from the object to form three identical images on three picture areas of a sensitive medium, the parallel faces of the said prisms, which are coplanar, being provided with a substance having a refractive index differing from that of the glass, to act as a partial reflector.

1,456,428. TRAP FOR REFRIGERATOR CARS. PAUL S. DOUGHERTY, Chicago, Ill. Filed Sept. 28, 1922. Serial No. 591,126. 1 Claim. (Cl. 182—13.)



A trap for refrigerator cars comprising a pressed metal bowl-shaped receptacle, a drain pipe projected through the bottom of said receptacle, the upper edge of the drain pipe terminating short of the upper edge of the receptacle and having a plurality of cut away portions extending downwardly therefrom, a hinge strap secured to said pipe adjacent its upper edge, and a pressed metal cap having an integral hinge portion arranged to engage with the hinge strap on said pipe, whereby said cap is held in a predetermined spaced relation from the side of the drain pipe when said cap is hinged downwardly upon the pipe.

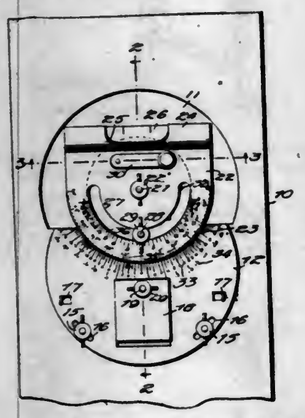
1,456,429. LAND AND WATER TOY. JOSEPH L. DUGGAN, Sparrows Point, Md. Filed June 29, 1921. Serial No. 481,285. 4 Claims. (Cl. 46—45.)



1. In a toy of the character described, a boat body, a fixed axle carried at one end of said body, wheels rotatably mounted on said fixed axle, a drive axle mounted at the other end of the body, traction wheels fixed to

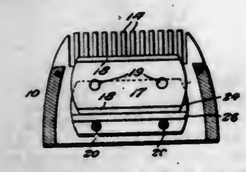
said drive axle, an animated figure simulating an oarsman arranged in said body and including a body portion and legs pivotally connected thereto, a pair of oars operated by the animated figure, means for causing said animated figure to partake of a rowing motion including a crank shaft, a spring motor for driving said crank shaft including a winding shaft, a spring barrel rotatable on said winding shaft, a coil spring having one

end connected to said spring barrel and the other end connected to said winding shaft, and means for preventing retrograde movement of the winding shaft, a link including a rocking lever having a sliding fulcrum on the winding shaft and connected at one end with the crank shaft and at the other end with the body portion of the animated figure, and a retaining bar for preventing displacement of the link from the winding shaft, and gearing for driving the drive axle from the crank shaft.



1,456,430. JUICE-SAVING ATTACHMENT FOR CANE MILLS. JAMES FISHER, New Orleans, La. Filed Dec. 26, 1922. Serial No. 609,061. 3 Claims. (Cl. 100—47.)

1. A juice saving attachment for three-roller mills comprising a turn plate mounted between the receiving roller and the bagasse roller, and having its upper surface curved in a transverse direction substantially parallel with the curvature of the top roller, said turn plate being provided on its upper surface with a series of grooves, inclined downwards and rearwards, adapted to receive the free juice carried along with the bagasse, and a deflector plate engaging the surface of the bagasse roller opposite the rear upper edge of said turn plate.

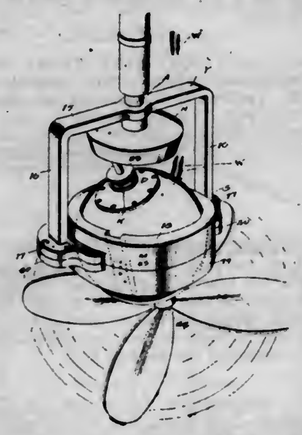


1,456,431. LEVEL AND PLUMB. DANIEL W. L. FRANK, Chicago, Ill. Filed Apr. 9, 1921. Serial No. 460,010. 5 Claims. (Cl. 33—213.)

1. In a device of the character described, in combination with a supporting element, a base plate mounted thereon and having a plurality of arcuate series of graduations thereon, an adjustable plate superposed on said base plate and having an arcuate edge provided with a plurality of series of graduations cooperable with the

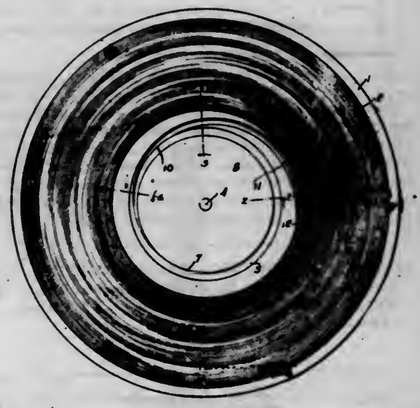
graduations of said base plate, a leveling device mounted upon the end of said adjustable plate opposite to the arcuate edge thereof, means for pivotally supporting the adjustable plate on the base plate, and means for retaining the adjustable plate in adjusted position.

1,456,432. HAIR-CUTTING DEVICE. HENRY FROH, Cincinnati, Ohio. Filed May 9, 1921. Serial No. 468,074. 1 Claim. (Cl. 30—12.)



A hair cutting tool embodying a casing including spaced walls connected together adjacent one longitudinal edge and each transverse edge forming a pocket there between and each wall being provided with a pair of elongated slots, the slots of one wall being designed to align with the slots of the opposing wall, a plurality of teeth extending from the opposite longitudinal edge of each wall and having their free ends beveled, one wall carrying teeth shorter in length and relatively finer than the teeth of the opposing wall, a blade holder formed of resilient sheet metal and bent upon itself to provide oppositely and outwardly flared walls, said last mentioned walls being provided with aligned spaced openings, a cushioning element secured between the walls of said blade holder and adapted to engage both walls adjacent the bent portion thereof, a blade arranged between said blade holder and adapted to engage the cushioning element, a pair of bolts provided with flattened heads and adapted to be inserted through the elongated slots of the casing and the openings of said blade holder, thumb nuts threadedly mounted on the ends of said bolts to adjustably secure said blade in the pocket of said casing through the medium of the blade holder for the purpose specified.

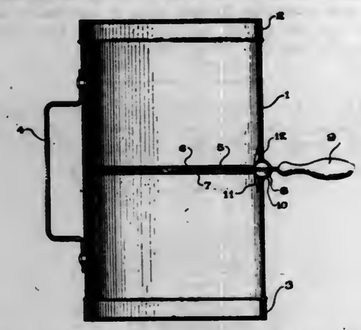
1,456,433. CEILING FAN. MAURICE M. GLASSER, Charleston, S. C. Filed Nov. 8, 1921. Serial No. 513,806. 7 Claims. (Cl. 230—1.)



1. A fan comprising a supporting yoke, a socket carried by the yoke, a motor casing of spherical form mounted

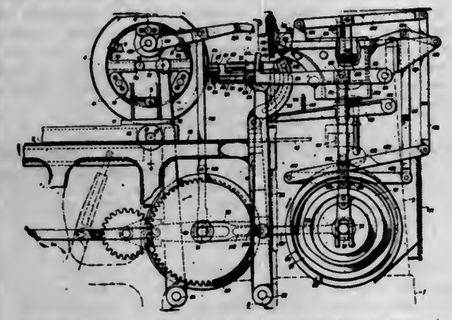
in the socket, a motor shaft extending from the casing, a fan wheel on the shaft, a counter-shaft operatively connected to the motor shaft, a gear fixed to the yoke,

and a pinion on the counter-shaft and constantly meshing with the gear whereby said gear operates to move the motor casing relatively to the socket with a resultant oscillation of the fan wheel.



1,456,434. PHONOGRAPH RECORD. WALTER C. HADLEY, New York, N. Y. Filed July 20, 1921. Serial No. 486,150. 3 Claims. (Cl. 274—41.)

1. In a record for sound reproduction, a section thereof adapted to receive a movable stylus and having predetermined limits, within which limits the stylus is operative to actuate an automatic stop device, said section having the bottom thereof inclined with respect to the plane of the record whereby it serves to give the stylus a rapid radial movement.



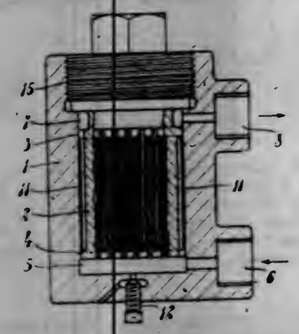
1,456,435. SIFTER. MINNIE HAGEN, Ellinwood, Kans. Filed Sept. 16, 1922. Serial No. 588,671. 1 Claim. (Cl. 83—60.)

A sifter of the class described comprising a receptacle having movable end walls, spaced metallic sifting members centrally arranged within the receptacle and having their ends twisted together, a wire gauze secured to the side walls of the receptacle and being arranged between the sifting members, a portion of a socket formed in said receptacle intermediate of its ends and being provided with a transverse elongated opening, a plate secured within the receptacle and having the other portion of the socket formed therein, and being provided with an

elongated opening registering with the first mentioned opening, a pair of semi-spherical members loosely positioned in the socket and being adapted to have passed therebetween the twisted ends of the sifting members which pass through the openings and extending exteriorly of the receptacle and a handle carried by the extending ends.

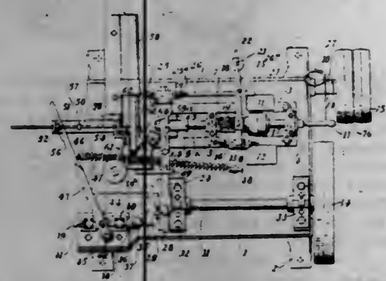
1,456,436. TYPOGRAPHICAL MACHINE. ANDREW HELDRICH, Philadelphia, Pa., assignor to Cade Manufacturing Company, Shelby, N. C., a Corporation of North Carolina. Filed Apr. 4, 1921. Serial No. 458,447. 40 Claims. (Cl. 199—11.)

19. In a typographical machine, a matrix-gatherer comprising a table having a channel therein, a set of matrix-receivers contained in said channel and having upstanding matrix-holders to support matrices with their bodies projecting above the surface of said table, the matrix-receivers being relatively shiftable longitudinally in said channel to gather together and spread apart the matrices carried thereby, and a member movable across the top of said channel to shift the matrices in a direction transversely thereof.



1,456,437. PIPE DRAIN. AARON HESS, New York, N. Y. Filed Mar. 31, 1920. Serial No. 370,109. 1 Claim. (Cl. 131—12.)

A drain for smoke pipes comprising a hollow body formed with a flange extending from the body, an exten-

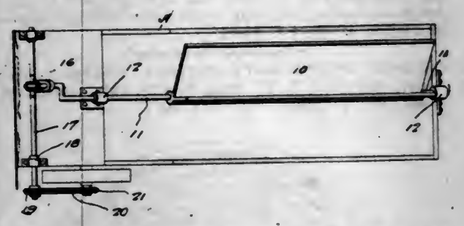


sion projecting from said flange, and an annular flange extending axially of the body, a cap pivotally connected with said extension formed with a depression adapted to fit over the second mentioned flange, and means for locking the cap in a closed position.

1,456,438. LIQUID FILTER. KNUT JONAS ELIAS HESSELMAN, Saltsjo-Storangen, Sweden. Filed July 28, 1922. Serial No. 578,153. 2 Claims. (Cl. 210—165.)

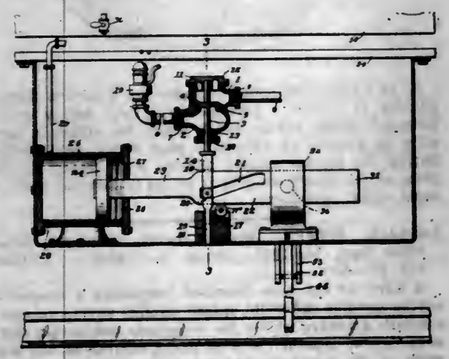
1. A liquid filter, particularly for filtering fuel oils under high pressure for internal combustion engines, comprising in combination a casing having a boring therein, an inlet and an outlet, a plug fitted in said boring having alternate external grooves connected to said inlet and said outlet, the partition walls between said grooves having ground off edges so as to form narrow air spaces between the grooves and the wall of said boring to constitute filtering passages between adjacent grooves.

1,456,439. THREAD-CUTTING MACHINE. FREDERICK W. HESSMER, Jersey City, N. J., assignor to American Musical Supply Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 6, 1919. Serial No. 328,761. 6 Claims. (Cl. 10—89.)



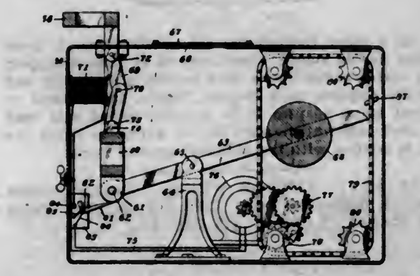
6. In a thread cutting device of the character as described, the combination of the arm holding the cutting die, said arm being pivotally arranged at one of its ends upon the supporting frame and being provided at its other end with a guide wheel sliding upon an excentric cam causing the arm to move alternately in a down and upward direction, a rod rigidly secured to the arm in the axis of its pivots and being journaled at its other end, said rod running parallel to the main shaft, an upwardly directed projection secured to said rod, another arm, holding the die to fit the lead screw, pivotally secured at its end opposite to the pivot, of the arm referred to above, a weight acting upon said arm at its end to hold it down upon the projection on the rod, this latter arm being lifted simultaneously with the arm holding the cutting die, thereby allowing the spring acting at the end of the main shaft to move it back to its original position.

1,456,440. FLASH-LIGHT ATTACHMENT FOR GUNS. JOHN PAUL HIER, Hightown, Va. Filed Mar. 3, 1922. Serial No. 540,785. 2 Claims. (Cl. 240—8.4.)



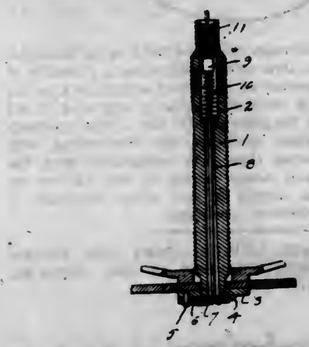
1. A flashlight attachment for fire arms having a tubular guide and means for attaching the same to the barrel of a fire arm, and a lighting unit slidably and removably fitted in said guide, the lighting unit having an exteriorly projecting switch button, and the guide having a cam for actuating said button upon the longitudinal movement of the lighting unit.

1,456,441. THRASHING-MACHINE ATTACHMENT. ORVILLE HOFFMAN, Modoc, Ill. Filed Oct. 16, 1922. Serial No. 594,881. 1 Claim. (Cl. 130—1.)



In a thrashing machine feeder, a frame with a dividing board therein forming compartments on opposite sides thereof, in combination with an oscillating trough pivotally mounted above and in line with said dividing board, and mechanism connected with said trough and frame for oscillating said trough so as to alternately cover or uncover said compartments.

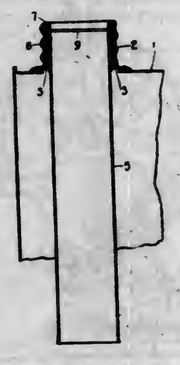
1,456,442. AUTOMATIC TRAIN-STOPPING APPARATUS. CHARLES C. HOLE, Fremont, Nebr. Filed May 1, 1922. Serial No. 557,645. 23 Claims. (Cl. 246—200.)



10. A train stopping apparatus, including a controlling valve having a reciprocatory stem, a reciprocatory member having an inclined slot, means carried by the stem for engaging the slot whereby the movement of the member will reciprocate the stem to open or close the valve, means for actuating the member, locking means for holding the member to maintain the valve normally in its closed position, and tripping mechanism for releasing the locking means.

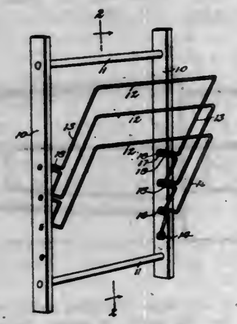
1,456,443. TRACK DEVICE FOR AUTOMATIC TRAIN-STOPPING APPARATUS. CHARLES C. HOLE, Fremont, Nebr. Original application filed May 1, 1922, Serial No. 557,645. Divided and this application filed May 3, 1922. Serial No. 558,076. 15 Claims. (Cl. 246—202.)

4. A train stopping apparatus, including a track device comprising a casing having guide openings, a frame movable through the said openings, a tripping head carried by the frame and arranged exteriorly of the casing, means for actuating the frame for moving the head outwardly, a toggle connected with the casing and the frame, and an electro-magnet adapted, when energised, to hold the toggle and when de-energised to release the toggle and permit outward movement of the tripping head.



1,456,444. AIR VALVE FOR INNER TUBES. STEVEN HOLICK, Millsboro, Pa. Filed July 14, 1921. Serial No. 484,653. 3 Claims. (Cl. 152—12.)

2. An air valve of the character specified comprising a tubular stem, a flap valve at the inner end of the tubular stem, a plate disposed exterior to the valve and having a central opening and a finger having its extremity extending through the opening of the plate and engaging the valve.

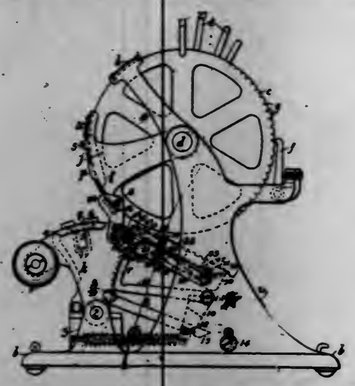


1,456,445. SPOUT. PERCY NICHOLAS HOOPER, London, England. Filed Jan. 26, 1921. Serial No. 440,074. 2 Claims. (Cl. 221—27.)

1. The combination with the head of a can, of a plate having a central opening therein, a lip curved in cross-section bounding the said opening, a spout having one end seated on the said plate and having at its other end an internal flange provided with a lip curved in cross-section, a tubular part slidably mounted in the openings

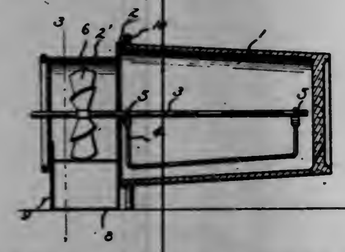
bounded by the said curved lips, and a bar mounted within the said tubular part adjacent to one end thereof accessible from outside the can.

1,456,446. DISPLAY RACK. OMAR JACOB HOTALING, East Orange, N. J. Filed Apr. 27, 1922. Serial No. 556,934. 4 Claims. (Cl. 211—14.)



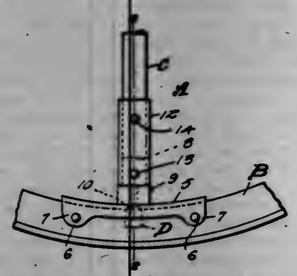
2. A display rack embodying spaced parallel supporting elements, a plurality of inverted U-shaped members having pivotal connection with and disposed between the supporting elements in superposed relation, and means coacting respectively with the pivotal connection of each member and with the member above said pivots for retaining the same in angularly adjusted positions.

1,456,447. MACHINE FOR MARKING GARMENTS. CHARLES EDWARD JENNER, London, England, assignor, by direct and mesne assignments, of one-half to George Albert Crosland and one-fourth to Alfred Lansdell Jenner, both of London, England. Filed July 27, 1922. Serial No. 577,927. 2 Claims. (Cl. 101—97.)



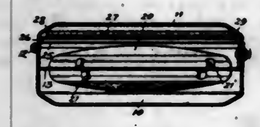
1. In a machine for marking garments for laundry purposes, in combination a pair of side frames mounted on a suitable base, a plurality of rotatable discs, marking letters numerals and signs inscribed on the peripheries of said discs, a fixed axis supported in said frames and upon which said discs are mounted, an indicator carried by said frames, means also carried by said frames for retaining the said discs in operative position for marking purposes, a quadrantal sheet metal shield mounted upon the aforesaid fixed axis an oscillatory quadrantal member mounted on the aforesaid base and coacting with said quadrantal sheet metal shield, an inking device carried by said oscillatory member and said side frames, means also carried by said oscillatory member to operate said

inking device and to withdraw same after each inking operation, a hammer pivotally mounted on one of the



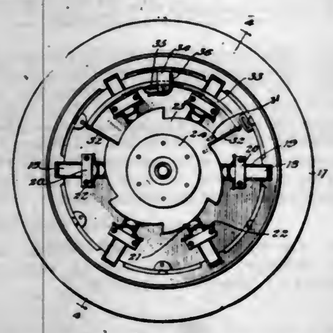
said side frames, trip mechanism carried by said oscillatory member and means for actuating said trip mechanism to operate said hammer.

1,456,448. EGG BEATER. CHRISTIAN E. JENSEN, Cuyahoga Falls, Ohio. Filed Aug. 28, 1922. Serial No. 584,881. 2 Claims. (Cl. 259—109.)



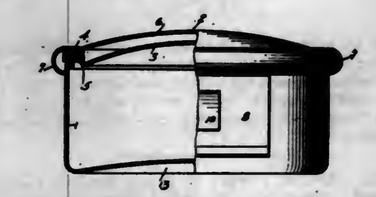
1. A device of the class described comprising a receptacle, a cover for the same, a casing formed with the cover and having an extension at its lower part providing an exhaust and a rest for the casing also having an inlet opening adjacent one side thereof, a shaft passing through the casing and into the receptacle, a water wheel on the shaft and arranged in the casing, and a beater on the shaft.

1,456,449. REPAIR SPOKE SOCKET. MOSES K. JOHNSON, Unadilla, Ga. Filed Aug. 1, 1922. Serial No. 579,010. 3 Claims. (Cl. 301—70.)



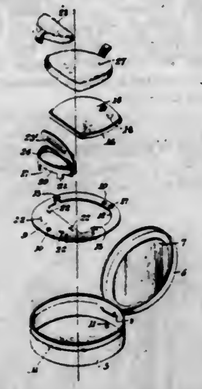
3. A fastening device to secure a spoke to a felly consisting of a plate attachable to the felly, a stud extending from the plate in continuation of the spoke intermediate the spoke and felly, said stud having a shoulder, clamping plates surrounding said spoke and stud with ends in abutment with said shoulder, and fastening means passing through said plates, studs and spoke.

1,456,450. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J. Filed Jan. 4, 1923. Serial No. 610,615. 2 Claims. (Cl. 132—83.)



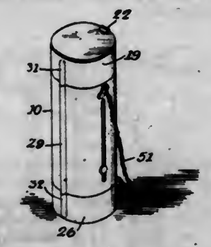
1. In a cover construction for vanity cases, a cover member having angular faces adapted to form a support for a mirror or the like, a bead formed in said cover and inwardly disposed with respect thereto, and a bezel of resilient metal adapted to be received behind said bead and exert sufficient pressure on the mirror to retain the same in contact with the aforesaid angular faces.

1,456,451. VEHICLE WHEEL. EDWARD JOSEPH KRPATA, Higganum, Conn. Filed Apr. 18, 1922. Serial No. 554,843. 3 Claims. (Cl. 301—28.)



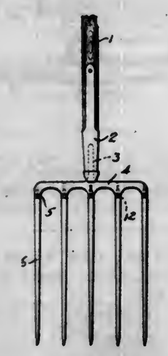
1. A device of the class described for locking demountable rims on wheel structures, comprising a plurality of latches slidably mounted on the wheel structure, a spring associated with each latch for normally retaining it out of engagement with the demountable rim, a cam rotatably mounted on the wheel structure and cooperating with the latches for forcing them into engagement with the demountable rim, and means carried by the cam for engaging with means carried by the wheel structure to retain the cam in different positions.

1,456,452. MASSAGE DEVICE. JOHN OLOF LINDEN, Albuquerque, N. Mex. Filed Sept. 13, 1921. Serial No. 500,332. 8 Claims. (Cl. 125—60.)



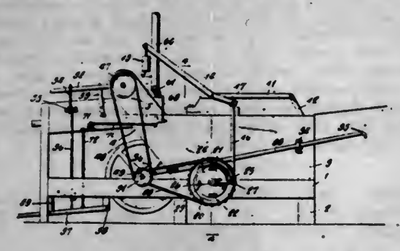
1. A massage device, comprising an open top receptacle, and a chambered cover closing said receptacle, said cover being locked to the receptacle and provided at its sides with means for protecting the hands of the user.

1,456,453. REFILL FOR VANITY CASES. WILLIAM LINDENMAYER, New York, N. Y. Filed Nov. 20, 1922. Serial No. 602,201. 9 Claims. (Cl. 132—83.)



6. In a toilet case device, a case, a refill plate having an opening stamped therein, said opening having a curved edge and a straight edge, said plate having upstanding tongues stamped from its material adjacent to the curved edge, said tongues being substantially oppositely arranged, said plate being provided in its solid portion adjacent to its straight edge with spaced slits, a rouge box formed of the material obtained in stamping the opening in the refill plate, said rouge box having a straight edge arranged opposite the straight edge of said opening and having a curved edge, said rouge box having depending strips passing through said slits and bent horizontally, and a cover hinged upon the straight edge of the rouge box and having an extension projecting toward the straight edge of the opening, and a powder compact removably mounted upon the refill plate and held in place over said opening by said tongues.

1,456,454. TOILET CASE. WILLIAM LINDENMAYER, New York, N. Y. Filed Dec. 13, 1922. Serial No. 606,614. 2 Claims. (Cl. 132—83.)

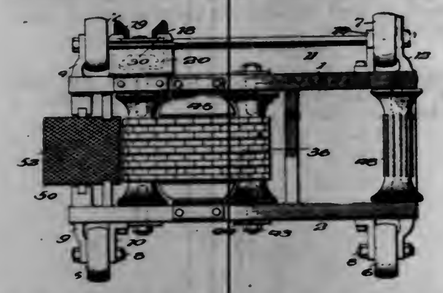


1. A toilet case comprising a relatively long tubular body portion adapted for receiving a relatively long powder compact and having its forward end open, a feeding element mounted at the rear end of the powder compact within the tubular body portion to advance the same forwardly and having angularly arranged resilient extensions which are inclined rearwardly and have frictional engagement with the inner wall of said tubular body portion, said angularly arranged extensions permitting of the forward movement of the feeding device while opposing its rearward movement with respect to the tubular body portion, means extending exteriorly of the tubular body portion, to move the feed device forwardly within the tubular body portion, a rouge compact receiving receptacle pivotally connected with the forward open end of the tubular body portion and having its bottom adapted to cover the same, and a lid pivotally connected with the open end of the rouge receptacle to cover the same and provided upon its inner side with a mirror.

1,456,455. PITCHFORK. ERIC LUUKKONEN, New York, N. Y. Filed Nov. 1, 1921. Serial No. 512,030. 1 Claim. (Cl. 294—49.)

In a pitch fork of the character described, a cross-bar provided with a plurality of sockets each presenting at the front thereof an annular rounded shoulder, each of said sockets being in line with a bore extending through the cross-bar to the side opposite the side of the sockets, a tine having an end shaped to fit in said socket and presenting a shoulder to mate with the shoulder of the socket arranged therein, said bore being adapted to receive a tool for ejecting from the socket said tine when a change of the same is desired.

1,456,456. FRUIT-WASHING MACHINE. LAURITZ N. MILLER, Eugene, Oreg. Filed Dec. 21, 1922. Serial No. 608,271. 5 Claims. (Cl. 146—194.)

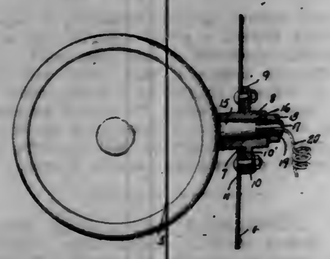


1. A prune washing machine comprising a supporting frame, a tank thereon, a prune receiving and washing basket pivotally supported in said tank, means for imparting vibratory motion to said basket and moving the same to dumping position at a predetermined time, conveying means for receiving the washed prunes from said basket and delivering the same from the tank, and spraying means in proximity to said conveying means for washing the prunes being elevated thereon.

1,456,457. AUTOMOBILE AND TRUCK TURNER. ALBERT GEORGE MOLNIAR, Albion, Mich. Filed July 2, 1921. Serial No. 482,064. 11 Claims. (Cl. 180—1.)

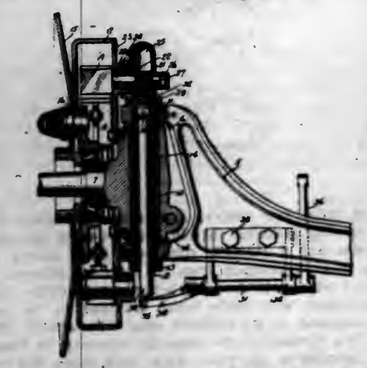
1. A motor vehicle turning device including a wheel frame adapted to receive the drive wheel of a motor

vehicle and having supporting wheels arranged transversely with relation to the wheel of the motor vehicle and means for transmitting motion from the drive wheel



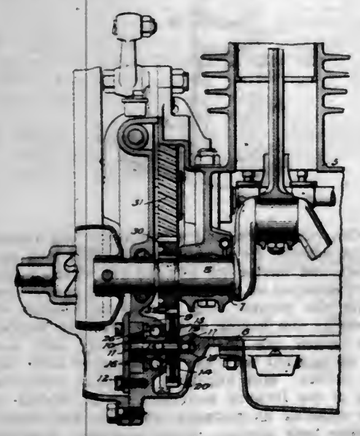
of the vehicle to the said transversely disposed wheels, said means including clutch mechanism for enabling the device to be moved laterally in either direction.

1,456,458. ROLL COVER. CARL NORDELL, Gilbertville, Mass. Filed Sept. 19, 1922. Serial No. 589,224. 8 Claims. (Cl. 19—143.)



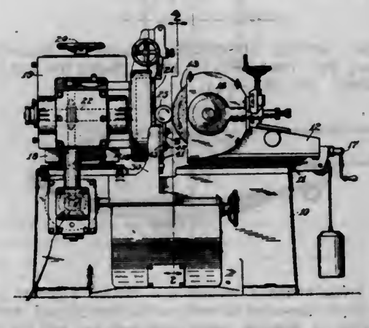
1. A cover for a roll of the kind described, comprising, as a new article of manufacture a single member constituting a permanently closed annulus and having a central band portion and a pair of inwardly directed, definitely offset, peripheral flanges at opposite sides of the band portion, said portions constituting a single integral finished structure completely permanently preformed into said central band portion and flanges before being applied to the roll.

1,456,459. LAMP SUPPORT. VICTOR W. PAGE, Kew Gardens, N. Y. Filed Jan. 6, 1922. Serial No. 527,513. 1 Claim. (Cl. 240—7.)



A lamp support comprising a socket in the form of a tubular member having a tapered internal passage, said tubular member being split to provide resiliency, oppositely disposed lugs carried by said split tubular member, a lamp, a tapered stem carried by the lamp and adapted to project through said tubular member, a screw-threaded extremity formed on said stem and adapted to receive a nut to prevent movement of the stem longitudinally of said tubular member, and a bolt passing through said lugs for contracting said tubular member about the stem to prevent rotary movement of the stem within the tubular member.

1,456,460. FRONT WHEEL BRAKE. VICTOR W. PAGE, Kew Gardens, N. Y. Filed Jan. 12, 1922. Serial No. 528,804. 3 Claims. (Cl. 188—194.)



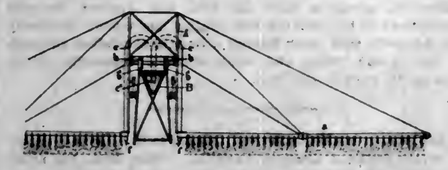
2. In combination with a steering wheel and its axle, a hollow king bolt for pivotally mounting said steering wheel, a brake carried by said steering wheel, means for operating said brake, said means comprising a cam, a shaft upon which said cam is mounted, a pinion gear carried by said shaft, a rack member movable through the hollow king bolt and having its rack portion engaging the pinion gear and means carried by the axle and adapted for engagement with said rack member to move the same longitudinally of the hollow king bolt to actuate the brake-operating means.

1,456,461. OIL PUMP. VICTOR W. PAGE, Kew Gardens, N. Y. Filed Mar. 29, 1922. Serial No. 547,899. 3 Claims. (Cl. 184—6.)

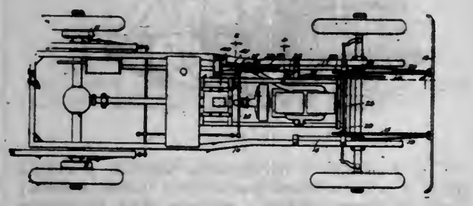
3. In a motor, an oil pump housing formed on the front wall of the crank case of said motor, an oil pumping mechanism mounted in said housing, a removable plate for closing said housing and retaining the oil pumping mechanism in position, a shaft projecting inwardly of the housing into the crank case housing, a gear carried by said shaft, and a gear carried by the motor crank shaft and meshing with said last-mentioned gear to drive the oil pumping mechanism.

1,456,462. CENTERLESS GRINDER. MILTON O. REEVES, Columbus, Ind., assignor to Reeves Pulley Co., Columbus, Ind., a Corporation of Indiana. Original application filed May 19, 1919, Serial No. 298,008. Divided and this application filed July 14, 1922. Serial No. 574,874. 11 Claims. (Cl. 51—116.)

1. In a grinding machine, the combination of a feed wheel, a grinding wheel, said two wheels having working faces which converge at an intermediate point to form a grinding throat and which move past such point in opposite directions, a tiltably mounted feed bar for supporting articles to be ground in said throat and movable to move them into or out of such throat, and a stop on said feed bar for positioning thereon articles to be ground.



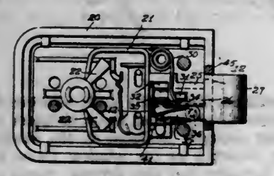
1,456,463. MEANS FOR LUBRICATING LEAF SPRINGS. JAMES I. RICHEY, Cincinnati, Ohio. Filed Nov. 18, 1920. Serial No. 424,832. 7 Claims. (Cl. 267—37.)



1. A device of the character specified, comprising in combination with a leaf spring, a housing for said spring, said housing comprising a middle section, said middle section having a widened portion intermediate its length, end sections pivotally secured to said middle section, cover plates for said end sections, and lubricant boxes arranged to be inserted into the widened portion of said middle section at opposite sides of the spring.

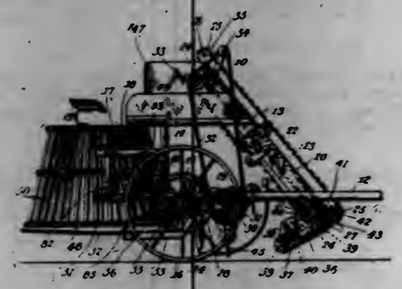
1,456,464. AUTOMATICALLY-WORKING IRRIGATION APPARATUS. EDMOND ROLLAND, Boulogne-sur-Seine, France. Filed Aug. 28, 1921. Serial No. 494,650. 6 Claims. (Cl. 299—52.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A watering apparatus comprising a frame, guide rails carried thereby across the surface to be watered, a carriage adapted to move on said rails, watering tubes mounted on said carriage, a water trough carried by the frame, feed pipes connected to the watering tubes and dipping into said water trough, endless cable means for reciprocating the said carriage along the guide rails, together with a shut off device, located in the feed pipe of each water tube, and with means for actuating said shut-off device through the movement of the carriage.



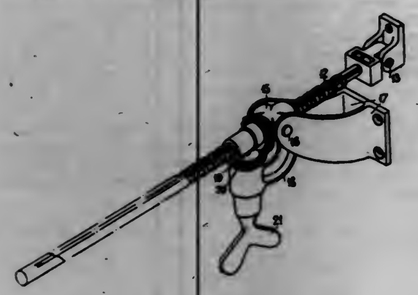
1,456,465. SAFETY DEVICE FOR MOTOR VEHICLES. ANDREW RYGIEL and JULIUS STERN, New York, N. Y. Filed Apr. 4, 1922. Serial No. 549,396. 4 Claims. (Cl. 180—83.)

1. In combination with a motor vehicle including brakes and an emergency brake lever for operating the brakes, safety devices of the class described comprising a bumper, rack bars slidably mounted on the vehicle frame supporting the bumper, spring means associated with the bumper for absorbing the shock when the bumper strikes an object, an arc-shaped bar mounted on the vehicle frame and co-operating with the emergency brake lever, means interposed between the rack bars and the curved bar for utilizing the movement of the bumper to operate the curved bar to release the brake lever, and a spring for positively operating the brake lever when it is released.



1,456,466. REVERSIBLE BOLT LOCK. WILLIAM NICHOLS SAUERBREI, Richmond Hill, N. Y., assignor to Wilson Bohannan, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 3, 1921. Serial No. 449,277. 5 Claims. (Cl. 292—244.)

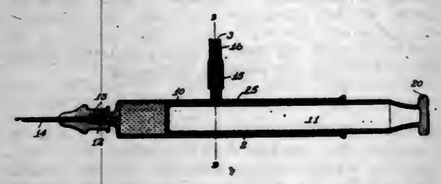
1. In a lock, a casing having a polygonal bolt head opening, a bolt having a shank of circular cross sectional contour and a beveled head slidingly engaging the said bolt head opening, a yoke provided with a bearing at the forward end thereof, said bearing being formed to provide an opening extending through its walls adjacent to the rear end thereof, said bolt having its shank arranged to slide and rotate in the bearing and to extend into the opening at the rear end of the bearing, a collar secured on said bolt shank and received within the said opening



of the bearing, whereby the axial movements of the bolt are limited, and a spring pressed lever fulcrumed on the said yoke and having an arm engaging the said collar to normally hold the said bolt against forward movement in the bearing and against movement relatively to the yoke, said lever having a handle extending through a slot in the casing and being operable exteriorly of the casing to release the bolt.

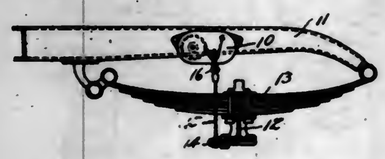
1,456,467. HAY-COCKING MACHINE. AVILA SAVIGNAC, Joliette, Quebec, Canada. Filed Sept. 12, 1921. Serial No. 500,174. 12 Claims. (Cl. 214—9.)

1. In a machine of the character described, a wheeled frame, a hay cock mechanism mounted therein, including a pair of hinged sections, a rotatable shaft for opening said sections, and means for driving said shaft and causing the sections to be opened.



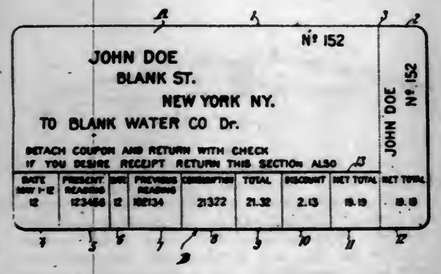
1,456,468. OPERATING DEVICE FOR SWINGING WINDOWS. WILLIAM SCHONFIELD, St. Mary Axe, London, England. Filed Mar. 7, 1922. Serial No. 541,828. 2 Claims. (Cl. 268—20.)

1. An apparatus for raising and lowering a skylight set at an angle to projecting walls or piers comprising a threaded rod pivotally mounted on the window sash, a nut pivotally mounted on the window frame adapted to receive said threaded rod and driving means carried by said nut adapted to rotate said threaded rod.



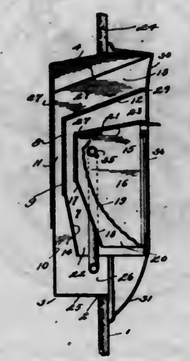
1,456,469. SYRINGE. OSCAR O. R. SCHWIDETZKY, Hasbrouck Heights, N. J., assignor to Becton, Dickinson & Co., Rutherford, N. J., a Corporation of New Jersey. Filed Mar. 10, 1921. Serial No. 451,129. 2 Claims. (Cl. 128—218.)

1. A syringe, comprising a barrel provided with an outlet at one end and an inlet at the side, and a valve plunger mounted to slide and to turn in the said barrel and having means adapted to register with the said



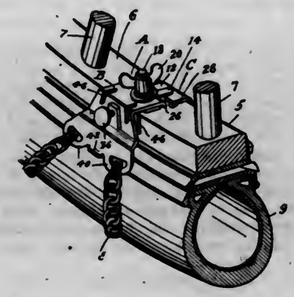
inlet to connect the latter with the outlet end of the barrel, the said means on turning the valve plunger moving out of register with the inlet.

1,456,470. SHOCK ABSORBER. HARRY B. SHAEFFER, Altoona, Pa. Filed Nov. 18, 1921. Serial No. 516,154. 2 Claims. (Cl. 267—10.)



1. A shock absorber including a casing, a spring tensioned drum supported therein, a stationary post within the casing, a flexible band attached to said spring tensioned drum and to the post, and a floating pulley resting in the bight of said band between the post and the drum, and means for connectnig the pulley with a vehicle part.

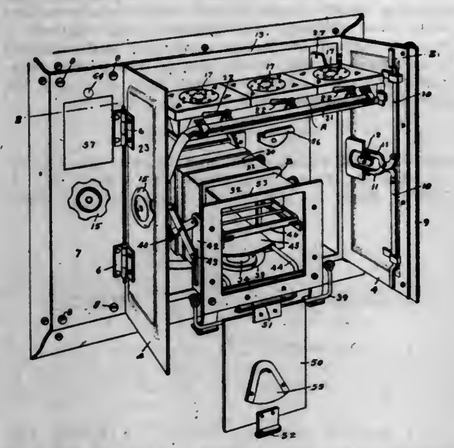
1,456,471. BILL FORM. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed July 8, 1919, Serial No. 309,435. Patent No. 1,378,627. Divided and this application filed May 6, 1920. Serial No. 379,220. 2 Claims. (Cl. 283—60.)



1. A bill-blank having at its head a printed business heading, and spaces for printing the address of the customer and the ledger number of his account, and having at its foot a series of laterally aligned spaces, each suitably headed to receive numbers indicating one of the following items; the date of a recent meter reading, the state of the meter at that reading, the date of a previous meter reading, the state of the meter at the previous reading, the difference between the readings, and the discount, and two spaces for receiving the net total, the second net total space being formed on the right marginal portion of the bill, said marginal portion being detachable along a perforated line.

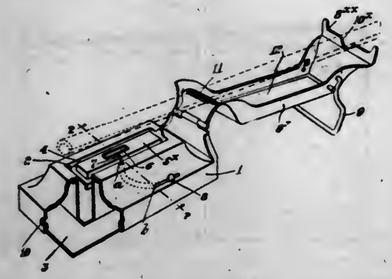
1,456,472. WALL HEATER. HENRY E. STEIN, Columbus, Ohio, assignor to The Quad Stove Mfg. Co., Columbus, Ohio, a Corporation of Ohio. Filed Dec. 11, 1922. Serial No. 606,335. 1 Claim. (Cl. 126—90.)

A heater of the class described comprising a casing, a supplemental casing located therein and spaced therefrom to provide air passages, a burner chamber located in the supplemental chamber and being spaced therefrom to also provide air passages, said casing having an air chamber at its lower end and common to the lower ends of all passages, a closure for the casing, and a supplemental casing having openings therein which register with the outlet ends of the respective passages.



1,456,473. ADJUSTABLE ANTISKIDDING DEVICE. HARRY SUMMERFIELD, St. Paul, Minn. Filed Nov. 5, 1920. Serial No. 421,994. 6 Claims. (Cl. 152—14.)

1. An adjustable antiskidding device for vehicle wheels comprising a pair of clamping members having overlapping ends, means adapted to secure said ends together, rim engaging claws formed on said members, anti-skidding means positioned on either side of said claws on each of said members, and a felly engaging means attached to the side of one of said members adapted to adjustably engage the felly to rigidly clamp said members thereto.



1,456,474. FOLDING COOK STOVE. MAX SUSSMAN, Detroit, Mich. Filed May 4, 1922. Serial No. 558,529. 11 Claims. (Cl. 126—37.)

1. A folding cook stove, comprising a casing adapted to be imbedded in a wall, a burner frame movably mounted in the casing, lazy tongs connecting the burner frame to the rear wall of the casing, doors connected

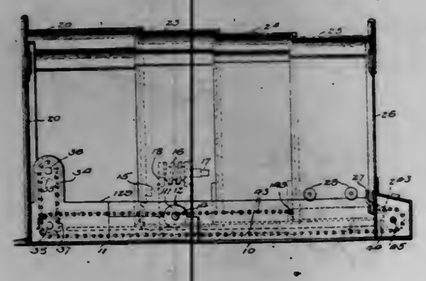
to the casing, and adapted to support the burner frame when the latter is withdrawn from the casing.

1,456,475. BURNER FOR SOLID FUEL. CARLO TOMMASI, JOHN SANDHOLM, HEINRICH DANNEEL, and AUGUSTO BUACH, Basel, Switzerland, assignors to Elektrizitätswerk Lonza, Basel, Switzerland. Filed Feb. 20, 1922. Serial No. 538,041. 5 Claims. (Cl. 158—97.)

1. A burner comprising means for supporting a block of fuel; a stop; means for urging the fuel block towards the stop; and means for varying the position of the stop.

1,456,476. PICTURE-MOLDING HOOK. ERNEST B. TRACY, Seattle, Wash. Filed Oct. 13, 1921. Serial No. 507,451. 1 Claim. (Cl. 40—145.8.)

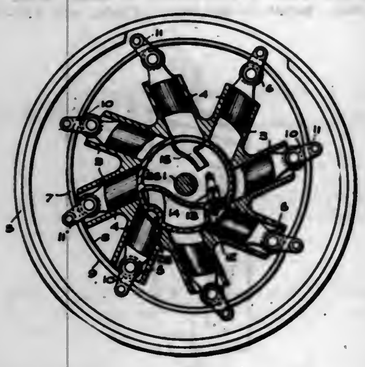
A picture molding hook composed of a relatively flat strip of metal bent into substantially S-shaped formation to provide two reversely arranged hook elements, one of said hook elements being adapted to engage a molding.



and the other hook element provided with a downwardly extending struck-out tongue constituting a depending finger and a central aperture, said depending finger extending below but in a plane with the bend of the lower hook element, said aperture being adapted to receive a loop of the picture suspending cord supported by said hook element, which cord is then passed downwardly and around said depending finger to control the same against creeping relative to the hook.

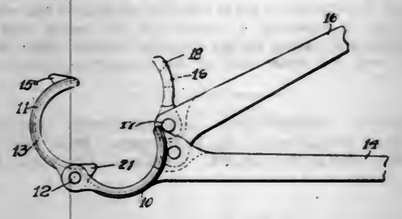
1,456,477. BUSHING FOR AUTOMATIC GRINDERS. ALBERT E. WHITE, Eau Claire, Wis. Filed Jan. 3, 1922. Serial No. 526,761. 6 Claims. (Cl. 51—236.)

1. A grinding apparatus including a feeding and centering device having a recess in which the article to be ground is seated, a bushing within said recess of non-magnetic hard metal, a rotary magnetic chuck for rotating the article in said bushing, and a grinding device for the article.



1,456,478. COLLAPSIBLE STRUCTURE. SAMUEL WHITE, Brooklyn, N. Y. Filed Nov. 20, 1922. Serial No. 602,310. 7 Claims. (Cl. 189—1.)

5. A collapsible structure including a base, a superstructure on the base at one end, super-structure sections movable on the base to telescope said additional sections in the first mentioned super-structure.

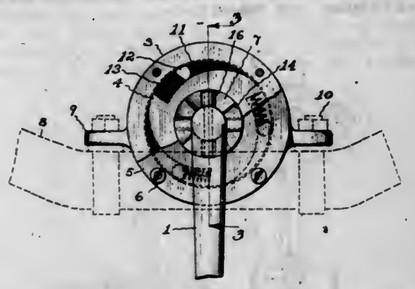


1,456,479. COMBINED INTERNAL-COMBUSTION AND TURBINE ENGINE. DALE SYDNEY ATKINSON and JAMES MCKENZIE, Toronto, Ontario, Canada. Filed Apr. 15, 1920. Serial No. 374,140. 4 Claims. (Cl. 60—13.)

4. In a combined internal combustion and turbine engine, the combination with a rotatable power shaft, cylinders mounted about said power shaft, a single combustion chamber, intake and exhaust ports communicating with said cylinders upon their rotation, pistons in said cylinders, means for actuating said pistons, a water jacket in proximity to said combustion chamber, a rotor secured to said power shaft, a stator, opposed buckets in the rotor and stator and nozzles respectively connecting the exhaust port and water jacket with the stator for simultaneously admitting the exhaust gases from the cylinders and the steam from the water jacket

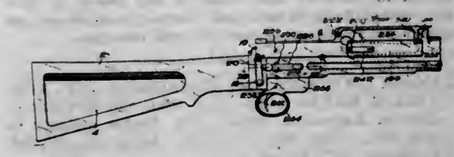
into the opposed buckets, said nozzle connecting with the exhaust port extending through the nozzle connecting with the water jacket.

1,456,480. PIPE WRENCH. GEORGE D. BECKER, Saginaw, Mich. Filed Apr. 5, 1922. Serial No. 549,708. 1 Claim. (Cl. 81—66.)



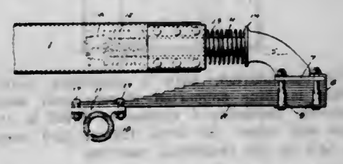
A pipe wrench comprising a pair of segmental clamping sections, one of which is provided with a handle, a second handle pivotally connected to the first named handle, means connected with the second named handle and adapted for engagement with the other of said sections for drawing the free end thereof toward the free end of the first named section, the working faces of said clamping sections being longitudinally grooved, and interchangeable bushings for said sections embodying ribs removably engaging in the grooves thereof, said grooves affording spaces receiving the flange of a pipe during engagement of the working faces of the wrench with the pipe.

1,456,481. SAFETY CRANKING DEVICE. OSCAR CROCKETT, Kansas City, Mo., assignor of one-half to Walter B. Crockett, Kansas City, Mo. Filed July 26, 1921. Serial No. 487,788. 3 Claims. (Cl. 123—185.)



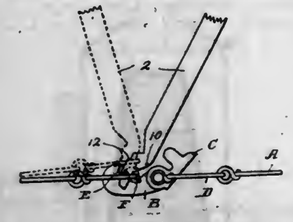
1. In a safety cranking device for engines, the combination with a starting crank provided with a clutch member adapted to engage the engine shaft, a bearing member on which said starting crank is slidably and rotatably mounted, said bearing member being formed with a depression or recess, a clutch disk within said recess or depression and clutch means interposed between the clutch disk and the bearing member, said clutch means permitting movement of the clutch member in one direction only, said clutch disk having a hub portion with notches therein having cam portions, projections on said starting crank to engage said notches upon movement in one direction and to be forced from said

notches by said cam portions upon movement in the other direction, and a cover plate for said bearing member, said cover plate being apertured to receive the hub



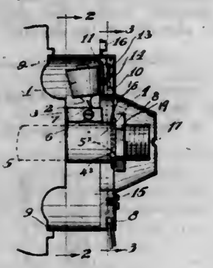
portion of the clutch disk and provide a bearing therefor and to retain said clutch disk in proper position within said bearing.

1,456,482. FIREARM. ANDRÉ VIRGILE PAUL MARIE BERTHIER, Neuilly-sur-Seine, France, assignor to United States Machine Gun Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 20, 1918. Serial No. 263,277. 12 Claims. (Cl. 42—3.)



1. In a gun operable as an automatic or semi-automatic gun, in combination, a receiver, a sear normally in operative position, a trigger, intermediate connections between said sear and said trigger whereby said sear will be moved from operative into inoperative position when said trigger is pulled and then will be automatically returned into operative position, a second sear movable upon a vertical pivot upon one wall of said receiver and normally in operative position to cooperate with said trigger-operated sear in semi-automatic firing, and means to render said second sear inoperative in automatic firing.

1,456,483. SUSPENSION SPRING FOR AUTOMOBILES. GEORGE H. DEIN, Woodhaven, N. Y. Filed Sept. 18, 1920. Serial No. 411,034. 3 Claims. (Cl. 267—28.)

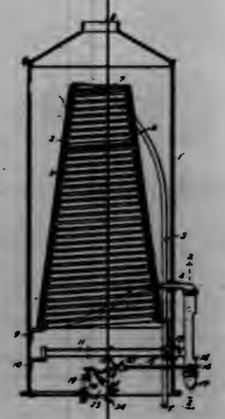


1. The combination with a vehicle frame including side and end bars; of spring supporting means therefor comprising front and rear cross bars, leaf springs secured at one end to said cross bars and arranged parallel with the side bars of said frame, axles attached to said springs, stub shafts carried by said cross bars and extended through said end bars of the frame, bushings carried by said end bars, in which said stub shafts are mounted, coiled spring mounted on said shafts on opposite sides of said end bars, and means carried by said shafts for holding said springs in operative position.

1,456,484. TOOL FOR APPLYING AND REMOVING TIRE CHAINS. LEROY D. FALCONER, Bethel, Kans., assignor to Edward E. Stephens, Kansas City, Mo. Filed Jan. 20, 1922. Serial No. 580,642. 1 Claim. (Cl. 284—78.)

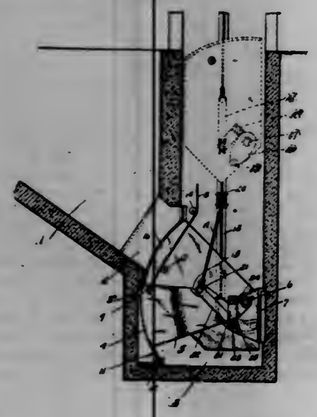
A tool of the character described consisting of a lever of U-shape configuration in cross section to provide two spaced parallel flanges, a pin uniting said flanges near one end and constituting a fulcrum, a flat transverse member uniting said flanges near the other end to constitute a fulcrum, a nose on the flanges extending forwardly of the last-mentioned fulcrum, and a series of shoulders on the lever.

1,456,485. TIMER. JESSE EDWIN HIGBY, Whiting, Kans. Filed Sept. 6, 1919. Serial No. 322,093. 1 Claim. (Cl. 200—24.)



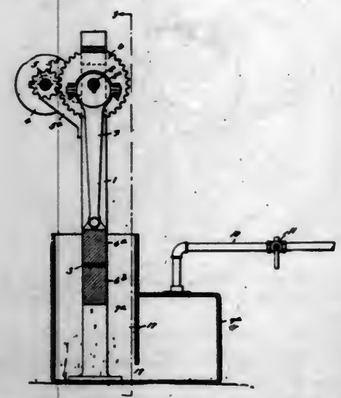
A timer for internal combustion engines having a rotatable shaft, said timer comprising an oscillatory shell, an insulating disc carried by the shell, stationary contacts carried by said insulating disc, a clamping sleeve secured to said shaft and having outwardly turned ends, an arm having one end extending between the outwardly turned ends, a shouldered pivot pin for pivotally securing said arm between said outwardly turned ends, a roller rotatably carried by said arm, said roller being a section of a cone, and a spring secured at one end to said pivot pin and arranged to bear at its other end on the pivted arm, whereby the roller is kept in close engagement with said stationary contacts.

1,456,486. COMPOUND FOR CLEANING ALUMINUM. CATHERINE M. HEMEN, Washington, D. C. Filed Aug. 7, 1919. Serial No. 315,948. Renewed Oct. 4, 1922. Serial No. 592,442. 1 Claim. (Cl. 87—5.)



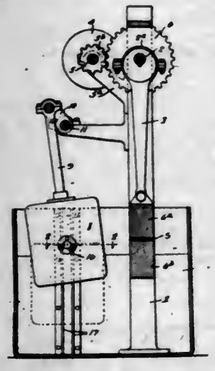
A cleaning composition formed of one pound white castile soap, one ounce oxalic acid, one ounce zinc oxide, one ounce bicarbonate of soda, one-fourth ounce gum tragacanth, six quarts of soft water, together with a sufficient quantity of a fine abrasive to hold the materials in a mixture.

1,456,487. WATER HEATER. GERMAINE MOMBLOOSS, New York, N. Y., assignor to Joseph Struelens, New York, N. Y. Filed Jan. 21, 1922. Serial No. 530,928. 5 Claims. (Cl. 67—116.)



1. A water heater which comprises a pilot light, a thermostatic element associated therewith and movable in accordance with the variations in the condition of the pilot light, an electrical contact adapted to be engaged by the thermostatic element in one position thereof, and manually operable means for positively holding the thermostatic element off the contact.

1,456,488. HOISTING APPARATUS. ZENAS E. COLBY, Bay City, Mich. Filed Feb. 11, 1921. Serial No. 444,089. 9 Claims. (Cl. 214—125.)

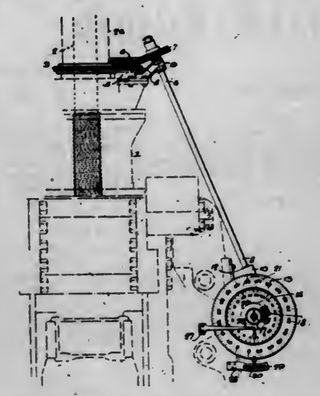


1. The combination with a chute, of a hoisting apparatus comprising a bucket, bale bearings thereon and a bale secured thereto, a flexible connection for raising and lowering said bucket, a support, a gate pivoted to said support and having seats formed therein adapted to receive the bale bearings, hubs on the bucket, and seats in the support adapted to receive said hub to allow the bucket to swing into loading position with relation to the chute.

1,456,489. MACHINE FOR CAMBERING AND TEMPERING METAL. CHRISTIAN GIRL and HERBERT S. JANDUS, Kalamazoo, Mich.; said Jandus assignor to said Girl. Filed Mar. 13, 1922. Serial No. 543,489. 22 Claims. (Cl. 266—6.)

1. The combination, with a cambering machine including forming elements, of a liquid-containing tank arranged to surround said elements, and means to raise the level of liquid in said tank, thereby to submerge and quench an article acted upon by said elements.

1,456,490. MACHINE FOR CAMBERING AND TEMPERING METAL. CHRISTIAN GIRL and HERBERT S. JANDUS, Kalamazoo, Mich.; said Jandus assignor to said Girl. Filed Mar. 13, 1922. Serial No. 543,490. 7 Claims. (Cl. 266—6.)

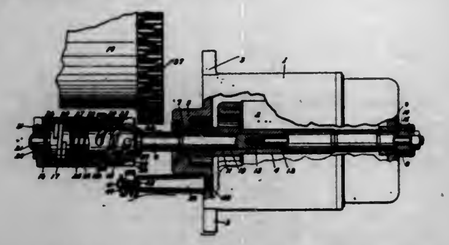


1. The combination, with a quenching tank, of a cambering machine supported therein, and means for mechanically displacing a volume of liquid in the tank to raise and lower the level thereof and quench an article held in the cambering machine.

1,456,491. INDICATOR FOR THE ADJUSTING SCREWS OF ROLLING MILLS. PAUL C. HALDEMAN, Coatesville, Pa., assignor to Lukens Steel Company, Coatesville, Pa., a Corporation of Pennsylvania. Filed June 21, 1920. Serial No. 390,687. 11 Claims. (Cl. 80—56.)

4. The combination in an indicator for the adjusting screws of rolling mills, of an adjusting-screw mechanism, a gear wheel thereon, a diagonal shaft, a bracket supporting the upper end of the shaft, intermediate

gears mounted on said bracket and through which motion is imparted from the screw mechanism to the shaft, a housing supporting the screw and the bracket, a plate secured to the lower portion of the housing, bearings on said plate for the lower end of the diagonal shaft, two dials, one located within the other, a shaft on which the lower dial is mounted, worm gearing between said shaft and the diagonal shaft so that the dial revolves



comparatively slowly, a spider carrying the outer dial, a gear wheel on which the spider is mounted, an intermediate shaft, a gear wheel thereon meshing with the dial gear wheel, a bevel gear wheel on the opposite end of the intermediate shaft, and a bevel wheel on the diagonal shaft that meshes with the first mentioned beveled gear wheel so that the outer dial will revolve at a greater speed than the inner dial, the inner dial having graduations in inches, the graduations of the outer dial being in fractional parts of an inch.

1,456,492. SURFACING COMPOSITION FOR HIGHWAYS AND THE LIKE. DONALD MACKNIGHT HEPBURN, Philadelphia, Pa. Filed June 17, 1921. Serial No. 478,328. 3 Claims. (Cl. 106—31.)

1. The herein described method of practicing highway and like surfacing which consists in mixing with heated water, oxide of calcium of relatively coarse, granular form to provide a thin mortar, then adding thereto and mixing therewith earthy material and when any acids as may be combined therewith shall have become neutralized and whilst the mass is still in a heated relatively dry condition adding thereto and mixing therewith pitchy material and then laying the resultant relatively dry, heated and granular mass upon the highway for immediate use.

1,456,493. ENGINE-STARTING MECHANISM. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Dec. 6, 1920. Serial No. 428,447. 15 Claims. (Cl. 74—7.)

1. In a starting mechanism for gas engines, the combination of a drive shaft; a sleeve mounted on the shaft for limited rotary and axial movement; a pinion loosely mounted on the sleeve; and a spring element fixed to the sleeve and frictionally associated with the pinion and operative to form a driving connection between the shaft and pinion when the engine is being started.

1,456,494. OILPROOF COATING OR IMPREGNATING AGENT. ANDREW J. ROWLAND, Cincinnati, Ohio. Filed Aug. 6, 1920. Serial No. 401,730. 3 Claims. (Cl. 134—16.)

3. A composition of matter consisting of approximately ninety (90) parts of water to approximately ten (10) parts of Irish moss.

1,456,495. MANUFACTURE OF CARBON ELECTRODES. SVEN EMIL SIEURIN, Hoganas, Sweden, assignor to Höganäs Billesholms Aktiebolag, Helsinborg, Sweden, a Company Limited. Filed July 31, 1920. Serial No. 400,515. 3 Claims. (Cl. 204—65.)

1. The process of manufacturing electrodes from a moulded mass of tar and carbon powder which consists in introducing and heating the bodies in gas-tight containers provided with outlets, condensing the escaping tar gases, and after the escape of the said gases removing the bodies from the container and exposing them to a finishing burning.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 310—No. 5. TUESDAY, MAY 29, 1923. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

ADJUDICATED PATENTS.

(U. S. C. C. A. Mass.) Moses patent, 1,333,331, claims 11, 13, 15, 17, 19, 22, 23, 25, for generating apparatus for Ford automobiles, *Held* restricted to special form, and not infringed. *Moses* v. *Lalime & Partridge*, 287 Fed. Rep., 37.

(U. S. C. C. A. N. Y.) Perkins reissue patent, 13,436, claims 13, 28, 30, 31, and 38, for glue and method of making it, *Held* not infringed. *Perkins Glue Co.* v. *Standard Furniture Co.*, 287 Fed. Rep., 109.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,353,910, L. H. Johnson, Telephone system, decided Apr. 18, 1923, claim 20.

Pat. 1,359,453, J. A. Watson, Oil-purifying apparatus for hydrocarbon engines, decided Apr. 20, 1923, claim 5.

Pat. 1,415,060, L. M. Woolson, Hydrocarbon motor, decided Apr. 20, 1923, claims 1 and 5.

Trade-Mark Index.

Beginning with the issue of June 5, 1923, the index of titles of trade-marks published for opposition will be arranged by classes, taking the place of the alphabetical list of trade-mark titles published for opposition, and the index of titles of trade-marks registered will be arranged by classes, taking the place of the alphabetical list of trade-marks registered.

Disclaimer.

1,429,201.—*William S. Gubelmann*, Buffalo, N. Y. Adding and Recording Machine. Patent dated September 12, 1922. Disclaimer filed May 2, 1923, by the patentee.

Hereby enters this disclaimer to that part of the claims in said specification which read as follows:

"113. In a calculating machine the combination of a plurality of accumulators, a shaft, a plurality of engaging members one for each accumulator of a plurality of said accumulators and mounted on said shaft so as to be caused to rotate therewith, means for operating said shaft to cause said members to rotate a plurality of said accumulators, and actuating means independent of said shaft and said engaging members for actuating said accumulators for accumulating items thereon.

"284. In a calculating machine, the combination of a plurality of sets of accumulators, number keys for controlling the items accumulated on either of said sets of accumulators, a printing device for printing the items accumulated on either of said sets of accumulators, a special sign printing device operable to print a special sign in conjunction with any of the items accumulated on either of said accumulators, a key for controlling operation of said special sign printing device, and operating mechanism for operating said accumulators and item printing device according to the control of said number keys and for operating said special sign according to the control of its keys."

Interference Defined.

Rule 93. An interference is a proceeding instituted for the purpose of determining the question of priority of invention between two or more parties claiming substantially the same patentable invention. In order to ascertain whether any question of priority arises the Commissioner may call upon any junior applicant to state in writing the date when he conceived the invention under consideration. All statements filed in compliance with this rule will be returned to the parties filing them. In case the applicant makes no reply within the time specified, not less than ten days, the Commissioner will proceed upon the assumption that the said date is the date of the oath attached to the application. The fact that one of the parties has already obtained a patent will not prevent an interference, for, although the Commissioner has no power to cancel a patent, he may grant another patent for the same invention to a person who proves to be the prior inventor.

Condition of Applications Under Examination at Close of Business May 18, 1923.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 73,530; Trade-Mark Division, 3,841. Oldest new case May 17, 1923; oldest amended, May 19, 1923. The dates given are 1923 except where * indicates 1922. Divisions. Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended. DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

SWARTWOUT *v.* SKINNER.

No. 1,562. Decided April 3, 1923.

INTERFERENCE—PRIORITY—INOPERATIVENESS.

Where priority had been awarded to Skinner on the ground that Swartwout's structure was inoperative, but it was conceded that the defect would be obviated by the use of a universal-joint connection as one element of the combination instead of the particular connection disclosed, and where such a universal-joint connection was originally mentioned in Swartwout's specification, although eliminated because the Examiner objected that it was not shown in the drawing, *Held* that the application as originally filed so disclosed the invention as to enable any one skilled in the art to understand and practice it, and priority was therefore awarded to Swartwout.

Mr. H. J. Lucke and *Mr. Robt. Watson* for Swartwout.

Mr. H. C. Lord for Skinner.

Before SMYTH, Chief Justice, ROBB, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeal from a decision of the Patent Office in an interference proceeding in which priority of invention was awarded the junior party Skinner (303 O. G., 851).

The invention embraces a steam-engine valve gear, so designed as not to be affected by expansion and contraction of the cylinder, due to changes in temperature incident to operation of the engine. The claims are three in number, of which we here reproduce the 1st, as illustrative of the group:

1. In an engine valve gear, the combination of a rocker oscillating on an axis at a right angle to the engine cylinder axis, a lay shaft parallel to the cylinder axis, and connecting means between the rocker and lay shaft, to operate the latter, said means including universal joints permitting variations in relative position between the shaft and rocker, the lay shaft being movable longitudinally relative to the cylinder, whereby expansion of the cylinder will not vary the angular relation of the lay shaft and the rocker.

The Examiner of Interferences, upon evidence warranting the conclusion, found that Swartwout had proven conception of the invention as early as September 6, 1915. His application was filed on August 23, 1916. And since Skinner, in his preliminary statement, alleged conception in December of 1915 and relied upon his filing date of July 20, 1917, for reduction to practice, it is apparent that he could defeat Swartwout only by successfully challenging operativeness of his structure. This he endeavored to do, but the Examiner, in a carefully-prepared opinion, ruled against him and awarded priority to Swartwout. The same question was raised before the Examiners in Chief, with the same result.

The Assistant Commissioner ruled against Swartwout on the question of operativeness, and therefore awarded priority to Skinner.

When Skinner filed his motion for dissolution, on the ground of the inoperativeness of the Swartwout device, the motion in due course was referred to the Law Examiner, who considered every phase of it. In his opinion he says:

One point of the motion is that Swartwout has not disclosed means including "universal joints" connecting the rocker arm and lay shaft. It is thought that the specific joints shown in Swartwout's drawing may be called "universal joints", but in view of the fact that the original specification stated that ball and socket joints might be substituted for the specific connection shown, whether the joints illustrated are "universal" becomes unimportant; ball and socket joints are universal joints within any meaning attributable to these words in Skinner's patent.

The principal point made in support of the motion rests upon a theory which is not even hinted at in Skinner's specification. It is said that in order to realize the results aimed at by the invention the points of connection of the link E with the lay shaft and rocker arm should remain fixed under cylinder expansion, to accomplish which Skinner fixes the lay shaft in the bearing house J at the frame end of the cylinder. Counsel says that if there were any relative motion of the fixed point of the lay-shaft and the point of pivotal connection of link E and rocker arm, the upper end of link E would move in the arc of a circle around its pivotal point of connection with the rocker arm thus rotating the lay shaft and disturbing the timing of the valves, and causing unequal distribution of steam. As above indicated the specification of Skinner fails to describe or suggest where the derangement of prior art devices due to cylinder expansion occurred, and it failed to state that the relation of parts now relied upon was essential to a realization of the invention. On the other hand it indicates that such realization is dependent principally upon the arrangement of the lay-shaft alongside the cylinder which may move relatively to the cylinder, and a rocker arm mounted on an axis at right angles thereto, connected to the lay-shaft through a link having universal joints.

* * * * * * *

Furthermore, since the expansion of the cylinder is said to be only about fifteen thousandths of an inch, even if the lay shaft were fixed at the outer end of the cylinder as the specification seems to contemplate as a possible construction, the angular motion of the lay shaft due to the change in radial position of link E, under cylinder expansion, would be so very slight that it would apparently not seriously affect the valves. At least it seems reasonable to say that even if the lay shaft were fixed at the outer end of the cylinder some of the benefits of the invention would still be realized. This appears to be the theory of Skinner's specification and it is thought to be correct. From a reading of Skinner's specification it is fair to assume that the fixing of the lay-shaft in the frame-end housing is not an essential feature of the invention, and it is significant that none of the claims bring in this feature. It is concluded that the fixing of the lay-shaft at any particular point from longitudinal motion is not of the essence of the broad invention.

The Assistant Commissioner rested his decision upon the ground that Swartwout has not disclosed means, including "universal joints", connecting the rocker arm and lay shaft, although he suggested that there might be merit in the other contentions advanced by Skinner.

These are combination claims and it in effect is conceded by the Assistant Commissioner that the use of such a joint would obviate the defect assumed to reside in the structure described. In his application as filed, Swartwout says:

A universal connection of suitable construction such as the ball and socket type may be substituted for the specific connection shown.

Inasmuch, however, as he had not illustrated this well-known type of universal joint in his drawing, he was required to cancel the allusion

thereto in his specification. The case, then, amounts to this: The specification sets forth the various elements of the combination and the drawing is illustrative of these particular elements, but in his specification the applicant suggests that a connection of a different and well-known type be substituted for the particular element shown in the drawing.

We agree with the Law Examiner, the Examiner of Interferences and the Examiners in Chief, that, in such circumstances, if the particular element illustrated proved unsatisfactory, any skilled mechanic would have experienced no difficulty in adopting the suggestion of the applicant for the substitution of the element mentioned. In other words, the application as originally filed so discloses the invention as to enable any one skilled in the art to understand and practice it, and that is sufficient. (*Gold* v. *Gold*, 34 App. D. C., 152; 152 O. G., 781.)

As to the other points suggested by the Assistant Commissioner, we are content to adopt the reasoning and conclusion of the other tribunals of the Patent Office.

The decision therefore is reversed and priority awarded Swartwout.

Reversed.

PATENT SUITS.

[Notices under section 4921, Revised Statutes, as amended February 18, 1922.]

Interference Notices.

U. S. PATENT OFFICE, *Washington, May 11, 1923.*

Harry Paul Senay, his assigns or legal representatives, take notice:

An interference has been declared by this Office between the application of The Reese Chemical Company, 1945 East 57th Street, Cleveland, Ohio, for registration of a trade-mark and trade-mark registered November 3, 1914, No. 101,015, to Harry Paul Senay, 601 H Street NE., Washington, D. C. The Office having been unable to secure service upon said Senay, notice is hereby given that unless said Senay, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, May 14, 1923.*

Walter F. McCaleb, his assigns or legal representatives take notice:

An interference having been declared by this Office between the patent granted April 20, 1920, No. 1,337,844, to Walter F. McCaleb, Federal Reserve Bank, Dallas, Tex., and an application for patent filed by William S. Gubelmann, 773 Richmond Avenue, Buffalo, N. Y., and a notice of such declaration sent by registered mail to said McCaleb at the said address having been returned by the post office undeliverable, notice is hereby given that unless said McCaleb, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 27, 1923.*

James P. Williams, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Paragon Electric Company, 329 East Fifth Street, New York, N. Y., for registration of a trade-mark and trade-mark registered January 31, 1899, No. 32,456, to James P. Williams, 39 and 41 Cortlandt Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Williams at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Williams, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 28, 1923.*

The Avery Stamping Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Baldwin Tool Works, Parkersburg, W. Va., for registration of a trade-mark and trade-mark registered January 23, 1906, No. 49,168, to The Avery Stamping Company, corner of Coe and Hamilton Streets, Cleveland, Ohio, and a notice of such declaration sent by registered mail to said The Avery Stamping Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said The Avery Stamping Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 28, 1923.*

Mary A. Morgan, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of the Windsor Soap Co., Inc., 963 William Street, Buffalo, N. Y., and The Van Camp Packing Company, Inc., of Lemcke Annex Building, Indianapolis, Ind., for registration of a trade-mark and trade-mark registered January 22, 1901, No. 35,817, to Mary A. Morgan, 1330 Dorchester Avenue, Boston, Mass., and a notice of such declaration sent by registered mail to said Morgan at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Morgan, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 30, 1923.*

Haight Fruit Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Llewellyn A. Banks, of 108 West Second Street, Los Angeles, Calif., for registration of a trade-mark and trade-mark registered January 14, 1896, No. 27,647, to Haight Fruit Co., of Redlands, Calif., and the Office having been unable to obtain service on said Haight Fruit Co., notice is hereby given that unless said Haight Fruit Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Changes in Classification.

(ORDER No. 2,814.)

U. S. PATENT OFFICE, *Washington, May 4, 1923.*

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 240, Illumination (Division XXX), abolish the following subclasses, with their definitions:

111. Shade, reflector, or globe supports—
112. Candle.
113. Drop.
114. Double clamp.
115. Top.
116. Base.
117. Adjustable and collapsible.
118. Spider.

The patents formerly contained in these subclasses have been placed for the most part in class 240, Illumination, subclasses 125–152, hereinafter established.

In class 240, Illumination (Division XXX), establish the following subclasses and definitions, the patents con-

tained in these subclasses having been taken for the most part from class 240, Illumination, subclass 111, Shade, reflector, or globe supports, and the subclasses indented thereunder, hereinbefore abolished:

125. Combined shade and bowl supports—
126. Socket attached,
127. Socket covers.
128. Shade or bowl supports—
129. Double-ring frame—
130. Socket extension—
131. Clamping jaws,
132. Socket covers—
133 Clamping jaws,
134. Spring ring,
135. Base—
136. Spider,
137. Removable socket collar,
138. Spring frame on bulb,
139. Spring frame on body of chimney,
140. Side,
141. On candle,
142. Combined with shade,
143. Combined with socket or shell,
144. Adjustable,
145. Collapsible,
146. Drop—
147. Hinged,
Interior arms and ring—
148. Crown engaged.
149. Inverted-bowl suspension devices—
150. Combined with light supports.
151. Lens holders or supports—
152. Perforated plate.

125. COMBINED SHADE AND BOWL SUPPORTS. Devices for supporting a shade and a bowl as a unit in relation to the light source. Shades include reflectors, and bowls include globes.
Search this class, subclass 78.

126. COMBINED SHADE AND BOWL SUPPORTS, SOCKET ATTACHED. Unitary shade and bowl supports which are attached or clamped to the body of the electric socket.
Search this class, subclass 129.

127. COMBINED SHADE AND BOWL SUPPORTS, SOCKET COVERS. Unitary shade and bowl supports which embrace or are carried by socket covers.
Search this class, subclass 132.

128. SHADE OR BOWL SUPPORTS. Miscellaneous devices for supporting shades, reflectors, bowls, or globes in position relative to the light source and not hereinbelow classifiable. The support is not an integral part of the shade, etc.

129. SHADE OR BOWL SUPPORTS, DOUBLE-RING FRAME. Includes supports comprising skeleton frames having a flanged ring to engage an electric socket and a ring to which the shade, reflector, bowl, or globe is connected.
Search this class, subclasses 134 and 135.

130. SHADE OR BOWL SUPPORTS, DOUBLE-RING FRAME, SOCKET EXTENSION. Includes supports attached to the socket which are of such length as to support the shade or reflector below the socket.
Search this class, subclass 134.

131. SHADE OR BOWL SUPPORTS, DOUBLE-RING FRAME, SOCKET EXTENSION, CLAMPING JAWS. Includes supports attached to the socket and provided with clamping jaws which engage the rim of the shade or reflector on the inside and outside, below the socket.
Search this class, subclass 133.

132. SHADE OR BOWL SUPPORTS, SOCKET COVERS. Includes supports for shades or reflectors which embrace a cover for the electric socket.
Search this class, subclass 134.

133. SHADE OR BOWL SUPPORTS, SOCKET COVERS, CLAMPING JAWS. Includes supports which also cover the electric socket and clamp the rim of the shade or reflector on the inside and outside.

134. SHADE OR BOWL SUPPORTS, SPRING RING. A spring ring to hold or clamp the rim of a shade, reflector, or globe within the flange of a frame such as a socket cover, socket extension, or skeleton frame.

135. SHADE OR BOWL SUPPORTS, BASE. Supports which engage the shade, reflector or globe at its lower end, the support not being an integral part of the shade, etc.
Search this class, subclasses 98 and 144.

136. SHADE OR BOWL SUPPORTS, BASE, SPIDER. Supports for shades, reflectors, bowls, or globes that consist of a series of radial arms directly engaging the shade, reflector, bowl, or globe, the support not being an integral part of the shade, etc.
Search this class, subclass 144.

137. SHADE OR BOWL SUPPORTS, REMOVABLE SOCKET COLLAR. Supports in the form of collars mounted on the lower part of an electric socket. Upon removal of the collar the shade or reflector slips off the socket.

138. SHADE OR BOWL SUPPORTS, SPRING FRAME ON BULB. Supports in the form of spring frames mounted directly on the bulb.

139. SHADE OR BOWL SUPPORTS, SPRING FRAME ON BODY OF CHIMNEY. Supports in the form of spring frames mounted directly on the middle or bulged portion of the lamp chimney.

140. SHADE OR BOWL SUPPORTS, SIDE. Devices to support a shade or reflector on the side of the light source.
Search this class, subclasses 105 and 110.

141. SHADE OR BOWL SUPPORTS, ON CANDLE. Devices specially designed to support shades, reflectors, or globes upon candles.

142. SHADE OR BOWL SUPPORTS, COMBINED WITH SHADE. Supports attached to electric sockets which are partially or entirely joined or integral with the shade or reflector.

143. SHADE OR BOWL SUPPORTS, COMBINED WITH SOCKET OR SHELL. Supports which are formed integrally with a portion of the socket or its shell.

144. SHADE OR BOWL SUPPORTS, ADJUSTABLE. Supports which are adapted to be adjusted to fit various sizes of shades, reflectors, or globes or to change their position in relation to the light source.

145. SHADE OR BOWL SUPPORTS, COLLAPSIBLE. Supports that are adapted to be folded, collapsed, or knocked down.

146. SHADE OR BOWL SUPPORTS, DROP. Supports that allow the shade, reflector, bowl, or globe to be readily dropped or otherwise moved out of the way relative to the light source to allow access to the light for the purpose of trimming the same.
Search this class, subclass 30, and the subclasses indented thereunder.

147. SHADE OR BOWL SUPPORTS, DROP, HINGED. Hinged supports that allow the shade, reflector, bowl, or globe to be readily moved out of the way relative to the light source.

148. SHADE OR BOWL SUPPORTS, INTERIOR ARMS AND RING, CROWN ENGAGED. Supports comprising a plurality of substantially vertical arms carrying a flanged ring or shield. The ring or shield engages the perforation in the crown of the shade or bowl, and the arms are within the shade or bowl and are attached at their other ends to the light support or electric socket. The shade or bowl may be inverted or uprightly mounted.

149. INVERTED-BOWL SUSPENSION DEVICES. Includes supports such as bands, clips, or fastening means engaging the rim of the bowl for indirect lighting. The bands or clips are carried by or supported from chains, rods, etc.

150. INVERTED-BOWL SUSPENSION DEVICES, COMBINED WITH LIGHT SUPPORTS. The bowl-supporting bands, clips, or fastening devices are provided with brackets or similar means to support one or more electric sockets.

151. LENS HOLDERS OR SUPPORTS. Includes attaching devices to support a lens on a chimney, electric socket, lantern, or light support to modify the direction or color of the rays passing through the lens.

152. LENS HOLDERS OR SUPPORTS, PERFORATED PLATE. Includes devices for attaching a lens or lenses to plates, which are perforated to receive them.

Search Class—
40—CARD, PICTURE, AND SIGN EXHIBITING, subclass 130, Signs, Illuminated.

THOMAS E. ROBERTSON,
Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 29, 1923.

[VOL. 310. No. 5.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 125,503. (CLASS 37. PAPER AND STATIONERY.) HIGHLAND MANUFACTURING COMPANY, Holyoke, Mass. Filed Dec. 2, 1919.

PATRICIAN

Trade mark "Patrician."

Particular description of goods.—Writing, Typewriting, and Printing Papers; Papeteries; Writing, Correspondence, and Index Cards; Tablets, and Pads.

Claims use since about April, 1915.

Ser. No. 135,212. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) PHILIPPS AKTIEN-GESELLSCHAFT, Frankfort on the Main, Germany. Filed July 20, 1920.

Philag

Particular description of goods.—Orchestrions, Pianos, Harmoniums, Organs, Violins, Cellos, Guitars, Zithers, Mandolins, Xylophones, Fifes, Flutes, Trumpets, Trombones, Clarinets, Drums, Timbrels, Cymbals, Hand Organs, Metronomes, Conducting Batons, Accordions, Music Boxes and Chimes, Automatic Orchestrions, Automatic Guitars, Automatic Pianos, Automatic Violins, Automatic Cellos, Automatic Zithers, Automatic Mandolins, Automatic Xylophones, Automatic Accordions, Automatic Music Boxes, Pneumatic Player Pianos, Pneumatic Player Harmoniums, and Pneumatic Player Organs for Reproduction of Artistic Music; Key-Board Self-Playing Attachments for Such Pianos, Harmoniums, and Organs and Attachment and Equipment Parts, Therefor—Namely, Note-Roll Ribbons, Perforated Note Sheets, Complete Mechanisms for Running the Note-Roll Ribbon, Complete Pneumatic Actions, Complete Player Mechanisms, Mechanical Wind Motors, Spool Boxes, Transmission Gear, Tracking Mechanisms for the Note-Roll Ribbons, Valves, Bellows, Mechanical Power Plants, Strings, Organ Pipes, Violin Bows, Batter Heads, Drumsticks, Sound Pipes, Air-Conduit Pipes, Piano Hammers and Keys, and Piano Mechanisms and Phonographs.

Claims use since July 1, 1919.

Ser. No. 136,626. (CLASS 5. ADHESIVES.) ELMER A. GARTEN, Hinton, W. Va. Filed Aug. 30, 1920.

EUREKA

Particular description of goods.—Composition for Stopping Leaks in Tires and for Preserving Rubber.

Claims use since Jan. 10, 1919.

Ser. No. 140,850. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SPECIAL PRODUCTS LABORATORY, INC., O'Fallon, Ill. Filed Dec. 9, 1920.

PYROBALM

No claim being made for the word "Balm" apart from the mark as shown in the drawing.

W

Particular description of goods.—Metal-Punching Tools and Dies.
Claims use since Sept. 15, 1920.

Ser. No. 175,593. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MORRIS H. ASKINN, doing business as Trichitone Laboratories, New York, N. Y. Filed Feb. 6, 1923.

TRICHITONE

Particular description of goods.—Hair Tonic.
Claims use since Jan. 1, 1923.

Ser. No. 175,616. (CLASS 32. FURNITURE AND UPHOLSTERY.) NEVER-STRETCH MATTRESS COMPANY, Philadelphia, Pa. Filed Feb. 6, 1923.

From Dark to Day

Particular description of goods.—Mattresses.
Claims use since Jan. 1, 1923.

Ser. No. 175,642. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAMUEL BLANC, doing business as Blanc Manufacturing Co., Philadelphia, Pa. Filed Feb. 7, 1923.

MENTHOCHLOR

Particular description of goods.—Antiseptic, Astringent, and Deodorant Mouth Wash.
Claims use since Jan. 4, 1923.

Ser. No. 175,667. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE LOWELL COMPANY, New York, N. Y. Filed Feb. 7, 1923.

Particular description of goods.—Compacts for Face Powder.
Claims use since on or about Mar. 1, 1921.

Ser. No. 175,693. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WINCHESTER REPEATING ARMS CO., New Haven, Conn. Filed Feb. 7, 1923.

WINCHESTER SCOUT

Particular description of goods.—Pocketknives.
Claims use since Jan. 15, 1923.

Ser. No. 175,729. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NOLANCE CHEMICAL COMPANY, New Brookland, S. C. Filed Feb. 8, 1923.

NoLance

Particular description of goods.—Salves and Ointments Used as a Remedy for the Treatment of Boils, Carbuncles, Bone Felons, Cuts, and Abrasions.
Claims use since Aug. 1, 1922.

Ser. No. 175,731. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) ONEIDA COMMUNITY, LIMITED, Oneida, N. Y. Filed Feb. 8, 1923.

Bird of Paradise

Particular description of goods.—Silver-Plated Flatware, Silver-Plated Tableware, and Silver-Plated Cutlery.
Claims use since Jan. 8, 1923.

Ser. No. 175,736. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) PYRENE MANUFACTURING CO., Newark, N. J. Filed Feb. 8, 1923.

Guardene

Particular description of goods.—Temperature-Indicating Device for Gas Engines.
Claims use since Dec. 15, 1922.

Ser. No. 175,739. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) RUSONITE PRODUCTS CORPORATION, New York, N. Y. Filed Feb. 8, 1923.

RUSONITE

Particular description of goods.—Radio Rectifiers and Radio Cat Whiskers.
Claims use since Apr. 1, 1922.

Ser. No. 175,741. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE SAYRE-LEVEL RADIO COMPANY, Philadelphia, Pa. Filed Feb. 8, 1923.

PHILRAD

Particular description of goods.—Radio Apparatus—Namely, Receiving Sets Assembled and Unassembled and Parts Thereof.
Claims use since on or about June 1, 1922.

Ser. No. 175,752. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) X-TOL PRODUCTS COMPANY, Dayton, Ohio. Filed Feb. 8, 1923.

X-TOL

Particular description of goods.—Lotion for the Scalp, Face, and Hands.
Claims use since Feb. 1, 1923.

Ser. No. 175,768. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CAPHENIN CHEMICAL COMPANY, Waverly, Iowa. Filed Feb. 9 1923.

DEE-LITE-FU-LAX

Particular description of goods.—Laxative Wafer.
Claims use since Mar. 24, 1922.

Ser. No. 175,790. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HENRY & ALLEN, Auburn, N. Y. Filed Feb. 9, 1923.

HA

Particular description of goods.—Repair Parts for Agricultural Machinery and Implements.
Claims use since January, 1922.

Ser. No. 175,818. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) SPEAR & SUSSKIND, Providence, R. I. Filed Feb. 9, 1923.

S&S

Particular description of goods.—Vest Chains, Lapel or Coat Chains, Key Chains, Bracelet Chains, Watch Chains, Guard or Lorgnette Chains, Neck Chains, Brooch Safety Chains, Eyeglass Chains, Pendants, Cuff Links, Scarf Pins, Cuff Pins, and Finger Rings, Which are Made of or Plated with Precious Metals.
Claims use since Sept. 1, 1922.

Ser. No. 175,820. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Feb. 9, 1923.

STAUFFERS AMPLIFIED

Particular description of goods.—Chemical Fungicide.
Claims use since Oct. 31, 1922.

Ser. No. 175,865. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) CHARLES HARDY, doing business as Advanced Metal Stamping Company, New York, N. Y. Filed Feb. 10, 1923.

AMSCO PRODUCTS

No claim is made to the use of the word "Products" aside from the mark shown in the drawings.

Particular description of goods.—Radio Apparatus—Namely, Rheostats, Potentiometers, Variable Condensers, Vernier Variable Condensers, Variable Grid Leaks, Inductance Switches, and Dials.

Claims use since Apr. 25, 1922.

Ser. No. 175,901. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FREDERIC LEHNHOFF-WYLD, Paris, France. Filed Feb. 10, 1923.

BISIODOL

Particular description of goods.—An Oxyiodide of Bismuth in Camphorated Solution.

Claims use since Nov. 10, 1922.

Ser. No. 175,902. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FREDERIC LEHNHOFF-WYLD, Paris, France. Filed Feb. 10, 1923.

BISCLOROL

Particular description of goods.—An Oxychloride of Bismuth in Camphorated Solution.

Claims use since Nov. 10, 1922.

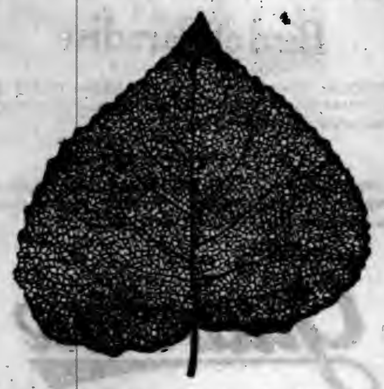
Ser. No. 175,904. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) YARD-O-METER CORPORATION, St. Louis, Mo. Filed Feb. 10, 1923.

Yard-O-Meter
MEASURES AND COMPUTES

No claim is made to the words "Measures and Computes" apart from the trade-mark shown.

Particular description of goods.—Devices for Computing and Measuring Fabrics.

Claims use since early part of April, 1922.



Ser. No. 175,918. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CONDÉ, PERFUMER, New York, N. Y. Filed Feb. 12, 1923.

FLEURS CAPTIVES

Particular description of goods.—Face Powders, Face Creams, Perfumes, Toilet Waters, Rouges, Hair Tonics, Hair Oils, Dentifrices, Tooth Powders, Nail Polishes, Deodorizing Preparations, and Sachet Powders.

REZISTEEL

Particular description of goods.—Ice Skates.

Claims use since Oct. 26, 1921.

Ser. No. 175,977. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) AMORE DRUG & CHEMICAL COMPANY, New York, N. Y. Filed Feb. 13, 1923.

Particular description of goods.—External Remedies for Skin Diseases, More Particularly Eczema, Pimples, Blackheads, and Itch.

Claims use since July 1, 1922.

Ser. No. 176,000. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) SIMONDS SAW AND STEEL COMPANY, Fitchburg, Mass. Filed Feb. 18, 1923.

PONTIAC

Particular description of goods.—Saws.

Claims use since March, 1900.

Ser. No. 176,012. (CLASS 12. CONSTRUCTION MATERIALS.) BOLCOM CANAL LUMBER CO., Seattle, Wash. Filed Feb. 14, 1923.

SPEED GETS EM

Particular description of goods.—Laths and Lumber.
Claims use since June, 1920.

Ser. No. 176,226. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ST. LOUIS BRASS MANUFACTURING COMPANY, St. Louis, Mo. Filed Feb. 17, 1923.

MAZE-LITE

Particular description of goods.—Electrical-Lighting Fixtures.
Claims use since Mar. 1, 1922.

Ser. No. 176,359. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PALMER-BEE COMPANY, Detroit, Mich. Filed Feb. 20, 1923.

MILL PB TYPE

No claim is made to the exclusive appropriation of the words "Mill Type" apart from the mark shown on the drawing.
Particular description of goods.—Speed Reducers, Shaft Couplings, Friction Clutches, Hoists, Jacks, and Cranes.
Claims use since Jan. 8, 1923.

Ser. No. 176,400. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE CONNECTICUT TELEPHONE & ELECTRIC COMPANY, INCORPORATED, Meriden, Conn. Filed Feb. 21, 1923.

SODION

The trade-mark consists of the arbitrary word "Sodion."
Particular description of goods.—Electron Tubes, Sockets for Electron Tubes, Rheostats, Amplifiers, and Radio Receiving Sets.
Claims use since about Feb. 14, 1923.

Ser. No. 176,407. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MARCUS A. HEYMAN, New York, N. Y. Filed Feb. 21, 1923.

MAIKO

The word "Maiko" means "Dancing Girl;" trade mark "Maiko."
Particular description of goods.—Piece Goods Made of Silk.
Claims use since on or about Dec. 1, 1922.

Ser. No. 176,419. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE MURRAY COMPANY, Dallas, Tex. Filed Feb. 21, 1923

SUPER CLEANER

No claim is made to the exclusive right to use the word "Cleaner" apart from the mark shown.
Particular description of goods.—Cotton Gins and Cotton-Gin Machinery.
Claims use since Jan. 1, 1923.

Ser. No. 176,436. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) WILLIAM C. ADAMS CO., Boston, Mass. Filed Feb. 23, 1923.

Smada

Particular description of goods.—Arc and Electric Welding Goggles.
Claims use since Sept. 15, 1922.

Ser. No. 176,449. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) THE C. E. Z. COMPANY, Chicago, Ill. Filed Feb. 23, 1923.

C.E.Z.

Particular description of goods.—House Numbers, Changeable Window Display Signs, and Sign Reflectors.
Claims use since Jan. 18, 1923.

Ser. No. 176,503. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) ROTHSCHILD & COMPANY, Chicago, Ill. Filed Feb. 23, 1923.

Particular description of goods.—Pearl Necklaces.
Claims use since July 1, 1922.

Ser. No. 176,635. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) MARINETTE ELECTRIC CORPORATION, Marinette, Wis. Filed Feb. 26, 1923.

BLUE STREAK

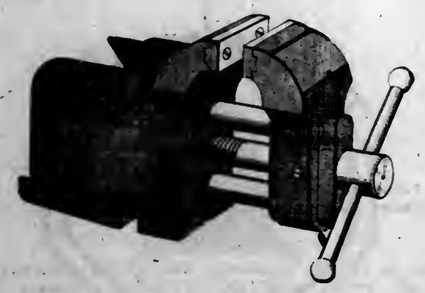
Particular description of goods.—Phones for Use with Radio Apparatus.
Claims use since May 1, 1922.

Ser. No. 176,676. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) LOUIS A. HAZELTINE, Hoboken, N. J. Filed Feb. 27, 1923.

NEUTRODYNE

Particular description of goods.—Radio Receiving Sets.
Claims use since Feb. 23, 1923.

Ser. No. 176,686. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) THE MOUQUIN RESTAURANT AND WINE COMPANY, LIMITED, New York, N. Y. Filed Feb. 27, 1923.



The lines on the drawing are for shading only.

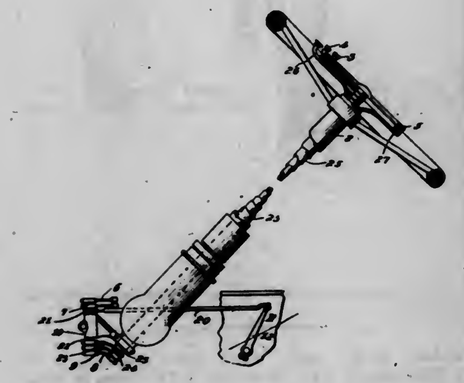
6,738.—*Title:* SPECIALLY DESIGNED FOR SPECIAL SALES. For Soap. JAMES S. KIRK & COMPANY, Chicago, Ill. Published March 25, 1923.

6,739.—*Title:* KIRK'S COCOA HARDWATER CASTILE. For Soap. JAMES S. KIRK & COMPANY, Chicago, Ill. Published May 1, 1923.

6,740.—*Title:* COLOR CERTAINTEED. For Dyeing of Yarn, Fabric, and Garments. "S. & M." DYE WORKS, INC., Philadelphia, Pa. Published April 2, 1923.

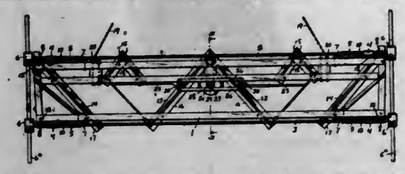
6,741.—*Title:* HAPPY HOME APRON DRESSES. For Aprons and Dresses. THE STERLING COMPANY, Chicago, Ill. Published April 2, 1923.



6,742.—*Title:* PERMANENT WAVE EFFECT NOW QUICK, CHEAP AND EASY. For Curling Fluid. MARGUERITE SULLIVAN, doing business as Domino House, Philadelphia, Pa. Published April 8, 1923.

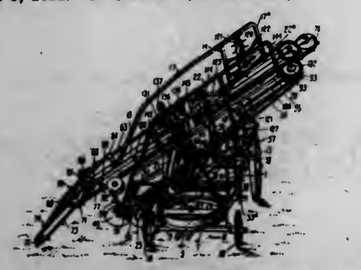
6,743.—*Title:* MR. BEADED TIP. For Beaded-Tip Shoe Lacings. UNITED LACE & BRAID MANUFACTURING CO., Auburn, R. I. Published April 5, 1923.

REISSUES.



MAY 29, 1923.

15,614. VARIABLE-SPEED DEVICE. James H. Brimson, Saginaw, Mich., assignor, by direct and mesne assignments, to Brimson Transmission Company, Saginaw, Mich, a Corporation of Michigan. Filed Mar. 5, 1920. Serial No. 363,555. Original No. 1,232,889, dated July 10, 1917, Serial No. 130,680, filed Nov. 10, 1916. 1 Claim. (Cl. 74—39.)

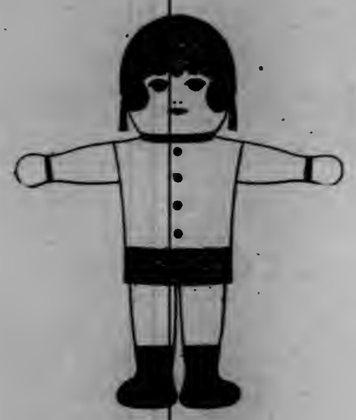


In a motor vehicle having a change speed mechanism provided with an actuating arm, and a steering column assembly including a spark control and a throttle control:—an additional control carried by the steering column assembly for the actuating arm of the change speed mechanism, said additional control including a tubular shaft rotatably mounted within the steering column assembly and adapted to be rotated at the upper end of the steering column assembly, a rock shaft wholly outside of the steering column assembly at the lower end thereof, a crank on said shaft connected to the actuating arm of the change speed mechanism and adapted to actuate said change speed mechanism, and an operative connection between said rock shaft and said tubular shaft so that said rock shaft may be rocked by rotation of said tubular shaft.

15,615. SUBGRADE SCRAPER. Edward G. Carr, Milwaukee, Wis. Filed May 8, 1919. Serial No. 295,791. Original No. 1,268,925, dated June 11, 1918 Serial No. 153,144, filed Mar. 7, 1917. Renewed Nov. 15, 1917, Serial No. 202,257. 8 Claims. (Cl. 94—45.)

5. The combination with a base track with reference to which a grade is to be established, of a vertically adjustable undercutting and non-impeding-progress scraper or cutter blade mechanism supported thereby.

15,616. CANE STRIPPER. George D. Luce, New Orleans, La., assignor to Luce Cane Harvester Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 17, 1915. Serial No. 8,940. Original No. 1,053,917, dated Feb. 18, 1913, Serial No. 600,917, filed Jan. 5, 1911. 44 Claims. (Cl. 130—31.)

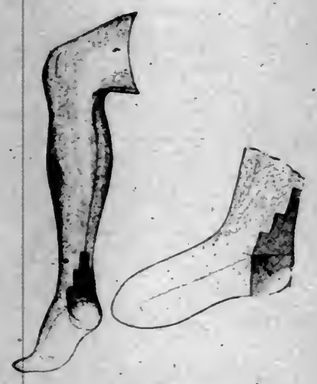


1. In a machine of the character described, in combination, a frame, guide frames forming a space therebetween through which the cane stalks may pass in a standing position, means for advancing cut stalks between said guide frames, a rotatable topping knife, a vertically adjustable carriage carrying said knife and mounted within one of the guide frames, vertically disposed brushes mounted in the guide frames in the rear of said knife, guide bars for guiding the stalks from one brush to another, and a guide bar carried by said knife carriage and arranged to guide the stalks in their passage by the knife and from the knife to the first stripping brush in the rear of the knife.

DESIGNS.

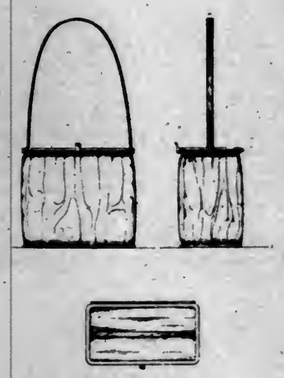
MAY 29, 1923.

62,433. DOLL. EMILY MCCOWAN, New York, N. Y. Filed Dec. 4, 1922. Serial No. 4,495. Term of Patent 7 years.



The ornamental design for a doll, as shown.

62,434. FACE-POWDER BOX. THOMAS J. NEWLYN, El Paso, Tex. Filed July 5, 1922. Serial No. 2,971. Term of patent 7 years.



The ornamental design for a face powder box as shown.

62,435. STOCKING. WILLIAM SCOTT, Jr., Norristown, Pa. Filed June 21, 1921. Serial No. 479,399. Term of patent 7 years.

The ornamental design for a stocking, as shown and described.

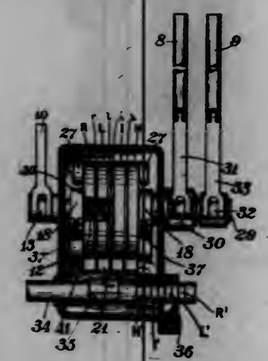
62,436. HAND BAG. JACOB SIMS, Brooklyn, N. Y. Filed Aug. 3, 1922. Serial No. 3,278. Term of patent 3½ years.

The design for a handbag as shown.

62,437. METAL BORDER STRIP OR SIMILAR ARTICLE OF MANUFACTURE. DAVID STOLL, New York, N. Y. Filed July 22, 1922. Serial No. 3,174. Term of patent 3½ years.

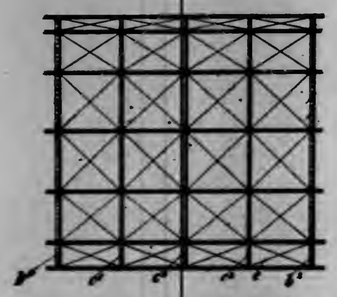
The ornamental design for a metal border strip or similar article of manufacture as shown and described.

62,438. SWEATER. LOUIS STRAUSS, Brooklyn, N. Y. Filed Jan. 14, 1922. Serial No. 198. Term of patent 3½ years.



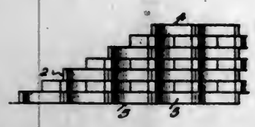
The ornamental design for a sweater as shown and described.

PATENTS



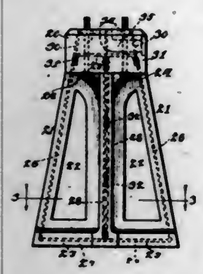
GRANTED MAY 29, 1923.

1,456,496. GEAR-SHIFTING MECHANISM. JAMES S. ALSPAUGH, Portsmouth, Ohio. Filed Apr. 26, 1922. Serial No. 556,676. 13 Claims. (Cl. 74—58.)



1. Means for reciprocating a gear shift rod comprising, in combination, a rock shaft and means for actuating said rod from said shaft, a pair of levers connected together and to said rock shaft to cause a back and forth motion of said rock shaft when said levers are alternately moved in the same direction, and means for imparting such movement to said levers.

1,456,497. SKELETON FRAME CONSTRUCTION FOR AIRSHIPS AND THE LIKE. KARL ARNSTEIN, Friedrichshafen, Germany. Filed Apr. 8, 1922. Serial No. 550,885. 1 Claim. (Cl. 244—3.)

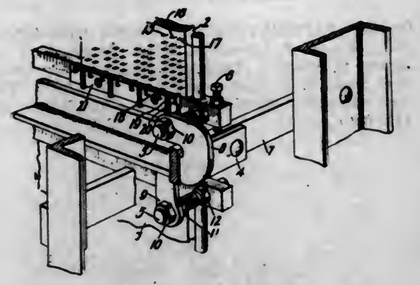


The method of making rigid skeleton frames for air ships which consists in connecting parallelly spaced longitudinal supporting members to a transversely arranged supporting ring, bracing an auxiliary ring by aid of radial tension members, inserting said auxiliary ring intermediate, said supporting members parallel to said supporting ring and removing said radial tension members.

1,456,498. BRICK OR TILE FOR FURNACE CONSTRUCTION. CHARLES F. BINNS, Alfred, N. Y. Filed July 18, 1921. Serial No. 485,610. 11 Claims. (Cl. 72—39.)

7. An article of manufacture comprising a brick for wall construction, said brick having flat top and bottom faces coextensive with the length and breadth of the brick and parallel aligned end faces, and a laterally offset portion intermediate of the end faces.

1,456,499. FOUNDATION PEDESTAL OR PIER. JOHN M. FITZ GERALD, River Forest, Ill. Filed Feb. 9, 1920. Serial No. 357,268. 8 Claims. (Cl. 72—84.)

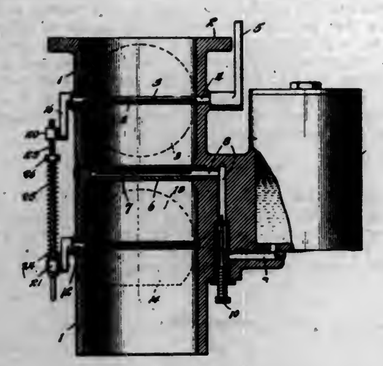


1. A foundation pier of the character described comprising a normally horizontal top or table portion, and a plurality of spaced-apart substantially vertical anchors rigid with the top or table portion and extending downward and outward from the under-surface thereof and defining a substantially horizontal base formed by the bottom portions of the anchors, the anchors being relatively long at the bottom so as to cover a relatively great area, the adjacent anchors providing recesses between them which open outwardly at the side portions of the device and which also open downwardly at the bottom thereof to provide space between adjacent anchors for filling and tamping under them respectively.

1,456,500. ADJUSTABLE MOUNTING FOR TERMINAL-BANK PANELS. OSCAR F. FORSBERG, Yonkers, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1919. Serial No. 342,377. 5 Claims. (Cl. 175—369.)

5. In combination, two terminal bank panels in superposed relation, a supporting structure for said panels, a double lug supporting member for said panels attached to said supporting structure, horizontal screws providing forward and back adjustment for said panels, each secured jointly to one of the lugs of said supporting member and to one of said panels, and each extending through

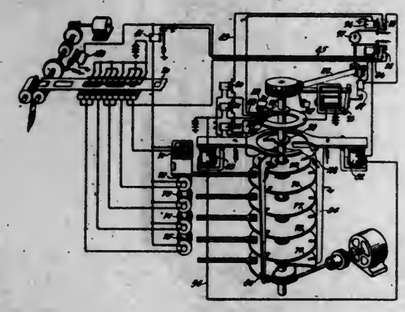
an aperture in its respectively associated panel, said aperture being larger than the portion of said screw which passes therethrough, thereby providing lateral adjustment for said panels, and a vertical screw jointly engaging said panel and said supporting structure, whereby said panel may be adjusted vertically.



1,456,501. DESK STAND FOR HAND TELEPHONES. OMER M. GLUNT, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1920. Serial No. 404,621. 1 Claim. (Cl. 179—147.)

In combination, a hand telephone having receiver and transmitter portions and an ungrooved handle portion between said receiver and transmitter portions, and a desk stand provided with a cradle adapted to receive the handle portion of the hand telephone and provided with projecting portions arranged to engage the receiver and transmitter portions of the hand telephone and hold the latter from longitudinal movement in the cradle.

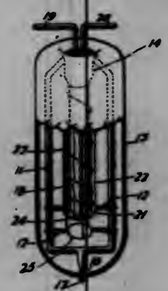
1,456,502. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. ALBERT E. HARTWELL, Newark, N. J., assignor, by mesne assignments, to Auto Betterment Corporation, Newark, N. J., a Corporation of Delaware. Filed Feb. 12, 1919. Serial No. 276,471. 7 Claims. (Cl. 261—52.)



1. In a carburetor, the combination of a body providing an air passage, a throttle therein, a fuel nozzle in the passage below the throttle, an unbalanced regulating valve located in the passage below the nozzle and arranged to be opened by entering air, an arm connected to the throttle, an arm connected to the valve, a link connecting the arms and movable in respect to one of them, and a spring carried by the link opposing variable resistance to the opening movement of the valve.

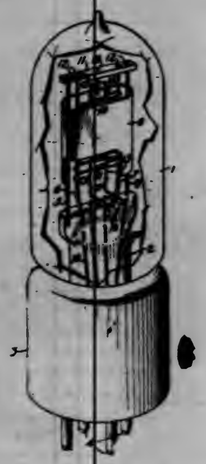
4. A carburetor comprising a body having an air passage including a mixing space, a fuel conduit having an orifice in the mixing space, an oscillating butterfly throttle located in the air passage posterior to the fuel orifice, a shaft for the throttle, an oscillating butterfly regulating valve located in the air passage anterior to the fuel orifice, a shaft for the regulating valve, the regulating valve at one side of the shaft being cut away to produce a partially unbalanced condition of the valve, a ledge being provided in the air passage to co-operate with the smaller side of the regulating valve, and spring means connecting the throttle and regulating valve shafts and arranged to apply varying resistance to opening movement of the regulating valve under the influence of entering air in different positions of the throttle and at different engine speeds.

6. In a carburetor, a body providing an air passage, a fuel discharge orifice therein, a throttle, an automatic air regulating valve movably mounted in the air passage and arranged to be opened by movement of air through the air passage, and means connecting the throttle and the regulating valve and arranged in any given throttle position to oppose yielding resistance to opening movement of the valve with the resistance decreasing as air flow increases.



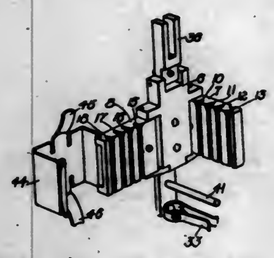
1,456,503. TRANSLATING APPARATUS. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1921. Serial No. 502,608. 4 Claims. (Cl. 197—20.)

1. In combination, a printing mechanism comprising a rotatable type wheel, a plurality of concentrically ar-



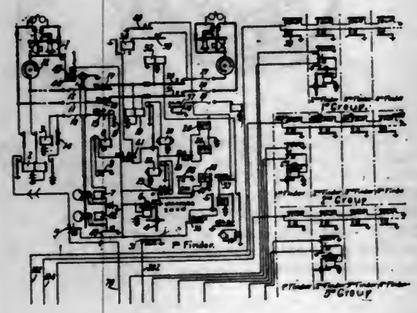
ranged discs having notches therein, a selector bar for each set of notches in said discs, means controlling the release of said bars, further means selectively operative for aligning the notches in the discs with respect to said bars, a tape perforated to conform to signals of different lengths, a plurality of segments over which said perforations are arranged to pass, and circuit closing means for completing contact with segments through said perforations, whereby said selectively operated means is operated to effect the impression of the character corresponding to such perforations.

1,456,504. ELECTRODE SUPPORTING DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 13, 1920. Serial No. 373,573. 8 Claims. (Cl. 250—27.)



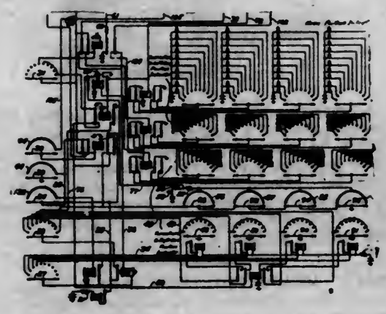
1. A support, an electrode to be supported therefrom, and supporting connections therebetween which are entirely exterior of either the support or the electrode to be supported.

1,456,505. ELECTRIC DISCHARGE DEVICE. WILLIAM A. KNOOP, Brooklyn, and PAUL P. CIOFFI, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 12, 1919. Serial No. 296,331. 22 Claims. (Cl. 250—27.)



1. An electron discharge device comprising an evacuated vessel, a press within said vessel, cathode, grid and anode electrodes mounted on said press within said vessel, and a frame, one of said electrodes surrounding said frame, and the others of said electrodes mounted entirely within said frame and said surrounding electrode.

1,456,506. VACUUM-TUBE-ELECTRODE ASSEMBLING JIG. WALTER J. LEVERIDGE, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1919. Serial No. 320,576. 17 Claims. (Cl. 113—99.)

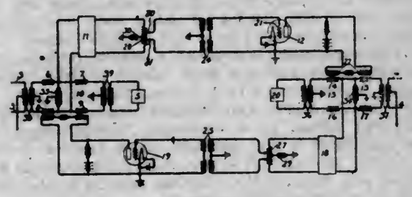


1. A jig comprising a main body portion having relatively movable members pivoted thereto and adapted to hold between them a plurality of electrodes, said movable members being provided with means for spacing said electrodes from each other.

1,456,507. TANDEM ALLOTTING SYSTEM. ALBEN E. LUNDELL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 21, 1919. Serial No. 298,580. 9 Claims. (Cl. 179—18.)

1. In an automatic telephone exchange system, a main group of automatic switches, said main group of automatic switches being divided into sub-groups, an allotter switch individual to said main group of automatic switches, an allotter switch individual to each of said sub-groups, means to determine which of said switches shall be taken for use as a result of the cooperation of said main group allotter switch and one of said sub-group allotter switches, and means to advance said main group allotter each time that a switch is taken for use.

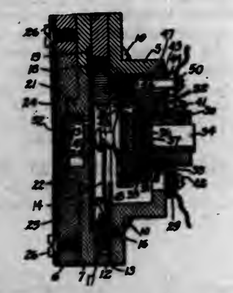
1,456,508. NUMBER-INDICATING SYSTEM. ALBEN E. LUNDELL, New York, and TUDOR VAN AMSTEL, Douglaston, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 26, 1919. Serial No. 313,524. 13 Claims. (Cl. 179—27.)



12. In a number indicating system, a plurality of sets of lamps, a set of registering devices, means to selectively position said registering devices, control relays, and means to operatively associate a desired set of lamps with said registering devices under the control of said relays.

1,456,509. PROCESS OF MAKING ARSENICAL SOLUTIONS. ALFRED MAI, Munich, Germany. Filed Sept. 1, 1921. Serial No. 497,726. 1 Claim. (Cl. 167—6.)

A process of making arsenic solutions in which the arsenic compounds are fused together with halogen compounds and the fusion is dissolved in organic solvents.

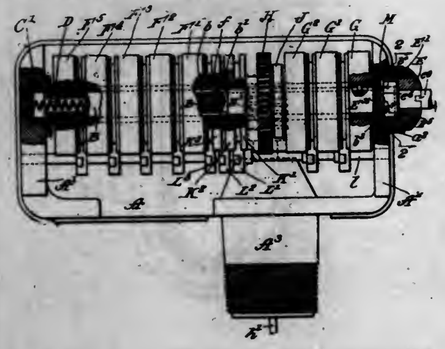


1,456,510. TRANSMISSION CIRCUITS. ROBERT C. MATHES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1919. Serial No. 339,740. 26 Claims. (Cl. 179—171.)

1. A two-way repeating system comprising a uni-directional path comprising an amplifier and impedance devices, a symmetrical connection to ground for certain of said devices, and an asymmetrical connection to ground for other of said devices.

1,456,511. TRANSMITTER. JOHN P. MINTON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 5, 1919. Serial No. 321,914. 7 Claims. (Cl. 179—187.)

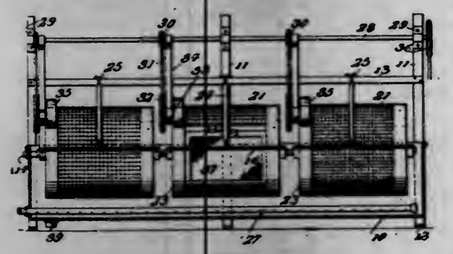
1. A telephone transmitter comprising a diaphragm, a plurality of chambers resonant at voice frequencies located in serial relation in front of said diaphragm



and constricted openings connecting said resonating chambers.

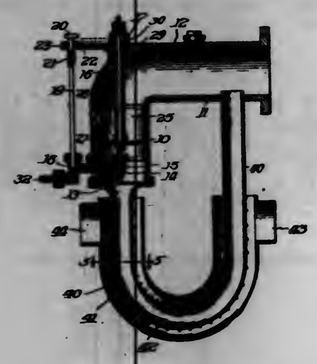
1,456,512. MANUFACTURE OF AIR PROPELLERS. EUGEN L. MÜLLER, Berlin, Germany. Filed July 16, 1920. Serial No. 396,874. 1 Claim. (Cl. 113—116.)

The method which consists in converting a metal disc into an outwardly cylindrical hollow body closed at one end and increasing in thickness towards the closed end and compressing said hollow body so as to transform it into a propeller blade with the open end forming the tip and the closed end forming the base of the blade, said blade containing a strong portion which makes it adaptable to be joined to other blades in the building up of an entire propeller wherein angular displacement of individual blades is essential.



1,456,513. ODOMETER. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 30, 1922. Serial No. 548,240. 6 Claims. (Cl. 235—96.)

1. In an odometer having a continuous indication train and a trip train, and having a shaft for the trip train which is arranged to be thrust longitudinally a substantial distance for disengagement from the continuous train for resetting the trip train, in combination with a frame or casing, a bushing mounted and longitudinally adjustable in said frame, a journal bearing

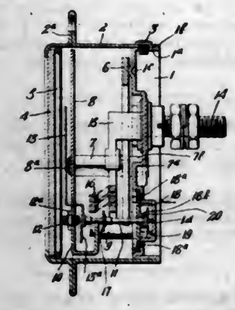


distinct from the bushing supported and longitudinally stopped therein, the trip train shaft journaled in said bearing and means for yieldingly holding it at a plurality of positions longitudinally therein; whereby said shaft is carried longitudinally with the longitudinal adjustment of the bushing, separately and independently of its adjustment from one to another of its several positions in the journal bearing and means for securing the bushing at adjusted position in the frame.

1,456,514. PHOTOGRAPHIC-PRINT-WASHING MACHINE. IRVING POTTRUCK and NORMAN SHALIT, New York, N. Y. Filed July 27, 1920. Serial No. 399,383. 19 Claims. (Cl. 95—93.)

1. A photographic print washing machine including a bath containing element, a print containing element partly submerged therein, a constantly operating driving element, and means for transmitting motion between the operating element and the print containing element including an endless member contacting with a portion of the print containing element.

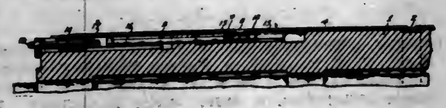
1,456,515. CARBURETOR. GEORGE L. REICHELM, Short Beach, Conn., assignor of one-half to Will H. Ritter, Short Beach, Conn. Filed Feb. 18, 1918. Serial No. 217,761. Renewed Oct. 11, 1922. Serial No. 594,346. 17 Claims. (Cl. 48—107.)



1. In a device of the class described, the combination of a member having a passageway, air and fuel inlets associated therewith, means for controlling said inlets whereby a constant mixture may be maintained, said air inlet comprising means for dividing the incoming air for initially and secondarily mixing with the fuel, said means being adjustable and means for treating the mixture of fuel and initially mixed air.

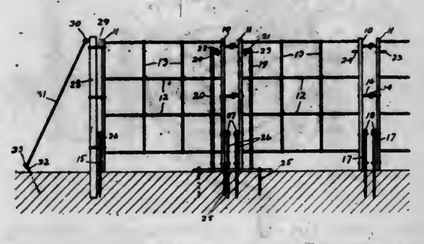
1,456,516. CONNECTING PLUG. WILLIAM E. RINCKEN, Glendale, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 26, 1918. Serial No. 230,974. 3 Claims. (Cl. 173—361.)

3. A connecting plug comprising a body portion, having an annular portion, a removable sleeve therefor, retaining means for said sleeve comprising a retaining member arranged to engage said sleeve, a resilient actuating member therefor confined within said annular portion and conforming to the inner surface thereof, and lugs formed on the ends of said actuating member engaging the edges of said annular portion.



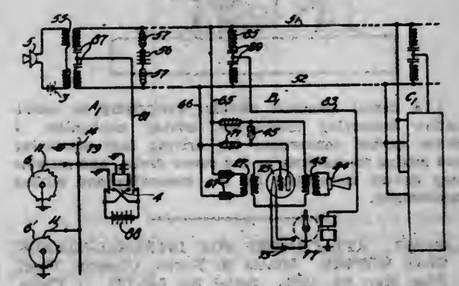
1,456,517. MEASURING INSTRUMENT. FRANK W. ROLLER, East Orange, N. J., assignor to Roller-Smith Company, a Corporation of New York. Filed Oct. 22, 1920. Serial No. 418,658. 6 Claims. (Cl. 171—95.)

1. In a measuring instrument, the combination with the movable element and means for causing the deflection thereof, of a damping liquid, and an auxiliary damping element carried by said movable element and engaging said liquid, said damping element comprising a disk movable in its own plane through said liquid and the periphery of said disk at all points being substantially equi-distant from the axis of said movable element.



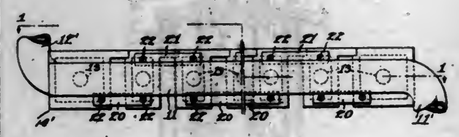
5. In a measuring instrument, a sheet metal support, a movable device having a shaft carried by said support, means for deflecting said device, and damping means for the movable device, said damping means comprising a container formed by a depression in said support, a damping liquid in said container, and a damping element carried by said shaft in said container and engaging said liquid, said damping element being movable in the direction in which its surface extends.

1,456,518. MARGINAL PRINTING PLATES. LOUIS A. SCHMIDT, New York, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Dec. 1, 1921. Serial No. 519,042. 9 Claims. (Cl. 101—378.)



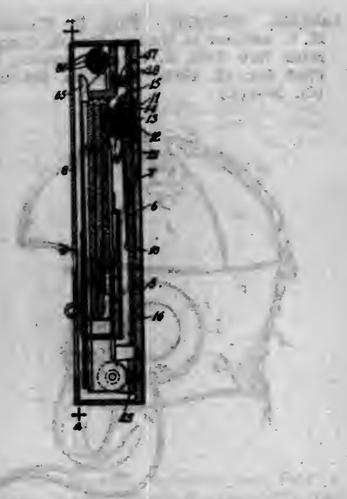
1. In a marginal printing mechanism, the combination with a plate support, of a main printing plate mounted thereon so as to leave a margin space at one end of the plate, and a supplement printing plate secured on the support and having an unbroken printing surface for printing in the margin space at the end of the main plate.

1,456,519. SECTIONAL FENCE. IOAKIM M. SEMENOFF and NYKOLA GURNICKI, Oshawa, Ontario, Canada. Filed Aug. 16, 1922. Serial No. 582,154. 3 Claims. (Cl. 246—24.)



1. A fence composed of a plurality of sections, each of said sections, comprising two end bars, hooks at the outer ends of one end bar of one section and eyes at the upper end of the end bar of the next section adapted to be engaged by said hooks, clamps for clamping one end section to a post, means for bracing the post against the ground, means for securing the adjoining ends of two fence sections to the ground, and angle irons hooked to said fence sections and engaging the ground with their horizontal branches on some of said sections, means for securing said horizontal sections to the ground, and nails passed through eyes at the lower end of two adjoining fence sections, into the ground to secure said fence to the ground.

1,456,520. ENERGIZATION AND CONTROL OF VACUUM TUBES. HERBERT E. SHREEVE, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 28, 1921. Serial No. 473,482. 9 Claims. (Cl. 179—77.)

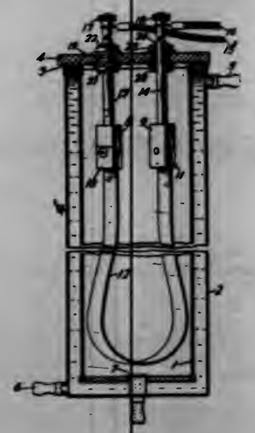


3. A system comprising a plurality of electron discharge amplifying tubes each having a cathode and a cathode-heating circuit, an intelligence transmission line, a source of electromotive force waves for supplying intelligence transmitting currents to said line, and means comprising said line for selectively controlling said heating circuits from a point remote from said tubes.

1,456,521. SECTIONAL WATER GRATE. HENRY F. MORRIS, Collingswood, N. J. Filed Mar. 3, 1921. Serial No. 449,524. 2 Claims. (Cl. 126—163.)

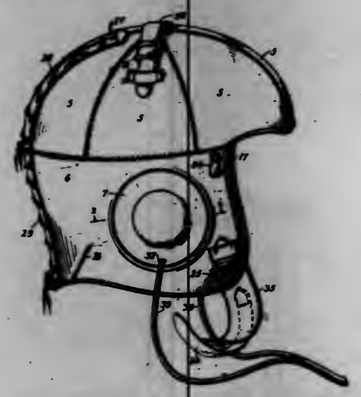
1. In a grate construction of the class described, a plurality of spaced grate bars, each grate bar having a lateral extension along one side thereof and a recess in its opposite side, said extension on each bar bridging the space between it and the next adjacent bar and resting in the recess therein and plates securing adjacent bars together at the top and base, alternately, to hold same in position, substantially as described.

1,456,522. CHECK WRITER. METER STARR, New York, N. Y. Filed July 12, 1922. Serial No. 574,416. 32 Claims. (Cl. 101—20.)



1. A check writer comprising a magazine, a plurality of die plates carried within said magazine and arranged in different planes, means for moving said plates in their respective planes and for transferring them from one plane to the other, and perforating means adapted to cooperate a given plate for carrying out a perforating operation.

1,456,523. METHOD OF AND APPARATUS FOR TREATING METALS. RUSSELL F. TRIMBLE, Elizabeth, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 19, 1919. Serial No. 311,042. 2 Claims. (Cl. 176—2.)

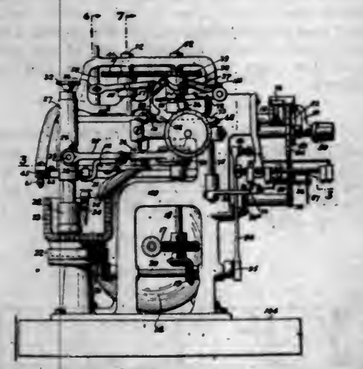


1. The method of manufacture of vacuum tubes which comprises subjecting a strip of electrode material to a vacuum, incandescing said strip while subjected to the

vacuum, forming electrodes from said strip, incorporating said electrodes into an electrode structure, assembling

said electrode structure within a tube, exhausting said tube and heating said electrodes to incandescence during the evacuation of the tube.

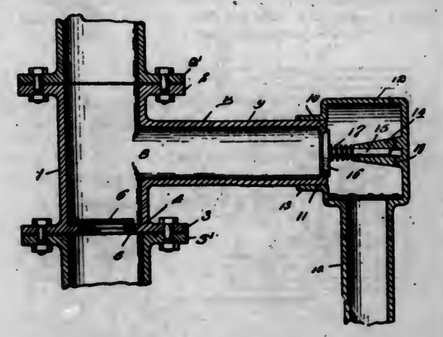
1,456,524. HELMET. FRED D. WALDRON, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 13, 1918. Serial No. 228,393. 4 Claims. (Cl. 2—117.)



1. A helmet comprising an upper portion and a lower portion, means for adjusting the upper portion to fit the head of the individual user, a pair of receiver pockets permanently secured to said lower portion and additional means for adjusting said receiver pockets for proper alignment with the ears of the individual user.

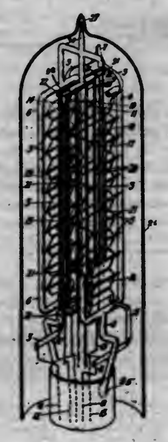
1,456,525. MACHINE FOR OPENING CANS. PRESTON C. WEST, Hamilton, Mont., assignor to P. C. West Mfg. Co. Inc., Chicago, Ill., a Corporation of Illinois. Filed Jan. 6, 1922. Serial No. 527,352. 36 Claims. (Cl. 30—3.)

1. A machine for opening cans comprising means for holding and rotating a can, automatic supporting means, and cutting means carried by said supporting means, one of said first and third named means being automatically held in a plane substantially parallel with the ends of the can but movable laterally in said plane during the cutting operation.



1,456,526. DENTAL-AMALGAM MACHINE. ALFRED G. WRIGHT, Bywood, Pa. Filed Oct. 21, 1922. Serial No. 596,002. 7 Claims. (Cl. 259—15.)

1. A dental amalgam machine comprising in combination measuring mechanism, mixing mechanism, a power device, connections for driving said measuring and mixing mechanisms by the power device, and settable stop motion mechanism for the measuring and mixing mechanisms.

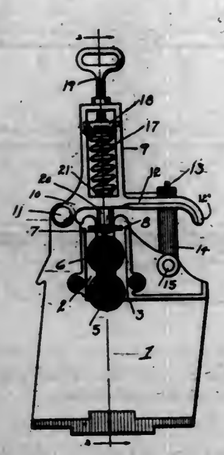


1,456,527. ATTACHMENT FOR INTERNAL-COMBUSTION MOTORS. WILLIS B. YOUNG, Olympia, Wash. Filed Mar. 22, 1922. Serial No. 545,781. 1 Claim. (Cl. 48—192.)

A device of the class described comprising a chamber adapted for connection in the intake manifold of an internal combustion motor between the cylinders and carburetor, a check valve in said chamber normally operating to permit the passage of gas through said chamber into the motor cylinders and operable to cut off communication between the motor cylinders and carburetor in the event of a back fire, a tube in open communication with said chamber, a check valve normally closing the outer end of said tube and adapted to open to the atmosphere in the event of back fire, a valve chamber surrounding said last mentioned check valve, a guide formed

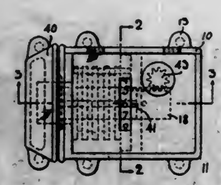
in said valve chamber, a stem for said check valve working within said guide and a spring surrounding said check valve to hold the same normally closed.

1,456,528. ELECTRIC DISCHARGE DEVICE. HAROLD D. ARNOLD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Continuation of application Serial No. 27,222, filed May 10, 1915. This application filed Feb. 17, 1919. Serial No. 277,578. 17 Claims. (Cl. 250—27.)



1. An electric discharge device comprising an anode composed of a plurality of parallel strips serially connected, the width of each of said strips being greater than its thickness.

10. In an electric discharge device, an electrode comprising intersecting wires secured together at their intersections forming a flattened cylinder.

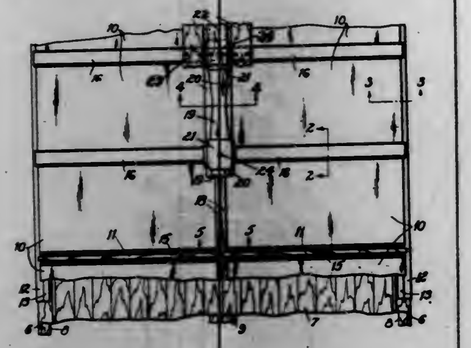


1,456,529. WRINGER. WILLIAM GEORGE BRATTY, Fergus, Ontario, Canada. Filed Jan. 4, 1922. Serial No. 527,025. 5 Claims. (Cl. 68—32.)

1. A wringer including a pair of compression rollers, the journals of one of which are mounted in movable bearings, and means for applying pressure thereto hingedly connected to the wringer, comprising a pair of spring holding frames, spring pressed pins movable through the

lower walls of said frames engageable with the movable bearings, and releasable means holding the pressure means in the pressure applying position.

1,456,530. KEYLESS LOCK. WALTER BICZAK, Hamilton, Ontario, Canada, assignor of one-half to Clifford Frederick, Hamilton, Canada. Filed Apr. 24, 1922. Serial No. 556,272. 4 Claims. (Cl. 70—53.)

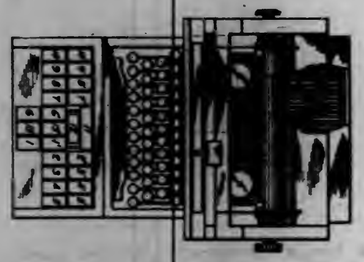


1. A lock of the character described comprising a grooved bolt guide, a large perforated combination disc and a plurality of smaller perforated, shouldered tumbler discs on said guide, washers between each two of said discs keyed to said guide, a bolt movable in said guide, a head on said bolt movable through said tumbler and combination discs when their perforations are in alignment, means for successively operating said tumbler discs to bring their perforations into alignment, and means for limiting the bolt movement.

1,456,531. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Dec. 28, 1922. Serial No. 609,467. 8 Claims. (Cl. 106—5.)

1. A flexible car roof comprising roof sheets arranged on opposite sides of the ridge and having ridge ends that

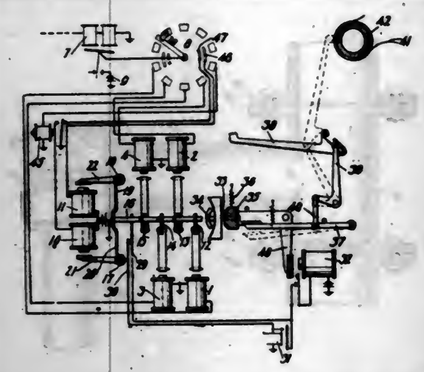
are convex, and means for holding the convex ridge ends of said sheets in contact with each other, whereby said



sheets are adapted to rock one on the other whenever there is movement of the roof sheets.

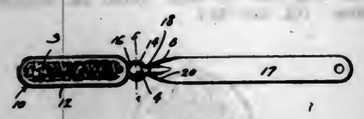
1,456,532. SELENIUM CRYSTALS AND METHOD OF PREPARING THE SAME. FAY C(LUFF) BROWN, Iowa City, Iowa. Filed Mar. 7, 1916. Serial No. 82,782. 11 Claims. (Cl. 252.)

1. The method of preparing selenium for use in selenium bridges, which consists in freeing selenium from occluded gases, then vaporizing the selenium by heat in a high vacuum, and causing the deposition of crystals from the selenium vapor so produced.



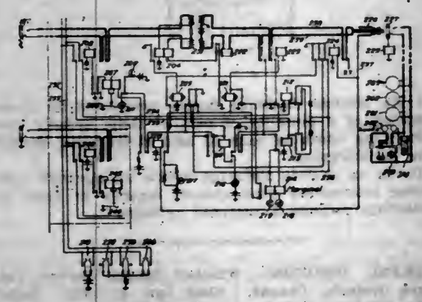
1,456,533. TYPEWRITING MACHINE. PAUL H. BURDICK, Geneva, Ill. Filed Nov. 6, 1920. Serial No. 422,273. 22 Claims. (Cl. 197—13.)

1. In a typewriting machine, a plurality of letter keys and a word space key, and means responsive to the simultaneous actuation of a letter key and said space key for advancing the carriage of said machine one space, for then writing the letter corresponding to the actuated letter key, and for then advancing the carriage another space.



1,456,534. PRINTING TELEGRAPHY. HARRY A. BURGESS, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 25, 1919. Serial No. 340,522. 10 Claims. (Cl. 178—27.)

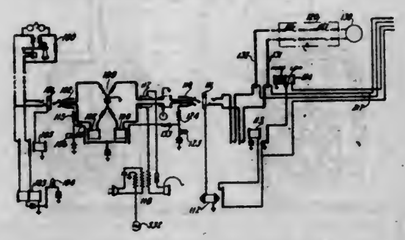
1. In a printing telegraph receiver, a plurality of selectable members, a plurality of selecting members, means for actuating any of said selecting members singly and in combination with any other or others of said members to condition a plurality of said selectable mem-



bers for actuation, means to actuate one of said conditioned members, and means associated therewith to print a character.

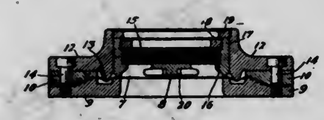
1,456,535. TOOTHBRUSH. MYLES H. CARTWRIGHT, Toledo, Ohio, assignor to The Cartwright Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed May 7, 1919, Serial No. 295,890. Renewed Feb. 24, 1923. 4 Claims. (Cl. 15—39.)

1. A tooth brush comprising a handle having one end equipped with head retaining means, side flanges on the edges ofthe handle in the rear of the head retaining means, said flanges being bent to provide a socket, a bristle carrying head removably engaged by said retaining means, and an extension at one end of said head for detachable engagement with said socket.



1,456,536. TELEPHONE SYSTEM. EDGAR H. CLARK, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1919. Serial No. 342,412. 9 Claims. (Cl. 179—35.)

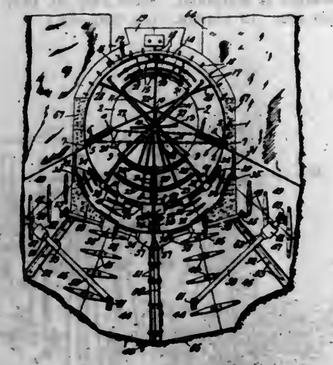
9. In a telephone system, an operator's position, a plurality of connecting circuits thereat, switches for ex-



tending said connecting circuits, a set of keys common to said circuits, an individual key for each circuit for associating the common keys with said circuits, a plurality of sources of current, means controlled by said common keys for connecting said sources of current to one of the connecting circuits, and means responsive to the operation of one of said switches for disassociating the common key set from the connecting circuit.

1,456,537. TELEPHONE-EXCHANGE SYSTEM. EDGAR H. CLARK, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 19, 1920. Serial No. 382,502. 14 Claims. (Cl. 179—27.)

1. In a telephone exchange system, an operator's position, a plurality of trunks arranged in groups at said position, trunk selecting devices, one for each group, means for operating said selecting devices to select a trunk in any of said groups, indicator selecting means, means controlled in accordance with which one of said trunk selecting devices in taken for use for determining the extent of operation of said indicator selecting means, indicator devices, and means controlled by said indicator selecting means for variably operating said indicator devices to indicate the group of trunks containing the selected trunk and the location of the selected trunk in such group.

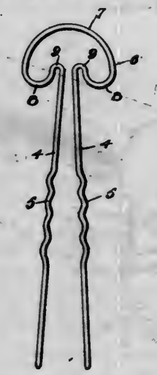


1,456,538. ACOUSTIC APPARATUS. IRVING B. CRANDALL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1917. Serial No. 208,661. 17 Claims. (Cl. 179—106.)

1. A device for the transmission of sound composed of two members, a gaseous medium therebetween, said members being in such a close face-to-face relation to each other that the lowest natural frequency of vibration of said device is beyond the range of importance to speech and means for providing low impedance paths for the gas imprisoned between said members.

1,456,539. CONCRETE MOLD OR FORM. THOMAS DE LA MARE, Tooele, Utah. Filed Feb. 23, 1921. Serial No. 447,203. 11 Claims. (Cl. 25—131.5.)

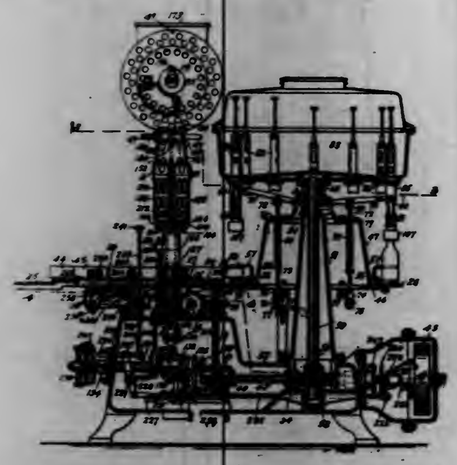
1. In a concrete mold, a core having an upper split portion, a cap plate seated upon the core over the split portion, an arcuate member attached to one end of the cap plate and having upstanding flange provided with



notches for receiving reinforcing rods, and a cope seatable upon the said rods adjacent said flange.

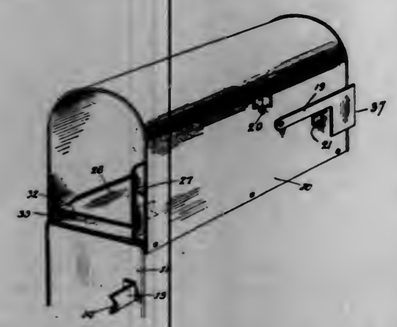
1,456,540. REGENERATED CELLULOSE MATERIAL AND PROCESS OF MAKING SAME. NORMAN E. DITMAN, New York, N. Y. Filed Mar. 9, 1921. Serial No. 450,961. 8 Claims. (Cl. 260—100.)

3. A process of preparing solutions suitable for production of regenerated cellulose structures which embraces the step of dissolving cellulosic corn cob material of mature corn cobs, in a caustic alkali and carbon bisulfid combination.



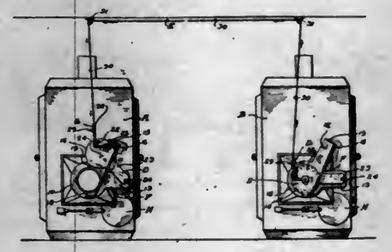
8. Artificial silk containing the regenerated water-insoluble constituents of corn cobs.

1,456,541. HAIRPIN. JEHU B. DOBSCHUTZ, St. Louis, Mo., assignor of one-half to William P. Hill, St. Louis, Mo. Filed May 15, 1922. Serial No. 560,875. 3 Claims. (Cl. 132—52.)



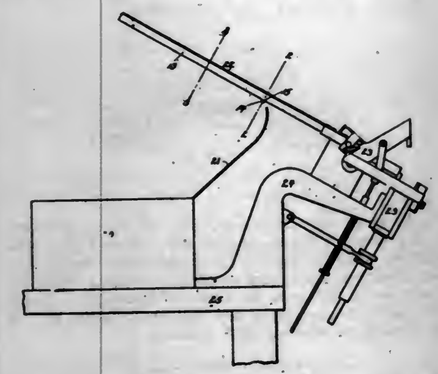
3. A hairpin comprising a pair of prongs, a curved head formed integral with said prongs, said head being provided in its lower portion with downwardly curved bent portions and adjacent the prongs with upwardly bent portions spaced apart from the downwardly bent portions, said upwardly bent portions being integral with the prongs and forming shoulders and pockets adapted to engage the hair for securing the pin therein when in use.

1,456,542. PACKAGING MACHINE. WILLIAM B. ENGLER, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed July 20, 1917. Serial No. 181,680. 13 Claims. (Cl. 226—75.)



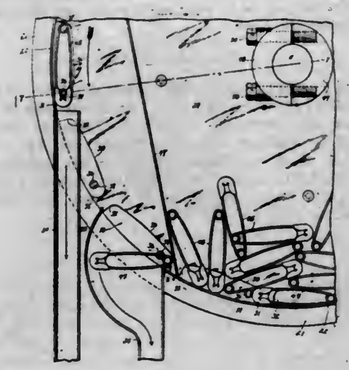
1. In packaging apparatus, and in combination, a plurality of packaging heads, a bottle-supporting table associated therewith to which bottles are delivered, a plurality of spaced bottle-engaging arms, a bar on which said arms are mounted, a plurality of pivoted guides in which said bar is slidable, a crank on which one of said guides is mounted, means for operating said crank, and means for simultaneously causing an endwise movement of the bar in said guides.

1,456,543. AUTOMATIC SIGNAL-OPERATING DEVICE FOR MAIL BOXES. HERMAN C. FEIST, Rowena, Tex. Filed Feb. 21, 1922. Serial No. 538,295. 2 Claims. (Cl. 232—35.)



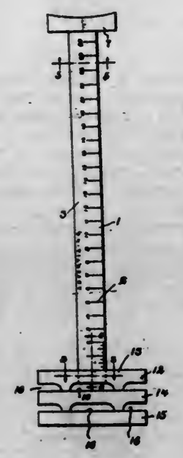
1. The combination with a mail box having a swinging door; of a signal member, a spindle for said signal member pivoted in the box and keyed to the signal member, an arm rigidly attached to said spindle, and means inserted between said door and said arm for operating the signal member through the swinging of said door, said means including a rod pivoted on said arm, a projection on said door adapted to engage with said rod when the door is closed, a false bottom in said box, a shaft upon which the false bottom is secured, a lever rigidly connected with said shaft, said lever having sliding engagement with said rod, said false bottom having a slight preponderance at the end away from said door, whereby said false bottom in co-operation with said lever is adapted to position said rod in the path of said projection upon the swinging of said door, when said bottom is being actuated by the depositing of a light object thereupon adjacent to the door.

1,456,544. COUPLED LIGHT DISSOLVER FOR MOTION-PICTURE MACHINES. ROGER N. FLEMING, Detroit, Mich. Filed Nov. 10, 1921. Serial No. 514,330. 5 Claims. (Cl. 88—16.)



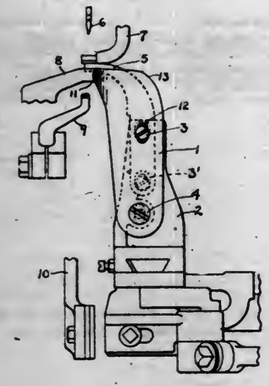
1. The combination with a pair of spaced moving picture projecting machines, of a light dissolver attachment therefor for permitting the simultaneous cutting off of one machine and the simultaneous projection of the other machine and consisting of a frame secured to each one of the machines, a dissolver plate secured to each frame for movement toward and away from the path of the projection means and having a relatively small opening therein, light trip levers pivotally secured to each plate, for normally closing said openings and a flexible cable connected to said light trip levers.

1,456,545. OVERFLOW MECHANISM FOR CHUTES. HENRY M. GLEASON, Waterbury, Conn., assignor to Chase Companies, Waterbury, Conn., a Corporation. Filed July 21, 1922. Serial No. 576,487. 4 Claims. (Cl. 193—31.)



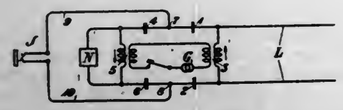
1. A chute having an overflow-opening, and a gate normally closing the said opening and furnished with a tripping-arm normally intersecting the path of travel through the chute.

1,456,546. SORTING MACHINE. HENRY M. GLEASON, Waterbury, Conn., assignor to Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed Aug. 10, 1922. Serial No. 580,867. 10 Claims. (Cl. 88—92.)



1. A sorting mechanism having an inclined revolving dial provided in the periphery of its upper face with a continuous series of laterally opening pockets, of a hopper, and two chutes, one of which has its mouth located above the plane of the said pockets and the other of which has its mouth in the said plane.

1,456,547. TAILOR'S RULE. EDWARD A. GRUBER, Chicago, Ill. Filed June 21, 1921. Serial No. 479,330. 1 Claim. (Cl. 33—2.)

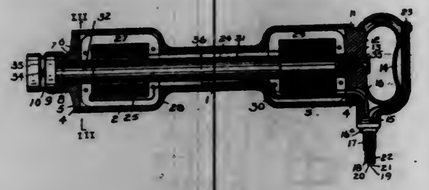


In a tailor's rule an elongated graduated body, a graduated rule slidably carried thereby, a cross head carried by one end of said sliding rule and having its outer edge concavely curved, and a trousers bottom marking head removably carried by said body, and comprising a plurality of connected portions for marking the various folds of a trouser cuff.

1,456,548. STITCHING-MACHINE GUARD. TANNY C. GUSEMAN, Houston, Tex. Filed Jan. 10, 1921. Serial No. 436,281. 1 Claim. (Cl. 112—40.)

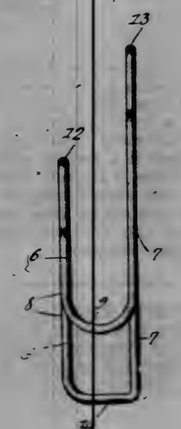
In a device of the character described, a stitch-forming mechanism including a table, a presser foot, a needle, a looper, a gage slide and a stationary edge gage, in combination with a guard comprising a sheet of resilient material secured adjustably to said gage slide and fitted along said edge gage in a position spaced to one side of said looper and needle, a laterally extending lip on said guard, the upper edge thereof being on a level with the top of said table, and the lip being bent outwardly and adapted to contact only with the forward end of said table, for the purpose described.

1,456,549. COMPOSITE SIGNALING CIRCUITS. BAXTER P. HAMILTON, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 29, 1919. Serial No. 320,705. 7 Claims. (Cl. 179—4.)



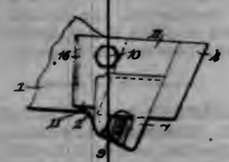
1. In a composite signaling system, a metallic transmission line, a local balanced circuit associated therewith, means to compensate for the connection of the line to said balanced circuit whereby neutral points may be established, means to apply signaling currents to both sides of said balanced circuit for transmission over both sides of said metallic line, and terminal signaling apparatus connected to points of said balanced circuit which are neutral with respect to said signaling currents.

1,456,550. ELECTRIC DRIVE MECHANISM. GEORGE B. HAMPTON, Pittsburgh, Pa., assignor, by direct and mesne assignments, to Central Electric Tool Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 10, 1917, Serial No. 141,584. Renewed Aug. 30, 1921. Serial No. 497,048. 7 Claims. (Cl. 172—126.)



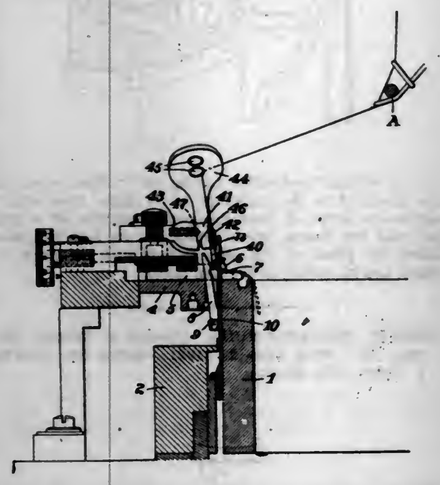
1. A reciprocating apparatus adapted to be supplied from an alternating current circuit, wherein a core is arranged to be repeatedly moved into and out of a solenoid and wherein an electromagnetic switch means is

arranged to alternately energize and de-energize the solenoid, characterized by the fact that a winding of the electro-magnetic switch is connected in circuit with the



solenoid to reduce the current in the winding and open the switch when the core is moved into the solenoid to increase the reactance thereof.

1,456,551. CLIP. MARK P. HARVEY, Little River, Fla. Filed July 11, 1922. Serial No. 574,138. 1 Claim. (Cl. 24—261.)

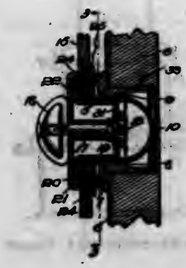


A clip comprising a length of wire formed into opposed connected sections, each of the sections including a relatively long arm and a short arm, said arms adapted to grip an article therebetween, the upper ends of the relatively long arms lying in a line at an oblique angle with respect to a line parallel with the arms.

1,456,552. TOOL HOLDER. JOSEPH HENNING, Newburgh, N. Y. Filed Sept. 9, 1921. Serial No. 499,435. 1 Claim. (Cl. 29—100.)

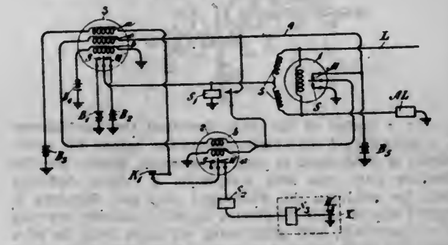
A tool holder of the class described comprising a head having a diagonally arranged face provided with a transverse groove, an enlargement formed on the face on end thereof and provided with an over-hanging extension, a tool having a rib adapted to engage the groove and a clamp provided with a pair of shoulders for engaging one corner of the tool and a face for engaging the face of the head, an over-hanging finger provided on the clamp for engaging the side of the head, means for holding the clamp in firm engagement with the head, a threaded aperture extending through the clamp so as to terminate adjacent the tool and a set screw situated in the aperture so as to bear against the tool for raising and lowering the same.

1,456,553. DETECTOR AND STOP-MOTION MEANS FOR KNITTING MACHINES. KENNETH HOWIE, Norristown, and WILLIAM O. TAYLOR, Limerick, Pa., assignors to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Original application filed Feb. 21, 1920, Serial No. 360,440. Divided and this application filed Aug. 8, 1921. Serial No. 490,647. 10 Claims. (Cl. 66—7.)



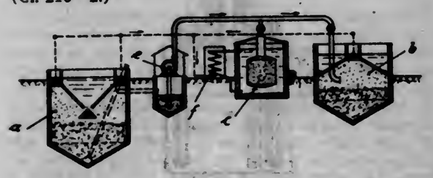
7. In combination in a knitting machine, needles with operating means therefor, a set of instruments cooperating with the needles in knitting, means for operating said instruments, a yarn guide movably mounted and contacting with a disabled instrument to be moved by said contact from normal position, and stop motion means controlled by the movement of the yarn guide, substantially as described.

1,456,554. FASTENER. BENJAMIN F. HUBBELL, Cambridge, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Aug. 13, 1921. Serial No. 491,911. 6 Claims. (Cl. 24—218.)



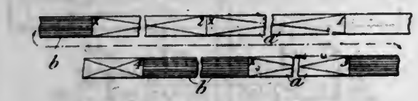
3. A fastener comprising, in combination, a stud having a head and a neck, a socket including a plate having a stud-receiving aperture therein and providing a reversely bent lip surrounding said aperture and an upstanding flange slotted to permit passage therethrough of a stud-engaging jaw and a notch through said plate and said lip communicating with said aperture.

1,456,555. FASTENER. BENJAMIN F. HUBBELL, Cambridge, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Aug. 13, 1921. Serial No. 491,912. 3 Claims. (Cl. 24—211.)



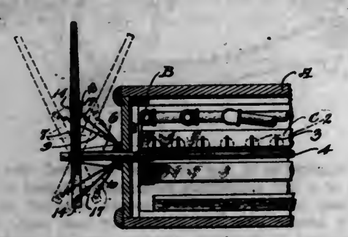
1. A fastener comprising a socket, in combination with a stud presenting a body portion projecting on one side of a flexible carrying medium, a generally flat spring carried by said body portion, the plane of said spring perpendicular to the axis of said body portion, and locking means for holding said spring locked in engaged relation to said socket, said locking means cooperating with an operating part extending into said body portion and projecting on the opposite side of said carrying medium from said body portion.

1,456,556. DUPLEX TELEGRAPH SYSTEM. EARL A. HUDSON, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 29, 1921. Serial No. 525,598. 4 Claims. (Cl. 178—58.)



1. A duplex telegraph set comprising a polarized line relay, a polarized pole changer relay having marking, spacing and holding windings, a polarized control relay having marking and spacing windings differentially arranged, a circuit normally including in series both of the windings of said control relay and the holding winding of said pole changer relay, and means controlled by the operation of said line relay for short circuiting one of the windings of said control relay.

1,456,557. CLEARING PLANT WITH SLUDGE DECOMPOSITION. KARL IMHOFF, Essen, Germany. Filed Aug. 14, 1922. Serial No. 581,910. 2 Claims. (Cl. 210—2.)

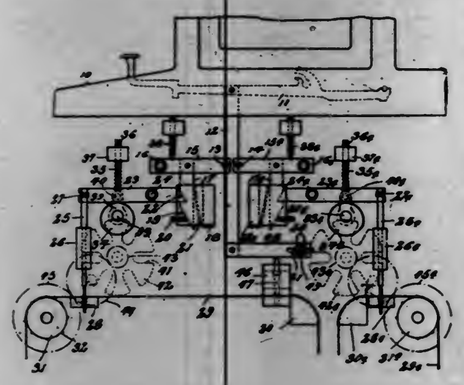


1. A method of decomposing waste-water sludge in digestion chambers, consisting in keeping part of the sludge for some time in a separate hatching chamber at an increased temperature favourable for the methane putrefaction, and then mixing the same with the other sludge, substantially as and for the purpose set forth.

1,456,558. PICTURE FILM FOR COMBINED CINEMATOGRAPH AND PHONOGRAPH PRODUCTION. ARTHUR THOMAS METCALF JOHNSON, Streatham, London, England. Filed Apr. 26, 1921. Serial No. 464,519. 2 Claims. (Cl. 88—16.2.)

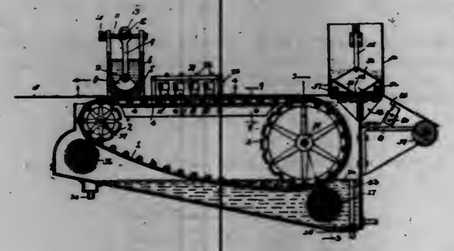
1. For use in combined cinematograph and phonograph production, a sectionized picture film comprising a succession of speaking sections as herein defined, provided with different numbers or letters, to serve as starting indications, and with characteristic symbols or marks differing from the numbers or letters and adapted to serve as stopping indications, each of the starting indications being arranged at the commencement of its speaking section and in front of the series of pictures in such section and each of the stopping indications being arranged at the terminal end of the speaking section and after the series of pictures in such section, the successive starting and stopping indications serving to indicate to an attendant, the times when each of a number of specially prepared voice record devices correspondingly numbered or lettered to the speaking sections and each adapted to produce sounds corresponding in kind and duration with those which an actor in the correspondingly numbered or lettered speaking section is supposed to be making, is to be started and stopped, so as to ensure synchronism between the assumed voice of the actor or actors in the successive speaking sections and the corresponding sound effects produced by the successive voice record devices, substantially as described.

1,456,559. EGG-TURNING MEANS FOR INCUBATORS. GROVER C. KITCHEN and CLAIRE KITCHEN, Sonoma, Calif. Filed Nov. 6, 1922. Serial No. 599,369. 6 Claims. (Cl. 119—44.)



2. In egg turning means for incubators, the combination with an egg tray and rotatable egg supports yieldably mounted in said tray, of a bar member reciprocally mounted beneath one end of the egg supports and actuating the supports, and a lever pivotally mounted on the incubator and connected with the bar member for imparting reciprocal movement thereto from time to time to adjust the supports.

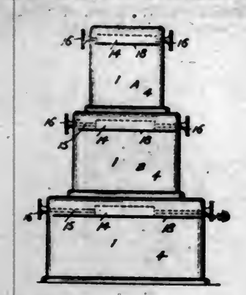
1,456,560. AUTOMATIC TYPEWRITER. TASSO D. METROPOLE and TASSOS M. COTTAKIS, New York, N. Y. Filed Oct. 25, 1921. Serial No. 510,210. 4 Claims. (Cl. 197—20.)



1. In combination with a writing machine including the key bar, means to feed a perforated record strip, a

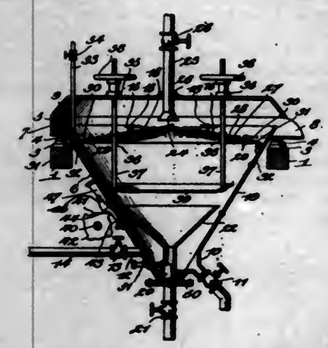
rod to enter a perforation thereof, a continuously operating cam, a connection between the rod and key bar including a releasable portion, whereby the cam may be engaged by said connection when the rod enters a perforation and said connection moved to actuate the key

bar, and means operable upon continued movement of the connection to operate the releasable portion to permit the key bar to return to normal position in advance of the return of the connection and rod to normal position.



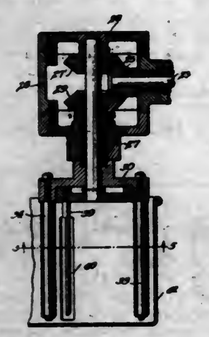
1,456,561. APPARATUS FOR MAKING ABRASIVE BELTS. ROBERT A. MOORE, Cleveland, Ohio. Filed Apr. 20, 1920. Serial No. 375,259. 8 Claims. (Cl. 91—43.)

1. In apparatus of the character described, the combination of a belt supporting mechanism adapted to support a belt passing thereover, means adapted to distribute a binder over the surface of said belt, other means adapted to distribute abrasive over the binder on such surface, and means adapted to remove any abrasive and binder from the reverse surface of said belt.



1,456,562. STATIONERY CABINET. RICHARD NEDDO, Norfolk, Va. Filed June 27, 1918, Serial No. 242,210. Renewed Oct. 7, 1922. Serial No. 593,144. 4 Claims. (Cl. 271—39.)

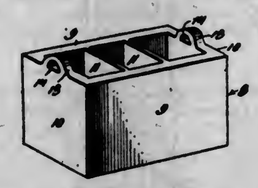
2. In a stationery dispensing cabinet, the combination with the outer casing having a vertical wall with a delivery slot near its top, a discharge roller mounted on the casing and positioned near said slot, a flat paper holder arranged to swing bodily and longitudinally upward at its delivery end and to support a pile of paper articles independently of the walls and bottom of the casing, an inclined stop for the paper articles at the rear end of the support, the drawer adapted to be inserted into the casing on horizontal lines extending



toward the discharge roller and hinged to the paper holder.

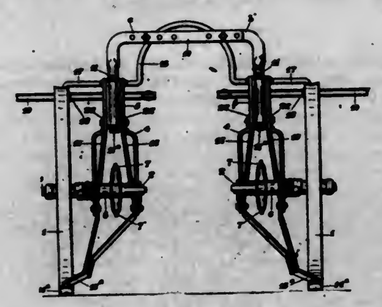
1,456,563. ORE CLASSIFIER. ALBERTO NORIEGA, New York, N. Y. Filed Oct. 4, 1920. Serial No. 414,395. 6 Claims. (Cl. 83—82.)

1. In a device of the class described the combination of a plurality of concentric receptacles, means for maintaining a fluid level in said receptacles, means for discharging pulp into said receptacle, a conical deflector plate for receiving the discharged pulp and directing it against one of said receptacles to effect variable rebound of the particles, said plate being arranged with its edge below the fluid level; and means for varying the fluid level for varying the rebound.



1,456,564. DOUGH-MIXING MACHINE. EDGAR E. O'CONNELL, Washington, D. C. Filed Apr. 7, 1923. Serial No. 630,563. 7 Claims. (Cl. 259—84.)

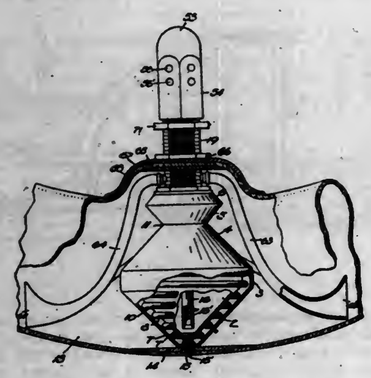
1. In a dough mixing machine, in combination, a receptacle, a series of stirring rods within the receptacle,



rotatable sleeves on said rods, said series of rods being revoluble in the receptacle, and at least one stirring rod revoluble within the cycle of revolution of the series of stirring rods and within the receptacle.

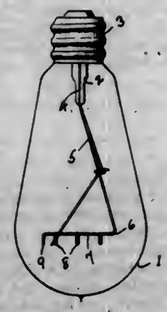
1,456,565. STORAGE-BATTERY CONTAINER. RICHARD B. OWEN, Washington, D. C. Filed Feb. 2, 1921. Serial No. 441,836. 3 Claims. (Cl. 206—2.)

2. A container for storage batteries molded from a material commercially known as paramold.



1,456,566. CULTIVATOR. WESLEY A. PAUL, deceased, late of Moline, Ill., by Lola V. Paul, administratrix, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Oct. 26, 1915. Serial No. 57,930. 5 Claims. (Cl. 97—153.)

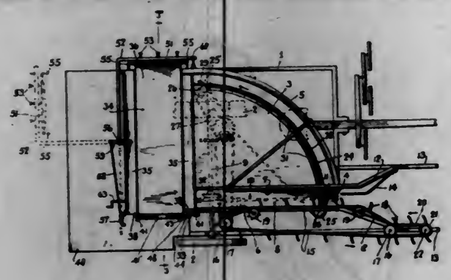
1. In a cultivator, the combination of wheeled axles adapted to independent movement forwardly or backwardly in parallel relation to the line of work, cultivating devices pivotally connected to each axle, a main arch connecting said axles and supported thereon by vertical pivots, a draft arch in constant parallel relation to the main arch, means to connect each axle with the draft arch, said connection and the pivotal connections of the cultivating devices and the main arch being in the same longitudinal vertical plane, and a draft device on each end of the draft arch.



1,456,567. PNEUMATIC TUBE. MAURICIO REBOLLAR Y PLANCHT, Habana, Cuba. Filed May 25, 1920, Serial No. 384,105. Renewed Feb. 5, 1923. 3 Claims. (Cl. 152—11.)

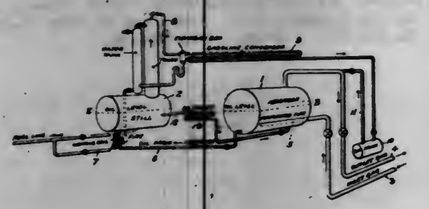
3. In pneumatic tubes, a supplemental closed fluid container, collapsible through the flattening down of its walls and arranged in the pneumatic tube and whose inner cavity is divided in two compartments, an upper one of less volume and whose walls yields in less degree than the walls of the lower compartment which is of larger volume, both compartments being in communication with one another through a tube which leads from the former towards near the bottom of the second one, a cylindrical fluid feeding member from the exterior which is connected with the upper compartment of the supplemental fluid container and passes through the wall of the pneumatic chamber, said member being provided with a central longitudinal hole connected to a pressure fluid feeding tube from the exterior and which hole serves as lodging for two opposite valves connected through a helical spring and of which one opens inwardly and the other one loosely slides through suitable guides inside an extension of said central hole, in combination with a seat formed in a cylinder connected to the bottom of the upper compartment of the supplemental fluid container directly above the tube communicating both compartments, said member being also provided with four longitudinal holes arranged crosswise around the central hole and terminating short of the inner end of the said

member, two of said holes communicating with the extension of the central hole and being provided with valves which open inwardly one of the other two holes having a valve which opens inwardly, these last two mentioned holes communicating beneath the level of said valve with nozzled rubber tubes leading from in the interior of the pneumatic tube in opposite directions, and the four longitudinal holes being united at the top of the said member by an annular recess, a disc cover closing this recess and which is tightened by the tension of a spring coiled on the pressure fluid feeding tube and whose tension is regulated by a nut screwed on said tube, said cover acting as a safety valve.



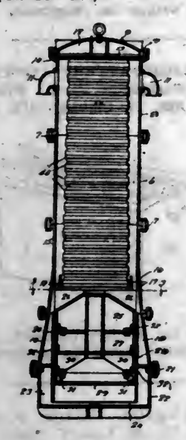
1,456,568. MULTIPLE-FILAMENT LAMP. GEORGE E. QUANDT, Lockport, N. Y. Filed June 29, 1922. Serial No. 571,827. 2 Claims. (Cl. 176—26.)

1. In an electric lamp comprising an inner glass stem having lead wires running therethrough, a series of



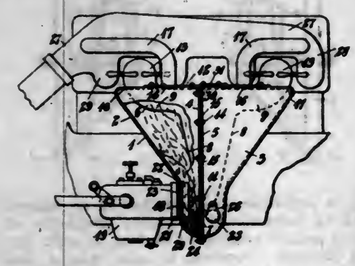
independent filaments, means for supporting said filaments, a spring filament contactor, means for supporting said contactor, and means for forcing said contactor into engagement with said filaments.

1,456,569. CORN HARVESTER. JOHN E. REECE and ASA C. REECE, Butler, Tenn. Filed Nov. 15, 1920. Serial No. 424,272. 5 Claims. (Cl. 56—82.)



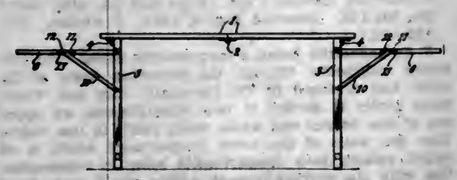
1. A corn harvester comprising a frame, cutting means at the front end of said frame, shocker means at the rear end of the frame and means for carrying the stalks of corn from the cutting means to the shocker means and turning them at right angles as they travel along, said means including an inclined platform, a traveling member moving in a curved path on the platform for engaging the butts of the stalks and means at the top of the platform for engaging the tops of the stalks for preventing longitudinal movement of the stalks.

1,456,570. METHOD OF OPERATION EMPLOYED IN EXTRACTING LIQUID VAPOR FROM A GASEOUS CARRIER. CHARLES C. REED, Clarksburg, W. Va., assignor to The Hope Construction and Refining Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,190. 1 Claim. (Cl. 196—25.)



In the recovery of gasoline from natural gas according to the absorption process, the method herein described of maintaining circulation between a pool of menstruum in an absorption chamber open for the escape of gas and a pool of heated menstruum in a still chamber open for the escape of gasoline vapor and through streams diverse in specific gravity, which consists in maintaining the two chambers at a common general level, leading the return pipe from the still out at a higher level than the point of ingress of the entrance pipe to the still, and cooling the return stream.

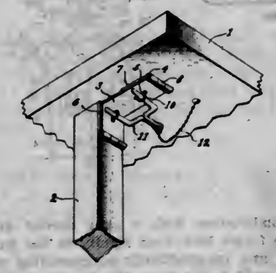
1,456,571. VULCANIZING PRESS. CARL E. RETT, Akron, Ohio. Filed May 3, 1922. Serial No. 558,008. 13 Claims. (Cl. 18—17.)



1. A vulcanizing press comprising an upright chamber provided at its lower end with an internal barrel, a condensate chamber surrounding said barrel, and a hydraulic plunger working in said barrel.

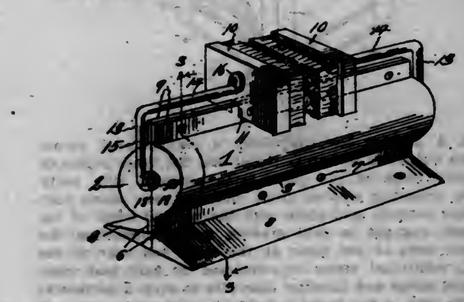
1,456,572. PREHEATER. JAMES I. RICHEY, Cincinnati, Ohio. Filed Dec. 14, 1921. Serial No. 522,425. 12 Claims. (Cl. 123—122.)

1. A preheater comprising a hollow body to surround an internal-combustion-engine fuel-intake pipe and having a part to be clamped between said pipe and an adjacent connected part.



1,456,573. FOLDING PORTABLE TABLE. ELMER O. ROBERTS and RAYMOND F. DOTSCH, Olympia, Wash. Filed June 27, 1922. Serial No. 571,147. 1 Claim. (Cl. 45—47.)

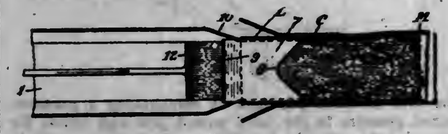
A folding portable table comprising hingedly connected top sections, oppositely disposed pairs of legs hinged to the end portions of the same, leaf extensions of sizes approximately corresponding to the space between the



opposite legs of the several pairs, said leaf extensions being hinged adjacent certain of their ends to and between the upper portions of said legs and snugly receivable therebetween in substantial parallel relation thereto at times, and adapted to be swung inwardly at substantially right angles to such legs at other times, arms pivoted to the inner sides of the intermediate portions of said legs having their free ends bifurcated, and plates having longitudinally spaced studs thereon secured to the opposite end portions of said leaves, receivable in said bifurcated ends of the arms, as and for the purpose set forth.

1,456,574. HINGE. ELMER O. ROBERTS and RAYMOND F. DOTSCH, Olympia, Wash. Filed June 27, 1922. Serial No. 571,148. 3 Claims. (Cl. 16—163.)

3. In combination with a folding table including a top and supporting legs, hinges connecting said legs to the under side of portions of said top comprising a substantially right angularly formed arm having bearing sleeves formed on its opposite extremities, attaching plates having bearing sleeves formed on its opposite extremities, attaching plates having a bearing sleeve on certain of their ends arranged adjacent the bearing sleeve on said arm, pintles passing through said adjacent bearing sleeves for inter-connecting the same, one of said plates being connected to the upper side of the adjacent table leg and the other attaching plate being connected to an adjacent portion of the under side of the table top, outwardly extending staples on certain of the sides of said attaching plates adapted to be received through openings in the angular portion of said arms, at times, and a forked locking member adapted to have the oppositely disposed legs thereof passed through said staples upon their engagement through the openings in said right angularly formed arm connected to the under side of an adjacent portion of the table top.



1,456,575. SHOE CLEANER AND SCRAPER. JESSE N. ROBERTSON, Portland, Oreg. Filed May 10, 1921. Serial No. 468,209. 3 Claims. (Cl. 15—112.)

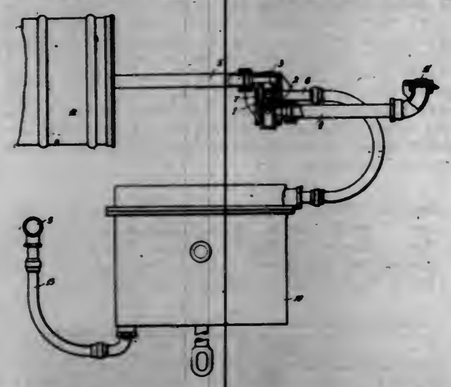
1. A shoe cleaning device comprising a cylindrical casing having a cylindrical chamber therein and closed

end walls, U-shaped members having their arms extending towards each other in axial alignment, the arms of each U-shaped member being in parallel relation, said U-shaped members being formed from rod material, the lower arms being axially disposed within the cylindrical chamber of the casing, and extending through apertures in the end walls thereof, a longitudinally disposed rib carried by the upper side of the casing, brushes carried by the ends of the upper arms and slidably mounted on the rib, heads carried by the inner ends of the lower arms and slidably mounted in the chamber of the casing, and coiled springs interposed between said heads and the end walls of the casing.

1,456,576. PACKAGING DEVICE. GEORGE A. ROBINSON, Norfolk Downs, Mass., assignor to Pneumatic Scale Corporation, Limited, Norfolk Downs, Mass., a Corporation of Massachusetts. Filed Jan. 18, 1922. Serial No. 530,207. 7 Claims. (Cl. 226—18.)

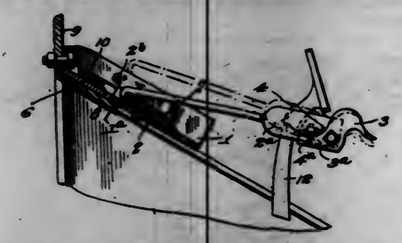
1. A smoother for a lined carton comprising a trough-like member having a wedge-formed leading end, and a cover for said member having its forward edge tapered to cooperate with said wedge-formed leading end in smoothing back the lining as the device is entered into the carton.

1,456,577. UNIVERSAL-JOINT CONNECTING ROD. EDWARD ROSENTHAL, Brooklyn, N. Y. Filed Apr. 11, 1922. Serial No. 551,670. 1 Claim. (Cl. 74—108.)



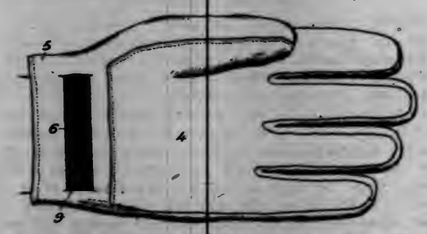
The combination with a piston having a pair of opposed inreaching lugs containing a diametrical bore, a wrist pin disposed therein, a connecting rod, a cap therefor, said rod and cap containing a spherical opening, rectangular flanges on said rod and cap, the lateral edges of said flanges fitting between the inreaching lugs, bolts securing said cap to said rod, a sleeve on said wrist pin, said sleeve being disposed wholly within the spherical opening in said rod and cap, and a sphere fitting the mentioned opening, said sphere being mounted on said sleeve.

1,456,578. PNEUMATIC BRAKE. ALFRED SCHEUER, Vienna, Austria, and HUGO SCHEUER, Zbaim, Czechoslovakia, assignors to the Firm Gebrüder Hardy, Vienna, Austria. Filed Aug. 8, 1921. Serial No. 490,565. 3 Claims. (Cl. 303—4.)



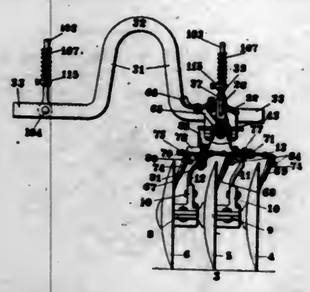
1. In pneumatic brakes a valve casing a pipe connecting the said valve casing with a brake cylinder, another pipe connecting the valve casing with the auxiliary reservoir and a third pipe connecting the valve casing with the hand actuated brake release valve, a movable valve within the said valve casing adapted to establish in one position communication between the first named and the last named pipe and to simultaneously shut the second named pipe and to establish in another

position communication between the first named and the second named pipe and to simultaneously shut the third named pipe and means for moving the said valve into



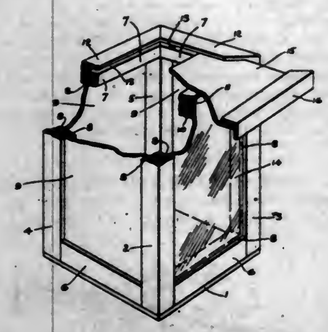
the first of these positions on establishing a predetermined pressure in the third named pipe and means for returning the said valve into the second of these positions.

1,456,579. BRAKE AND CLUTCH LOCK. JOSEPH S. SIMS, Idaho Falls, Idaho. Filed Nov. 13, 1920. Serial No. 423,966. 6 Claims. (Cl. 74—81.)



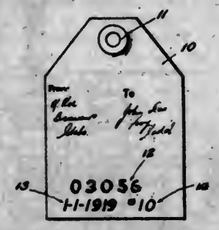
1. A device for retaining the clutch and brake pedals of an automobile in operative position, comprising a lever pawl adapted for locking connection with the shank of the pedal and having a catch at its forward end, a yoke clip mounted on said shank below the pedal tread thereof and pivotally supporting the rear end of the said lever pawl, a supplemental lever having a foot tread at one end pivotally mounted on the rear end of the lever pawl, the other end adapted for movable engagement with the rear end of the lever pawl whereby the catch end may be lifted, and ratchet lugs mounted on the footboard of the car adapted to be engaged by the said lever pawl.

1,456,580. GLOVE. JOHN VINCENT SULLIVAN, Fremont, Ohio. Filed May 3, 1922. Serial No. 558,137. 3 Claims. (Cl. 2—9.)



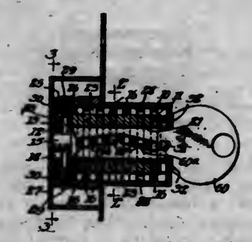
1. A glove having a wrist portion provided with registering apertures, and a wrist band passing through said apertures, said band lying wholly outside of the glove on the front and back portions thereof, substantially as set forth.

1,456,581. DISK CULTIVATOR. CHARLES E. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Apr. 24, 1918. Serial No. 230,497. 6 Claims. (Cl. 97—224.)



1. The combination with a gang carrier and its support, of the frame bars fixed rigidly to the gang carrier, the rocking and longitudinally reciprocating scraper bar mounted in said frame bars, the downturned arms rigid with the rocking and reciprocating bar, each arm having a rounded face, the scrapers each pivoted at a point near its center to a down-turned arm to permit it to vibrate around lines longitudinal of itself and also around a horizontal axis, and means for yieldingly holding each scraper against the rounded face of its arm.

1,456,582. PACKING CASE. ROBERT WOOD and CORNELIUS GARRETT, Vancouver, British Columbia, Canada. Filed Sept. 28, 1922. Serial No. 591,185. 3 Claims. (Cl. 217—56.)

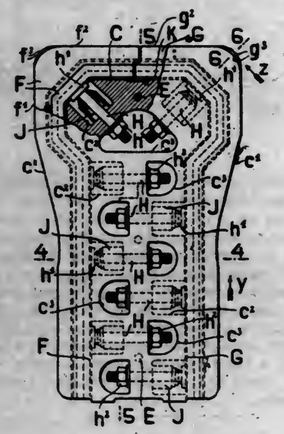


1. A packing box comprising a bottom wall, corner posts extending upwardly therefrom, the inner angularly related sides of the posts being provided with vertically extending grooves, front, side, and rear panels positioned between said posts with the vertical edges of the panels engaged in said grooves, strips connecting the upper ends of the posts at the sides and rear of the box, additional strips superimposed on said first mentioned strips and coacting therewith to form a horizontal guide way, a top panel movable in said guide way and means for securing the adjacent edges of the top and front panels together.

1,456,583. INDIVIDUAL RECORDING DEVICE FOR SHIPPING PURPOSES. WALTER H. BECKER, Bruneau, Idaho. Filed Aug. 2, 1919. Serial No. 314,848. 4 Claims. (Cl. 283—20.)

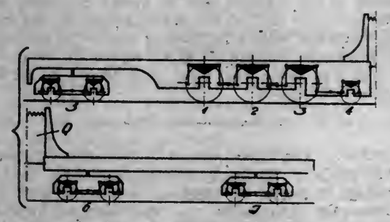
1. A shipping tag provided with a space for an address, a permanent record producing symbol denoting the sending office placed adjacent one edge of the tag, other symbols denoting the sending date and the individual number of the tag placed between said edge and the first symbol.

1,456,584. KEY LOCK. DILLWYN M. BELL, Chicago, Ill. Filed Apr. 22, 1920. Serial No. 375,869. 14 Claims. (Cl. 70—92.)



1. In a master key cylinder lock, a casing, a barrel rotatably mounted therein, a plurality of tumblers carried by said barrel and normally engaging said casing, a portion of said tumblers being operable by means of a master key, and another portion thereof being operable by means of an individual or pass key, the operation of either of said portions permitting rotation of said barrel within said casing.

1,456,585. HEADLIGHT LENS. LOUIS BELL, West Newton, Mass., assignor to Edward N. Goding, trustee, Newton, Mass. Filed Feb. 13, 1920. Serial No. 358,535. 3 Claims. (Cl. 240—48.4.)



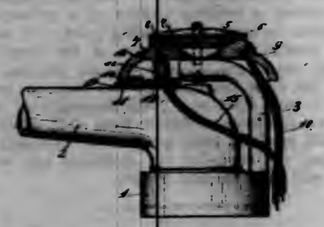
1. In combination with a headlight having an outwardly faced lens bearing and an inwardly faced lens clamping front, a lens having refracting elements of predetermined function with reference to a definite vertical axis disposed centrally thereof, and an annular clamping margin surrounding said elements, the rear face of said margin being roughened for non-slipping contact with the outwardly disposed bearing of said headlight and the front face of said annulus having circumferential diffusing elements entirely about its margin and extending within the grasp of the inwardly disposed bearing of the clamping front.

1,456,586. PRESS FOR MANUFACTURING SHEET METAL AND PLATES WITH TURNED-UP OUTER EDGES. KARL BÖHLE, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed June 7, 1921. Serial No. 475,589. 5 Claims. (Cl. 113—49.)

1. A flanging press for the manufacture of sheet metal plates flanged on their outer rim comprising a female die member having a flanging portion which consists of two parts lying opposite each other and a third part meeting said two first-named parts in rounded corners and a stamp having a flanging portion of a corresponding shape adapted to enter the flanging portion of said female die member in the direction of the longitudinal axis of the press, one of said flanging portions being rigid and the other consisting of two members movable relatively to each other in a plane perpendicular to said axis in two directions different from each other, said two movable members being adapted to elastically yield in the sense of increasing the clearance left between them and said rigid flanging portion.

1,456,587. BALANCING DEVICE BETWEEN TWO COUPLED CARRIAGES FOR EFFECTING DESIRED WHEEL PRESSURE. ISIDOR BROBERG, Skarsatra, Lidingon, Sweden, assignor to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden, a Corporation. Filed Apr. 13, 1922. Serial No. 552,372. 5 Claims. (Cl. 105—73.)

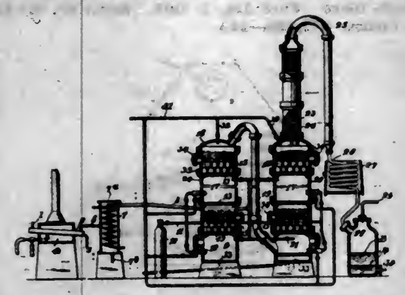
1. A vehicle comprising two parts arranged one behind the other in the direction of movement and fixedly connected to each other, means located between said



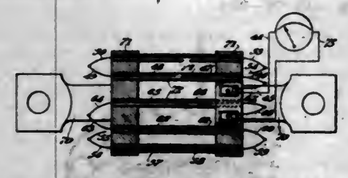
parts for obtaining the desired wheel pressures in the parts of the vehicle and including a resilient member producing on the running of the vehicle a substantially horizontal force having its points of application positioned in the parts of the vehicle adjacent the fixed connection between the said parts.

1,456,588. DITCHING MACHINE. JOHN S. DOBBMIER, Chalmers, Ind. Filed Oct. 20, 1921. Serial No. 509,105. 3 Claims. (Cl. 37—102.)

1. A ditching machine comprising supporting beams having turned and separated end portions, a cutting blade mounted on said end portions, draft element supporting beams mounted on the opposite end portions of said beams, a depth regulating and guiding member mounted adjustably in said beams, means for controlling the last mentioned member, a driver's seat mounted on said beams and rearwardly of said cutting member, an elevator structure pivoted at its lower end to said turned and separated ends of the beams opposite said cutting member, and a transverse discharge conveyor suspended beneath the upper end of said conveyor to receive material therefrom.



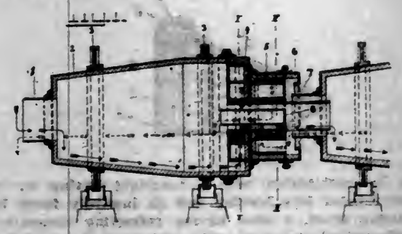
1,456,589. AUTOMATIC STOP MECHANISM FOR TALKING MACHINES. ALBERT EBNER, Stuttgart, Wurttemberg, Germany. Filed Sept. 14, 1920. Serial No. 410,382. 6 Claims. (Cl. 192—119.)



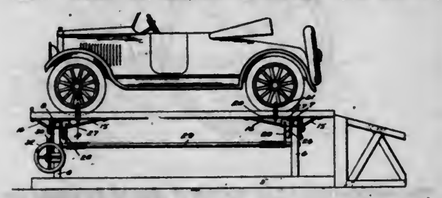
1. In an automatic stop device for talking machines of the electric motor driven type equipped with a movable tone arm, contact members adapted to be interposed in the electric motor circuit, one of said contacts being actuated by the tone arm, means permitting adjustment of the other contact whereby the moment of separation of the contacts may be varied according to the position of the end of the sound groove in the record, and indicating means facilitating correct adjustment of the adjustable contact to effect separation of the contacts at a predetermined point with respect to the sound groove in the record.

1,456,590. PROCESS OF MAKING HALOGENATED PRODUCTS. BYRON E. ELDRED, New York, N. Y., assignor, by mesne assignments, to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Feb. 8, 1917. Serial No. 147,461. 23 Claims. (Cl. 260—157.)

1. The process of making chlorhydrins from the gaseous olefins which comprises establishing a flowing current of steam and adding to such current successive portions of chlorin and of gas comprising olefins, time for reactions to take place in such current being afforded between additions.



1,456,591. THERMAL AMMETER. WILLIAM N. GOODWIN, Jr., Newark, N. J., assignor to Weston Electrical Instrument Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 24, 1920, Serial No. 368,407. Renewed Oct. 17, 1922. Serial No. 595,182. 8 Claims. (Cl. 171—95.)

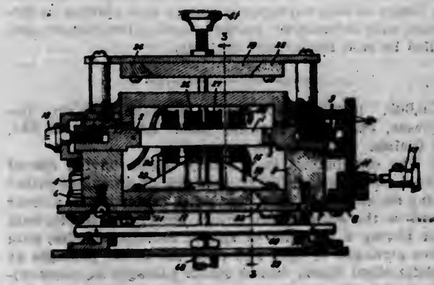


2. A thermal ammeter comprising terminals; a heating conductor heated by the current and connected to the terminals; a thermo-electric couple having its hot junction in thermal contact with the heating conductor; a thermal conducting means in thermal connection with at least one of the terminals, a portion of the thermo-couple conductors and of the electrical connecting conductors having thermal connection with a portion of the said thermal conducting means, and the cold ends of the couple extending from the said thermal conducting means into the air surrounding the terminals and heating conductors, the free lengths of the thermo-couple conductors and of the electrical connecting conductors between the cold ends and the aforesaid thermal conducting means being, together with the said thermal conducting means, thermally equivalent to a crresponding portion of the heating conductor.

1,456,592. AUTOMATICALLY-ACTING LIXIVIATION APPARATUS. GUSTAF HAGLUND, Falun, Sweden. Filed Feb. 16, 1922. Serial No. 537,104. 4 Claims. (Cl. 33—31.)

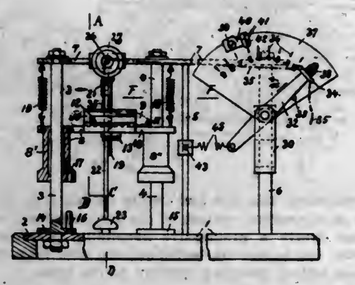
1. Automatically operating lixiviation apparatus consisting of a plurality of coacting horizontally disposed rotary drums each of which is provided with a feed opening, a transport device associated with each drum for carrying material to be lixiviated in a certain direction, another transport device associated with each drum for carrying the liquid in an opposite direction, both transport devices being located at the end of the drum opposite the feed opening and consisting of two spiral elevators, one of the transport devices receiving lixiviation material mixed with liquid from the interior of the drum, a conduit situated in the central part of the apparatus to which the said mass is transported and the conduit opening outwardly and serving to remove the treated mass, the other transport device receiving fluid from the outside, another centrally arranged conduit receiving fluid from the second mentioned transport device and having a smaller diameter than the first mentioned conduit and opening inwardly so as to return the fluid to the drum.

1,456,593. MOTOR-VEHICLE TILTING APPARATUS. ALBERT J. HOLLE, Rushford, Minn. Filed July 6, 1921. Serial No. 482,752. 3 Claims. (Cl. 214—1.)



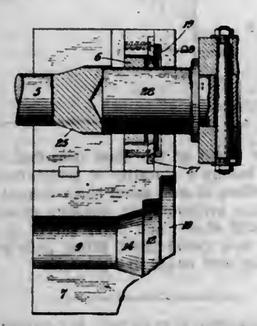
1. A tilting apparatus for motor vehicles and the like comprising a rigid support, a sidewise tiltable open frame eccentrically pivoted on said support and including a longitudinally extending track, slidably adjustable means for securing the wheels of a motor vehicle to the track and releasable means carried by the support and attached to the inner side of the frame for adjustably limiting the tilting movement thereof and to maintain the vehicle in various angular positions when secured on the frame.

1,456,594. PROCESS OF MAKING SODIUM-SILICO FLUORIDE. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 3, 1922. Serial No. 549,208. 5 Claims. (Cl. 23—13.)



1. Process of making alkali silico fluorides which comprises acidulating phosphate rock with sulfuric acid, separating the resulting solution from insoluble material, adding to the solution an alkali in quantity insufficient to convert the phosphoric acid in the solution to the mono alkali salt, and recovering the resulting precipitate of alkali silico fluoride.

1,456,595. RECORDING APPARATUS. CHARLES A. HOXIE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 13, 1918, Serial No. 228,320. Renewed Apr. 4, 1923. 23 Claims. (Cl. 250—8.)

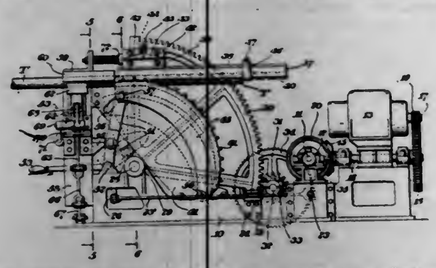


1. A selective signal receiving device, comprising a magnet, a diaphragm resonant to a definite frequency located in the field of said magnet and a stationary winding surrounding said diaphragm and adapted to carry current impulses of a frequency equal to that to which the diaphragm is resonant.

1,456,596. THREAD-TENSION-MEASURING DEVICE. JOHANN HUGENTOBLER, St. Gallen, Switzerland. Filed Nov. 28, 1921. Serial No. 518,174. 3 Claims. (Cl. 73—51.)

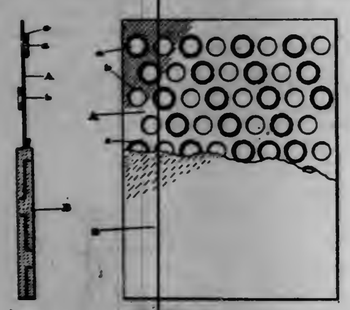
1. In a device of the character set forth, in combination with a suitable support, a drop member adapted for free fall on said support, and "dead-stroke" means, for preventing said drop member from bouncing-up again at the end of its descent, comprising a stationary pin of upwardly tapering conformation extending upwardly from said support in line with the drop of said drop member, the latter presenting a respectively oppositely tapering bore in its underface in axial alinement with said taper pin, adapted for jamming cooperation therewith on descent of said drop member.

1,456,597. METHOD OF FORGING. WILLIAM HUGHES, Philadelphia, Pa., assignor to The Hess-Bright Manufacturing Company, a Corporation of Delaware. Filed Feb. 7, 1921. Serial No. 443,035. 4 Claims. (Cl. 78—81.)



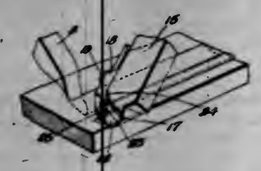
1. The method of forging rings which consists in upsetting the suitably heated end of a steel bar into slightly conical formation and squeezing the surplus metal into a circumferential flash located inwardly of the ends of such body, then moving such body, while still heated as aforesaid smaller end first, through a shear plate and engaging such body adjacent the base of the flash and shearing the same from such body.

1,456,598. TUBE-BENDING MACHINE. JOHN F. JACKSON, Milwaukee, Wis., assignor, by mesne assignments, to Kidwell Boiler Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 19, 1921. Serial No. 446,208. 13 Claims. (Cl. 153—46.)



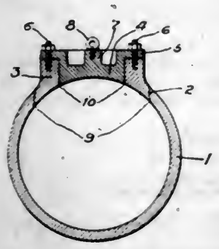
1. In a tube-bending machine, a supporting structure, a form member thereon having a curved tube-supporting

surface, a presser bar approximately tangential to said surface and having a longitudinal tube-engaging surface means for clamping at a point beyond the form member the body of a tube which is interposed between said surfaces in a plane longitudinally of the presser bar, means



for supporting said bar and bodily rolling it in close relation to the curved surface of the form member, whereby the bar exerts a progressive nonsliding pressure upon the tube, and means for bodily moving said form member into and out of clamping relation to the tube.

1,456,599. PLASTER BOARD. RASMUS N. JENSEN, Sandy, Utah, assignor to Moses Paggi and Rasmus N. Jensen, trustees of Metalgyp Company, Salt Lake City, Utah. Filed Sept. 6, 1921. Serial No. 498,680. 2 Claims. (Cl. 154—45.9.)



1. A plaster board of the class described, comprising a metal sheet having a plurality of perforations therein; flange like portions of said metal sheet formed in making said perforations protruding in opposite directions from the plane of said sheet; and cover sheets of plaster on both sides of said metal sheet filling said perforations and surrounding said flange like portions.

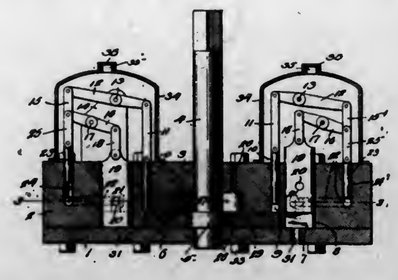
1,456,600. TURNSOLE-FITTING MACHINE. ALBERT E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 22, 1920. Serial No. 367,745. 3 Claims. (Cl. 12—27.)

1. In a machine for preparing turn soles of the type having an inwardly cut marginal channel lip, in combination, a channel lip forming knife, and a tool located at the inner side of the shank of said knife having an offset shoulder overlying the cutting blade of said knife provided with a concave lip engaging end acting to turn the lip inward over the between substance of the sole as it is fed.

1,456,601. MANHOLE FOR PIPES AND SIMILAR CONTAINERS. FRANCIS E. JOHNSON, Jr., Orange, N. J., assignor to The M. W. Kellogg Company, a Corporation of Delaware. Filed June 1, 1921. Serial No. 474,244. 1 Claim. (Cl. 137—76.)

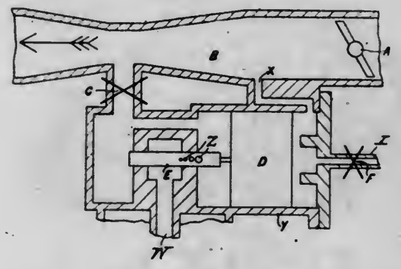
The combination of an apertured pipe of forgeable material, an apertured pad of forgeable material extending into said pipe, one edge of said pad coming flush with the inner surface of said pipe, the outer surface of said pad being firmly united to the edge of said pipe.

1,456,602. CALLING DEVICE. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 17, 1920, Serial No. 352,001. Renewed Nov. 23, 1922. 28 Claims. (Cl. 179—90.)



1. A device of the character described including a pair of interrupter contacts, an interrupter provided with a pair of wings normally resting between a pair of interrupter springs to which said interrupter contacts are connected, means for rotating said interrupter whereby the wings of said interrupter engage said springs to disengage said interrupter contacts, and a line circuit controlled by said interrupter contacts.

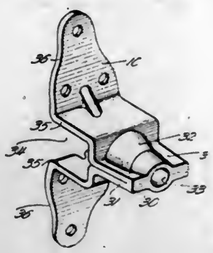
1,456,603. ROTARY ENGINE. MICHAEL B. KATO, Duquesne, Pa. Filed Jan. 15, 1920. Serial No. 351,691. 5 Claims. (C. 121—73.)



3. The combination in a rotary engine having spaced exhaust passages and intake passages, of an engine jacket having an annular steam chamber, a center shaft, a rotor affixed to the center shaft within the engine jacket, said rotor having a plurality of spaced radiating blades, gate valves arranged to open and close the intake passages at predetermined times, branch steam passages in communication with the intake passages, valve pistons operated by the steam from the aforesaid passages, gate valves

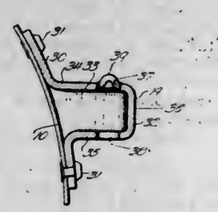
controlling the intake of steam, means for actuating the gate valves, said means also being arranged to operate the valve pistons, cam means arranged in a predetermined relation to the rotor blades to open the gate valves at

predetermined times to supply continuous steam pressure in one direction within the steam chamber acting on the rotor blades, said gate valves having their outer ends arranged to act as an abutment in the steam chamber when the gate valves open the steam ports.



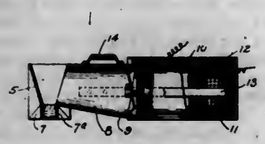
1,456,604. MEANS FOR CONTROLLING THE SUPPLY OF MIXTURE TO INTERNAL-COMBUSTION ENGINES. GEORGE KEITH and WILFRED AMBROSE WHATMOUGH, London, England. Filed May 13, 1922. Serial No. 560,851. 2 Claims. (Cl. 123—129.)

1. For controlling the supply of mixture to internal combustion engines, the combination with the induction pipe leading to the engine, of a governor device comprising a valve in the path of the fuel component flowing to the induction pipe, a piston determining by its position the extent of opening of said valve, a cylinder in which said piston is movable, a valve controlling the admission of fuel to said induction pipe, a fluid conduit communicating with the chamber of said cylinder, and means for controlling the passage of fluid through said conduit; whereby a progressive increase in the richness of the mixture as the vacuum in the induction pipe increases may be effected, the rate of increase being adjustable while the engine is running.



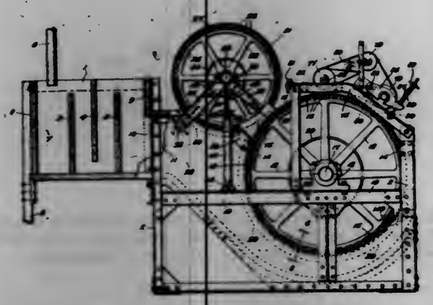
1,456,605. BRAKE-BAND FITTING. OTTO KONIGSLOW, Sr., Cleveland, Ohio, assignor to Otto Konigslow Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 22, 1921. Serial No. 494,343. 7 Claims. (Cl. 188—77.)

1. A brake band fitting consisting of a metal stamping having superimposed layers of metal, the layers being shaped to provide an aperture extending at right angles to the axis of the brake band, one end of each of said layers being bent away from the like end of the other



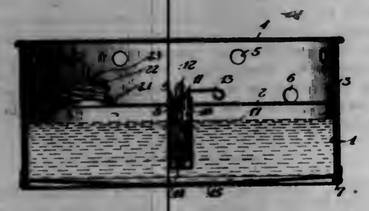
to form a slot having its side walls substantially parallel to said layers, each of said ends terminating in an arcuate portion for securing the fitting to a brake band.

1,456,606. BRAKE-BAND FITTING. OTTO KONIGSLOW, Sr., Cleveland, Ohio, assignor to Otto Konigslow Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 22, 1921. Serial No. 494,344. 3 Claims. (Cl. 188—77.)



1. A brake band fitting comprising a plate shaped to conform to the cylindrical surface of the brake band, and a hollow rectangular protuberance stamped from the plate, the protuberance comprising a plurality of rectangular walls substantially in line with the strain to which the fitting is to be subjected, and walls for tying the walls together to prevent crumpling of the same when they are subjected to the strain.

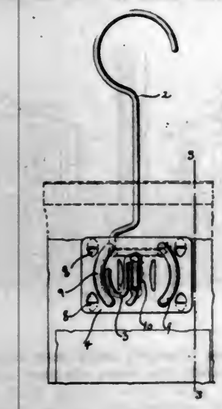
1,456,607. AIR CIRCULATOR AND HUMIDIFIER FOR RADIATORS. RUDOLPH W. MENK, Joliet, Ill., assignor to The Excelsior Steel Furnace Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 8, 1920. Serial No. 363,961. 1 Claim. (Cl. 230—11.)



As an article of manufacture, a device for distributing and increasing the velocity of air to a heating radiator comprising a portable box-like structure having elongated side walls one of which is provided with an aperture; said structure being open at its top, a relatively short conduit fitting said aperture and discharging therethrough into said box-like structure, and means for forcing air through said conduit into said box-like structure.

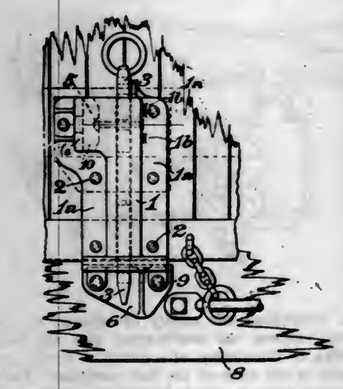
1,456,606. FELTING MACHINE. TREADWAY B. MUNSON, New Orleans, La., assignor to C. F. Dahlberg, New Orleans, La. Filed Dec. 3, 1921. Serial No. 519,746. 9 Claims. (Cl. 92—39.)

1. In a machine of the class described the combination of a chamber; a pair of felting rolls within said chamber; means adapted to produce a hydrostatic pressure within said chamber against the surfaces of said rolls; means for varying the distance between said rolls whereby the thickness of the sheet being produced may be controlled; and means including a seal adapted to move when said distance is varied, to prevent the escape of fibers past the ends of said rolls to the interior thereof, substantially as described.



1,456,609. OIL HEATER. ISRAEL PUTNAM, Elmira, N. Y. Filed May 9, 1922. Serial No. 559,578. 1 Claim. (Cl. 158—94.)

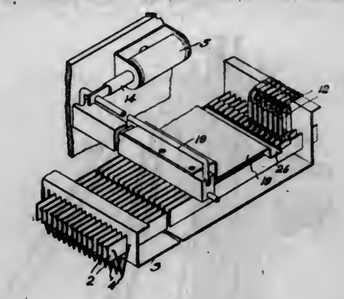
In an oil lamp, the combination with a sealed reservoir, of a wick tube extending downwardly therein from the top wall of the reservoir and having a bottom closed by a foraminous diaphragm including a multiplicity of fine openings adapted to both allow water to instantly escape from the tube and oil to flow freely into the same, the bottom of the tube being spaced from the bottom of the reservoir, a wick in the tube, and means for supporting the wick in spaced relationship to the walls of the tube, so that an air space is left around the wick from the mouth of the tube down to the level of the oil therein.



1,456,610. HANGER FOR MOTHPROOF BAGS. GEORGE ROTTMAN, New York, N. Y. Filed Sept. 24, 1921. Serial No. 502,973. 2 Claims. (Cl. 206—7.)

1. In combination with a bag, an inner plate having a hollow bead projecting therefrom, and an outer plate having hook-attaching means, interengaging means on said plates to clamp them upon opposite sides of the

bag, and a hook swiveled in said bead and foldable against said inner plate.



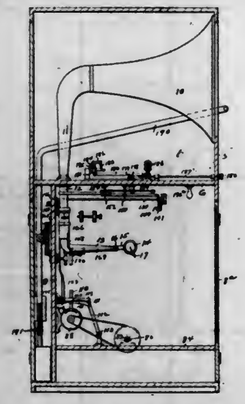
1,456,611. CAR-DOOR LOCK. JAMES C. FRITTS, Scranton, Pa. Filed Apr. 8, 1922. Serial No. 550,597. 3 Claims. (Cl. 291—189.)

. 1. A car-door lock, comprising a housing adapted to be secured to the door and having a longitudinal passage therethrough and a transverse hole intersecting said passage, a bracket adapted to be secured to the car sill and having an opening adapted to register with said passage, a locking bolt adapted to occupy said passage and opening and having a transverse hole therethrough, and a rivet adapted to be passed through said holes and to be headed over to prevent its withdrawal.

1,456,612. COMBINATION ORGAN-STOP ACTION. JOHN T. AUSTIN. Hartford, Conn., assignor to The Austin Organ Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 4, 1920. Serial No. 408,216. 6 Claims. (Cl. 84—344.)

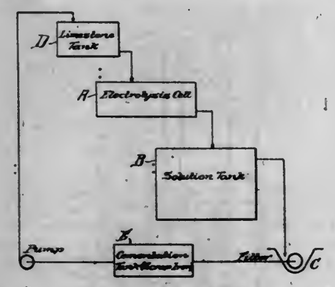
5. A combination organ stop action comprising a trace, a magnet and its armature, the trace having a notch in which the armature is mounted and the magnet when energized acting to attract its armature, an im-

peller, and means for reciprocating the impeller whereby on its forward movement it engages the armature when it is thus attracted, to advance the trace.



1,456,613. SAMPLE CASE. THEODORE B. BARTELS, San Francisco, Calif. Filed Apr. 5, 1921. Serial No. 458,688. 10 Claims. (Cl. 206—44.)

1. A sample case for rings and the like comprising a box provided with partitions forming parallel compartments in the body thereof; and a leaf hingedly connected to the box and having slots therein arranged to register with said compartments, said registering slots and compartments being arranged to receive and retain rings and other articles of jewelry.

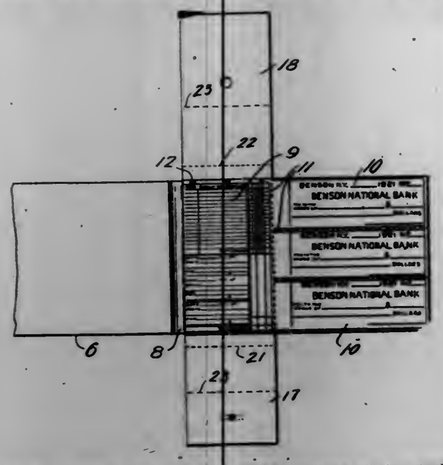


1,456,614. AUTOMATIC RECORD-TRANSFERRING MECHANISM FOR PHONOGRAPHS. GEORGE A. BEHLEN, Greenville, S. C., assignor of one-half to C. C. Rush, Greenville, S. C. Filed Sept. 21, 1921. Serial No. 502,166. 34 Claims. (Cl. 274—10.)

1. A device of the character described, comprising a traveling rotative turntable, a record receiving magazine, means for supporting a plurality of records therein, a record gripping and carrying element bodily movable with the table, said table being movable to a position beneath the magazine and the gripping element being movable to a position above the magazine, and means for effecting movement of the table upwardly into the magazine to deposit a record beneath the pile therein, and means for

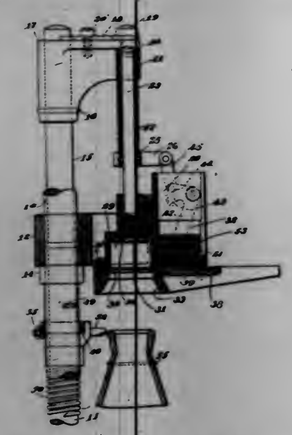
effecting movement of the record gripping device downwardly into the magazine to engage the uppermost record therein.

1,456,615. PURIFYING SOLUTIONS OF IRON AND RECOVERING METALS FROM SUCH SOLUTIONS. DONALD BELCHER, Boston, and FREDERIC A. EUSTIS, Milton, Mass., assignors of one-half to Charles Page Perin, New York, N. Y., and one-half to said Eustis. Filed June 7, 1922. Serial No. 566,581. 27 Claims. (Cl. 204—57.)



1. The art of treating iron sulphide carrying also other associated metals, which comprises leaching the material with a suitable solvent to dissolve iron and part at least of the associated metals, removing from the solution the soluble metals other than iron by precipitating the same, together with at most a minor fraction of the iron, and then electrolyzing the solution to deposit iron therefrom.

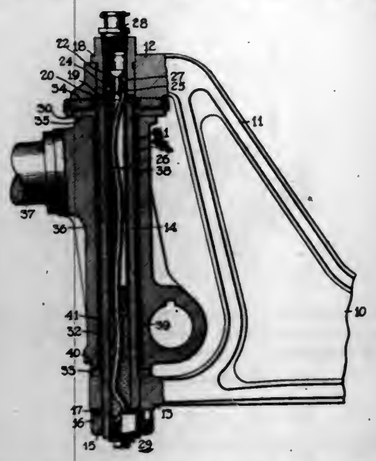
1,456,616. STUB BINDING AND ENVELOPE FOR CHECK BOOKS. EDWIN P. BENSON, New York, N. Y. Filed Jan. 24, 1921. Serial No. 439,335. 2 Claims. (Cl. 281—15.)



1. A device of the kind described, comprising a stack of stub-sheets and attached checks, each stub-sheet having detachably connected thereto a plurality of check-forms in vertical column, each stub-sheet having thereon indicia relating to bank deposits and also distinct indicia relating to the respective check-forms pertaining thereto, an envelope having a back co-extensive with the stub-sheets, edge-fold portions co-extensive with the thickness of the stack of stub-sheets and cover portions for covering the front of the stack of stub sheets, a main backing

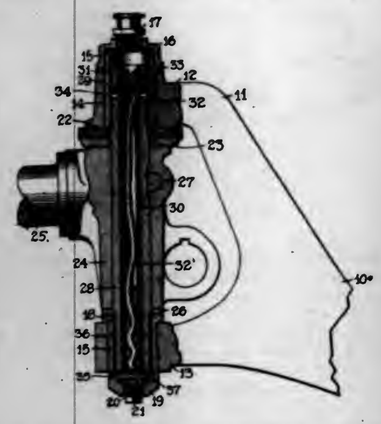
underlying the stack of stub-sheets and checks and the envelope back and parallel thereto, and fastening means

passing through the horizontal edge portions of the stack of stub-sheets and through the upper edge portion of the envelope back and of the main backing.



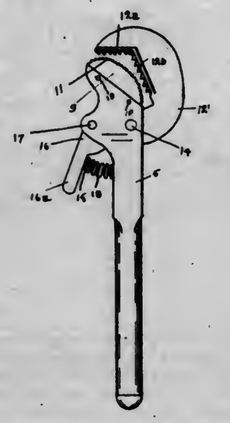
1,456,617. BOTTLE-CAPPING AND WIRE-REMOVING MACHINE. ROLLAND J. CANTON, Lynn, Mass. Filed Sept. 15, 1921. Serial No. 500,745. 3 Claims. (Cl. 226—92.)

1. In a machine of the class described, the combination of bottle holding means, a cross-head movable toward and from said bottle and provided with a recess, a cutter slidably mounted in said recess, and means for forcing said cutter outwardly with respect to said recess to maintain said cutter in engagement with the bottle during its movement to cut and remove used cup holding rings from the neck of the bottle.



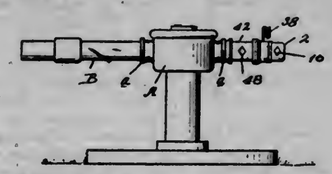
1,456,618. LUBRICATION OF AUTOMOTIVE VEHICLE KNUCKLES. GUSTAV W. CARLSON, Cleveland, Ohio, assignor to The Torbensen Axle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 4, 1922. Serial No. 549,592. 15 Claims. (Cl. 64—27.)

3. In a knuckle construction, the combination of a hollow knuckle pin, a bearing at the upper portion thereof, said pin having a transverse opening for supplying lubricant to the bearing, a device in the upper portion of said hollow pin adjacent said opening and having a peripheral portion engaging an inner portion of the pin



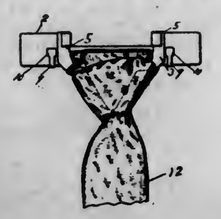
so as to intercept lubricant from its course down the pin and guide same into said opening, and a wick in the hollow pin for feeding lubricant up to the peripheral portion of said device.

1,456,619. LUBRICATION OF AUTOMOTIVE VEHICLE KNUCKLES. GUSTAV W. CARLSON, Cleveland, Ohio, assignor to The Torbensen Axle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 4, 1922. Serial No. 549,593. 7 Claims. (Cl. 64—27.)



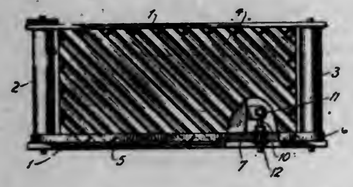
5. In a device of the character described, a hollow pivot pin, an active bearing surface, a container for lubricant closed at one end and open at its opposite end and enclosed within the hollow of the pivot pin, the open end of the container being flared outwardly so as to engage the inner wall of the hollow pivot pin and being of a diameter less than the inside diameter of the hollow pivot pin, whereby an oil passage is provided between said container and the inner wall of the pivot pin through which the oil is free to flow in its movement toward the active bearing surface, a wick extended at one end within the container and at its opposite end extended towards the open end thereof, said wick being adapted to conduct the lubricant within the container to said passage, and a support for the wick spaced slightly above the upper open end of the lubricant container.

1,456,620. WRENCH. GEORGE W. CARY, Greenfield, Mass. Filed Oct. 22, 1919. Serial No. 332,543. 1 Claim. (Cl. 81—111.)



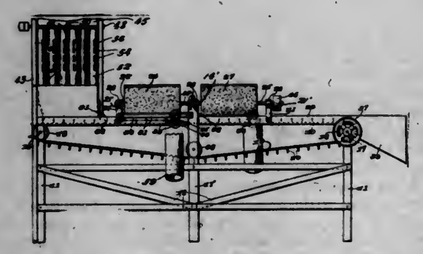
A wrench comprising a handle having a jaw-holding head on one end, said head being laterally enlarged and longitudinally slotted, a rigid jaw supported by the sides formed by the slot in said head and having a series of teeth disposed in the convex curve, certain of said teeth being located along the innermost side of the jaw in substantial axial alignment with the handle, a movable jaw having an arm pivotally supported in the slot and provided with two rows of gripping teeth, one row being disposed at an oblique angle of the other row and the two rows having a common meeting point so that the teeth of said movable jaw will converge away from the teeth of the rigid jaw toward said meeting point, said arm having segmental gear teeth therein, a lever provided in the slot of said jaw-holding head and having segmental teeth to engage with the segmental teeth of said arm and provided with a handle extending toward the first named handle, and a spring bearing at one end against the handle and at the other end against said lever to maintain the movable jaw toward the rigid jaw.

1,456,621. PORTABLE GAS METER. JOHN W. CHADWICK, Kansas City, Mo. Filed Dec. 29, 1920. Serial No. 433,905. 2 Claims. (Cl. 73—167.)



1. A portable device of the character described consisting of a tubular member closed at one end and having an outlet port in one side and open at the other end which latter is adapted to be pressed against a fluid-containing pipe, and a second tubular member open at one end and adjustably mounted upon the first member and provided with an outlet port to coact with the first outlet port in providing a variable discharge orifice which may be entirely closed or opened to any desired degree, there being a scale on the second member to coact with an index on the first member to show the degree of such opening.

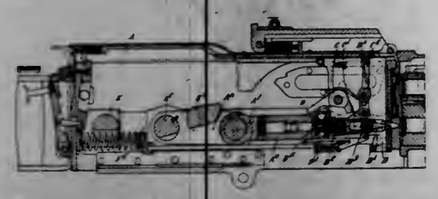
1,456,622. NECKTIE-KNOT-FORMING DEVICE. PETER CRAUSE, Hartford, Conn. Filed Dec. 28, 1922. Serial No. 609,426. 3 Claims. (Cl. 24—56.)



1. A device of the class described, comprising a sheet metal body portion which is of longitudinal arcuate form and is adapted to fit within a collar intended for human wear, the body having means for its connection detachably with the collar button and having a downwardly bent portion which is also longitudinally arched, the body portion and the downwardly bent portion having jointly a slot to receive a necktie.

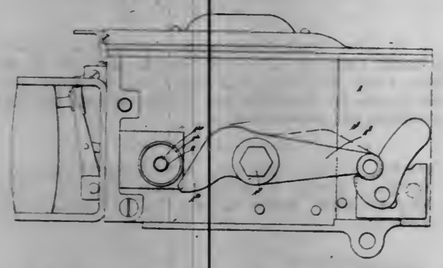
1,456,623. CARRIER-TABLE ATTACHMENT. JOHN PETER DAMM, Techny, Ill. Filed Aug. 8, 1921. Serial No. 490,528. 2 Claims. (Cl. 271—52.)

1. In paper feeding mechanism, the combination with a carrier table, of rollers arranged in the ends of the table, a belt connecting said rollers, and manually operable means for regulating the tension of said belt and of shifting the same laterally.



1,456,624. CORN FEEDING AND DEBUTTING MACHINE. GEORGE W. DAVIS, Gibson City, Ill. Filed May 27, 1922. Serial No. 564,174. 5 Claims. (Cl. 146—11.)

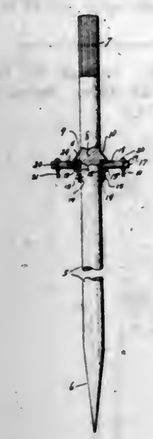
1. A machine for trimming ears of corn comprising a carrier, cutting mechanisms mounted at opposite sides of the carrier and in staggered relation to each other, a rotatable member for moving the ears into position to



have one end cut off by one of the cutting mechanisms, means for deflecting the ears toward said rotatable member, a second rotatable member for moving the ears to present their other ends to the other cutting mechanism, and means for deflecting the ears toward the second rotatable member.

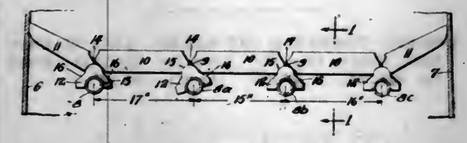
1,456,625. MACHINE GUN. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Jan. 7, 1921. Serial No. 435,651. 5 Claims. (Cl. 89—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a machine gun of the barrel recoiling type, the combination with a part recoiling with the barrel, a crank pivoted on said part, the lock, and a connecting rod connecting said crank to said lock of a centrally arranged and rigid stop-piece which said crank strikes at the end of its movement during recoil of the barrel, and a device common to the side lever axis pin and the firing spring for retaining these two parts in their assembled position.



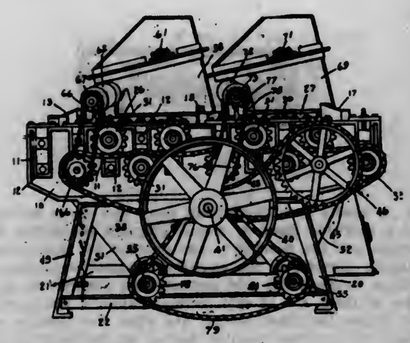
1,456,626. MACHINE GUN. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Original application filed Jan. 7, 1921, Serial No. 435,651. Divided and this application filed Jan. 18, 1921. Serial No. 438,167. 4 Claims. (Cl. 89—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a machine gun of the barrel recoiling type, the combination with a part recoiling with the barrel, a crank pivoted on said part, the lock, and a connecting rod connecting said crank to said lock, of a centrally arranged and rigid stop-piece, and a centrally arranged mass of metal on said crank, which mass strikes the stop-piece at the end of the movement of said crank during recoil of the barrel.



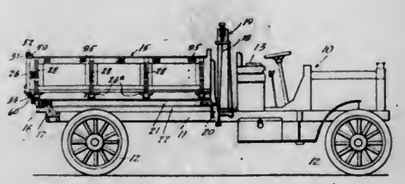
2. In a machine gun of the barrel recoiling type, the combination with a part recoiling with the barrel, a crank pivoted on said part, the lock, and a connecting rod connecting said crank to said lock, of a centrally arranged and rigid stop-piece, and a centrally arranged mass of metal on said crank, and projecting beyond the upper surface thereof, which mass strikes the stop-piece at the end of the movement of said crank during recoil of the barrel.

1,456,627. HITCHING AND TETHERING DEVICE. EDWARD JOHN DELBRIDGE, Hatch, Idaho. Filed Nov. 15, 1922. Serial No. 601,111. 1 Claim. (Cl. 119—117.)



A hitching and tethering device comprising a standard having a flange formed integrally therewith adjacent one end of the standard and projecting outwardly, said flange surrounding the standard and having its lower face disposed at right angles to the standard to provide a bearing surface, a holding plate having a central opening adapted to receive the standard and engage the bearing face of the flange, the plate being rotatable on the standard, the edge portion of the plate projecting beyond the flange, hitching means carried by said edge portion at spaced intervals, a collar movably mounted on the standard, the upper face of said collar being disposed at right angles to the standard to provide a bearing face adapted to engage the plate, and a plurality of threaded openings provided in the collar adjacent its lower edge for the reception of set screws whereby the bearing collar may be urged into binding engagement with the plate and the plate urged into binding engagement with the flange and the set screws tightened to hold the plate rigid.

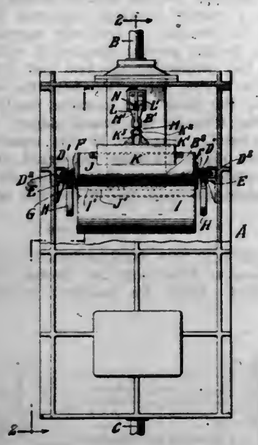
1,456,628. FIRE-BOX-ARCH CONSTRUCTION. GUY CARLETON DENNEY, Hinsdale, Ill., assignor to American Arch Company, a Corporation of Delaware. Filed Nov. 26, 1920. Serial No. 426,348. 8 Claims. (Cl. 110—87.)



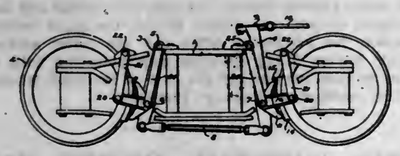
1. In a locomotive fire box having spaced arch supporting members, an arch comprising brick supporting members on the arch supporting members and bricks spanning the distance between said arch supporting members and resting on said brick supporting members, each of said brick supporting members being provided with an arch supporting member engaging surface and a brick supporting surface, the arch supporting member engaging surface permitting movement of the brick supporting member to change the position of the brick supporting surface whereby spaces of different dimension between arch supporting members can be spanned by bricks of one size.

1,456,629. TIN-PLATE BRANNING AND CLEANING MACHINE. WILLIAM N. DURBIN, Anderson, Ind. Filed Oct. 18, 1919. Serial No. 331,637. 12 Claims. (Cl. 51—23.)

1. A tin plate cleaning machine including a branning compartment and a cleaning compartment to which the tin plates are fed directly from the branning compartment, means for preventing the bran from passing from the branning compartment to the cleaning compartment, and separate means for supplying cleaning material repeatedly to the branning and cleaning compartments, substantially as set forth, whereby the cleaning material in said two compartments will be kept separate.



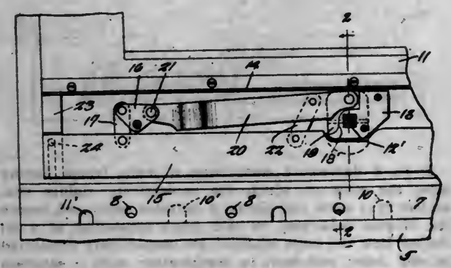
1,456,630. VEHICLE BODY. ARTHUR L. EATON and HARRY F. VICKERS, Los Angeles, Calif.; said Vickers assignor to said Eaton. Filed May 23, 1921. Serial No. 471,580. 2 Claims. (Cl. 296—14.)



1. In a vehicle body, a bottom, a side, a member arranged in connection with the bottom to project from its edge, the member having a guide slot in it, a block slidably carried by the slot, and a bracket attached to the side and having pivotal connection with the block so that the side can be positioned to project from the edge of the bottom in the plane of the bottom or to project upwardly from the bottom, the bracket having parts adapted to be connected with said member to hold the side in either of said positions.

1,456,631. WEIGHING MACHINE. HAROLD D. ELFRETH, Philadelphia, Pa., assignor, by mesne assignments, to H. S. B. W.-Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 24, 1919. Serial No. 347,096. 7 Claims. (Cl. 249—54.)

1. A tilting bucket for weighing machines having an intercepting receptacle secured to it, and so arranged that when the bucket is in normal receiving position the material to be weighed will flow freely from the receptacle into the bucket, and when the bucket tilts to deliver its contents said receptacle will be turned to a position in which it will retain a considerable quantity of said material.



1,456,632. RAILWAY BRAKE HEAD. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 2, 1922. Serial No. 540,577. 8 Claims. (Cl. 188—236.)

5. The combination with a truck comprising wheels and a frame, of brake levers, hangers suspended from said frame, and a brake head having an arm extending laterally and in advance, and connections between the brake head and arm and said hangers.

1,456,633. WEATHER STRIP. CLARENCE M. EVELETH, River Forest, Ill. Filed Sept. 12, 1921. Serial No. 500,081. 1 Claim. (Cl. 20—58.)

In a device of the character described, a hinged closure, a sill associated with the hinged closure, a pair of spaced

ribs extending upwardly from the sill, a housing secured to the lower end of said closure, a supporting plate secured to the inner surface of the housing, a movable plate having a square opening supported intermediate the ends of the housing, a vertically movable weather strip, an arm having pivotal connection with the movable plate, a link connecting the arm and weather strip, a pivoted plate having connection with the arm, a link for connecting the plate and movable weather strip, a shaft extending through the hinged closure and having a squared extremity disposed in the squared opening of the movable plate, whereby movement of the shaft and movable plate will cause the weather strip to move into close engagement with one of the ribs of the sill.

1,456,634. DEVICE FOR BABBITTING CONNECTING RODS. CHARLES ERICKSON, Jr., Scotia, Calif. Filed Mar. 18, 1922. Serial No. 544,853. 2 Claims. (Cl. 22—123.)

1. In a mandrel for babbitting connecting rods, a base provided with an upstanding pin passing through and spaced from the head of the connecting rod, collars fitted upon the pin and in contact with the opposite ends of the head of the connecting rod and provided with annular grooves upon their adjacent faces registering with the space between the pin and the bore of the head, and an additional collar secured upon the extremity of the pin, and means passing through the additional collar and bearing upon an adjacent collar, to jam the parts securely together, the additional collar and the collar adjacent thereto having filling openings communicating with the space between the pin and the bore of the head, whereby Babbitt metal may be poured thereinto.

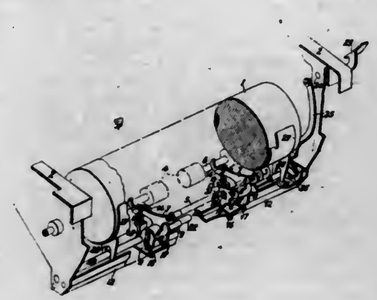
1,456,635. DAVENPORT-BED STRUCTURE. HYMAN FREEDMAN and NATHAN H. FREEDMAN, Chicago, Ill., assignors to Davoplane Bed Company, a Corporation of Illinois. Original application filed May 15, 1916, Serial No. 97,688. Divided and this application filed Mar. 6, 1919. Serial No. 280,964. 3 Claims. (Cl. 5—51.)

1. In a davenport comprising a main frame having sides the ends of which are respectively rigidly connected by a back and front, a movable seat, and means for hinging said seat to said front consisting of a U-shaped link the ends whereof are respectively connected to said front and seat, in combination with a separate link having a pivotal connection with one of said members and a sliding connection with the other of said members.

1,456,636. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J., assignor to Henri Rigaud, New York, N. Y. Filed Aug. 30, 1922. Serial No. 585,185. 2 Claims. (Cl. 132—38.)

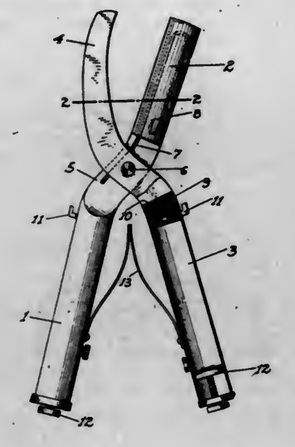
1. A vanity case comprising body and cover sections and a partition member, means hingedly connecting the sections and the member to one another for independent swinging movement, the partition member occupying a position between the said sections and adapted to close either of them, one of said sections having a rim portion over which the other section fits when the sections are closed, the partition member having an outstanding portion to seat upon the edge of said rim portion when the partition member is in position closing the said section, and articles for toilet use supported upon the partition and within the said body and cover sections, the said rim portion of the first-mentioned section being provided with a notch whereby the said outstanding portion of the partition member may be readily engaged for the purpose of swinging the member about the hinge.

1,456,637. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 4, 1919. Serial No. 321,664. 1 Claim. (Cl. 197—102.)



The combination with a typewriter key lever of a cup fixed against rotation on said lever, the sides of the cup being made from thin sheet metal, said metal sides having a screw-thread rolled therein, a key-paper and glass inserted in said cup, and an annular cap also of thin sheet metal and having threads rolled in the sides thereof and adapted to be screwed down upon said cup, said cap having an inturned top flange to bear down upon the glass to retain the glass and paper in the cup.

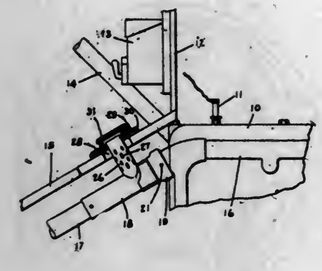
1,456,638. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 30, 1920. Serial No. 413,671. 21 Claims. (Cl. 197—138.)



1. In a typewriting machine, in combination, a platen, front and rear feed-rolls, hangers common to both front and rear feed-rolls, a shaft on which said hangers are carried, guides for said shaft, springs acting on said hangers at one side of said shaft, and means for withdrawing said hanger and, consequently, said rolls from

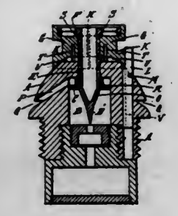
the platen, acting to apply force to said hangers along lines at the same side of said shaft as the points of appli-

cation of said springs, so as to counteract the twisting tendency about said shaft of the hangers due to said springs and means.



1,456,639. FLESH-CUTTING SHEARS. CELESTIN I. LAGIER, Stockton, Calif. Filed Oct. 22, 1921. Serial No. 509,629. 6 Claims. (Cl. 128—305.)

1. A shears comprising a pair of co-operating and connected cutting members, one of said members being hollow, and heat creating means mounted in the hollow area.



1,456,640. AUTOMOBILE EXHAUST LOCK. GEORGE A. LOWAY, Indianapolis, Ind., and THOMAS K. LOWAY, Chicago, Ill. Filed June 21, 1920. Serial No. 390,677. 4 Claims. (Cl. 207—6.)

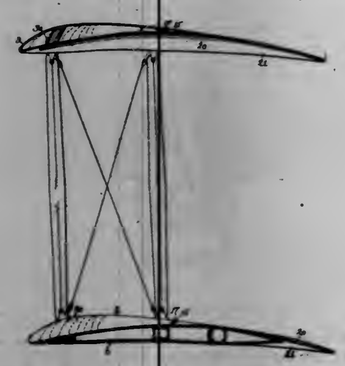
1. A locking device for a conduit, having a valve mounted therein, means for opening and closing said valve and locking it in position, means for connecting said locking device with the conduit, and an annular

sleeve loosely mounted thereon between said connecting means and valve for protecting said locking means against being engaged by a cutting tool.

1,456,641. SHELL FUSE. OWEN DAVID LUCAS, Westminster, London, England, assignor to M. L. Experimental Limited, Westminster, London, England. Filed Aug. 24, 1920. Serial No. 405,659. 15 Claims. (Cl. 102—39.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

14. In a shell fuse, the combination with the striker of a head carried by said striker and arranged in front of the fuse, a cylinder in the fuse, a piston which is carried by said striker and works in said cylinder, the area of said piston being approximately equal to the effective area of said head, means for conveying air to the cylinder in rear of said piston, a split collar for holding the striker in the safe position, a tape wrapped round said collar and a set-back pin for holding said tape in position.

1,456,642. VEHICLE WHEEL. AUGUST G. MASS, Cincinnati, Ohio. Filed Dec. 12, 1921. Serial No. 521,657. 5 Claims. (Cl. 152—32.)

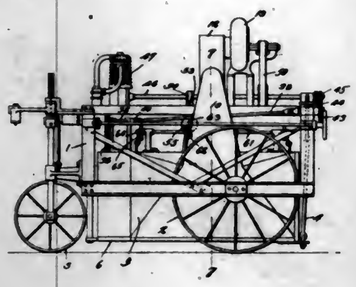


5. In a vehicle wheel, the combination of an inner wheel-member having an outer peripheral face, an outer wheel-member comprising an annular rim provided with annular radially inwardly extending flanges to form an inwardly opening annular groove, said outer peripheral face and said rim having an annular space between them, said rim provided with outer cross-grooves at its outer periphery to form inwardly extending cross-ridges at its inner periphery and apertures at the ends of said grooves, a series of full elliptical springs annularly arranged in said annular space, U-clips, the bases of said U-clips

located in said cross-grooves and the limbs of said U-clips received through said apertures between the sides of the outer halves of said springs and said flanges to

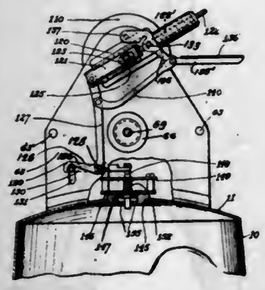
connect said springs and said outer wheel-member, and U-clips connecting said springs and said inner wheel-member.

1,456,643. AIRPLANE. FRANK R. MAXWELL, Jr., Dedham, Mass. Filed Apr. 13, 1921. Serial No. 460,925. 7 Claims. (Cl. 244—12.)



2. An aerofoil comprising a supporting element provided with a slot extending therethrough transversely of the line of flight, such slot being arranged adjacent to the advancing edge of said element and being normally covered, and means for simultaneously uncovering said slot and increasing the angle of incidence of the aerofoil.

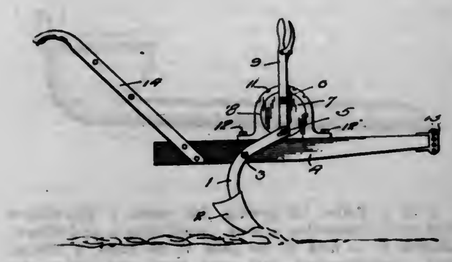
1,456,644. DIAL FOR ELECTRICAL INSTRUMENTS. VERNON H. MEYER, Cleveland, Ohio. Filed July 31, 1922. Serial No. 578,302. 2 Claims. (Cl. 74—33.)



1. A dial of the kind described, comprising a base provided with a knob, and a circular knurled flange projecting from the base and extending around the same near the outer edge thereof.

1,456,645. COTTON PICKER. JOSEPH B. NEIL, York, S. C., assignor of one-third to Charles L. Cobb, Rock Hill, S. C., and one-third to J. C. Wilborn, York, S. C. Filed Apr. 19, 1920. Serial No. 374,951. 11 Claims. (Cl. 56—14.)

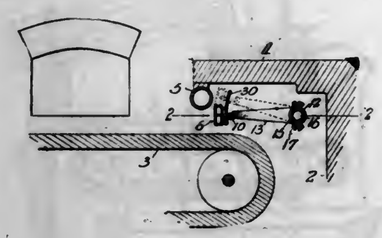
4. In a cotton picking machine the combination with a frame, means for reciprocating the frame, and superposed picking units carried by said frame, each unit including a picking roll and a spiral roll, of suction throats extending from each of the picking units and forming branch receiving pockets therebetween and extending longitudinally of the frame, a stationary suction hood in communication with the suction throats, means for setting up a suction through the hood from the throats and picking units during the reciprocation of the frame and units, and means for actuating the picking units during their reciprocation.



1,456,646. SEA MINE. EUGENE OSEGOVIC, Brooklyn, N. Y. Filed June 30, 1921. Serial No. 481,491. 5 Claims. (Cl. 102—3.)

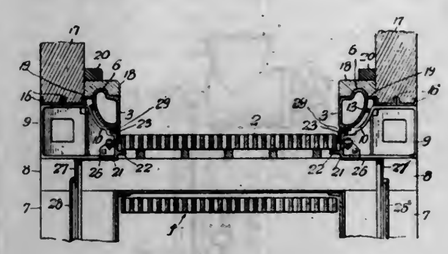
4. A sea mine comprising a casing, a firing pin slidably mounted co-axial with said casing, an explosive mixture in the casing adapted to be detonated by said firing pin, a hub rigid with said casing and surrounding said firing pin, a flange rotatably mounted upon said hub, a foot integral with said flange, a cocking pin integral with said firing pin, said cocking pin engaging said foot preparatory to firing, means urging said cocking pin against said foot, a plurality of antennæ pivotally attached to, and extending tangentially from, said flange, said antennæ being adapted, upon impact with a solid object, to rotate said flange and foot to release said cocking pin and firing pin, a drum mounted on said casing and having a cable wound thereon, a gear rigidly mounted co-axially with said drum, a rotatably mounted member adjacent said gear and having two spaced-apart teeth extending therefrom, one of said teeth being adapted to engage said gear before launching of the

mine to prevent rotation of the drum, the other being adapted to engage said gear after the mine has sunk to a predetermined depth, both being adapted to lie clear of said gear during sinking or drifting of the mine, a diaphragm on the outside of the casing, resilient means urging said diaphragm outward, a spring urging said member to rotate to withdraw said first-named tooth from engagement with said gear and to bring said second-named tooth into engagement with said gear, releasable locking means to prevent rotation of said member, means on said diaphragm contacting with said last-named means, said last-named means being adapted to be partially released by withdrawal of said means on said diaphragm when said diaphragm is forced partway back by pressure of the water, a projection on said means on the diaphragm adapted to engage said releasable locking means after said partial release to prevent complete release, said first-named tooth thereby being withdrawn from engagement with said gear to allow free rotation of the drum, said projection being adapted to be withdrawn from said releasable locking means upon further backward movement of the diaphragm owing to greater pressure, said second-named tooth thereby being brought into engagement with said gear to prevent further rotation of said drum, a valve in the casing communicating with the explosive chamber, a flat member pivotally mounted on the casing and adapted to be partially rotated by the weight of the water during towing in of the mine, means connecting said flat member with said valve operable by partial rotation of said flat member to open said valve.



1,456,647. PLOWFOOT ADJUSTER. LUCIUS A. PANNELL, Atlanta, Ga. Filed Dec. 13, 1921. Serial No. 522,142. 2 Claims. (Cl. 97—197.)

2. In a plow foot adjuster, the combination with a plow beam, of a plow arm fulcrumed thereon, a notched segment affixed to the plow beam, a hand lever operatively engageable with the notched segment, a rotatable disk positioned within the notched segment, means operatively connecting the upper end of the plow arm with the lower end of the hand lever, and means loosely connecting the lower portion of said hand lever to the upper end of the plow arm.

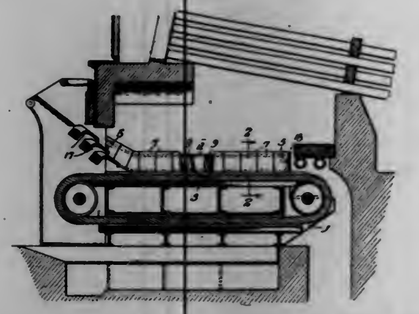


1,456,648. FUEL-RETARDING MEMBER. HERMAN A. POPPENHUSEN, Hammond, Ind., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Dec. 22, 1919. Serial No. 346,472. 5 Claims. (Cl. 122—4.)

1. In a furnace, the combination of a combustion chamber, a traveling grate therein, a liquid cooled fuel retarding member above said grate adjacent the rear end thereof and extending across the same, said member being formed of a plurality of separate hollow sections arranged end to end, means providing communication between said sections so that a cooling liquid may be circulated through said member from one section to the other, each section having a rear web, a bar extending lengthwise of said member to the rear thereof and secured to said webs, a rock shaft spaced rearward of said sections, arms extending between said bar and said shaft

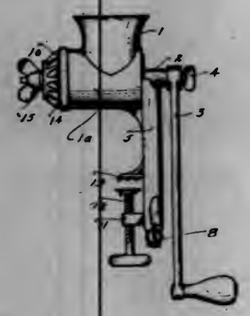
and connected therewith for supporting and adjusting said sections toward and from said grate, and means for turning said shaft and holding said member in any of its adjusted positions.

1,456,649. LEDGE PLATE AND WATER-BOX MOUNTING FOR FURNACES. HERMAN A. POPPENHUSEN, Hammond, Ind., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed July 25, 1921. Serial No. 487,242. 3 Claims. (Cl. 122—292.)



1. In a furnace, the combination with a combustion chamber and a grate therein, of a water box extending along one side of the grate and lying in direct contact with the fuel bed thereon, said box being located inside of the adjacent side wall of the combustion chamber and having inlet and outlet openings, a plurality of laterally spaced chairs supported by said side wall and extending under the water box for supporting the same, said box and said chairs having a key and slot connection permitting the box to expand and contract endwise with respect to said chairs and said side wall, said box having clean-out openings in the spaces between said chairs so that access may be had thereto through said wall from the exterior thereof.

1,456,650. WATER BOX FOR FURNACES. HERMAN A. POPPENHUSEN, Hammond, Ind., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Aug. 17, 1921. Serial No. 492,948. 8 Claims. (Cl. 122—292.)

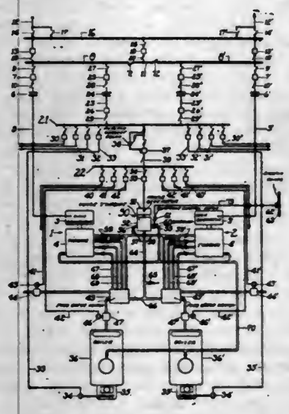


1. In a furnace, the combination with a combustion chamber and a grate therein, of an elongated box extending along one of the walls of said combustion chamber and supported thereby, and a plurality of tiles supported by said box and extending over and covering the inner side face thereof, said tiles being in direct contact with the fuel bed on the grate and insulating the box therefrom

and the heat produced in the combustion chamber, said box having inlet and outlet openings so that a cooling

fluid may be circulated through the box for maintaining the same and tiles relatively cool for preventing adherence of the fuel bed to said tiles.

1,456,651. FOOD-GRINDING MACHINE. D. MYRTILLE RIEMAN, Portland, Oreg. Filed Aug. 3, 1922. Serial No. 579,531. 4 Claims. (Cl. 17—20.)

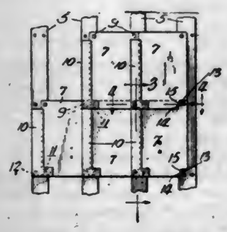


4. The combination with a food grinder embodying a bowl and a grinding screw, of a liquid receptacle connected to one end of the bowl and depending therefrom, and means for controlling the discharge of liquid from the receptacle.

1,456,652. ELECTRIC POWER-GENERATING SYSTEM. ALLEN M. ROSSMAN, Chicago, Ill., assignor to Sargent & Lundy, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed June 11, 1921. Serial No. 476,701. 30 Claims. (Cl. 290—2.)

17. In combination, a main prime mover, a main generator driven thereby, an auxiliary prime mover, an auxiliary generator driven thereby, means for supplying current continuously from the main generator to the auxiliary generator to drive the auxiliary generator and its connected prime mover idle so long as the main generator is being driven and means for cooling the driven prime mover.

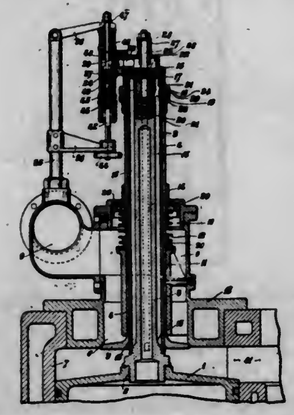
29. In a steam driven power plant employing a house turbo generator driven by current from the main turbo generator, the method of conserving the heat of the friction losses on the vanes and blading of the turbine of the house generator which comprises passing steam



through said turbine to absorb the heat of fluid friction with the moving parts and transferring the heat of the steam so used to feed water for the main turbine.

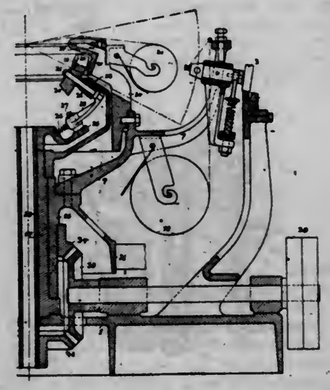
1,456,653. SEED SOWER. MAX SCHLING, New York, N. Y. Filed July 21, 1922. Serial No. 576,430. 3 Claims. (Cl. 275—1.)

1. In a device for sowing fine seeds, a pipe-shaped seed-sower comprising a bowl, constituting a seed-hopper, adapted to be held in the palm of the hand, a tubular stem communicating with said bowl, and means for controlling the flow of seeds from said bowl to said stem.



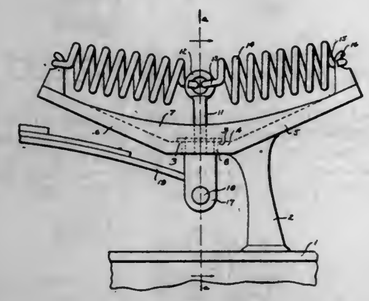
1,456,654. ASH HOPPER. ARTHUR P. STRONG, Chicago, Ill., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Oct. 6, 1921. Serial No. 505,702. 6 Claims. (Cl. 189—3.)

1. A wall, comprising plate supporting beams, plates arranged inside of said beams and closing the spaces



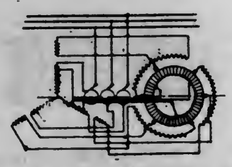
between the same, and bolts securing the plates to said beams, said plates having means extending over the inner ends of said bolts for protecting the same from contact with the material packed against the inside of said wall.

1,456,655. INTERNAL-COMBUSTION ENGINE. WALTER FREDERICK THOMAS, St. Helens, Isle of Wight, England. Filed Oct. 17, 1922. Serial No. 595,120. 5 Claims. (Cl. 123—33.)



1. In a four stroke cycle internal combustion engine, a working cylinder having valve controlled air inlet and exhaust ports, a working piston mounted to reciprocate in said cylinder, an auxiliary pump cylinder, an auxiliary pump piston mounted to reciprocate in said pump cylinder, means for reciprocating said pump piston coincidently with said working piston comprising a means for introducing alternately a charge of fuel and air and a charge of pure air into said pump cylinder, and means for transferring said charges of fuel and air and pure air when compressed to said working cylinder.

1,456,656. BRAIDING MACHINE. CARL TOBER, Berlin-Karlshorst, Germany. Filed Jan. 31, 1921. Serial No. 441,422. 2 Claims. (Cl. 96—7.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

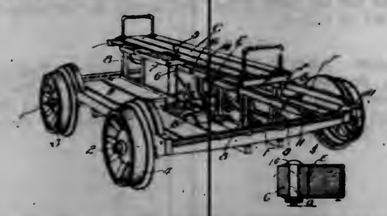


1. In a braiding machine a plurality of outer bobbins, a rotatable carrier therefor, a plurality of slides adapted to revolve relative to said carrier in opposite direction thereto, inner bobbins carried by said slides, a set of rollers for operating the said slides, a track on the said carrier for the said slides, and means for rotating the said set of rollers.

1,456,657. SHOCK ABSORBER. HARRY A. TOULMIN, Jr., Dayton, Ohio, assignor to The Temco Electric Motor Company, Leipsic, Ohio, a Corporation of Ohio. Filed Apr. 7, 1921. Serial No. 459,446. 7 Claims. (Cl. 267—28.)

1. In combination, a stanchion having opposed ends, a resilient element connected to either end of said stanchion, a supporting link connected at one end to said resilient element and at the other end to a second resilient element, the parts being so arranged that the shock imparted to the vehicle will pass through the stanchion, the resilient element, the supporting link to the second resilient element in the order named.

1,456,658. ALTERNATING-CURRENT COMMUTATOR MOTOR. OTTO TÜRK and JAROSLAV KOZISEK, Charlottenburg, near Berlin, Germany, assignors to Siemens-Schuckert Werke G. m. b. H., Berlin, Germany, a Corporation of Germany. Filed Oct. 29, 1915. Serial No. 58,679. 3 Claims. (Cl. 172—274.)



1. In combination an asynchronous machine having a wound rotor and a wound stator, a commutator machine mechanically coupled to said asynchronous machine and having a wound rotor and brushes resting on its commutator and having a wound stator, slip rings rotating with said asynchronous machine and an alternating current supply line connected to said slip rings, connections from the slip rings to the asynchronous machine rotor and connections from the latter to the commutator machine rotor, and circuits including the stator windings of both machines and said brushes.

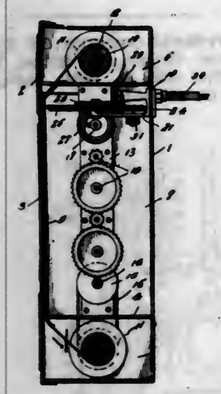
1,456,659. MOTOR CAR. JEAN K. VANATTA, Chicago, Ill., assignor to Mudge & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1923. Serial No. 620,573. 7 Claims. (Cl. 105—162.)

1. In a track inspection motor car of the class described, a raised seat frame comprising parallel side rails and a plurality of cross bars, vertical supporting stand-

ards between the car platform and the seat frame, a handle member at the side of each side rail capable of

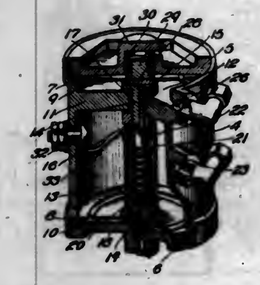
longitudinal movement relative thereto, and means for controlling the extent of movement of said member.

1,456,660. COMPUTING MACHINE. HARRY H. VICKERS, Corona, Long Island, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Mar. 10, 1921. Serial No. 451,120. 12 Claims. (Cl. 235—60.)



2. In combination, a traveling carriage, computing mechanism normally set for addition and including means for indexing numbers and a general operator for effecting computation of the numbers so indexed, subtraction-setting mechanism returnable to ineffective position by said general operator, and means for automatically causing actuation of said general operator upon backing of the carriage a predetermined distance into a computing zone.

1,456,661. COLLAPSIBLE IRONING BOARD. ANDREW L. WAGSTAFF, Kansas City, Mo. Filed May 9, 1921. Serial No. 468,003. 1 Claim. (Cl. 68—10.)

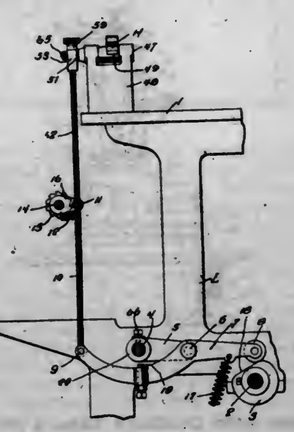


In apparatus of the class described, a casing divided into a central compartment and end compartments, a cover for said casing provided with a window over said central compartment, reels in said end compartments, respectively, a map wound about one of said reels and adapted to be unwound therefrom onto the other reel and movable across said window, a shaft in said central compartment, driving connections between said shaft and the winding reel, a train of reducing gears in said central compartment connected to said shaft whereby said shaft may be rotated to move said map a certain distance in proportion to the travel of the vehicle, a second shaft connected to said reduction gearing to operate the latter, a pinion on said last named shaft, a gear meshing with said pinion between said gear and a moving part of the vehicle, said driving connections including a flexible shaft, connections between said flexible shaft and gear and a bracket supporting said gear and last named connections and said flexible shaft and transversely movable within a slot in said casing and means for moving said bracket within said slot to engage said gear with said pinion and disengage the gear from the pinion.

1,456,662. TOURIST MAP AND OPERATING MECHANISM THEREFOR. HARRY E. WILDER, El Paso, Tex. Filed Aug. 1, 1922. Serial No. 578,892. 1 Claim. (Cl. 40—42.)

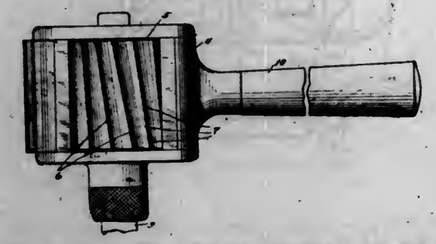
In apparatus of the class described, a casing divided into a central compartment and end compartments, a cover for said casing provided with a window over said central compartment, reels in said end compartments, respectively, a map wound about one of said reels and adapted to be unwound therefrom onto the other reel and movable across said window, a shaft in said central compartment, driving connections between said shaft and the winding reel, a train of reducing gears in said central compartment connected to said shaft whereby said shaft may be rotated to move said map a certain distance in proportion to the travel of the vehicle, a second shaft connected to said reduction gearing to operate the latter, a pinion on said last named shaft, a gear meshing with said pinion between said gear and a moving part of the vehicle, said driving connections including a flexible shaft, connections between said flexible shaft and gear and a bracket supporting said gear and last named connections and said flexible shaft and transversely movable within a slot in said casing and means for moving said bracket within said slot to engage said gear with said pinion and disengage the gear from the pinion.

1,456,663. MOTOR PROTECTOR. GROVER C. WILLIS, Kansas City, Mo., assignor to Willis-Warner Manufacturing Company, Kansas City, Mo., a Partnership composed of Grover C. Willis and Joseph O. Warner. Filed Mar. 17, 1921. Serial No. 453,043. 7 Claims. (Cl. 200—83.)



1. In a device of the class described, a closed casing having a vacuum chamber and an oil chamber, a contact-carrying diaphragm in the oil chamber, a contact post having one end in the oil chamber and the other in the vacuum chamber, a contact-carrying diaphragm in the vacuum chamber to be moved into functional position to contact its contact with the post when a vacuum is created in the vacuum chamber, a binding post in the wall of the casing, and a connection between the contact in the vacuum chamber and the post.

1,456,664. METAL WEATHER STRIP. LUTHER C. YEICH and ROBERT H. G. PARKER, Reading, Pa. Filed Feb. 16, 1922. Serial No. 536,923. 2 Claims. (Cl. 189—65.)

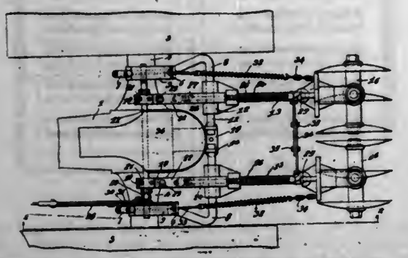


1. In a metal weather strip for windows, a metal retaining member having a flat body portion and one longitudinal edge bent at right angles thereto and forming an open groove, in combination with a weather strip of light, resilient metal having one longitudinal edge bent at right angles to its body and adapted for frictional engagement in said groove while the other edge is curved to bring it free from contact with the window frame.

1,456,665. ELEVATOR-CONTROL MECHANISM FOR ENVELOPE-MAKING MACHINES. ADDISON E. AUGUSTINE, Hackensack, N. J., assignor to Chester Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 5, 1919. Serial No. 315,395. 11 Claims. (Cl. 271—62.)

1. In elevator control mechanism for envelope-making machines, an elevator adapted for supporting a pile of envelope blanks, means for moving the elevator upwardly so as to maintain the level of the blanks, including a rotating shaft, connections between the elevator and the shaft for imparting a step by step movement to the elevator, a lever having a portion adapted to engage the upper surface of the pile of envelope blanks, a link extending between said lever and said connections for rendering the connections inoperative in accordance with the level of the pile, means adjustably connecting said lever and said link whereby to determine the point at which said lever becomes effective upon said connections, said last means comprising a member fixed to said link and having a slot therein, a member pivotally engaging said lever extending into said slot, and a screw engaging between said two members for adjusting the second member longitudinally of the slot by rotation of the screw.

1,456,666. FISH SCALER. JAMES J. BARRY, Brooklyn, N. Y. Filed Nov. 21, 1922. Serial No. 602,487. 4 Claims. (Cl. 17—5.)

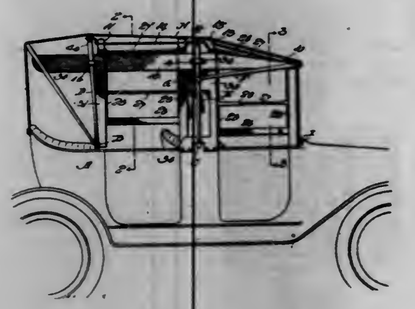


1. A device of the character described comprising a housing, a tooth-wheel in said housing adapted to engage and remove scales from a fish, said housing having a separate opening for ejecting the scales.

1,456,667. MANUFACTURE OF ARTIFICIAL STONE, CEMENT, OR THE LIKE. HOWARD BERRY, Welwyn, England. Filed Feb. 14, 1923. Serial No. 619,011. 1 Claim. (Cl. 106—24.)

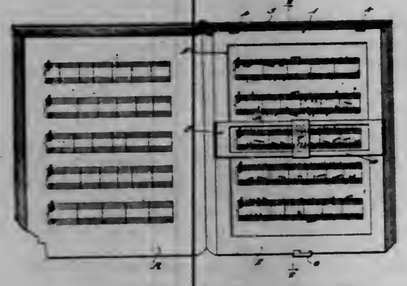
A cementitious material composed of 85% powdered slate, 10% calcined magnesite, 5% sodium bicarbonate, mixed with a trace of a soluble barium compound, substantially as hereinbefore set forth.

1,456,668. TRACTOR ATTACHMENT. JOSIAH QUINCY BILLINGS, Hammond, La. Filed Sept 24, 1921. Serial No. 502,945. 5 Claims. (Cl. 97—71.)



4. A device of the class described including bearing blocks, draw bars connected thereto, connecting bars laterally movable on the draw bars, a crank shaft, connecting rods including laterally swingable arms, implement connecting means at the free end of said arms, and an actuating lever having connection with the crank shaft to impart movement to the connecting rods.

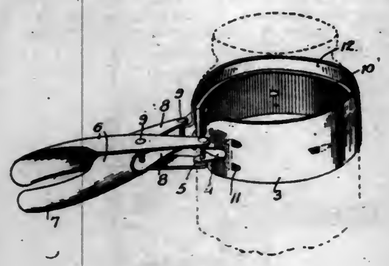
1,456,669. CURTAIN-CARRYING ATTACHMENT FOR VEHICLES. JAMES H. BOOGASS, Fond Du Lac, Wis., assignor to Longdin-Brugger Company, Fond Du Lac, Wis., a Corporation. Filed May 19, 1919. Serial No. 298,172. 9 Claims. (Cl. 296—140.)



1. A vehicle top including an arched frame, curtain frame guideways supported by said arched frame, said

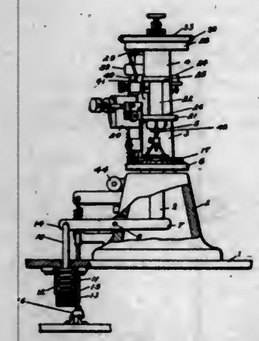
guideways extending upwardly along one side of said arched frame and then curving inwardly at different heights to extend across the top portion of the latter, and a flexible curtain slidable in said guideways, said curtain comprising two spaced flexible strips which are

slidable in said guideways, and transverse struts connecting said strips, the transverse strut at the upper edge of the frame of said curtain being readily adjustable torsionally to prevent binding of the upper edge of said curtain as it passes around the curved portions of said guideways.



1,456,670. ATTACHMENT FOR MUSIC SHEETS. MARY M. BROWN, Elberton, Ga. Filed May 31, 1921. Serial No. 473,604. 3 Claims. (Cl. 84—470.)

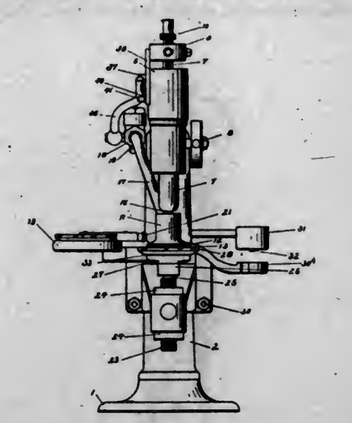
1. A device for teaching persons how to read music comprising a frame composed of pair of pivotally connected sections, the front section having an opening of sufficient size to permit the notes to be seen therethrough, a vertically shiftable track extending crosswise of said front section, said track having hooks at its ends slidably engaging the vertical edges of said sections, and an indicator slidably mounted on the track for cooperation with the aforesaid notes.



1,456,671. FRUIT-JAR HOLDER. JACOB S. BUCKWALTER, Philadelphia, Pa., assignor of one-half to Lewis H. Shank, Paradise, Pa. Filed Nov. 30, 1921. Serial No. 518,842. 1 Claim. (Cl. 81—33.)

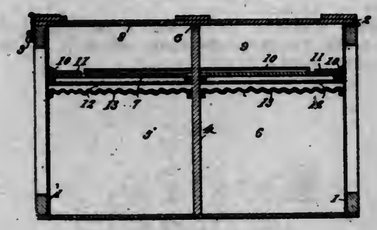
A combined fruit jar holder and lifter comprising a flexible metallic band adapted to embrace the body of the jar, the respective end portions of said band having integral and up-turned portions providing pairs of perforated lugs, a pair of pivotally mounted handles connected to said lugs for contracting the band against the

jar, one edge of said band being crimped inwardly to form a ledge for engaging against the shoulder of the jar when in one position, and providing a supporting element for the jar when applied thereto in another position.



1,456,672. CUTTER. OCTAVE DEGRENIER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 10, 1920. Serial No. 380,190. 15 Claims. (Cl. 33—28.)

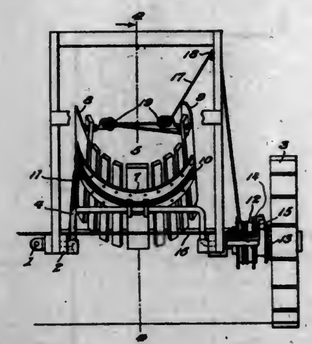
1. A lens cutter including a frame, a cutter carried by the frame and means for automatically forcing the article to be cut with uniform pressure in the direction of the cutter.



1,456,673. BLOCKING MACHINE. GILBERT S. DEY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 10, 1919. Serial No. 337,090. 21 Claims. (Cl. 51—277.)

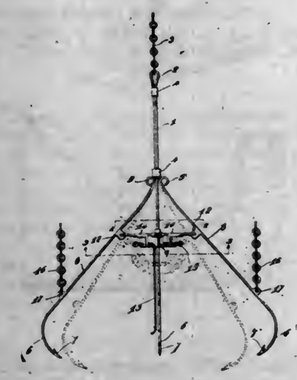
5. A machine of the character described, including a base, a plunger supported by the base and a table rotatable on the base, said member having a lens blank supporting portion and a lens block receiving portion

adapted to be selectively presented in predetermined position with respect to the plunger through rotation of the table.



1,456,674. SHIPPING CRATE. HAMILTON MICHELSEN, Miami, Fla. Filed Aug. 17, 1922. Serial No. 582,336. 1 Claim. (Cl. 217—7.)

A refrigerator shipping crate for the transportation of fruit, comprising a box having its interior divided into a fruit receiving compartment and a superimposed ice receiving compartment, a removable horizontally disposed partition piece separating the said compartments and forming a bottom for the ice receiving compartment, a vertical partition piece within the fruit receiving compartment for dividing the same vertically into a plurality of compartments and on which said removable partition piece rests, said partition piece dividing said ice receiving compartment vertically into a plurality of compartments, a layer of cellular material horizontally supported below the said bottom to provide an air space between said bottom and the fruit within the receptacle, and partly supported by said vertical partition piece, and to overlie the fruit within the fruit compartment to maintain the same from contacting with the undersurface of the bottom, weep openings formed in the walls of the ice compartment for the escape of the water therefrom, a cover for the ice compartment, and means for locking the cover to the crate.

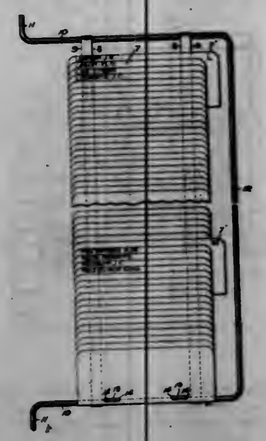


1,456,675. BUNDLE CARRIER AND SHOCKER. JOHN MILLER, Calvin, N. Dak. Filed Oct. 12, 1920. Serial No. 416,340. 2 Claims. (Cl. 56—401.)

1. A shocker attachment for binders comprising a wheeled frame, a yoke pivotally mounted on said frame, a spring influenced flexible carrier pivotally secured to said yoke, a pair of plates secured to opposite sides of the carrier, spring means for holding the yoke in lowered

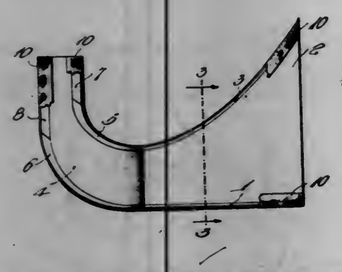
position, spring influenced clutch means connected to said plates for successively folding, raising and tilting the carrier, and means for controlling the movement of said clutch means.

1,456,676. TRAP. MANSFIELD MARTIN MOFFITT, San Antonio, Tex. Filed Sept. 14, 1921. Serial No. 500,524. 1 Claim. (Cl. 43—89.)



A trap of the class described including a stem, spring hook arms extending at an angle from said stem, an elongated body member arranged between said arms, links hingedly connected to one end of the body and to said arms, a bait member depending from said body, and adjusting screws carried by the links for engagement with the peripheral face of said body whereby to regulate the amount of downward pull to be exerted on the trigger to release the arms to their closed position.

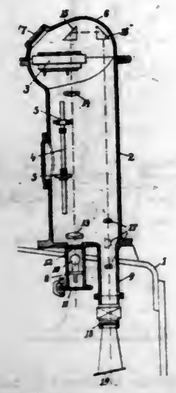
1,456,677. FILING EQUIPMENT. JOHN T. QUIGLEY, Boston, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1919. Serial No. 336,885. 19 Claims. (Cl. 129—16.)



1. In an indexed file, the combination of a guide, a series of overlapping sheets overlying one side of said guide and having overlapping margins presenting identifications, and a series of bars secured to said sheets, re-

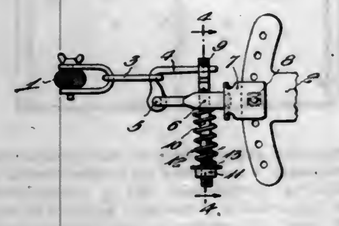
spectively, overlying the other side of said guide, and maintaining a minimum exposure of said margins.

17. In a file, the combination of a series of overlapping sheets including one which is substantially larger than the adjacent sheets and divides the sheets into two groups.



1,456,678. AMPLIFIER FOR SOUND-REPRODUCING MACHINES. PAUL RADER, Miami, Fla. Filed Feb. 23, 1922. Serial No. 538,794. 1 Claim. (Cl. 181—27.)

An amplifier for sound reproducing machines comprising a forwardly flaring horn formed of a plurality of walls, a depending throat telescopically connected with the inner reduced end of the horn, said throat being composed of separate walls, and strips of fabric extending along the corners of the horn and throat and connected with the walls for simultaneously connecting the walls with one another and for connecting the horn to the throat.



1,456,679. ILLUMINATING DEVICE FOR USE IN CONNECTION WITH MAGNETIC COMPASSES OF SUBMARINE VESSELS. MAX ROUX, Berlin, Germany. Filed Jan. 28, 1921. Serial No. 440,732. 5 Claims. (Cl. 88—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

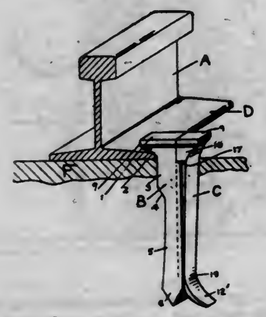
1. In a submarine vessel having a hollow structure extending upwards from the body of the vessel and having a compass with a transparent card in the top of said structure, the combination, with said vessel-body, said structure, said compass and said card, of a branch forming an additional member of the said hollow structure and extending from it down into the vessel body; a source of light located in said branch; means arranged within the hollow structure on a level above that of the compass and being adapted to reverse the direction of the rays so

as to make them return into the body of the vessel on another way; the compass being so arranged as to have its card cross one of said ray ways, for the purpose as described.

1,456,680. CLEVIS. DANIEL RYSON, Emerado, N. Dak. Filed Apr. 14, 1922. Serial No. 552,698. 4 Claims. (Cl. 280—33.16.)

1. A clevis comprising an element for connection with an implement to be pulled, a bill for engagement with pulling means, said bill being loosely connected with said element for swinging movement into and out of an operative position and having a free end portion extending longitudinally of said element when in an operative position, a hook for releasably engaging the free end portion of said bill having a stem slidably carried by said element and extending transversely thereof, a spring upon said stem, and a fastener adjustable upon said stem and engaging the spring to place the spring under tension and normally prevent the hook from moving to a position releasing the bill.

1,456,681. WELL DRILL. ALBERT J. SCHEPP and HERMAN J. SCHEPP, Manhattan, Kans. Filed June 9, 1921. Serial No. 476,292. 9 Claims. (Cl. 255—4.)



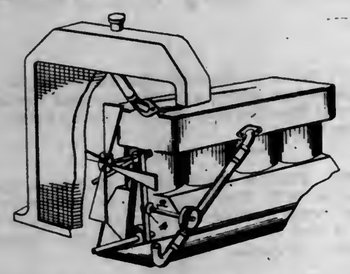
1. A well drill comprising a casing, a bit shaft extending into the casing, a motor in the casing, transmission means in the casing between the motor and bit shaft,

spacing ribs extending longitudinally of the casing, fins pivotally connected with the casing, and resilient means

holding the fins extended radially from the casing for engaging the walls of a well and preventing rotation of the casing in one direction.

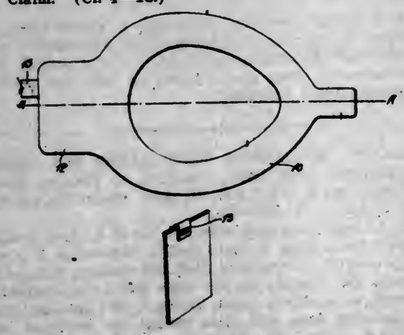
1,456,682. RAILROAD SPIKE. WILLIAM H. STEFFER, Worcester, Mass., assignor of one-half to Adolphe D. Major, Worcester, Mass. Filed Feb. 7, 1921. Serial No. 443,302. 2 Claims. (Cl. 85—23.)

1. The combination of a spike having a straight side formed with a transverse shoulder at its upper end and having a longitudinal groove of uniform depth except at its lower end, a locking key having a shoulder for engaging said last named shoulder and a straight back for engaging the back wall of the groove coextensively therewith and having its front side tapering, the lower end of the spike being thicker than certain points thereabove.



1,456,683. ELECTRIC-LIGHT FIXTURE. MAX H. THURNAUER, Cincinnati, Ohio. Filed Nov. 15, 1921. Serial No. 515,383. 7 Claims. (Cl. 240—52.)

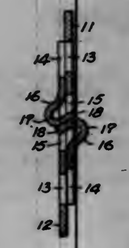
7. A portable electric light fixture, comprising an electric light bulb receptacle, having a base, the base provided with a pair of tangs projecting from its lower side, each of arcuate form and in a plane parallel with



the base lower side for engaging a support under a screw-like action between the tangs and base lower side.

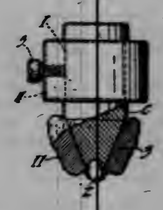
1,456,684. WATER-CIRCULATING MACHINE RUN BY THE FAN BELT FOR GASOLINE ENGINES ON AUTOMOBILES. JOSEPH CARL VOIGT, Los Angeles, Calif. Filed June 24, 1921. Serial No. 480,188. 1 Claim. (Cl. 123—175.)

In an internal combustion engine having a cylinder block, a water jacket therefor, a radiator, connections between the radiator and the water jacket, and a belt-driven fan for drawing air through the radiator, a cooling water circulator comprising a casing inserted in the inlet to the water jacket of the engine, a shaft extending into the casing and perpendicular to the plane of the cylinder block, an impeller mounted upon the shaft within the casing, and a pulley mounted upon the shaft outside the casing and adapted to be engaged and driven by the edge of the fan belt.



1,456,685. SANITARY SEAT COVER. IDA D. WILDER, Lake City, Fla. Filed June 7, 1920. Serial No. 387,080. 1 Claim. (Cl. 4—18.)

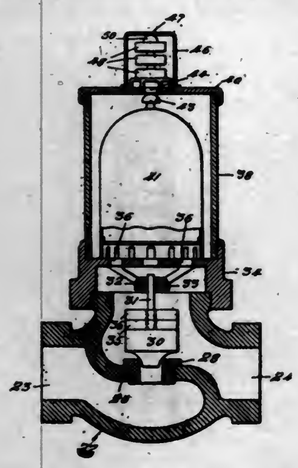
A sanitary seat cover comprising a body portion adapted to fit a conventional toilet seat, a flap formed at the



front end of said body portion adapted to be folded beneath the toilet seat, a flap formed at the rear end of said body portion, a securing flap formed on said last named flap, and adhesive material provided on said securing flap whereby when folded into packet form said securing flap may be utilized to retain it in said position.

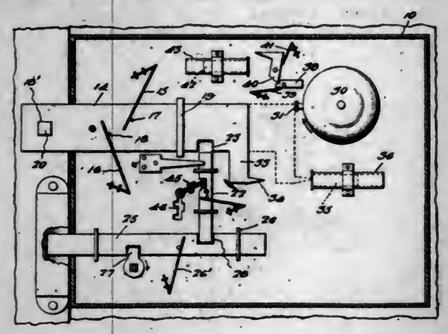
1,456,686. FUSIBLE LINK. WILLIAM H. BAKER, Montreal, Quebec, Canada. Filed Dec. 19, 1919. Serial No. 346,003. 3 Claims. (Cl. 169—42.)

1. In a device of the class described, a pair of apertured plates each having a tongue projecting through the aperture of the other plate and into sliding contact with the other tongue.



1,456,687. STYLUS MOUNTING. THOMAS A. EDISON, Llewellyn Park, West Orange, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Dec. 11, 1919. Serial No. 344,092. 11 Claims. (Cl. 274—38.)

2. A stylus mounting comprising a holder having a reduced end portion, a stylus partially embedded in said holder and extending from the end of said portion, and a reinforcing collar electro-plated on said end portion, substantially as described.

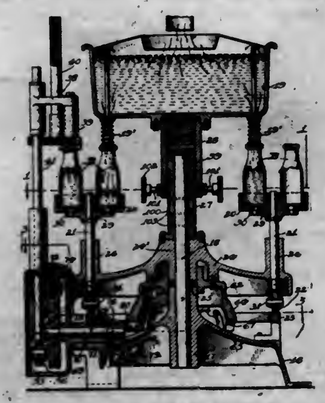


1,456,688. EQUALIZING VENT VALVE FOR VAPOR HEATING SYSTEMS. CHARLES A. FULLER, Mount Vernon, N. Y. Filed Feb. 27, 1922. Serial No. 539,381. 2 Claims. (Cl. 236—62.)

1. An equalizing vent valve for use in a vapor heating system comprising a main casing containing a check valve adapted to open only when the pressure on one side exceeds the pressure on the other side by a substantial amount, an auxiliary casing having a vent opening therein mounted upon said main casing, the inside of said auxiliary casing being in direct and free communication with the outlet side of said main casing, a normally open vent valve controlling the vent in said auxiliary casing, and means located in said casing and responsive to the

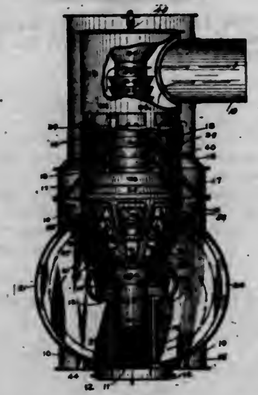
heat of steam passing through said check valve for closing said vent valve promptly when said check valve opens and allows steam to pass therethru.

1,456,689. ALARM LOCK. GIOVANNI GESMUNDO, New York, N. Y. Filed July 8, 1921, Serial No. 483,311. Renewed Apr. 6, 1923. 2 Claims. (Cl. 116—8.)



1. In a lock, a bolt movable longitudinally a slidable bar parallel with said bolt, a device movable between said bar and bolt and holding one of said elements inoperative when the other is free, means for retaining one end of the bar in engagement with the door frame, means causing the movement of the slidable bar when free of the frame, and an alarm mechanism operative upon such sliding movement and upon impact of that end of the bar opposite to that engaging the door frame.

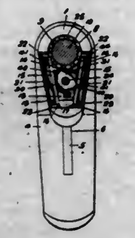
1,456,690. FILLING AND CAPPING MACHINE. MOSES GOLDBERGER, Chicago, Ill., assignor to Cresco Creamery Supply Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1921. Serial No. 442,738. 40 Claims. (Cl. 226—76.)



1. In a filling and closing machine, a revoluble twin receptacle support, a filling mechanism and closing mechanism spaced radially to the axis of revolution of

the support and cross a circumferential line concentrically enclosing said axis, with the support traveling to and past the closing mechanism, and means to shift receptacles

while sustained on said support from operative relation to the filling mechanism to operative relation to the closing mechanism, and vice versa.



1,456,691. FUEL ECONOMIZER. WILLIAM G. GRIFFIN, Washington, D. C. Filed June 12, 1922. Serial No. 567,646. 15 Claims. (Cl. 110—51.)

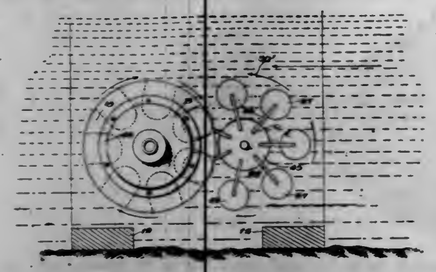
1. A combustion device comprising a chamber forming an enlarged interposed portion of the exhaust conduit of a furnace, and a mixing nozzle within said chamber having an air inlet and having its discharge end within the exhaust conduit at a point in advance of the discharge of the products of combustion within said chamber, said nozzle having passages communicating with the interior of said chamber for the induction into the nozzle of the products of combustion.

1,456,692. RATCHET HAND TOOL. JOHN M. HARGRAVE, Cincinnati, Ohio. Filed Oct. 22, 1919. Serial No. 332,514. 1 Claim. (Cl. 145—75.)

In a device of the class described, a handle providing a counterbore, in one face thereof, a tool providing circumferenential ratchet teeth adjacent one end thereof, said end and teeth rotatively stepped in said counterbore, with said tool at right angles to said handle, spring pressed pawls engageable simultaneously and independently with said ratchet teeth, pivoted means for controlling said pawls, and a cover enclosing and retaining said pawls, springs, and latch, and engaging the said

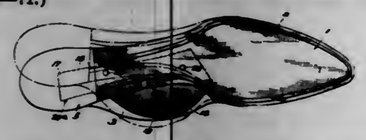
ratchet teeth, to retain said tool in its counterbore, the pivot for said controlling means engaging and securing said cover.

1,456,693. OIL WELL. JOHN N. HICKS, Tulsa, Okla., and CHARLES A. ELLIOTT and PRICE DUNBAR, Breckenridge, Tex.; said Dunbar assignor to said Hicks. Filed Jan. 3, 1922, Serial No. 526,737. Renewed Oct. 2, 1922. Serial No. 591,984. 5 Claims. (Cl. 166—2.)



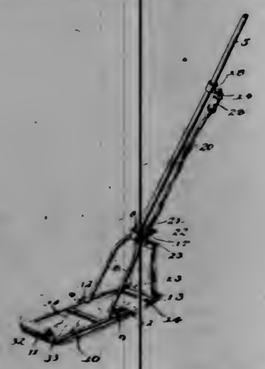
1. An oil well comprising a casing, a liquid eduction conduit arranged therein and having a liquid chamber embodying a sleeve which is such in diameter as to form a comparatively small gas space between itself and the casing, said sleeve being formed with a plurality of gas intake ports closed by valves, and packing arranged between the conduit and casing below said chamber to prevent the passage of gas downwardly into the well to disturb the oil-sand.

1,456,694. PUMP. LEO L. INGRAHAM, Gooding, Idaho, assignor of one-fourth to Erle Whipkey, Gooding, Idaho. Filed June 20, 1921. Serial No. 478,890. 5 Claims. (Cl. 103—126.)



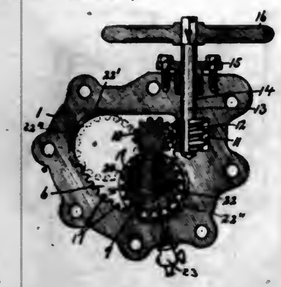
1. In a device of the character described, a rotatable drum having radial pockets arranged circumferentially upon the periphery thereof, said pockets open at their outer ends, and having lateral recesses in their inner ends, a hollow axle supporting said drum at one side and communicating with said lateral recesses, a one way valve controlling each lateral recess, said valves adapted to open and permit liquid to escape from the pocket into the hollow axle upon predetermined pressure in the pockets, a wheel comprising a plurality of radial spokes, each spoke carrying at its outer end a

cylindrical plunger adapted to have rolling contact with and move within said pockets, and means for po-



sitioning said wheel whereby upon rotation thereof its plungers move into and out of said pockets for the purpose described.

1,456,695. SHOE. JACOB F. JONAS, Bellevue, Ky. Filed Sept. 3, 1920. Serial No. 407,937. 6 Claims. (Cl. 36—71.)



6. An insole having a greater thickness of material at the shank portion thereof, an instep extension from the inner side of the shank portion, and an arch plate for the shank portion of said insole, having an instep extension, the heel and shank portions of the insole being offset laterally to form an arched elevation at the shank and secured in its offset position to the plate.

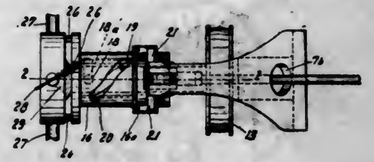
1,456,696. FLOOR AND WALL MOP. JOHN FRANCIS KELLY, Elkins, W. Va. Filed Feb. 28, 1922. Serial No. 540,052. 4 Claims. (Cl. 15—120.)

1. A mop comprising a supporting member, arms carried by the supporting member, a frame pivoted to the arms, a mop cloth comprising a strip folded upon and beneath the frame, said frame being formed to prevent displacement of the strip, the extremities of the strip being disposed in contact, a feed screw carried by the supporting member and having one end thereof connected to said extremities of the strip, and an operating member in the form of a nut engaged on the screw for movement longitudinally thereof to impart a revolving motion to the screw so as to twist the strip.

1,456,697. BLOW-OFF VALVE. WILLARD A. KITTS, Jr., Mountain Lakes, N. J., assignor to Isaac L. Kitts, Fort Myer, Va. Filed Oct. 6, 1919. Serial No. 328,799. 9 Claims. (Cl. 251—54.)

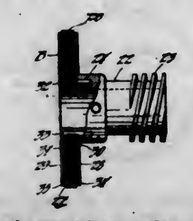
1. In a valve mechanism of the character described, the combination of a case having a passage therethrough, and a chamber extending some distance to one side of and at right angles to the passage, a valve movable in said chamber to and from a position across said passage and having an independent rotary movement about its axis, means for rotating the valve in one direction about its axis while in its closed position and also for rotating the valve in a reverse direction, and means cooperating with the first named means for causing said valve to move from its closed position toward an open position with a rolling motion when its direction of rotation is reversed.

1,456,698. JAR LIFTER. JOHN L. KIVLAN, Boston, Mass. Filed Jan. 11, 1921. Serial No. 436,524. 1 Claim. (Cl. 294—33.)



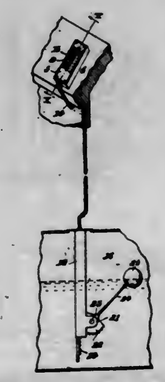
A jar lifter comprising a single piece of wire bent into a coiled spring and having its ends bent into substantially symmetrical crossed members, handle members intermediate said crossed members and said spring, and substantially parallel gripping members in planes perpendicular to that of said crossed members, one of said crossed members comprising parallel spaced parts of said wire and the other of said crossed members being adapted to slide between and to be guided by said spaced members.

1,456,699. AIR-CIRCULATING SYSTEM. RUDOLPH KRAMER, Sheyenne, N. Dak. Filed Sept. 2, 1921. Serial No. 498,115. 2 Claims. (Cl. 170—163.)



1. In a device of the character described, a fan comprising a hub having slots in the rear face thereof,

radially extending blades having respectively a shank turnably journaled through said hub and a rearwardly extending pin for extension through said slots, said hub having a rearwardly extending sleeve, and a pulley mounted on said sleeve, and a collar turnably mounted

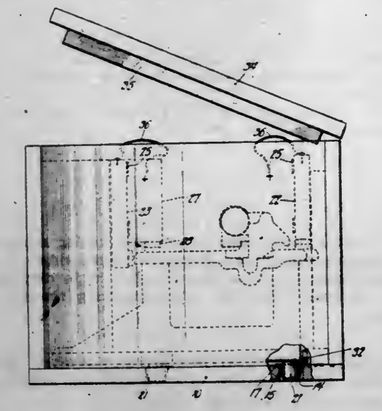


on said sleeve, and means for limiting the turnable movement in relation to said sleeve, said collar having a peripherally recessed flange for engaging said pins, and a reciprocative element for operating said collar, and means for actuating said element.

1,456,700. RESILIENT GEARING. CHARLES W. LUHR, West Orange, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Nov. 10, 1920. Serial No. 423,084. 6 Claims. (Cl. 74—29.)

1. A gear wheel comprising a body portion made up of a plurality of peripherally toothed plates or laminations rigidly secured together at their central portions so as to be incapable of relative bodily rotary movement, and with the outer portions free but contiguous, and a pair of reinforcing plates respectively disposed at the sides of said body portion, one of said reinforcing plates having teeth corresponding to and registering with but of less height than the teeth of the adjacent lamination, substantially as described.

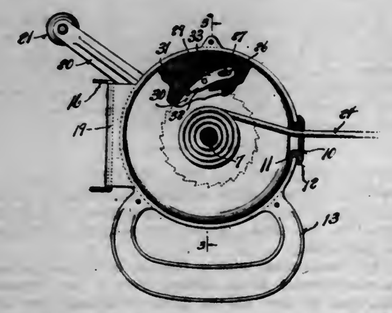
1,456,701. LIQUID-LEVEL INDICATOR. HANS LUNDQUIST, Chicago, Ill., assignor to United States Specialty Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1921. Serial No. 477,167. 7 Claims. (Cl. 73—82.)



1. A liquid level gage comprising in combination a vertically movable indicator member, a flexible wire attached directly thereto, a float and float-actuated means operated by the upward movement of the float and connected directly to the other end of said wire for exerting a pull upon said wire and lowering said indicator member.

1,456,702. PROCESS OF MAKING ALDEHYDE AMMONIA. HOWARD W. MATHESON, Montreal, Quebec, Canada, assignor to Shawinigan Laboratories Limited, Montreal, Canada. Filed Sept. 17, 1920. Serial No. 410,935. 11 Claims. (Cl. 250—141.)

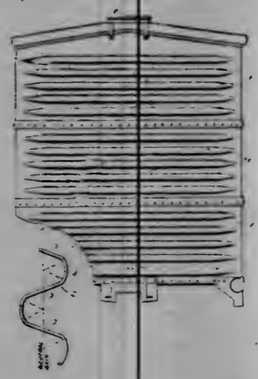
7. A process of making an aldehyde ammonia, which comprises passing an aldehyde and ammonia in substantially equimolecular proportions into ethyl acetate, and maintaining a temperature not above 50° C.



8. A continuous process according to claim 7, having the additional step of continuously removing the aldehyde ammonia from the ethyl acetate by continuously circulating the same through a filtering apparatus.

1,456,703. CARRYING AND SHIPPING CASE. LOUIS W. MECKSTROTH, Chicago, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed June 3, 1921. Serial No. 474,612. 16 Claims. (Cl. 217—53.)

1. A container for a device with resilient supporting feet, having sockets for receiving said feet, said sockets being provided with supports upon which said feet may rest for supporting said device in said container on said feet so that said feet form a cushion for said device in said container.



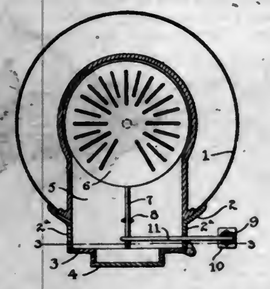
1,456,704. CLOTHESLINE REEL. LOUIS MEDVED, Milwaukee, Wis. Filed July 3, 1922. Serial No. 572,641. 2 Claims. (Cl. 242—101.)

1. A clothes line reel comprising a two-part stamped casing having rearwardly and outwardly projecting ears,

a drum mounted within said casing, an external handle for operating said drum, a line passed into said casing and secured to said drum, a fixed support having a slot therein adapted to receive said ears to temporarily hold said winding reel in position, pawl and ratchet means for locking said drum in adjusted position, and a handle located below said casing and having two complementary half sections each formed integrally with the corresponding part of the two part casing.

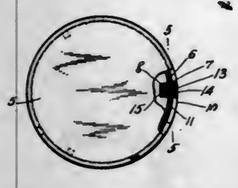
1,456,705. CORRUGATED-SHEET-METAL CAR END. WALTER P. MURPHY, New York, N. Y. Filed July 17, 1920. Serial No. 397,110. 10 Claims. (Cl. 105—410.)

1. A sheet metal plate for car ends having a plurality of parallel corrugations therein with the ridges of the corrugations formed on the arc of a circle merging on arcs of lesser radii into webs connecting the adjacent ridges.



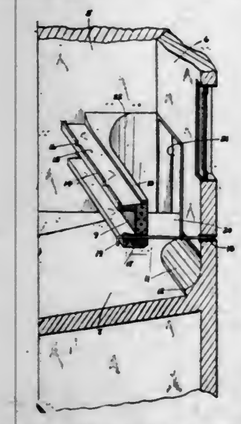
1,456,706. SHEEP PROTECTOR. ROY MURRAY, Jensen, Utah. Filed Jan. 26, 1921. Serial No. 440,070. 3 Claims. (Cl. 119—106.)

1. A sheep protector comprising a collar including side members having upper and lower longitudinal elements provided with interengaging straps, each of the side members including members movably connected with the upper and lower elements, and a swinging member carried by each upper element and disposed between the slidable members.



1,456,707. FURNACE-GRATE SHAKER. OSCAR P. NYSTROM, Holland, Mich., assignor to Holland Furnace Company, Holland, Mich., a Corporation of Michigan. Filed Feb. 10, 1921. Serial No. 443,770. 2 Claims. (Cl. 126—169.)

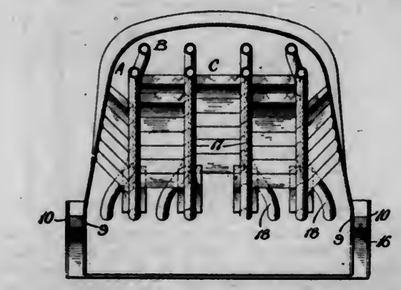
1. The combination with a furnace having a movable grate, an extended front casting with a door opening therein, and an arm on the grate extending into said extended front casting, of a grate shaker comprising a lever pivotally anchored at its lower end to the furnace foundation at one side of said extended front casting and



reciprocable in a plane parallel with said door opening, and means for connecting the lever between its ends to said arm.

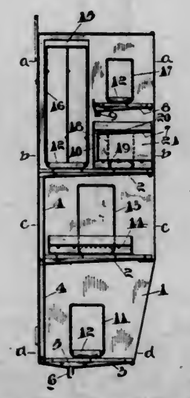
1,456,708. PISTON. ALDEN E. OSBORN, New York, N. Y. Filed June 29, 1920. Serial No. 392,634. 11 Claims. (Cl. 74—108.)

1. The combination with a piston provided with a groove and with a socket in the back wall of said groove, of a packing ring seated in said groove, and an inwardly projecting positioning pin secured to and carried by said ring and loosely fitting in the socket aforesaid, said pin comprising a bushing having an angular outer end engaging a corresponding seat in the ring and a stud for securing the bushing when thus seated to the ring.



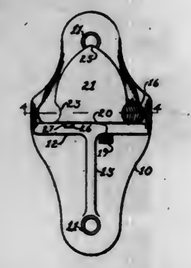
1,456,709. SLAUGHTERHOUSE CONSTRUCTION. CHARLES PANCERO and JACOB FREUND, Cincinnati, Ohio. Filed Jan. 2, 1923. Serial No. 610,267. 2 Claims. (Cl. 17—30.)

1. A slaughter house construction comprising a walled enclosure, a floor within said walled enclosure inclined



downwardly from the walls to the center, a girder extending between opposite walls above the floor and located adjacent to one of the remaining walls of the enclosure a distance adapted to permit the passage of cattle between the girder and the adjacent wall, a walk upon the girder, and spacer rods adapted removably to be located between the girder and the adjacent wall and at spaced intervals relatively to each other.

1,456,710. LOCOMOTIVE-FIRE-BOX STRUCTURE. LE GRAND PARISH, Mountain View, N. J., assignor to American Arch Company, New York, N. Y., a Corporation of Delaware. Filed June 4, 1919. Serial No. 301,786. 3 Claims. (Cl. 122—71.)



1. A boiler fire box construction comprising in combination, a forward water leg, a rear water leg, a plurality of arch tubes connecting said legs, said tubes being arranged in two rows with the tubes of one row located respectively in substantially the same vertical planes as the tubes of the other row, said tubes being connected to a sheet of the forward water leg in substantially the same horizontal plane, and baffling bricks supported on the tubes, the bricks on the upper tubes being arranged to present a solid central arch with spaces at the sides and the bricks on the lower tubes being arranged to present solid side arches with a space therebetween and beneath the solid central arch.

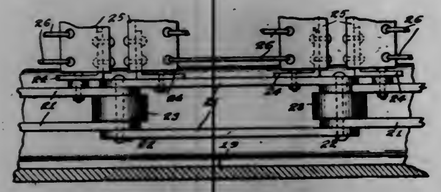
1,456,711. DRYING CABINET. CASPER L. M. PETERSEN, Toronto, Ontario, Canada. Filed Dec. 28, 1921. Serial No. 525,476. 6 Claims. (Cl. 141—11.)

1. A drying cabinet comprising a casing open at the front; a plurality of drip pans supported therein at different levels, each upper pan having its bottom sloping from the ends and front to the middle of its back edge and connected to the back of the cabinet, removable racks supported above said pans; a drainage discharge from the lowermost pan; and means for leading the drainage of the upper pans to the same discharge point without interference with dishes supported in the racks.

1,456,712. CLOTHESLINE GRIP. HARRY H. PODJUS, Chicago, Ill. Filed July 15, 1922. Serial No. 575,227. 6 Claims. (Cl. 24—134.)

2. In a clothes line gripping device, a rotatably mounted gripping member, having a height more than twice the diameter of the clothes line, the upper portion of said member terminating in a bluntly rounded point, and gently curved guiding surfaces extending from said point downward to gripping position.

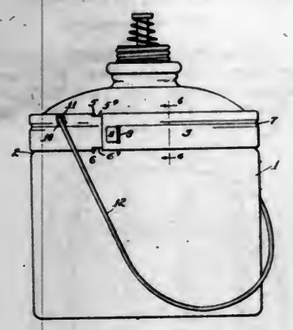
1,456,713. ANTISAND BEARING. GOMER W. PRICE and CURT F. ZIMANSKY, San Francisco, Calif., assignors to G. W. Price Pump and Engine Company, San Francisco, Calif. Filed May 21, 1921, Serial No. 471,456. Renewed Mar. 17, 1923. 7 Claims. (Cl. 103—103.)



1. The combination with a rotary well pump provided with bowls having water passages, a shaft and runners mounted therein, of a bearing mounted within each bowl to receive said shaft; and a suction chamber enclosing said bearing and arranged to cause sand admitted into said chamber above said bearing to be drawn away from said bearing by suction created within the chamber when the runners are operated.

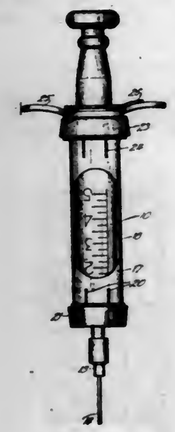
1,456,714. WELL-PUMP CONSTRUCTION. GOMER W. PRICE and CURT F. ZIMANSKY, San Francisco, Calif., assignors to G. W. Price Pump and Engine Company, San Francisco, Calif. Filed May 21, 1921, Serial No. 471,457. Renewed Mar. 17, 1923. 9 Claims. (Cl. 103—102.)

1. A well pump construction comprising a discharge casing; a shaft rotatably mounted and centered within said casing; a shaft casing enclosing the shaft; and means for placing the shaft casing under a compression and the discharge casing under tension to truss said shaft casing whereby a rigid support may be provided for the shaft.



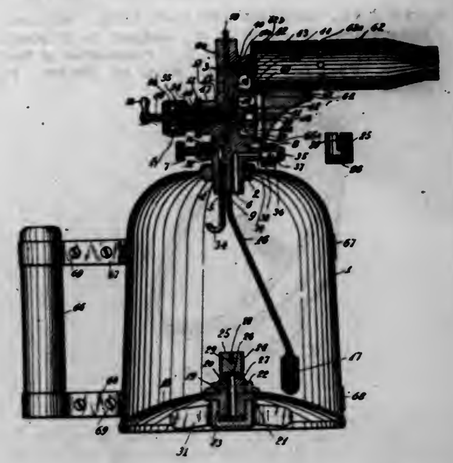
1,456,715. CONVEYING MECHANISM. AMZI G. RECK, Columbus, Ohio. Filed July 3, 1919. Serial No. 308,449. 2 Claims. (Cl. 198—193.)

1. In a cooling apparatus for bakery products, a pair of spaced stationary rails, a chain movable longitudinally along each of said rails, said chains including a plurality of aligned link sections having pivotally united adjoining ends, bars extending transversely of said chains and having the ends thereof connected with said link sections intermediately of the pivotal connections between the latter, there being a pair of said bars to each pair of adjacent link sections, and a support of open work construction between the inner edges of each pair of said bars and between the pivotal connections of said link sections, said support serving to permit of normal flexing on the part of said chains.



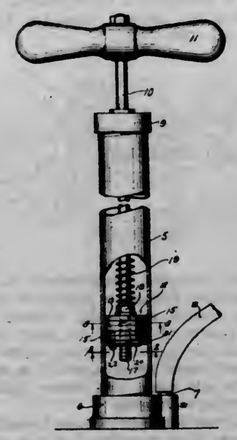
1,456,716. BAIL-ATTACHING MEANS. MARC RESEK, Cleveland Heights, Ohio, assignor to The Cleveland Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 12, 1919. Serial No. 289,600. 5 Claims. (Cl. 220—85.)

3. In combination with a vessel, a member for attachment to said vessel, said member having outwardly bulged portions that are disposed substantially diametrically opposite each other, the upper slope of each bulged portion having an aperture, a bail having its ends turned inwardly to provide hooks that may be engaged through said apertures when the bail occupies a



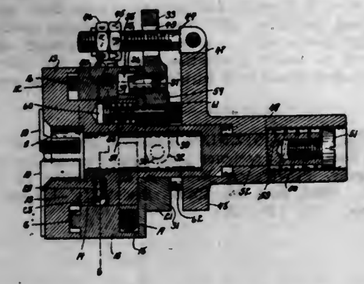
position below and substantially perpendicular to the plane of said member, the vessel being so proportioned that when the member is applied to the vessel the bail will engage the side of the vessel and thereby be prevented from assuming the aforesaid perpendicular relation to the member.

1,456,717. HYPODERMIC SYRINGE. ARTHUR E. SMITH and ARTHUR D. GRAY, Chicago, Ill. Filed Apr. 7, 1921. Serial No. 459,354. 8 Claims. (Cl. 128—218.)



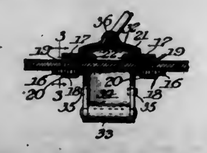
1. In combination with a syringe comprising a glass barrel having a rounded shoulder at its lower end, a fenestrated frame fitting around the barrel and provided at its lower end with an inturned lip having a conical surface arranged to bear against said shoulder, longitudinal slits in the lower end of the frame dividing said lip into a plurality of sections, and means carried by the frame for holding the several sections of said lip tightly against the aforesaid rounded shoulder.

1,456,718. BLOWTORCH. JAMES B. ANDERSON, Pittsburgh, Pa., assignor to Pumpless Blow Torch Company, Pittsburgh, Pa. Filed Sept. 28, 1921. Serial No. 503,838. 1 Claim. (Cl. 158—33.)



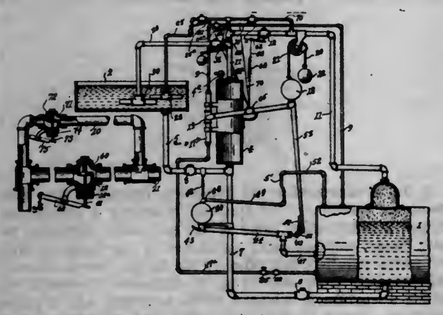
In a torch, the combination of a plurality of burners of the character described; a test-valve; a tube connecting said test-valve with the tank of said torch; an upward bend provided at the lower end of said tube, and a filling-valve positioned centrally of the bottom of said torch.

1,456,719. TIRE PUMP. HENRY J. BOOSTED, Kenosha, Wis. Filed Oct. 22, 1920. Serial No. 418,641. 1 Claim. (Cl. 230—27.)



A tire pump comprising a cylinder; a piston provided with split metallic packing rings workable within said cylinder, and provided with a port extending longitudinally therethrough eccentric of its axis; a non-metallic disc positioned upon the bottom face of said piston, adapted to control the passage of fluid through said port; a yieldable metallic disc positioned beneath said first disc and in intimate contact with its lower surface; a curved elongated spring member engaging the lower surface of said last mentioned disc; and a screw securing one end of said spring member, and both of said discs to the lower surface of said piston at a point substantially diametrically opposite to said port.

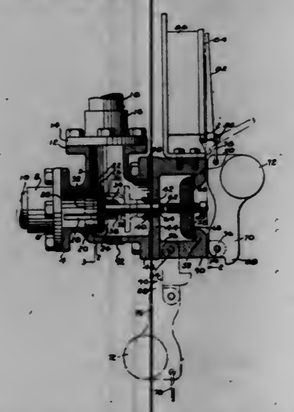
1,456,720. SELF-OPENING DIE HEAD. ALBERT F. BREITENSTEIN, New Haven, Conn., assignor to The Geometric Tool Co., New Haven, Conn., a Corporation. Filed Apr. 1, 1921. Serial No. 457,801. 3 Claims. (Cl. 10—96.)



1. A self-opening die-head having a body, chasers, a cam-ring, a cam-ring spring, a back-plate mounted upon the body and holding the cam-ring in place thereupon, and a pivotal tripping-mechanism carried by the back-plate and including a locking-bolt coacting with the cam ring to hold the same in the closed position of the chasers against the tension of the cam-ring spring.

1,456,721. BAG FITTING. HENRY J. CHILTON, Chicago, Ill. Filed Dec. 3, 1920. Serial No. 428,053. 18 Claims. (Cl. 190—58.)

8. In a device of the class described, the combination of a bag frame, means having a handle secured thereto and means for securing the means having the handle to the frame, said means having the handle having an aperture permitting its adjustment relatively to the frame.

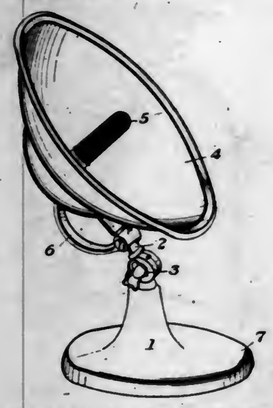


1,456,722. BOILER-FEED WATER SYSTEM. GEORGE W. COPE, Oil City, La. Filed Oct. 18, 1920. Serial No. 417,725. 7 Claims. (Cl. 137—101.)

1. In a gravity feed water system for steam boilers having a charging tank, said tank situated above the

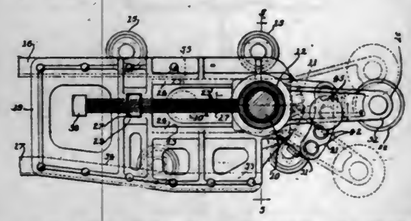
boiler water level and having a valved water inlet and a valved water connection with the boiler's water space and having valved steam connections with the steam space of the boiler an air inlet and outlet and a valved steam outlet combined with means for operating the valves of said valved steam inlet and outlet means for gradually establishing boiler pressure upon the water in said tank to thereby prevent the high speed flow of a large volume of steam upon the water in said tank and prevent a water hammer, said means comprising essentially a primary steam inlet, a valve in said primary steam inlet, means connecting the valve with the valve operating means, a secondary steam inlet, a valve in said secondary steam inlet and an elastic connection connecting the valve of the secondary steam inlet with the valve operating means.

1,456,723. QUICK-OPENING VALVE. JOHN H. DERBY, New York, N. Y., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of New York. Filed Nov. 30, 1920. Serial No. 427,386. 5 Claims. (Cl. 169—19.)



1. In a device of the class described, a valve seat, a valve, means for normally holding said valve closed, said means comprising a retaining member movable into releasing position, and a weight carried by said retaining member for effecting such movement thereof, said weight being first movable relatively to said member into impact therewith and being then movable with said member toward releasing position.

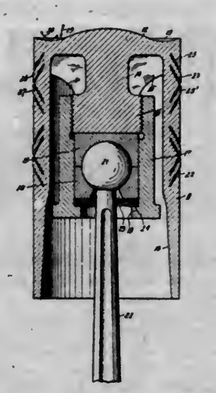
1,456,724. CURTAIN-LIGHT MOUNTING. BERNARD P. DONNELLY, Holland, Mich. Filed Nov. 29, 1922. Serial No. 604,014. 6 Claims. (Cl. 296—145.)



5. In a construction of the class described, an open frame of rubber or like material including a continuous flange, a reinforcing frame of flat bar metal embedded in said flange, said bar being positioned in the flange so that its width parallels the sides of the flange, means extending inwardly from said flange in alignment therewith to which a curtain is adapted to be attached, and a glass retaining means formed integrally with the frame and extending to one side thereof including a second continuous flange substantially paralleling the first flange and spaced therefrom, whereby a continuous groove is formed between the flanges in which the edge portions of a section of glass are adapted to be received and held.

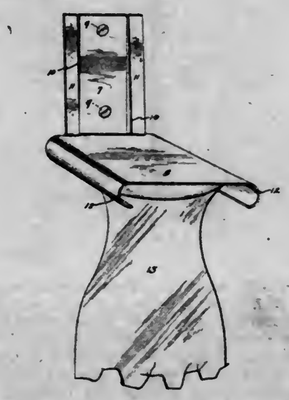
1,456,725. HEATER AND THE LIKE. REINHOLD FERRENBACH, Westville, N. J., assignor to Welsbach Company, Gloucester City, N. J., a Corporation of New Jersey. Filed July 16, 1921. Serial No. 485,200. 10 Claims. (Cl. 126—92.)

1. In a heating device adapted to occupy a normal safe position, a heating element, and means whereby when the device is upset said heating element is moved to a predetermined safe position other than said normal safe position.



1,456,726. TAKE-UP AND ADJUSTABLE ROLLER. LAWRENCE V. FRALEY, Chicago, Ill., assignor, by mesne assignments, to Standard Conveyor Company, North St. Paul, Minn., a Corporation of Minnesota. Filed Apr. 12, 1919, Serial No. 289,685. Renewed Apr. 16, 1923. 13 Claims. (Cl. 198—103.)

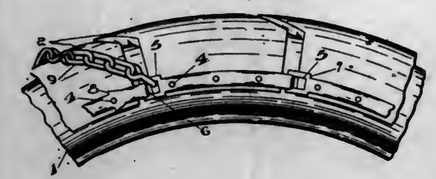
1. The herein described improvement in conveyors, comprising a flexible carriage, a horizontal shaft having sprocket wheels around which the carriage is trained, an idler roller positioned beyond the shaft, bearings for said shaft for taking up said carriage, arms pivoted on said bearings, said roller being rotatably mounted in the free ends of the said arms, and means rigid with said bearings for holding said arms.



9. The herein described improvement in conveyors, comprising a carriage head consisting of two side frames, upper and lower angle bar tracks, one side of each track being vertical to form lateral conveyor guards and the other side of each being horizontal to form wheel tracks, the vertical flanges secured upon the inner faces of said side frames, a shaft around which the conveyor is trained, the shaft movable in said side frames for adjusting the carriage, the upper angle bar tracks terminating at the inner limit of movement of said shaft, said side frames having integral tracks abutting the ends of the upper bar tracks, said integral tracks forming a continuation of said first tracks.

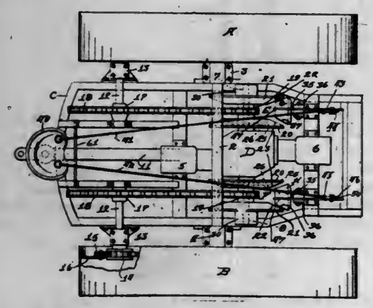
1,456,727. PISTON. ALDO M. FRANCHI, New York, N. Y., assignor to Franchi Ringless Piston Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 1, 1922. Serial No. 540,113. 1 Claim. (Cl. 74—108.)

A piston including a shell having a plurality of pairs of grooves cut into the outer face thereof, the grooves of each pair extending in parallel relation a substantial distance into said shell, thereby forming a resilient ring, the rings on said shell projecting beyond the outer face thereof, each ring being provided with one or more slots.



1,456,728. BOTTLE HOLDER. ROSS E. FRANK, Detroit, Mich. Filed July 31, 1922. Serial No. 578,628. 1 Claim. (Cl. 232—41.)

A bottle holder formed of a sheet metal blank bent to form two angularly disposed portions one of which is adapted to be secured to a wall and is slitted to form a plurality of gripping tongues adapted to releasably engage for support a ticket placed therebetween and said other portion of which blank is rolled downwardly upon itself on opposite sides to form opposed gripping jaws adapted to engage the neck of a bottle to support the same.

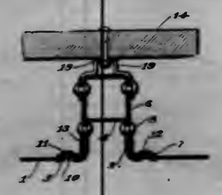


1,456,729. PROTECTIVE TREAD FOR PNEUMATIC TIRES. WILLIAM J. FRASER, Toronto, Ontario, Canada. Filed Apr. 19, 1921. Serial No. 462,698. 10 Claims. (Cl. 152—16.)

6. A tire protector comprising a plurality of flexible non-metallic tread sections, each adapted to extend across the tread of a pneumatic tire and partway down the sides thereof, and connectors at each side flexibly securing the sections together in spaced relationship, the

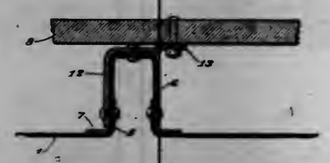
tread portion of one end of each section being convexly extended circumferentially of the tire and the opposite end similarly recessed to receive the convex end of an adjoining tread section.

1,456,730. TRACTOR. DAVID F. GEIGER, Minneapolis, Minn., assignor of one-third to Arthur D. Cole, Minneapolis, Minn. Filed Oct. 26, 1916, Serial No. 127,814. Renewed Mar. 26, 1921. Serial No. 455,986. 4 Claims. (Cl. 180—17.)



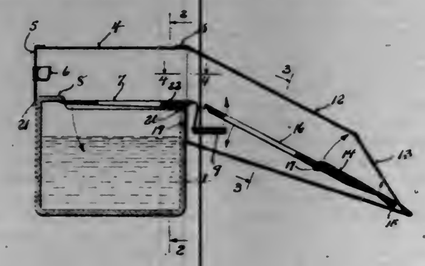
1. Apparatus of the class set forth, comprising, in combination, a pair of revoluble tractor elements, a frame freely hung between said tractor elements, a power unit carried by said frame having a drive shaft, independent transmission elements interposed one between each of said tractor elements and said power unit, each of said transmission elements consisting of a pair of friction gears, one being coupled to the power unit and the other coupled to a tractor element and being urged toward and adapted to clutch the companion friction gear, and a friction pinion interposed between said gears and normally urged out of contact with said friction surfaces, said pinion being slidable to frictionally engage said movable gear, disconnect said friction gears and the driving motion between said power unit and a tractor element and upon further thrust movement of said pinion to engage both of the friction surfaces of said friction gears and cause the reverse revolution of a tractor wheel.

1,456,731. CAR ROOF. GARTH G. GILPIN, Riverside, Ill., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Mar. 25, 1921. Serial No. 455,499. 13 Claims. (Cl. 108—5.4.)



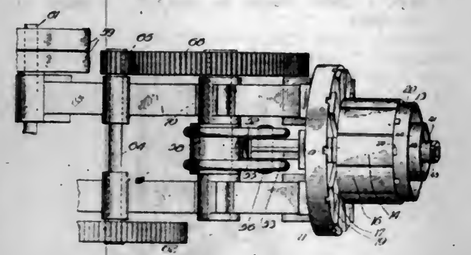
1. In an all metal car roof, roof sheets having their eaves ends secured to the car side plates and having upstanding flanges on their adjacent meeting edges, inverted U-shaped carlines extending from side to side therebetween having outstanding flanges on their side walls resting upon and secured to the car side plates,

inverted U-shaped seam caps having outstanding flanges on their side walls engaging and holding the roof sheets



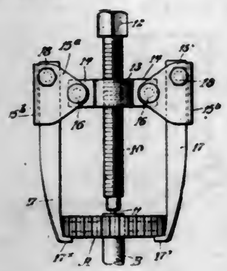
and roof sheet flanges against the carline flanges and side walls, and means securing the seam caps to the carlines.

1,456,732. CAR ROOF. GARTH G. GILPIN, Riverside, Ill., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Apr. 4, 1921. Serial No. 458,502. 9 Claims. (Cl. 108—5.4.)



1. In an all metal car roof, roof sheets having their eaves ends secured to the car side plates and having spaced apart adjacent edges provided with continuous upstanding flanges, inverted U-shaped combined carlines and seam caps thereover having outstanding flanges on their side walls resting upon the body of the roof sheets, and a plurality of horizontally disposed rivets securing the roof sheet flanges to the side walls of the carlines.

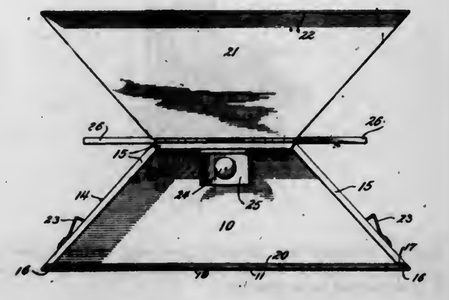
1,456,733. ANIMAL TRAP. JOSEPH GOTTWALD and ADAM POSLER, Theresa, Wis. Filed Oct. 1, 1921. Serial No. 504,601. 1 Claim. (Cl. 43—76.)



In an animal trap, the combination of a receptacle containing liquid and having a horizontal forwardly extending flange, a casing secured thereto, a trap door pivoted on said casing adapted to contact along its rearward end with the front edge of said flange, a weight normally maintaining said trap door in elevated position, the front of said casing being prolonged to form a passageway, an entrance door pivoted adjacent the front of said passageway, a runway pivoted in said passageway, said entrance door being normally in lowered position but adapted to be raised by the weight of the animal on the rearward portion of said runway to close the entrance to said passageway, said weight being adapted to contact with said runway when said trap door is lowered.

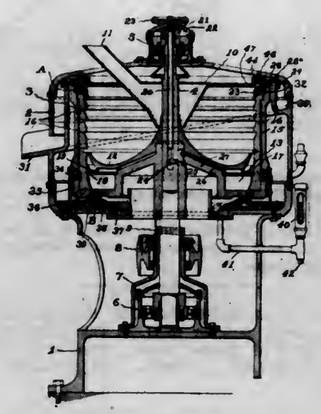
1,456,734. EXPANDING MACHINE. CHARLES G. GROTNES, Chicago, Ill. Filed Apr. 22, 1920. Serial No. 375,702. 19 Claims. (Cl. 78—13.)

2. An expanding machine having, in combination, a main frame, a jaw table secured to the main frame, an outboard support located forwardly of the jaw table, members rigidly securing the outboard support to the jaw table, a circular series of radially movable jaws between the jaw table and the outboard support, the members which secure the outboard support to the jaw table being located within the circle defined by the series of jaws, a drawbar supported for movement axially of the series of jaws, a head piece slidably supported in the outward support, a plunger head on the drawbar, and links connecting said plunger head to said jaws.



1,456,735. GEAR PULLER. GEORGE L. HUNT, Boscobel, Wis., assignor to The George L. Hunt Manufacturing Company, Inc., Boscobel, Wis., a Corporation of Wisconsin. Filed Apr. 20, 1922. Serial No. 555,760. 4 Claims. (Cl. 29—85.)

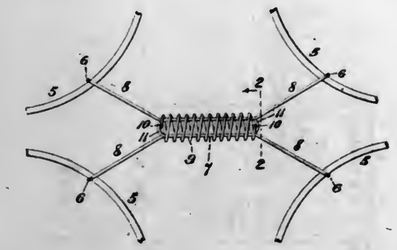
1. A gear puller comprising a jack-screw, a block through which said jack-screw extends and with which it has threaded engagement, said block being provided with a pair of fixed arms which project therefrom in opposite directions in lines substantially at right angles to the axis of the jack-screw, a pair of jaw shackles, each of said jaw shackles being substantially U-shaped in horizontal cross section and having its parallel portions pivoted to one of said fixed arms for movement relative to the latter in a plane co-incident with the axis of the jack-screw, and a pair of jaws depending from said shackles, the upper end of each of said jaws being embraced within one of said shackles and being pivoted to its associated shackle, near the upper portion of the shackle, for limited movement relative to the shackle in a plane co-incident with the axis of the jack-screw.



1,456,736. ILLUMINATED-LICENSE-TAG HOLDER FOR VEHICLES. MICHAEL F. KANE, Shaft, Pa. Filed Apr. 28, 1922. Serial No. 557,170. 7 Claims. (Cl. 40—132.)

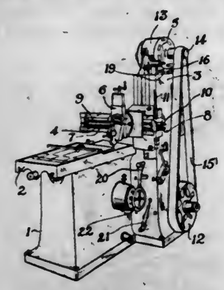
2. A tag holder for vehicles comprising a housing having forwardly diverging sides forming an opening provided with bottom and side flanges; a tag and associated parts disposed in the guide-ways formed by the diverg-

ing sides and said flanges; and a hinged top for said housing having a flange overlying said tag.



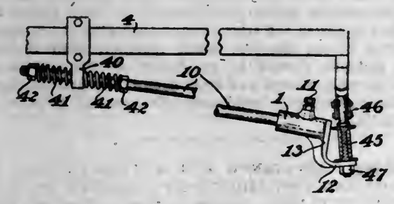
1,456,737. CENTRIFUGAL SEPARATING MEANS. RALPH E. LAPHAM, Oakland, Calif. Filed Aug. 7, 1920. Serial No. 401,883. 18 Claims. (Cl. 83—67.)

1. A centrifugal separating machine of the character described including a rotating bowl provided with a wall over which the separating medium, and pulp flow, a stationary reservoir for the separating medium, and an annular circulation flange carried by the bowl and projecting into the separating medium, said flange being formed of a material for which the separating medium has an affinity and over which it flows in an amalgamated engagement.



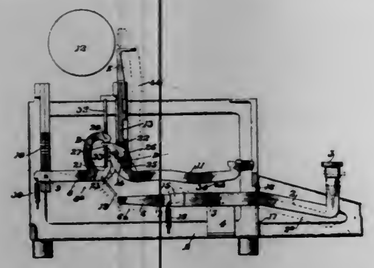
1,456,738. BEDSPRING STRUCTURE. WILLARD O. LATHROP, Cincinnati, Ohio. Filed Aug. 10, 1921. Serial No. 491,259. 1 Claim. (Cl. 5—29.)

In a bed-spring structure, an elastic torsional coupling-member for each group of four or a multiple of helical springs in the structure, such coupling-member comprising a pair of corresponding forked resilient-wire members having fastening-hooks at their forked outer ends adapted to connect with and support the upper coils of respective grouped helixes, U-shape shanks in the said forked members adapted to lie contiguous with each other for sliding-engagement longitudinally along one another, and spiral springs encircling the said slidingly-assembled shanks and having their opposite ends turned inwardly in the guide-ways formed by the said U-shape shanks for coup-



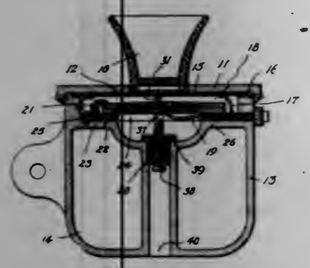
ling the pair of forked members into reciprocating and torsional elastic relation, substantially as and for the purpose specified.

1,456,739. PLANER. JAY EDWARD LEHMAN, Canton, Ohio. Filed Apr. 29, 1921. Serial No. 465,594. 4 Claims. (Cl. 90—24.)



1. In a planer comprising a base having a reciprocating table thereon, and a vertical column provided at one side of the base, and a drive pulley connected to the driving mechanism of the table, a plate upon the column, a motor mounted upon said plate, and adjusting screws for raising the plate to tighten said belt.

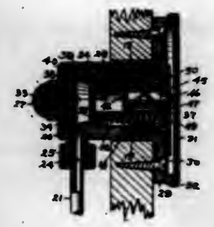
1,456,740. FRONT RADIUS ROD. MANFRED W. LINK, Kansas City, Mo. Filed Mar. 19, 1921. Serial No. 453,728. 6 Claims. (Cl. 267—67.)



1. A front radius rod for automobiles terminating at its forward end in a clamping block having a toe projecting forward beneath the vehicle axle and adapted to be secured thereto, and an upright face adapted to contact with the rear side of the axle, said toe and upright face being so positioned relatively as to clamp the vehicle axle therebetween when in secured position.

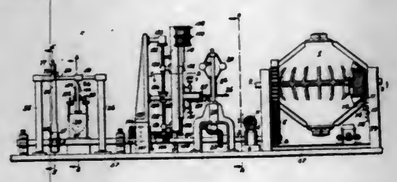
1,456,741. TYPEWRITER. PAUL RICHTER, Daly City, Calif. Filed July 5, 1922. Serial No. 572,943. 4 Claims. (Cl. 197—28)

1. In a typewriting machine of the character described, a type bar pivoted at one end, an upper cam surface formed on the bar adjacent the pivot, the inner end of said cam surface having a curvature of constant radius and the remaining portion thereof having a curvature of constantly increasing radius, a lever engageable with the cam surface to impart a swinging movement to the type bar, a key lever, and means for transmitting movement from the key lever to said last named lever.



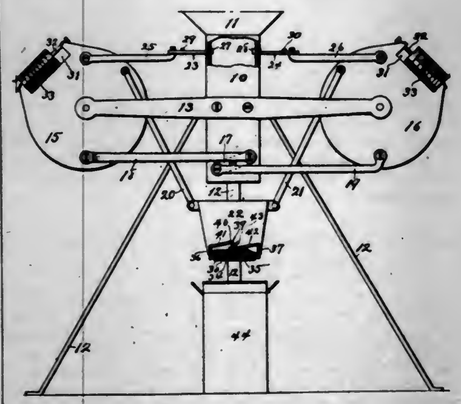
1,456,742. SOUND TRANSMITTER. PAUL V. ROONEY, Morristown, N. J. Filed Apr. 4, 1921. Serial No. 458,513. 8 Claims. (Cl. 179—145.)

1. In a variable resistance device, two approximately flat members comprising a like number of flat spirals arranged directly one above the other, the cross section of each spiral being so shaped that the adjacent surfaces of the mating spirals are adapted to have direct flat contact one with the other, means anchoring the marginal portions of the members firmly together, while the central portions thereof at the center of the spirals are both movable toward and from each other, and conductor means connected to said respective central portions of the spirals.



1,456,743. APPLIANCE FOR AUTOMATICALLY INDICATING THE AMOUNT OF GASOLINE IN AUTOMOBILE TANKS. GEORGE A. SZABO, Cleveland, Ohio. Filed Feb. 26, 1921. Serial No. 448,235. 4 Claims. (Cl. 73—111)

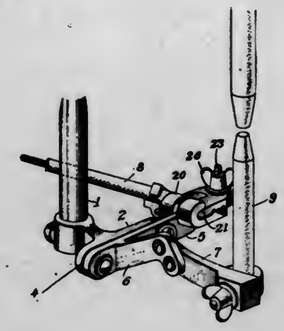
1. An appliance for automatically indicating the amount of liquid within a supply tank, comprising an indicator casing having a spring-pressed plunger therein, a cylindrical member affixed to said casing in sleeved connection with said plunger, a spindle with a spiral groove rotatably mounted within said cylindrical member, means connected with said plunger operating within said spiral groove, an index member affixed to said



spindle, an index dial mounted upon said casing opposite said index member, a pipe connection adapted to convey a fluid behind said plunger.

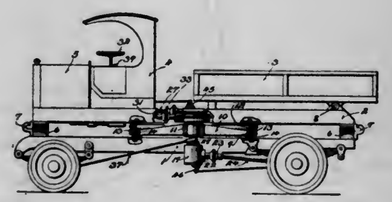
1,456,744. CONTROLLING MECHANISM FOR STABILIZING GYROSCOPES. HARRY L. TANNER, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 4, 1917. Serial No. 194,646. 49 Claims. (Cl. 74—78.)

1. In combination, a stabilizing gyroscope, means for locking said gyroscope against precession and means for rendering said locking means ineffective to lock said gyroscope at a predetermined point in a precession-causing roll, said second named means being controlled by said gyroscope.



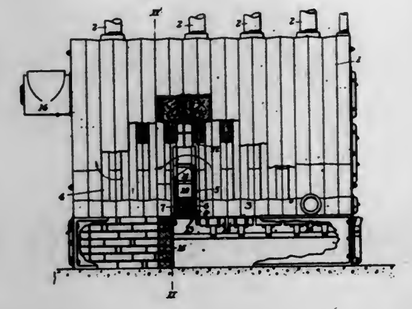
1,456,745. MEASURING DEVICE. REID W. THOMPSON, Turner, Iowa, assignor to H. V. Thompson and R. W. Walls, both of Turner, Iowa. Filed Mar. 27, 1922. Serial No. 547,332. 4 Claims. (Cl. 249—49.)

1. A measuring device, comprising a chute, valves slidingly mounted in said chute, counterbalancing wheels,



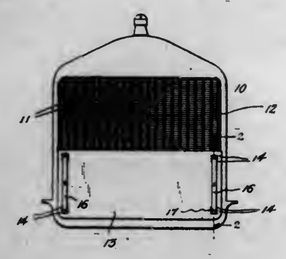
connections between said wheels and valves, hangers on said wheels, a container carried by said hangers beneath said chute, and means for dumping the contents of said container.

1,456,746. CABLE TERMINAL FOR ARC LAMPS. THEODORE F. UHLEMANN, New York, N. Y., assignor to Nicholas Power Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 29, 1918. Serial No. 264,687. 3 Claims. (Cl. 173—259.)



1. In a cable terminal for electrical connectors, the combination of independent clamping members, said members having continuous trough shaped faces of angular cross section with interengaging cutaway portions and projections, and means for drawing said members together with their trough shaped faces opposite to vary the cross section of the bore formed between them and to thereby clamp the conductor in said bore with any desired degree of pressure, said conductor contacting with each of the clamping members along the entire length of the terminal.

1,456,747. MOTOR TRUCK. BENJAMIN O. VOLLENDORF, Iron Mountain, Mich. Filed Oct. 11, 1920. Serial No. 416,256. 4 Claims. (Cl. 180—1.)



1. In a power vehicle, a vehicle supporting frame, means for driving the vehicle frame, a body frame rotatably mounted on the supporting frame, steering rods connected to the normally front wheels of said vehicle, steering means carried by the body frame connected with the vehicle frame and cooperating with said steering rods for steering the vehicle, and means for turning the body frame end for end with the vehicle frame to dispose said steering means in different positions with respect to the latter.

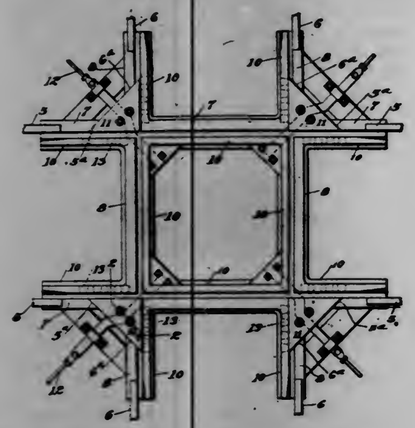
1,456,748. COMBUSTION DEVICE. SAMUEL B. WATERS, Johnstown, Pa. Filed May 21, 1921. Serial No. 471,494. 1 Claim. (Cl. 110—73.)

The combination in a boiler of a fire box, a bridge wall placed in the fire box, said bridge wall being constructed by sections of refractory material having vertical and horizontal passages therein, such passages extending throughout the width and height of said wall and used for conducting air into the fire box where it is mixed with the gases in the combustion chamber, substantially as described.

1,456,749. RADIATOR PROTECTOR. THOMAS H. WELCH, Hawthorne, N. Y., assignor of one-third to Horace K. Curtis and one-third to John I. D. Bristol, both of Chappaqua, N. Y. Filed Nov. 16, 1921. Serial No. 515,651. 8 Claims. (Cl. 257—132.)

4. In a radiator protector, the combination of a guard member and means to detachably lock the same against the front surface of the radiator, said locking means including a pair of springs having the end portions thereof bearing against the guard member while the middle portions of the springs are extended forward from the guard member, and key means cooperating detachably with the radiator and engaging the forward portions of the springs and serving to hold the same backward with the springs under compression and whereby the key means are held in place.

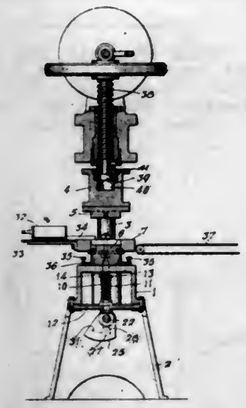
1,456,750. STOP FOR THE CONTROLLING LEVERS OF AUTOMOBILES. FRANK W. WILLIAMS, Chicago, Ill. Filed Aug. 27, 1920. Serial No. 406,433. 2 Claims. (Cl. 74—39.)



1. A lever, a quadrant over which it moves, a U-shaped stop straddling said quadrant, a screw through one leg of said stop bearing against the quadrant, another screw through the other leg of said stop bearing against

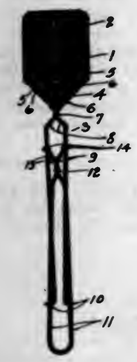
the other face of said quadrant, one of said screws having a means to facilitate manual turning of the same,

and the other screw having means for cooperating with a tool for turning that screw.



1,456,751. RAILWAY CROSSING. BYRON E. WILSON, Marion, Ohio, assignor to The Eymon Crossing Company, Marion, Ohio, a Corporation of Ohio. Filed Sept. 19, 1921. Serial No. 501,775. 4 Claims. (Cl. 246—380.)

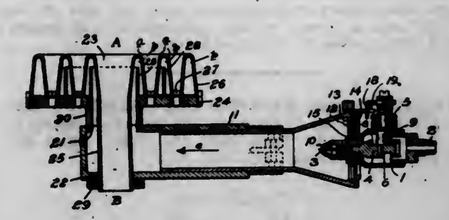
1. In a railway crossing, the combination of rails and rail sections at the crossing, a movable block for forming uninterrupted tread surfaces between the rails and rail sections and apertures at the side of said block forming passageways for dirt and other obstacles said apertures and movable block being so arranged that the block will force dirt and small obstacles through said apertures each of said apertures being widened in the direction of the outlet end thereof.



1,456,752. POWER TILE PRESS. EDMUND W. ZEH, Newark, N. J. Filed Oct. 23, 1920. Serial No. 418,891. 31 Claims. (Cl. 25—27.)

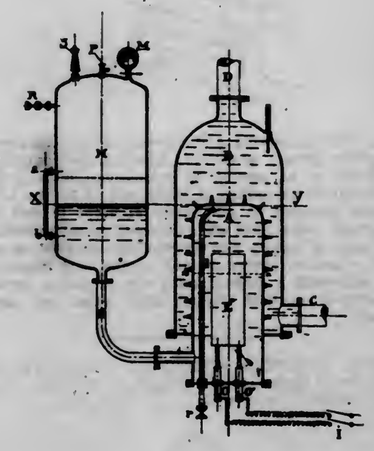
1. In a power tile press, the combination of a lower die to receive the material of which the tile is to be formed, an upper die adapted to cooperate with said lower die to compress the material, operating means for moving the upper die into and out of contact with material in

the lower die, and means for enabling successive percutient blows to be struck upon the material while the dies are in contact therewith.



1,456,753. FLY SWATTER. ALFRED K. ANCKER and ROBERT F. MORTON, Denver, Colo. Filed Apr. 18, 1922. Serial No. 554,850. 2 Claims. (Cl. 43—137.)

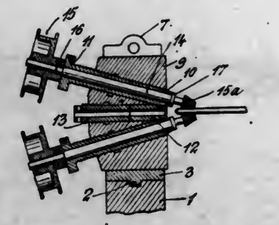
1. A handle adapted to be used with a fly swatter consisting of a wire bent intermediate its ends and formed into a closed loop adapted to co-operate with a flexible swatter element, the ends extending from said loop portion in spaced substantially parallel relation and provided with eyelets which are adapted to engage the sides of a second elongated U-shaped handle member, the sides of which are twisted together near the ends thereof, the ends being provided with eyelets engaging the sides of the first mentioned member.



1,456,754. GAS BURNER. JAMES B. ANDERSON, Shaler Township, Allegheny County, Pa., assignor to Peoples Natural Gas Company, Pittsburgh, Pa., a Corporation of West Virginia. Filed July 14, 1922. Serial No. 575,103. 6 Claims. (Cl. 158—116.)

1. In a gas burner a burner body within which a stream of gas is caused to spread horizontally and radially from a center and as it spreads to flow in sinuous course, the burner body being provided with

orifices at the crests of the sinuosities in the stream of gas.



1,456,755. ELECTRICAL HEATING APPARATUS. PAUL BERGEON, Grenoble, France. Filed Oct. 6, 1921. Serial No. 505,866. 5 Claims. (Cl. 219—38.)

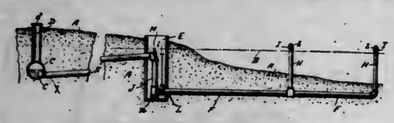
1. An electric heating apparatus for gases or liquids comprising: (a) a heating receiver containing the fluid liquid or gas to be heated, (b) a chamber surrounded by the heating receiver and containing electrodes dipping in water and connected with an electric circuit, (c) a compensating tank communicating with the electrode chamber and containing water the surface of which is exposed either to atmospheric pressure or to any pressure the variation of water level in the electrode chamber regulating the electric power according to the temperature of the fluid to be heated.

1,456,756. MILLING MACHINE. JOHAN ERIK BERGSTRÖM, Christiania, Norway, assignor to Gustaf Stahle, Stockholm, Sweden. Filed Jan. 24, 1921. Serial No. 439,669. 3 Claims. (Cl. 90—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a milling machine, an inclined support, a cylindrical frame adapted upon said inclined support, a turn-table cutter block resting in the said frame and angularly adjustable to any desired position, bearing

sleeves each arranged in the cutter block at an acute angle to the axis thereof and in the plane of the said axis, and cutter spindles mounted in said sleeves.

1,456,757. REVERSIBLE NECKTIE. HARRY BERKSON, Chicago, Ill. Filed Mar. 26, 1923. Serial No. 627,736. 3 Claims. (Cl. 2—82.)



1. A bow tie comprising a loop, means for securing said loop to the collar of a wearer, and two flat bows set back to back and rotatably encircled by said loop whereby they may be reversed.

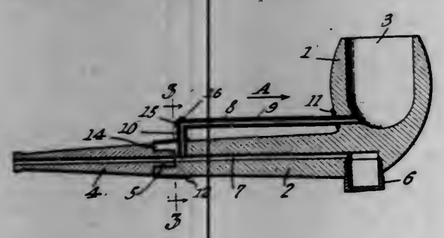
1,456,758. ARCH SUPPORT. ADOLPH BERNAT and ISAAC BERNAT, Kansas City, Mo. Filed Nov. 16, 1921. Serial No. 515,504. 1 Claim. (Cl. 36—71.)

An arch support comprising a flexible foot suporting member having an arched portion, a plate extending across said arched portion and adjacent to its ends attached to the under side of said member, and coil springs arranged in a longitudinal row and each removably mounted between said plate and said arched portion, substantially as set forth.

1,456,759. MEANS TO WITHDRAW SURFACE WATER FROM BATHING BEACHES AND RESORTS. SHELDON M. BOOTH, Chicago, Ill. Filed June 20, 1922. Serial No. 569,684. 2 Claims. (Cl. 210—11.)

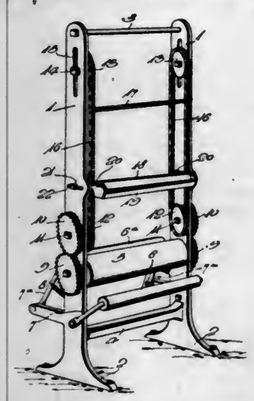
1. A bathing beach installation comprising stand pipes provided with apertures adjacent to the upper ends thereof, pipes embedded in the bottom of the beach and communicating with said stand pipes, an additional stand pipe with which and near the lower end thereof said embedded pipes communicate, a gate arranged to control the flow of water into said last named stand pipe, and means to create an upward flow of water in said last named stand pipe and the discharge of water therefrom at the upper end thereof, all combined as set forth.

1,456,760. ELECTRIC SOLDERING IRON. FREDERICK W. BORTON, Miami, Fla. Filed Oct. 18, 1921. Serial No. 508,436. 1 Claim. (Cl. 219—28.)



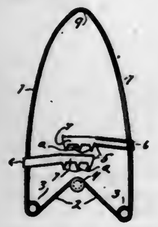
In an electric soldering iron a metallic housing, a tubular projection formed on said housing, a copper tip removably mounted on said projection, said housing being formed with a chamber adjacent said tip, a wooden handle secured to said housing, a metallic plate secured to the end of said handle, and adjusting rod disposed centrally of said tool and screw-threadedly engaging said plate, the end of said adjusting rod projecting into said chamber, a resistance element comprising a plurality of discs disposed within said chamber, said adjusting rod acting to regulate the pressure on said discs and an electric circuit for causing a current of electricity to pass through said resistance element, substantially as and for the purpose described.

1,456,761. HOSE COUPLING. ERIC BYLUND, Winnipeg, Manitoba, Canada. Filed Sept. 29, 1921. Serial No. 504,239. 4 Claims. (Cl. 285—129.)



4. A hose coupling comprising a pair of coupling members; two hinge connected members of semi-cylindrical formation adapted to embrace the coupling members; means on the hinge-connected and coupling members interengageable when the hinge-connected members are closed around the coupling members; a grooved latch on one of the hinge-connected members; a rotatable bolt on the other hinge-connected member having a flat side and a rounded side, the flat side permitting the latch to pass under the bolt, and a lever rigidly secured to the bolt whereby the said bolt may be rotated to engage the rounded side of the bolt in the groove in the latch to lock the coupling.

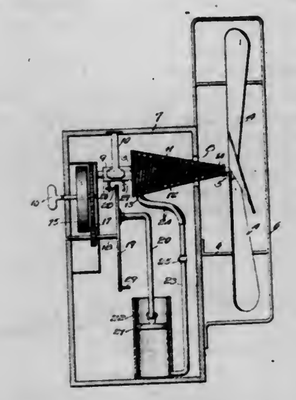
1,456,762. PIPE. JOHN A. CHAMBERS, Newburg, Mo., assignor of one-half to James A. Clark, Newburg, Mo. Filed May 11, 1921. Serial No. 468,566. 3 Claims. (Cl. 131—12.)



1. In a device of the class described, a pipe comprising a bowl and a stem, the stem having a bore; a receptacle detachably assembled with the pipe and communicating with the bore adjacent to the inner end of the bore; an external conduit including angularly disposed branches mounted respectively in the bowl and in the stem, one branch communicating with the interior of the bowl and the other branch communicating with the bore of the stem; and a closure member mounted in each branch and giving access to the other branch.

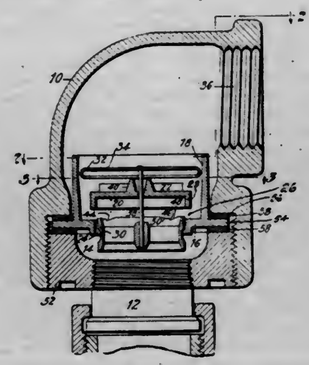
1,456,763. STRIP MARKING AND MEASURING MACHINE. FRANK J. CHAPMAN and JAMES F. BRENNAN, Paterson, N. J. Filed Nov. 13, 1922. Serial No. 600,664. 3 Claims. (Cl. 101—74.)

1. A strip measuring and marking device, comprising an upright frame, a roller journalled horizontally in said frame to be rotated by engagement with a strip of material to be marked, a lower pair of axially alined sprockets mounted on said frame adjacent to and having driving connections with the ends of said roller, an upper pair of axially alined sprockets mounted on said frame, a pair of chains trained around said upper and lower sprockets, a strip marking bar extending between and secured to said chains, and means for inking said bar.



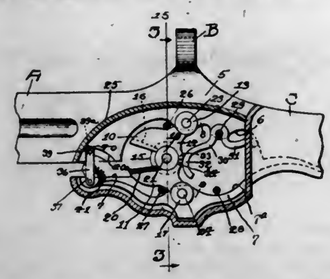
1,456,764. FUR-PELT STRETCHER. CHARLES B. CORBIN, Grand Rapids, Mich. Filed Mar. 25, 1922. Serial No. 546,651. 4 Claims. (Cl. 149—21.)

2. In an implement for stretching the pelts of fur bearing animals, a frame formed of spring metal wire in U form, the end of each arm of the frame coiled first at a short distance from the end, thence extending inwardly and relatively upwardly and again coiled and a rivet passed through the coils at the extreme ends pivotally connecting the ends, and sheet metal clips having one end bent U form and provided with holes therethrough to form two bearings upon each arm of the frame.



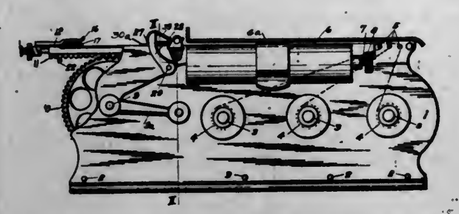
4. In combination with the elements covered in claim 2, one end of the clip made U formed and at a slight obtuse angle with the body of the clip and provided with a hole through each side of the U form, and in direct alinement, a loop formed at the other end of said clip, a second plate having a loop formed at one end to engage the first named plate and form an extensible member on said clip, the free end of said plate inclined relatively downwardly and having points thereon for engaging the ends of the pelts to be stretched.

1,456,765. FAN. FRANK L. CUPP, Chicago, Ill. Filed Aug. 15, 1921. Serial No. 492,325. 6 Claims. (Cl. 230—1.)



1. In combination, a spring motor, a fan, and pneumatic means operated by the motor for imparting rotation to the fan.

1,456,766. DEMAND-LIMITING DEVICE. JAMES P. FISHER, Bartlesville, Okla., assignor, by mesne assignments, to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 29, 1919. Serial No. 320,586. 16 Claims. (Cl. 50—10.)



1. In a fluid demand limiting device, the combination of a valve casing, a valve in the said casing, a disk connected to said valve and mounted to be freely movable along the inner wall of the casing so as to permit a limited flow of fluid between the edges of the disk and the casing wall, and means for decreasing the pressure of fluid passing through the casing between the valve and the disk.

1,456,767. BAYONET WIRE CUTTER. PETER PAUL GRABOWSKY, Providence, R. I. Filed Nov. 27, 1920. Serial No. 426,706. 4 Claims. (Cl. 42—90.)

4. A wire cutter comprising an elongated yielding extension extending substantially in parallel relation thereto, the extension forming with an adjacent portion of the body member, a recess, a pair of jaw members pivotally connected to each other at one of their ends, said jaw members having shanks extending in opposite directions, the shank of one of said jaw members being pivoted to the body member in the recess, the shank of the remaining jaw member being pivoted to the extension, means carried by the body member and disposed within the compartment for normally holding the pivot of the jaws to one side of the aligned pivots of the shanks of the jaws, plates carried by the side portions of the body member and the extension and cooperating to provide a chamber, said plates having longitudinally extending slots coacting to provide a guide, the lower portion of said plates extending beneath the extension in spaced relation to the extension whereby said extension is capable of adjusting itself within the chamber according to the movement of the pivot of the jaws relative to the pivots of the extensions of the jaws.

1,456,768. AUTOGRAPHIC REGISTER. LOUIS F. HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Dec. 7, 1916. Serial No. 135,600. 40 Claims. (Cl. 282—21.)

24. In an autographic register, in combination, mechanism adapted to simultaneously feed a plurality of superposed apertured webs, means adapted to adjust portions of said webs relative to each other comprising a controlling finger reciprocal across the paths of the webs adapted to enter the apertures in the superposed webs, and held against movement longitudinally of said paths, and an operating handle operatively connected to said feed mechanism and said adjusting mechanism.

1,456,769. AUTOGRAPHIC REGISTER. LOUIS F. HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Dec. 30, 1916. Serial No. 139,809. 32 Claims. (Cl. 282—21.)

1. A device of the character described comprising, in combination, a support, means for feeding a web com-

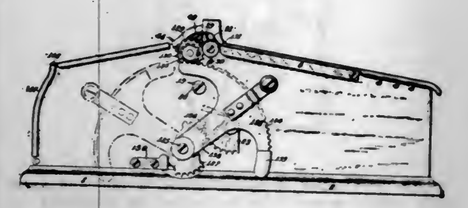
prising a reciprocating member, means for reciprocating said member comprising a driving shaft, spaced driving arms on said shaft, arms connecting said recipro-

cating member to said driving arms, and a carriage having web roll supports movable into and out of said frame, between the planes of movement of said spaced arms.

1,456,770. AUTOGRAPHIC REGISTER. LOUIS F. HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Feb. 5, 1917. Serial No. 146,681. 23 Claims. (Cl. 282—18.)

1. A device of the character described comprising, in combination, a support for a web, a member mounted on said support and fixed against longitudinal movement relative to the support for engaging a web to feed the same relative to the support, means to release the feeding means from engagement with the web to permit retrograde motion of the web, and means adapted to engage the web to limit the retrograde motion thereof when released and thereby retain a portion of the web in a predetermined position relative to the support.

1,456,771. AUTOGRAPHIC REGISTER. LOUIS F. HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Apr. 17, 1917. Serial No. 162,704. Renewed July 23, 1920. Serial No. 398,541. 33 Claims. (Cl. 282—21.)



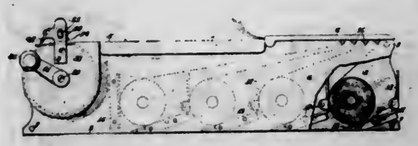
1. A device of the character described comprising, in combination, a web support, means for feeding webs a definite amount relative to the support, means for engaging the webs for adjusting the position of a portion thereof relative to the support, and means for projecting the engaging means into the path of the webs after the feeding is completed and for positively retaining the engaging means projected while setting the feeding means for the next feeding operation.

4. A device of the character described comprising, in combination, a web support, means for feeding webs a definite amount relative to the support, comprising a member for gripping and releasing the webs, means for engaging the webs for adjusting the position of a portion thereof relative to the support comprising pins adapted to enter perforations in the webs, and means for projecting the pins into the path of the webs while the gripping means releases the webs and for positively retaining the pins projected until the feeding means is ready for the next feeding operation.

29. In an autographic register, in combination, a reciprocatory gripper adapted to advance a web at intervals, a tearing bar separate from said gripper movable toward and from the web, and a web retaining finger adapted to be pressed against the web by movement of said tearing bar from the web, said finger being mounted on the register independently of said tearing bar.

1,456,772. AUTOGRAPHIC REGISTER. LOUIS F. HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario, Canada. Filed Apr. 17, 1917, Serial No. 162,705. Renewed Nov. 1, 1922. Serial No. 598,435. 40 Claims. (Cl. 282—18.)

1. A device of the character described comprising in combination a support for a web, means for feeding a web a predetermined amount relative to said support including feed operating members adapted to pass out of engagement with each other after the web has been fed a predetermined amount, means for severing the web, reciprocatory aligning pins for adjusting the position of a portion of said web, and means for operating said severing and adjusting means including members adapted to pass into engagement with each other after a predetermined amount of feed.

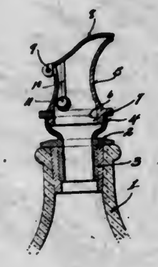


12. In an apparatus of the character described, in combination, a feed roller, an oscillatory operating member, devices whereby movement of said member rotates said roller including a gear operatively connected to said roller, a rack movable into and out of mesh with said gear, a stop tooth on said gear, and a stop stationary relative to said rack adapted to cooperate with said tooth to arrest rotation of said gear.

16. In an apparatus of the character described, in combination, a feed roller, a reciprocatory aligning finger adapted to enter apertures in the web, an oscillatory operating member, and devices whereby operation of said operating member rotates said roller and reciprocates said finger.

25. In an apparatus of the character described, in combination, a feed roller, a reciprocatory aligning finger adapted to enter apertures in the web, an oscillatory operating member, and devices whereby operation of said operating member rotates said roller and reciprocates said finger and relieves said web from the feed grip of said roller.

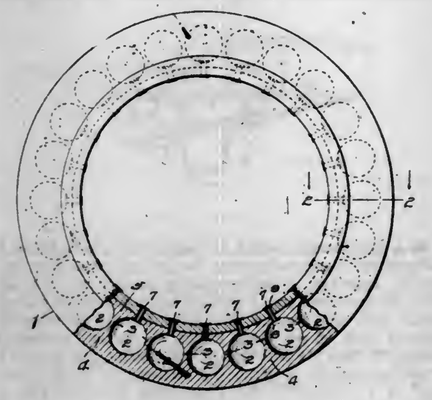
30. In an apparatus of the character described, in combination, a feed roller, a reciprocatory aligning finger, a web severing knife, an oscillatory operating member, and operative connections whereby said roller, finger and knife are actuated upon operation of said operating member.



1,456,773. AUTOGRAPHIC REGISTER. LOUIS F. HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed July 17, 1917. Serial No. 181,019. 35 Claims. (Cl. 282—21.)

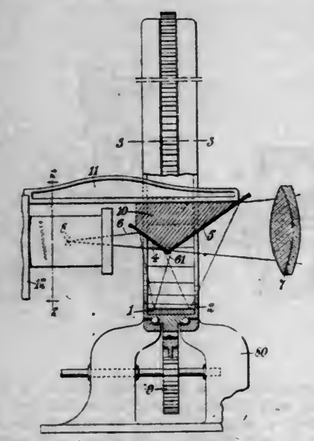
20. In an autographic register, a feed roll, a yieldingly-pressed roll bearing against it for feeding duplicate strips of paper, a pair of pins on the feed roll adapted to engage aligning perforations in the paper, and means for lifting the tension roll off the feed roll during the engagement of the pins with said perforations.

22. In a friction-roller manifolder employing perforated form strips, a drive roll and a cooperative pressure roll for feeding said strips, means for relaxing the pressure between the rolls after feeding said strips a predetermined distance, and form adjusting means on said drive roll for engaging form perforations at the time of said pressure relaxation.



1,456,774. AUTOMATIC BOTTLE CLOSURE. CLARENCE HARRER, Port Washington, Wis. Filed Sept. 14, 1920. Serial No. 410,223. 1 Claim. (Cl. 215—63.)

A bottle closure comprising a hollow neck engaging portion having its upper end flared to form a comparatively wide mouth through which the bottle may be filled, a spout detachably connected to said flared end at the topmost portion of said flared end, an annular rib on said spout adapted to rest on the edge of said flared end, a cover for said spout, and gravity actuated means for automatically opening and closing said cover, said spout being increased in cross sectional area adjacent to said flared end to provide space for said gravity actuated means.

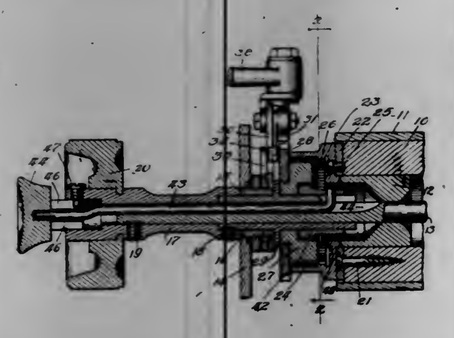


1,456,775. CUSHION PNEUMATIC TIRE. ALBERT J. HICKS, St. Louis, Mo. Filed June 5, 1919. Serial No. 301,979. 2 Claims. (Cl. 152—1.)

1. In a tire structure of the class described, a cushion body provided with spherical air chambers, said body being circular in cross section and the spherical air chambers therein being equally spaced apart by relatively thin walls, said spherical air chambers being of such relative location that the tread wall of the body is of relatively large thickness progressively narrowing until

the inner wall of the body becomes relatively thin, and said inner wall of the body being provided with a passage leading from each spherical air chamber.

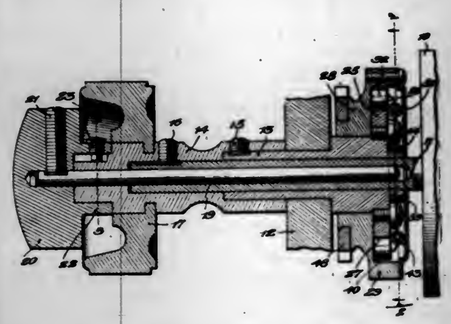
1,456,776. CINEMATOGRAPHIC PROJECTION APPARATUS. KINGSLEY HIGGINSON, Kingston-on-Thames, England. Filed Jan. 6, 1921. Serial No. 435,356. 8 Claims. (Cl. 88—16.8.)



1. For use with a kinematograph projector wherein the film can be moved continuously through the gate, the combination with a plurality of mirrors each of trapezoidal form mounted side by side to form an annulus with each of the mutually inclined sides of a mirror adjacent to one of the mutually inclined sides of its neighbor, means to support the annulus in the path of a beam from the projector and so that the general plane of the annulus is transverse to the said beam and means to rotate the annulus about an axis that is transverse to the general plane thereof, of a reflector so disposed as to intercept the beam from the projector and so inclined as to throw it on to a mirror of the annulus to be reflected thereby and to form on the mirror an intersection of the beam that is trapezoidal and of the same size between the mutually inclined sides as that of the mirror between its mutually inclined sides.

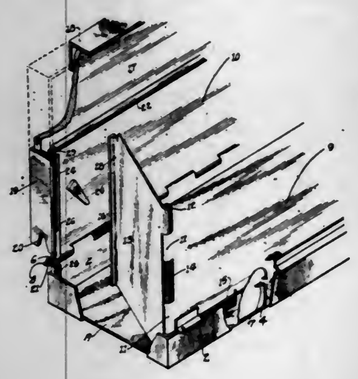
1,456,777. METALLIC SIGNAL FOR LOCOMOTIVES. LORAN LEE HOFFMAN, Milwaukee, Wis. Filed Oct. 30, 1922. Serial No. 597,912. 2 Claims. (Cl. 116—30.)

2. A combination signal for locomotives, comprising a rectangular metallic housing having an open rear end and an open top, a stud extending through the housing near its open rear end, a pair of signal panels in pivotal union with the stud, a slit cover for the rectangular housing and off-set lamp casing, a bracket extending angularly from the rear wall of the housing and having a T-shaped portion, a strap for securement to the front wall of a locomotive, the strap being provided with a T-shaped aperture for receiving the T-shaped portion of said bracket, whereby the housing is supported.



1,456,778. VARIABLE LINE SPACER FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Oct. 7, 1919. Serial No. 287,949. 7 Claims. (Cl. 197—123.)

1. In combination, a typewriter platen, a frame for supporting said platen, ratchet mechanism for operating said platen, a bushing carried by said frame, a sleeve journaled in said bushing, said sleeve and bushing constituting a pivotal support for said ratchet mechanism, a platen rod extending through said sleeve and removable therefrom for detachably holding said platen in operative position adjacent said ratchet mechanism and a clutch member slidably mounted on said sleeve for controlling said ratchet mechanism.



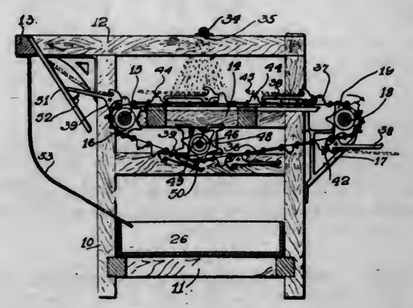
1,456,779. VARIABLE LINE SPACER FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Oct. 14, 1920. Serial No. 416,804. 12 Claims. (Cl. 197—123.)

1. The combination with a rotary platen, of a line spacing wheel loosely mounted thereon, a roller clutch for causing said wheel and platen to rotate in unison with one another, and means for rotating said platen having driving connection with said platen independent of said line spacing wheel and roller clutch, said means comprising a rotary member arranged to release said

clutch during an initial rotation and to rotate said platen during a continuation of the rotation of said member subsequent to the release of said clutch.

1,456,780. COMBINATION RUNNING BOARD, TABLE, AND CONTAINER. JAMES E. KERMODE, Vallejo, Calif. Filed Mar. 29, 1922. Serial No. 547,704. 5 Claims. (Cl. 280—164.)

2. The combination with the running board of an automobile, of an inner and an outer side section pivotally attached thereto to permit folding downwardly against the running board or vertical positioning of the same, a cover member carried by one of said side sections, and means permitting sliding and pivotal movement of said cover section with relation to the member carrying the same.



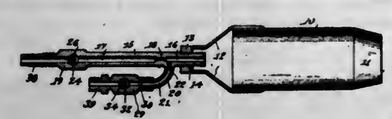
1,456,781. PROCESS OF RECOVERING CELLULOSE ACETATE FROM SOLUTIONS THEREOF. JOHANNES M. KESSLER, West Orange, and VIRGIL B. SEASE, Newark, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 14, 1919. Serial No. 297,167. 6 Claims. (Cl. 18—54.)

1. The process which comprises forcing a solution of cellulose acetate through small orifices into an ether to precipitate said cellulose acetate.

1,456,782. CELLULOSE-ESTER COMPOSITION. JOHANNES M. KESSLER, West Orange, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 26, 1919. Serial No. 340,930. 15 Claims. (Cl. 106—37.)

1. A composition comprising a cellulose ester and an acetin substantially free from monoacetin and containing from about 75 to 97% of triacetin and from about 25 to 3% of diacetin.

1,456,783. MACHINE FOR SPRAYING LEATHER. JOHN D. CHAPMAN, Richwood, W. Va. Filed Apr. 15, 1922. Serial No. 553,236. 10 Claims. (Cl. 149—19.)



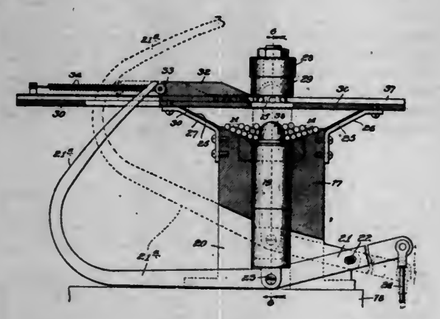
4. A machine of the character described comprising a supporting frame, a plurality of endless chains, a plurality of pairs of sprocket wheels upon which the chains are mounted, means for driving the sprocket wheels, a series of fingers pivoted at intervals upon each chain and extending in the same direction, means yieldingly holding the fingers in a position parallel to the chain and extending in a direction reverse to the direction of travel of the chain, a series of guides extending downward and forward from the top of the frame and between which guides said fingers pass as they move from the under flight of the chain to the upper flight thereof, each of said guides having pins extending upward therefrom to support the edge of the leather, and means for keeping all of said chains taut.

1,456,784. PROCESS OF TREATING ORES CONTAINING GALENA. NIELS C. CHRISTENSEN, Salt Lake City, Utah, assignor to The Consolidated Mining and Smelting Company of Canada, Limited, Montreal, Canada, a Corporation of Canada. Filed Sept. 30, 1919. Serial No. 327,401. 16 Claims. (Cl. 75—18.)

1. The process of treating ores containing galena which consists in treating said ores with a relatively concentrated salt solution containing ferric chloride, and thereby dissolving the lead as a chloride in said salt solution.

1,456,785. LIQUID AND GASEOUS FUEL BURNER. MAURICE COLLMAN, Akron, Colo., assignor of one-sixth to Harry Collman, Akron, Colo., one-sixth to Emmet P. Rogers, Denver, Colo., and one-half to the Investors Securities Company, Denver, Colo., a Corporation of Colorado. Filed Jan. 10, 1922. Serial No. 528,184. 2 Claims. (Cl. 158—73.)

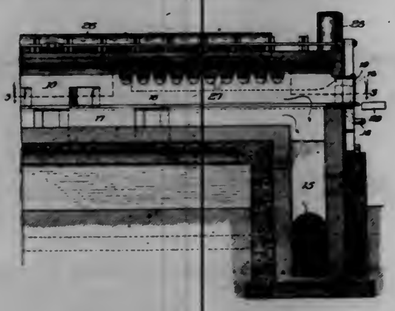
1. A fuel burner comprising a tubular combustion chamber open at both ends, a fuel supply nozzle disposed rearwardly of one of the open ends of said chamber and spaced therefrom, means for adjustably connecting said nozzle with said chamber, a fluid supply element disposed in the same plane as the plane of the nozzle and further formed integral with the nozzle, said fluid supply element at its point of joinder with said nozzle provided with a restricted duct to increase the velocity of the supply of fluid to the nozzle, a curved branch pipe having one end formed integral with said nozzle forwardly of said duct and formed with a restricted outlet opening into said nozzle, and said



fluid supply element positioned in parallelism with respect to said fuel supply element, and opening into said pipe.

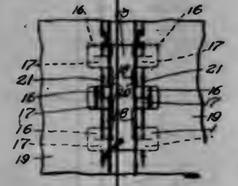
1,456,786. PEN OR PENCIL ATTACHMENT. FRANK DE LUCA, Bowdens, N. C. Filed Apr. 11, 1921, Serial No. 460,266. Renewed Mar. 22, 1923. 1 Claim. (Cl. 120—84.)

A device of the class described comprising a member having a central longitudinal elongated slot, a blade slidably guided for longitudinal movement in said member, a releasable catch carried by and movable with the blade within said slot and engageable within the enlarged portion of said slot to retain the blade retracted within said member and to retain said blade extended beyond one end of said member, said releasable catch comprising a spring pressed member normally urged away from the blade toward locking position, said spring pressed member comprising a push button having a reduced portion of slightly less diameter than the width of the major portion of said slot and an inner enlarged portion of greater diameter than the width of the major portion of said slot, the slot in said member being provided with enlarged openings communicating with the ends of said slot and of a diameter slightly greater than the diameter of the enlarged portion of the push button, and a lateral pin rigidly fixed to said blade and projecting outwardly through said slot, said push button being slidably mounted upon said pin.



1,456,787. MACHINE FOR FILLING BALL RETAINERS. JOHN DLESK, Berwyn, Ill., assignor to U. S. Ball Bearing Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed July 14, 1920. Serial No. 396,241. 6 Claims. (Cl. 29—84.)

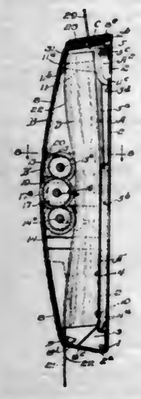
1. In a machine for filling ball retainers, a hopper for the balls, an integral plunger reciprocable vertically thru said hopper and adapted to be lowered beneath the balls



in the hopper, means on said plunger for holding a predetermined number of balls thereon and means for holding a ball retainer so that the balls held on the plunger will be forced by said plunger into the ball retainer on the next upward reciprocation thereof.

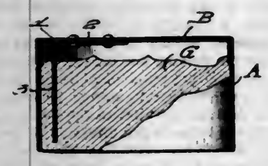
1,456,788. BILLET-HEATING FURNACE. NICOLAS F. EGLER, Chicago, Ill., assignor, by mesne assignments, to The Union Trust Company, trustee, Cleveland, Ohio. Filed Apr. 21, 1921. Serial No. 463,138. 7 Claims. (Cl. 263—15.)

1. A recuperative furnace comprising an elongated combustion chamber and pipes lying across said chamber through which air passes for preheating said air for the furnace.



1,456,789. DRAPERY-SUPPORTING DEVICE. ERNEST R. FALKENBERG, Chicago, Ill. Filed Sept. 5, 1922. Serial No. 586,183. 8 Claims. (Cl. 156—21.)

5. Drapery supporting means comprising in combination, a member adapted to be enclosed by a pleat, a plurality of laterally offset portions upon said member to provide a series of vertically aligned and spaced apart openings whereby a pin may be passed through said openings and through a plurality of portions of the drapery protruding between pairs of said offset portions, a hanger adapted to be supported by a curtain pole, and a hook upon said hanger adapted to engage one of said offset portions to support a drapery secured thereto.

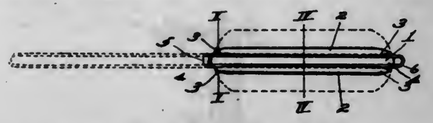


1,456,790. TOILET-PAPER CABINET. CHARLES FISHER, Chicago, Ill., assignor of one-third to Albert C. Grunwald and one-third to Carl E. Carlsen, both of Chicago, Ill. Filed Sept. 18, 1920. Serial No. 411,236. 6 Claims. (Cl. 211—8.)

2. In means of the character set forth, the combination of a rear casing-section equipped at its upper portion with immovable paper-supporting means and equipped also below said paper-supporting means with a spring-pressed follower, a closure having its lower end portion pivotally connected with the lower portion of said rear casing-section, means for releasably locking the closure in the closed position, and paper-feeding mechanism comprising gear-connected upper and lower feed-rolls mounted on the inner

side of the front wall of the closure, both of said feed-rolls bearing normally on a package of paper interposed between them and said follower.

1,456,791. ATTACHMENT FOR CAN CLOSURES. BENJAMIN BARTLY FOSTER, Renville, Minn. Filed May 4, 1922. Serial No. 558,371. 1 Claim. (Cl. 220—85.)

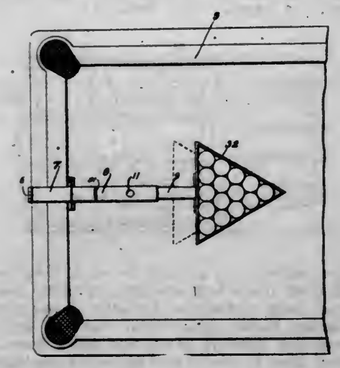


An attachment for can covers or the like comprising a strip of metal bent between its ends to provide right angularly disposed portions, one of said portions being intended to be connected to the underside of the cover so that the other portion extends at right angles from said cover, said last named portion constituting a spreader or paddle with which the lubricant can be spread or applied to the desired parts of machinery.

1,456,792. CONDUIT-OUTLET BOX. WILLIAM G. FRANKE, Detroit, Mich. Filed Dec. 15, 1919. Serial No. 344,983. 1 Claim. (Cl. 247—15.)

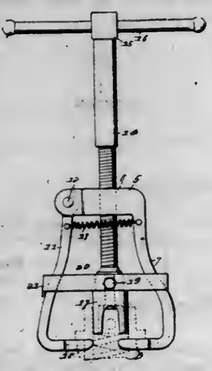
An outlet box comprising a stationary section having partially completed pipe sockets by which said section may be supported, a detachable section adapted to close the stationary section and complete the pipe sockets, said sections having connected confronting edges in a plane to one side of the central vertical plane of the box so that the stationary section of said box may be supported by pipes when the detachable section is removed, means independent of said pipe sockets and spaced therefrom connecting said sections, and an insulator anchored by an edge of the stationary section and into which insulator the edge of the detachable section may extend.

1,456,793. SPRING CLASP. ANNA S. FRIDOLPH, Kansas City, Mo. Filed Aug. 29, 1921. Serial No. 496,459. 2 Claims. (Cl. 132—41.)



1. A spring clasp comprising a body-portion having parallel roll edges extending for substantially the full length of and overlapping and spaced from the body-portion, and a pin pivoted at one end to the body-portion; the pin and roll edges bearing a laterally-yielding and wedge relation at their opposite ends to insure engagement and disengagement respectively, when the pin is operated pivotally under sufficient power to close or open it.

1,456,794. PRINTING AND DUPLICATING. DAVID GESTETNER, London, England, assignor to D. Gestetner, Limited, London, England. Filed Dec. 9, 1919. Serial No. 343,662. 7 Claims. (Cl. 95—5.)



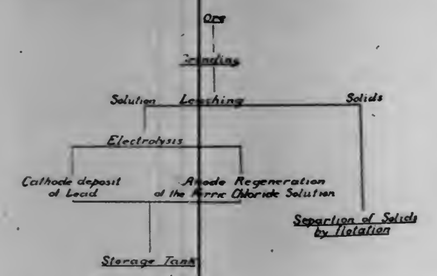
1. The process of forming stencils for use in duplicating, which comprises producing by the agency of light a photographic image of the matter to be reproduced and an image of a screen in superposition on a layer of composition which is rendered insoluble in a developer by the action of light and treating the layer of composition with a developer to remove the still soluble portions thereof.

1,456,795. REGISTER FOR POOL TABLES. PETER T. GRIFFIN, Van Zandt, Wash. Filed May 12, 1921. Serial No. 469,008. 1 Claim. (Cl. 235—71.)

In a registering device for pool tables comprising a support, a hollow body portion having a slot formed therein, a receptacle within the body portion and having a slot registering with the first mentioned slot, a tubular member positioned in one end of the body portion and carrying sprocket wheels, said body portion and tubular member having registering openings, indicating means operated by the sprocket wheels, and adapted to be viewed through the registering openings, a ratchet wheel associated with one of the sprockets, an operating rod carrying a finger adapted to cooperate with the ratchet wheel to rotate the same, upon movement of the tubular member within the body portion, and means for returning the tubular member to its inactive position.

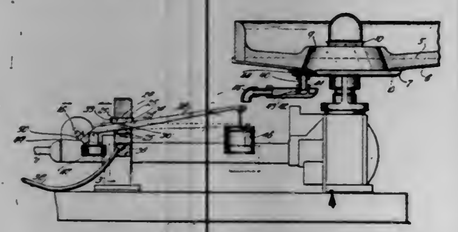
1,456,796. CLUTCH-SPRING-COMPRESSING DEVICE FOR CHEVROLET AUTOMOBILES. ANTON F. GROSS, Aberdeen, Wash., assignor to Joe G. Batinovich, Aberdeen, Wash. Filed June 2, 1921. Serial No. 474,355. 2 Claims. (Cl. 29—87.1.)

1. In a clutch spring compression device for automobiles, a head having a rigid and a pivoted arm, each having an inturned end terminating in a jaw, one of which coacts with the other, a yoke, means for advancing the yoke with friction to the jaws of the arms, and means for holding the pivoted arm in operative relation to the rigid arm and the yoke.



1,456,797. VACUUM BOTTLE. ALBERT GIBSON HALB, Fort Thomas, Ky. Filed June 20, 1921. Serial No. 478,876. 1 Claim. (Cl. 215—13.)

A device of the type described comprising a frangible container having a reduced neck, an inner metal casing cemented to said container, the neck of said casing being spaced from the neck of said container, a resilient washer disposed between the neck of said container and the neck of said casing, the neck of said casing being threaded, a coupling having a threaded portion adapted



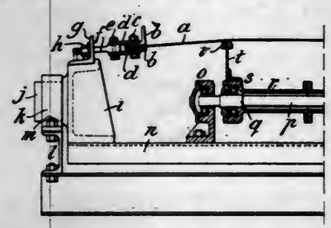
to be screwed onto the casing, said coupling being spaced from said casing at all other points, an outer casing secured to said coupling and being spaced from said inner casing at all points, and a cap screwed onto said coupling and being adapted to enclose the open end of said container.

1,456,798. PROCESS FOR THE EXTRACTION OF LEAD FROM SULPHIDE ORES. WILLIAM HENRY HANNAY, Trail, British Columbia, Canada, assignor to The Consolidated Mining & Smelting Company of Canada, Limited, Montreal, Quebec, Canada, a Corporation of Canada. Filed Apr. 30, 1920, Serial No. 377,752. Renewed July 22, 1921. Serial No. 486,806. 5 Claims. (Cl. 204—15.)

1. A process for the extraction of lead from sulphide ores, which consists of grinding the ore in a neutral liquid, leaching it with ferric chloride in the presence of sodium chloride to dissolve the lead sulphide, electrolyzing the solution to deposit the lead with simultaneous regeneration of the ferric chloride, and washing the residue to remove the chlorine therefrom.

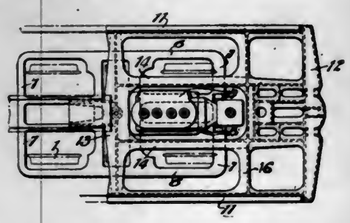
1,456,799. OIL BURNER. FRANKLIN HARDINGE, Chicago, Ill., assignor to Hardinge Brothers, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 16, 1921. Serial No. 470,208. 3 Claims. (Cl. 158—36.)

2. The combination with an oil burner comprising a rotary atomizing nozzle and a motor for rotating said nozzle of a movably mounted member for actuating said switch to its open position, means for collecting unconsumed oil discharged from said atomizing nozzle, and means controlled by said collected oil and actuated by said motor for moving said member to actuate said switch to its open position.



1,456,800. METALLIC CHAIR, STOOL, SEAT, AND THE LIKE. FREDERICK HAGGER HEADLEY, Northfield, England, assignor to Tan Sad Limited, Birmingham, England, a Corporation of Great Britain. Filed Jan. 28, 1921. Serial No. 440,705. 1 Claim. (Cl. 155—191.)

In metallic chairs, stools and the like of the type described, a plurality of tubular legs, transverse strip members, plugs telescopically arranged to coact with the upper ends of the tubular legs, rivet means countersunk in said strip means for securing said plugs to said strip



members, a frame resting upon said strip members, a sheet of material rigidly secured to said frame, and means for detachably securing said frame to said strip members.

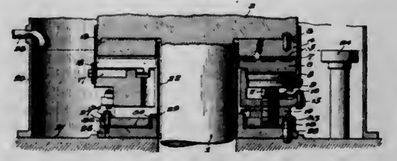
1,456,801. SCREENING APPARATUS. HENRY PATRICK HOYLE, Durham, England. Filed July 26, 1922. Serial No. 577,741. 33 Claims. (Cl. 83—56.)

1. The combination of a screening surface with arms, bars on the arms extending across and engaging the screening surface and positive means for moving the arms an appreciable distance away from and towards the screening surface.

1,456,802. CAST-STEEL PLATFORM. HOWARD L. INGERSOLL, White Plains, N. Y., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed June 13, 1922. Serial No. 568,030. 2 Claims. (Cl. 105—34.)

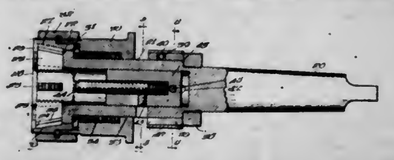
1. In a railway car, a truck frame, a motor mounted on said truck frame and extending upwardly therefrom, and a car body underframe including a one-piece platform casting having longitudinal draft or center sills and transverse members above said truck frame spaced from each other to receive said motor between them, said sills and members being flanged to reinforce the casting about the opening provided for the motor.

1,456,803. DISH DRAINER. JOHN D. JUDKINS, San Diego, Calif. Filed Nov. 3, 1919. Serial No. 335,521. 1 Claim. (Cl. 141—11.)



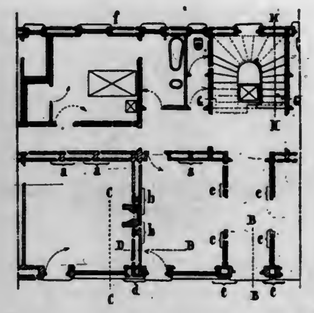
A dish drainer comprising a basket of woven wire having a front wall and end walls inclined outwardly

toward the top and having a bottom, the bottom and front wall being formed of relatively close longitudinal wires and transverse wires spaced substantially far apart forming relatively long, narrow mesh openings whereby the lower edges of the dishes, within the basket may



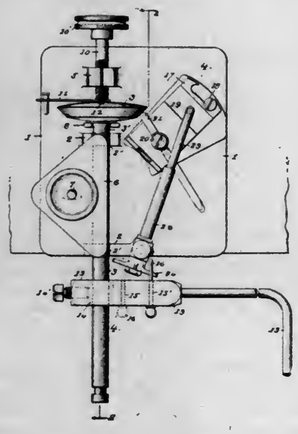
project therethrough, the rear edges of the end walls and bottom being arranged in substantially the same vertical plane, whereby said drainer may be hung against a substantially flat vertical surface, and the surface serve as a back for said drainer.

1,456,804. ELECTRICALLY-INSUALTED BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Filed Jan. 19, 1920. Serial No. 352,364. 20 Claims. (Cl. 64,25.)



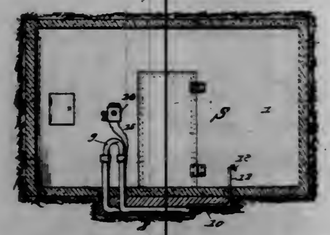
1. In a bearing for sustaining the end thrust of the shaft of an electrical apparatus, a bearing structure including a rotatable bearing member and a stationary bearing member, a frame for supporting said bearing structure, and electrical insulation interposed in said bearing structure between said bearing members and said frame.

1,456,805. DIE HEAD. VICTOR R. KOONTZ, Waynesboro, Pa., assignor to The Victor Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed June 9, 1921. Serial No. 476,277. 11 Claims. (Cl. 10—95.)



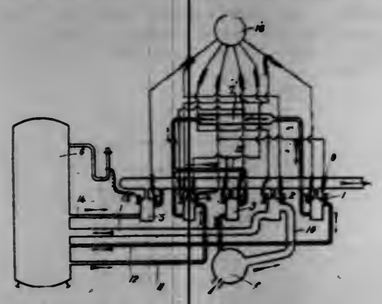
4. In a threading tool, the combination with a stock, of a plurality of cutters radially slidable in the outer end thereof and having inclined bearing portions, a tubular actuating member slidable longitudinally on the stock, and having inclined ways for the bearing portions and also having a socket in its rear end, a coiled spring within the actuating member and bearing against the same to urge it rearwardly, a rotary holding collar in rear of the actuating member and provided with a forwardly extending lug adapted to enter the recess and to abut against the member at one side of said recess, and means operated by the work being threaded, for automatically turning the holding collar.

1,456,806. MONOLITHIC BUILDING. CÉSAR JEAN MARIE LANCETTE, Paris, France. Filed May 21, 1920. Serial No. 383,164. 5 Claims. (Cl. 72—1.)



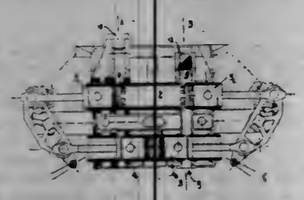
2. A monolithic building of one or more stories, comprising hollow vertical walls embodying pairs of spaced, reinforced concrete panels; horizontal girders of reinforced concrete to which said panels are secured at their upper and lower ends, each panel of each story of the building extending the entire height of that story; and horizontal beams disposed at intervals within the spaces between the panels to divide them into longitudinal cells.

1,456,807. VALVE-REFACING MACHINE. HANS G. LARSEN and WILLIAM C. REDFIELD, Chicago, Ill. Filed Oct. 12, 1921. Serial No. 507,373. 12 Claims. (Cl. 82—1.)



1. In a valve refacing machine, a frame, a saddle block formed with an angular channel, a confining plate in superimposed relation to said saddle block, means for adjusting said plate, a work adjusting spindle mounted on the frame in aligned relation to the channel of the saddle block, a resistance bar arranged in opposed relation to said adjusting spindle, resilient means for moving said bar in one direction, a slide rest carrying a cutting tool and having a sliding movement in an inclined direction on the frame, an operating hand crank, and means intermediate of said hand crank and the slide rest for imparting an intermittent feed to said slide rest with each revolution of the hand crank.

1,456,808. SAFETY STATION FOR SUBTERRANEOUS PASSAGEWAYS. GEORGE M. LOWE, Bowen, Colo. Filed Sept. 7, 1921. Serial No. 498,955. 1 Claim. (Cl. 262—34.)



A safety station for a subterraneous passageway including a chamber formed within a wall of said passageway and an entranceway leading from said chamber to the passageway, means for closing the entranceway, an induction line for air discharging within the chamber, an air eduction line in communication with the chamber, and a removable coupling engageable within the chamber with the induction and education lines for connecting said lines to permit a direct flow from the induction to the education line.

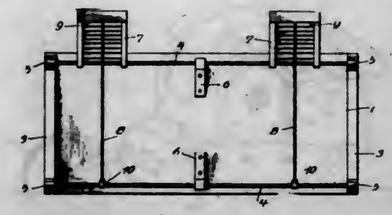
1,456,809. PROCESS FOR TREATING WOOD. GUSTAVE FRANTZ LYON, Paris, France. Filed Feb. 15, 1921. Serial No. 445,193. 3 Claims. (Cl. 99—12.)

1. A process for the methodical drying of wood by the treatment thereof in a chamber characterized by first subjecting the wood to a slightly reduced atmospheric pressure and then treating the wood with dry ozonized air for a suitable period of time.

1,456,810. LOCOMOTIVE. ACHILLE MACCHIONI and ENRICO HOCKE, Genoa, Italy. Filed May 24, 1921. Serial No. 472,304. 2 Claims. (Cl. 105—62.)

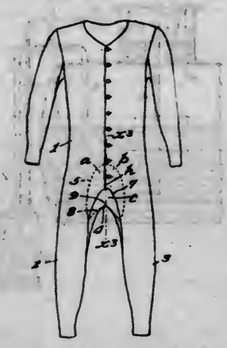
1. A locomotive fitted with an internal combustion engine with horizontal cylinders, characterised by the fact that the engine consists of one or several couples of cylinders; two cylinders of each couple having parallel and distinct axes and each cylinder having two pistons moving in opposite directions, and by the fact that the pistons placed on the same side of the two cylinders forming a couple are connected together by a member, one for each side, the said member compelling the pistons to move in opposite directions.

1,456,811. AUTOMATIC FIREARM. ULDARIQUE AUGUSTE MARGA, Dieghem, Brussels, Belgium. Filed Mar. 21, 1921. Serial No. 454,129. 1 Claim. (Cl. 42—4.)



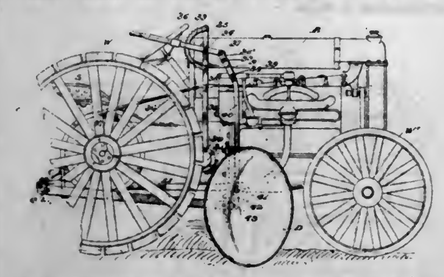
In an automatic firearm, a breech-block movable rearwardly by the recoil, a barrel movable rearwardly with said breech when bolted to the latter, a catch carried by said barrel, a firing pin having sliding movement in the breech-block, a bolt member mounted in said breech-block and adapted to engage said catch to lock said barrel and breech-block together, said bolt being actuated to locking position by said firing pin upon firing movement of the latter, and means for causing a partial rotation of said barrel to thereby disengage said catch from said bolt when said breech-block has completed a portion only of its recoil movement.

1,456,812. BUILDING ELEMENT. JAKOB MELLES, Brieg, Germany. Filed May 17, 1922. Serial No. 561,767. 3 Claims. (Cl. 72—110.)



1. A building element comprising a lower member consisting of a plane trellis work plate formed of longitudinal and cross wires, an intermediate member consisting of a trellis work plate formed of several parallel longitudinal wires bent zig zag and of several straight cross wires, an upper member consisting of a wood beam, parallel transverse rows of vertical partitions on the lower surface of said upper member spaced in accordance with the parallel rows of upper apexes of said longitudinal wires of the intermediate member slits being formed between the partitions of each row at distances which correspond with the distances between the apexes of one row of upper apexes of the parallel longitudinal wires of said intermediate member, said apexes being inserted into said slits, and transverse pins inserted below the apexes of the bent longitudinal wires of the intermediate member and supported by said partitions.

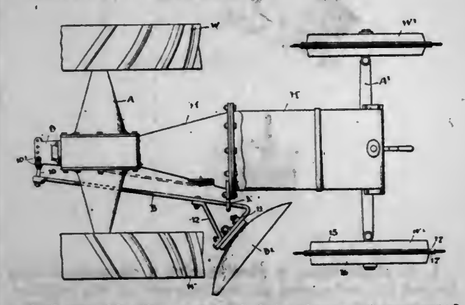
1,456,813. PRUNING LADDER. SYLVESTER J. MITCHELL, ALFRED D. GABBERT, and JOHN W. BLATTER, Grand Junction, Colo. Filed Mar. 21, 1922. Serial No. 545,498. 1 Claim. (Cl. 228—1.)



A pruning ladder comprising a portable, flat, rectangular base adapted to be mounted on a wagon body, transverse beams at opposite ends thereof, longitudinally disposed rods carried by said beams along opposite sides of the base and in spaced relation thereabove, a ladder pivoted at its lower end on one of said rods and foldable over said base with its upper end adapted to be supported on the other of said rods, the length of said ladder equalling the width of the base, said ladder being slidable on its rod longitudinally of the base, a sleeve rotatably and slidably disposed on the opposite rod, and a guy wire connected at one end to said sleeve and at the opposite end to an upper rung of the ladder, whereby said ladder, wire, and sleeve may be moved longitudinally of the base and maintained in raised position, the length of said wire being such as to dispose said ladder when raised inclined outwardly of the base.

1,456,814. UNDERGARMENT. ZOLA B. MOORE, Los Angeles, Calif. Filed Oct. 23, 1918. Serial No. 259,440. 2 Claims. (Cl. 2—144.)

1. An undergarment for men comprising a body having legs united by a permanently closed-crotch and having an open-front and an opening in rear; a reinforcing patch fastened to the garment and extending upwardly on the front of said garment from about the level of the crotch and the middle thereof to a considerable distance above the crotch and the lower edge of said open-front and a short distance at each side of the middle of said open-front, and downwardly on the inside of the legs of said garment and over the usual crotch seam, and one side of said downwardly extending portions terminating at the lower edge of the rear opening; and said reinforcements being adapted to receive the wear and strain occasioned by the central male organ substantially as set forth.

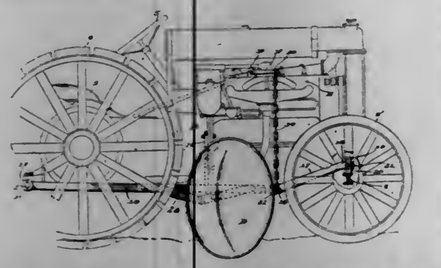


1,456,815. PLOW ATTACHMENT FOR TRACTORS. BENJAMIN W. MORTON, Williston, Fla. Filed Dec. 31, 1921. Serial No. 526,262. 11 Claims. (Cl. 97—47.)

3. In combination with a tractor, a bar pivotally connected to the tractor and extending forwardly with relation to said tractor, a plow carried at the forward end of the bar and disposed to operate forward to a drive wheel of said tractor, and means carried by the tractor adapted to cooperate with said bar to maintain the plow in its operative position.

8. In combination with a tractor, a bar having its one end pivotally connected to said tractor and extending forwardly with relation thereto, a disk plow rotatably supported at the forward end of said bar and disposed to press inwardly upon the last named end of the bar when brought into operation, and means carried by the body of the tractor adapted to serve as a stop against the inward pressure of the disk plow and also serve to permit upward or downward movement of said disk plow.

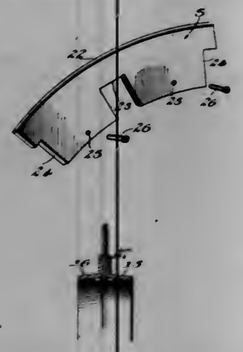
1,456,816. WHEELED TRACTOR. BENJAMIN W. MORTON, Williston, Fla. Filed Feb. 25, 1922. Serial No. 539,251. 6 Claims. (Cl. 97—47.)



1. In combination, a wheeled tractor, a plow carried thereby and disposed in alignment with a wheel of the tractor and adapted to operate at the rear of said wheel, and means carried by said wheel to sever the earth over which the same passes.

6. In combination, a wheeled tractor, a push bar pivotally secured at the rear end of said tractor and extending forwardly with relation thereto, a disk plow rotatably supported at the forward end of said push bar, and said disk plow being adapted to operate at the rear of the associated front wheel of said tractor, and at an angle to the longitudinal axis of the tractor, and means carried by said front wheel of the tractor adapted to sever the earth over which said wheel passes.

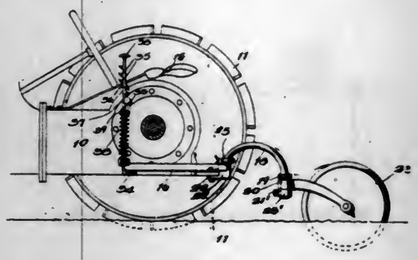
1,456,817. PLOW ATTACHMENT FOR TRACTORS. BENJAMIN W. MORTON, Williston, Fla. Filed Feb. 25, 1922. Serial No. 539,252. 11 Claims. (Cl. 97—47.)



1. In combination with a tractor, a bar extending longitudinally thereof, means for pivotally securing the

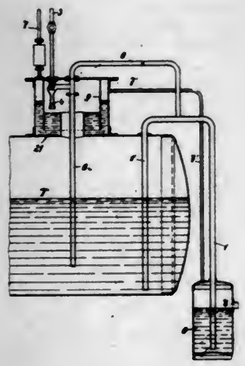
rear end of said bar to the tractor and the forward end of said bar being adapted to rest upon the front axle of the tractor, and a plow carried by said bar at a point intermediate it ends.

4. In combination, a tractor, a bar extending longitudinally thereof, means for pivotally securing one end of said bar to the tractor for vertical swinging movement of said bar and the forward end of the bar adapted to rest upon a stationary part of said tractor, and a plow supported intermediate the ends of said bar.



1,456,818. WHEELED TRACTOR. BENJAMIN WHITFIELD MORTON, Williston, Fla. Original application filed Feb. 25, 1922, Serial No. 539,251. Divided and this application filed Sept. 29, 1922. Serial No. 591,381. 5 Claims. (Cl. 97—209.)

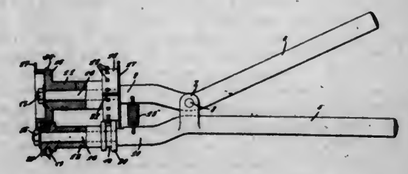
1. In combination, a wheel having a circumferentially divided rim and spokes secured between the rim portions, a cutter blade section comprising a plate member having its outer edge bevelled to form a cutting edge, said plate member being adapted to be positioned between the rim portions of said wheel and having its inner edge formed with recesses adapted to receive the outer ends of the associated spokes of said wheel, whereby to hold the cutter blade section against inner movement or circumferential movement with respect to the wheel, and means for holding the cutter blade section against outer movement with respect to the wheel.



1,456,819. COLTER ATTACHMENT FOR TRACTORS. BENJAMIN W. MORTON, Williston, Fla. Filed Dec. 4, 1922. Serial No. 604,949. 7 Claims. (Cl. 97—47.)

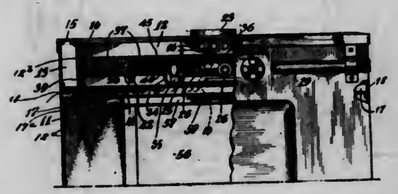
1. In combination, a tractor, a lever bar having an intermediate offset portion and a rear arcuate shaped portion, a colter pivotally connected to the rear end of said lever bar, means whereby the offset portion of said lever bar may be fulcrumed upon the rear end of a tractor, and means associated with the forward end of said lever bar whereby the upward and downward movements of said colter may be controlled.

6. In combination, a tractor, a bar fulcrumed upon the rear end of the tractor for swinging movement in a vertical plane arranged longitudinally of the tractor, a colter carried by the rear end of the bar, and means whereby the forward end of the bar may be locked against downward movement and thereby to impose the weight of the tractor upon the colter whereby to insure that the colter will penetrate the earth over which said tractor passes a predetermined degree.



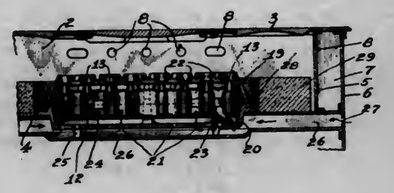
1,456,820. CONVEYANCE OF HIGHLY-INFLAMMABLE LIQUIDS. JOSEF MUCHKA, Vienna, Austria. Filed Jan. 6, 1921. Serial No. 435,555. 5 Claims. (Cl. 221—67.)

1. Apparatus for drawing off highly inflammable liquids from a storage vessel in which the liquid is stored under protective gas, comprising in combination with a tapping vessel and a siphon for drawing off the liquid from the storage vessel into the tapping vessel, a jet pump for starting and stopping the action of the siphon, and capable of being operated by means of a protective gas of the same kind as that contained in the storage vessel above the liquid.



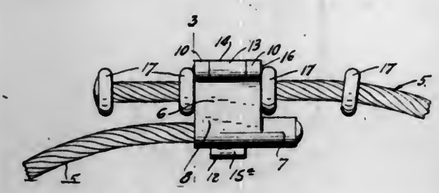
1,456,821. FILM-GUIDING DEVICE. GEORGE W. NOYES, Billings, Mont. Filed Sept. 15, 1920. Serial No. 410,363. 2 Claims. (Cl. 154—42.)

1. In a device of the character described, a pair of pivotally connected arms, said arms including handle portions, a roller carried at one end of each arm, said rollers adapted to cooperate to clamp a film therebetween,



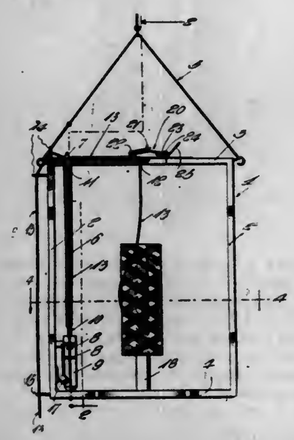
one of said rollers having teeth to engage within openings of a moving picture film, and means for normally urging the rollers towards each other.

1,456,822. GAS RANGE. HENRY W. O'DOWD, Jersey City, N. J., assignor to William M. Crane Company, a Corporation of New York. Filed June 6, 1921. Serial No. 475,182. 18 Claims. (Cl. 126—39.)



1. A gas-range including a combustion chamber presenting apertured side and end walls, a closed top covering said chamber, a flue surrounding the chamber walls and in communication with said chamber through the apertures of its side and end walls, a central burner, and a bed of heat-radiating material arranged between the burner and flue and adapted to disseminate the heat from said burner uniformly in all directions.

1,456,823. GAS RANGE. HENRY W. O'DOWD, Jersey City, N. J., assignor to William M. Crane Company, a Corporation of New York. Filed Aug. 24, 1921. Serial No. 495,077. 17 Claims. (Cl. 126—39.)

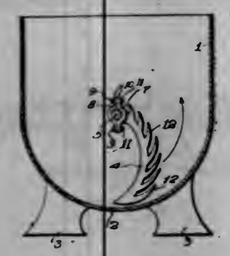


1. A gas-range including, in combination, a combustion chamber, a closed top therefor, a flue surrounding said chamber and communicating therewith, a Bunsen burner, and a member formed with secondary air discharge opening leading into the combustion chamber and through which the burner flames project, the said member being constructed to exclude secondary air from the combustion chamber except through said discharge openings.

1,456,824. FASTENING DEVICE FOR CABLES. ADOLPH W. OLSON, McIntosh, Minn. Filed June 19, 1922. Serial No. 569,222. 4 Claims. (Cl. 24—115.)

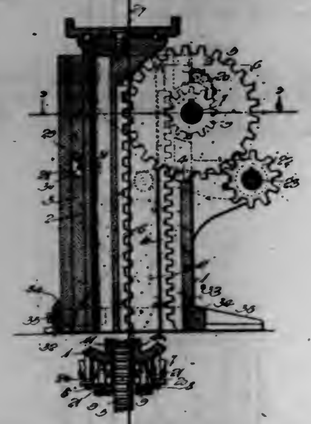
4. In combination with a flexible member, a clamp carried by one end of said member, stop members carried by the opposite end of the flexible member in spaced relation to each other, said clamp being arranged to receive and clamp the second mentioned end portion of the cable, said stop members preventing movement of the second mentioned end portion of the cable in either direction from its clamped position between the jaws.

1,456,825. COMBINED ADVERTISING DEVICE AND TWINE HOLDER. JOSEPH LAWRENCE ORR, Lexington, N. C. Filed July 21, 1921. Serial No. 486,561. 3 Claims. (Cl. 242—141.)



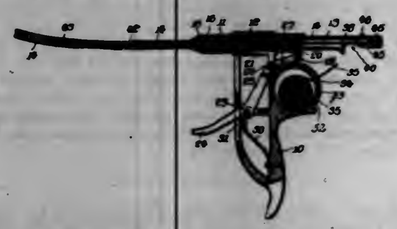
1. A twine holder comprising a substantially rectangular vertically disposed open-ended frame work, means for carrying a bundle of twine thereon, a pair of vertically disposed wires extending between the top and bottom of said frame, a weight, eyes upon opposite sides of said weight and adapted to slidably pass up and down on said wires, an arm carried by said weight, a signal carried by said frame work and disposed adjacent the vertical pathway of the weight, and means whereby the weight will be raised and lowered upon withdrawal of twine from the frame and the signal operated.

1,456,826. CORN MIXER AND SILK REMOVER. JOHN J. PEAHOTZKI, Baltimore, Md. Filed Sept. 25, 1922. Serial No. 590,376. 4 Claims. (Cl. 130—9.)



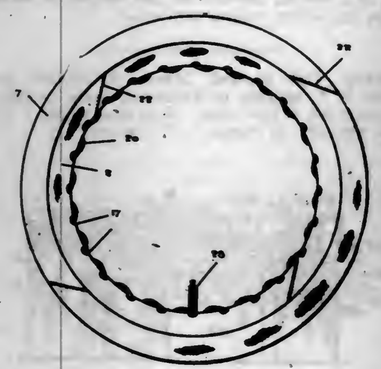
1. In a corn mixer and silk remover, a receptacle adapt-

ed to contain a mass of material to be mixed and arms rotatably mounted therein, having fingers to enter and



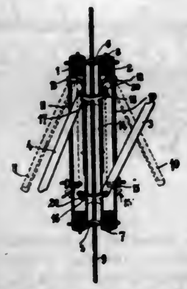
stir the mixture and rise therefrom to thereby lift the silk from the mass.

1,456,827. LIFTING JACK. CHARLES S. PILLSBURY and LIGH S. SIMS, Pulaski, Va. Filed Aug. 1, 1921. Serial No. 488,887. 13 Claims. (Cl. 254—97.)



1. A jack comprising a standard, hoisting members slidably supported on said standard, said members being equipped with rack bars, a shaft rotatably mounted on the standard, pinions mounted on said shaft and having their teeth engaged with the teeth of said rack bars, one of said pinions being larger than the other, whereby to simultaneously elevate the hoisting members at relatively different speeds.

1,456,828. GAUZE-PACKING DEVICE. ERNEST M. PISTOR, Dundee, Ill., assignor of one-half to August T. Pistor, Oak Park, Ill. Filed Mar. 17, 1922. Serial No. 544,517. 5 Claims. (Cl. 128—263.)

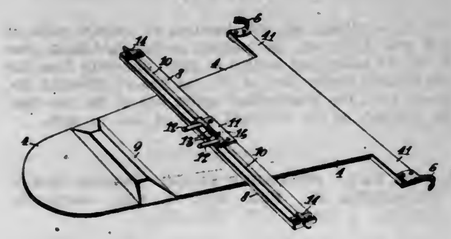


1. A gauze-packer of the character described comprising in combination a handle adapted to be gripped substantially in the palm of a hand of the operator, a relatively long gauze tube open at its forward end carried by said handle, said tube having an opening adjacent to the handle for the admission of a strip of gauze thereinto, a gauze feeder extending longitudinally within said tube, said feeder having means for engaging a strip of gauze to feed it forward within said tube and out of the forward end thereof with a step-by-step movement, and means for moving the feeder longitudinally with a reciprocating motion, said means including a lever operable by a part of the hand gripping said handle when the device is normally in use.

1,456,829. TIRE PROTECTOR. CLARENCE RATELLE, Los Angeles, Calif. Filed Aug. 24, 1922. Serial No. 584,029. 3 Claims. (Cl. 152—18.)

3. A protector for the inner tube of a pneumatic tire comprising a plurality of strips cut on the bias with the threads or strands extending obliquely, the strip at one edge of the protector having a double fold between its edges providing a double portion and a flap behind said portion and projecting beyond said portion to be overlapped by the opposite edge portion of the protector, securing elements engaged through said doubled portion, the doubled portions of the first named strip being secured together inwardly of said securing elements, and securing elements engaged through the last named edge portion of the protector.

1,456,830. PROCESS AND APPARATUS FOR PERMANENT UNDULATION OF HAIR. PIERRE FRANÇOIS MARIE ROBLIN, St. Nazaire, France. Filed Sept. 11, 1922. Serial No. 587,439. 3 Claims. (Cl. 132—36.)



3. Apparatus for permanent undulation of the hair, a plurality of bars in the same disposed parallel to one another, means to distance the same from their common axis, and to move the same toward this axis, gutterlike members, articulated to cover closely said bars when in their closed position knifelike members between said bars and articulated to permit access to the space intermediate to the bars when said knife-like members are in open position, means to fix said gutterlike members and said knife like members in their closed position adjacent to the said bars, an axial member to guide the said bars and the said members and means to axially adjust the same.

1,456,831. PROCESS FOR THE COMMERCIAL PREPARATION OF POTASSIUM PHOSPHATE. WILLIAM H. ROSS and WILLIAM HAZEN, Washington, D. C. Filed Dec. 20, 1922. Serial No. 608,072. 8 Claims. (Cl. 23—13.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A process for the preparation of a concentrated material containing two of the three essential constituents of fertilisers which consists in treating potassium chloride with an excess of concentrated phosphoric acid, heating the solution to drive off hydrochloric acid, diluting with water, cooling, and separating the crystallized salts from the mother liquor.

1,456,832. COMBINED FOLLOWER AND IRONING BOARD. HENRY W. ROUNTREE, Richmond, Va., assignor to H. W. Rountree & Brother Trunk & Bag Company, Incorporated, Richmond, Va. Filed Mar. 6, 1922. Serial No. 541,453. 2 Claims. (Cl. 190—13.)

1. As a new article, a combined follower and ironing board device for wardrobe trunks provided with clothes hanger members at the upper edge of the clothes compartment and having a set of drawers in another compartment, the said device comprising a tapering board having lateral extensions at the upper end, a hook fitted to each of the said ends for fitting over the clothes hanger members to support the device as a follower, a cross strip attached to the board body whose ends extend practically the full width of the clothes compartment and the full width of the trunk drawers, the said strip constituting a follower portion when the device is adjusted as a clothes presser and operating as an abutment strip for engaging the outer top edge of a drawn out trunk drawer when the upper or wider end of the device is inserted into the partly drawn out drawer and projected under the next top drawer to bear against the bottom thereof when the device is sustained on the trunk drawers to serve as an ironing board.

1,456,833. APPARATUS FOR TURNING DEEP-WELL BITS WHEN BEING SHARPENED. JAMES G. SCHOOLEY and HENRY M. RANSDELL, Tulsa, Okla. Filed Aug. 31, 1921. Serial No. 497,189. 1 Claim. (Cl. 78—101.)

A pulley, comprising in combination, a U-shaped supporting member, a shaft journaled between the terminals of said supporting member, said shaft having one end extended and a squared portion occurring intermediate the terminals, a sheave fitted upon said squared portion of the shaft and having a peripheral groove adapted to receive links of a chain and hold the same against sliding movement thereon, a collar upon the extended end of the shaft and adapted to hold the same against longitudinal movement in one direction, a cotter pin carried upon the other end of the shaft adapted to hold

the same against movement in the opposite direction, and a bar secured upon the extended end of the shaft extending transversely thereof whereby said sheave may be rotated.

1,456,834. ART OF PRINTING. JOSEPH HENRY SHEFFIELD, Chicago, Ill. Filed Apr. 10, 1916. Serial No. 90,240. 3 Claims. (Cl. 283—46.)

The BODY *THAT* the BOYS HAD DISCOVERED WAS DRAGGED ashore AND SHE SAID *that she identified* the remains *which* SHE COULD still RECOGNIZE by the clothes *although* THEY HAD LAIN long in the water AND WERE much DECOMPOSED.

1. The improved method of visually indicating the structure and meaning of a sentence that consists in printing in type of different kinds words and groups of words that comprise syntactic elements of the sentence, the different kinds of type serving to show the relationship that the elements, as component parts of the sentence, bear to one another.

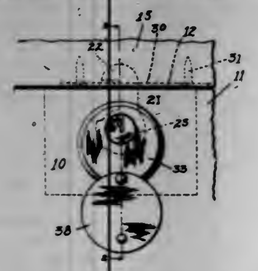
1,456,835. GRATE CONSTRUCTION. CHARLES AUGUSTUS SHIVELY, Hoquiam, Wash. Filed Sept. 25, 1920. Serial No. 412,663. 6 Claims. (Cl. 126—167.)

2. In a grate construction, a bearing bar consisting of a body portion having a head at one end thereof and a relatively reduced neck portion disposed between the body portion and the head, said body portion being formed with opposite side members, thereof parallel, with an elongated opening therethrough extending between the parallel side members, and with an integral longitudinal rib projecting vertically from the upper and lower surface of each side member, the head being adapted to form a supporting surface for one end of the bar.

1,456,836. BAG FOLDING AND SEALING DEVICE. VINCENT SLEZAK, Chicago, Ill., assignor of one-half to Nicholas E. Ford, Chicago, Ill. Filed Nov. 21, 1921. Serial No. 516,788. 14 Claims. (Cl. 226—56.)

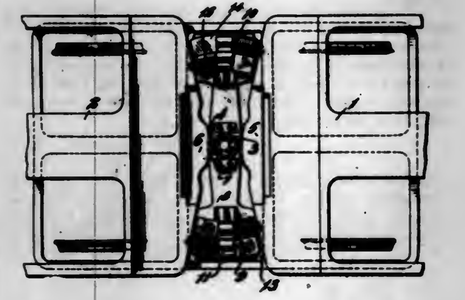
1. In a bag-folding machine, the combination of means for carrying a bag with the edge portion to be folded in proximity to a forming member having an inclined recess therein substantially circular in cross view and opening toward the bag as it passes along said forming member, means for conducting into said recess the edge

of the bag to be folded, means for holding the bag in contact with the former as the bag travels thereagainst, the inclined recess being so arranged that as the bag



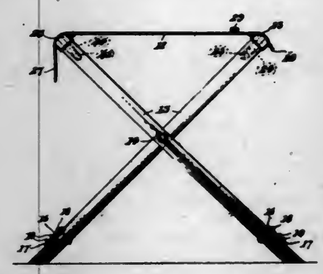
normally travels forward, more and more of the bag edge to be folded enters the recess and is rolled tubularly therein, and means for pressing flat the tubularly-shaped portion of the bag.

1,456,837. APPARATUS FOR CHARGING OR DISCHARGING FURNACES. MARTIN VAN MARLE, Lower Gornal, England. Filed June 16, 1921. Serial No. 478,123. 4 Claims. (Cl. 214—26.)



1. Apparatus for feeding goods into or removing goods from furnaces, comprising an undercarriage, an upper travelling carriage movably mounted thereon, said upper carriage including a supporting element and an independent goods carrying element resting thereon, inclined blocks on one of said elements having each an inclined face and a substantially horizontal face, abutments on the other of said elements, means carried by said undercarriage for moving said upper travelling carriage as a whole with respect to the undercarriage and means carried by said upper travelling carriage for moving one of said elements with respect to the other of said elements irrespective of movement of the undercarriage, whereby said inclined blocks co-act with said abutments to alter the level of the goods carrying element.

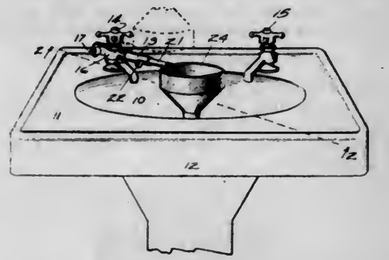
1,456,838. LOCK. HENRY G. VOIGHT, New Britain, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed July 17, 1918. Serial No. 245,383. 13 Claims. (Cl. 70—46.)



1. Locking mechanism, comprising a latch casing having a spring operated latch bolt pivotally mounted therein, a cylinder lock having a key-barrel rotatable therein, said key-barrel provided with a projection extending therefrom into operative engagement with said latch bolt to retract the same, the engagement between said projection and latch bolt constructed to permit said latch bolt to be swung about its pivotal mounting without rotating said key-barrel.

1,456,839. ARTICULATED CAR. CHARLES T. WESTLAKE, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Jan. 5, 1923. Serial No. 610,873. 12 Claims. (Cl. 105—4.)

3. In a railway car, side bearings at opposite sides of each end of the car, the bearings at the right-hand sides of the car ends being located at equal distances from the longitudinal center line of the car but at different distances from the longitudinal center line of the car than the bearings at the left-hand sides of the car ends.



1,456,840. FOLDABLE STOOL. STEPHEN ZSIKAY, Philadelphia, Pa. Filed Sept. 22, 1921. Serial No. 502,383. 1 Claim. (Cl. 155—150.)

A camp stool comprising a pair of leg members each including a pair of substantially centrally pivotally connected rails, rigid spacing connections adapted to detachably connect the lower ends of the leg members when set up for use in parallel arrangement, the rigid spacing connections each comprising a hook-shaped member pivotally secured adjacent the lower end of one of said rails forming a part of one of said legs and adapted to engage spaced loops carried by one of said rails forming a part of the oppositely disposed leg, the upper ends of said rails having axially arranged sockets, spring thimbles positioned in said sockets and having slotted and contracted inner ends providing arcuate ripping jaws, a flexible seat member, a transverse cleat carried at each end of the seat member, posts fixed to and perpendicularly projecting from the opposite ends of the cleats, said posts having heads at their free ends and

adapted for removable positioning within said thimbles when the device is set up for use with the heads retainingly engaged by said jaws, straps carried adjacent one end of said flexible seat, buckles carried adjacent the opposite end of said seat and adapted for engaging the said straps for holding the device in folded arrangement, and a loop carried by the said flexible seat for providing a handle for the folded camp stool.

1,456,841. MOUTH WASHBASIN ATTACHMENT. ERIC FORBS BROWN, Buxton, Iowa. Filed Sept. 5, 1922. Serial No. 586,085. 1 Claim. (Cl. 4—1.)

In a device of the class described in combination with a lavatory having a faucet thereon, a funnel shaped basin arranged to be received in the lavatory, means for supporting said basin, said means including a yoke member mounted on the faucet, a telescoping arm pivotally secured to said yoke member at one end and to the basin at the other end so that the basin may be swung on a pivot to position where it will not be received within the lavatory, said yoke being provided with a pair of resilient clip members for retaining the arm in one of its positions.

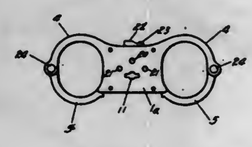
1,456,842. PROCESS OF MANUFACTURING WATERPROOF ADHESIVES. SAMUEL BUTTERMAN, Chicago, Ill., and CHARLES K. COOPERRIDER, Albuquerque, N. Mex., dedicated, by mesne assignments, to the people of the United States for their free use and enjoyment. Filed May 2, 1922. Serial No. 557,966. 7 Claims. (Cl. 87—17.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A composition of matter comprising casein, lime, silicate of soda, cupric chloride and water.

1,456,843. INSOLE FOR SHOES OR THE LIKE. LAWRENCE E. CLARK, Des Moines, Iowa. Filed July 25, 1921. Serial No. 487,286. 1 Claim. (Cl. 36—37.)

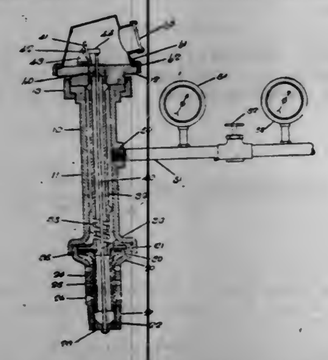
An insole for shoes of substantially the outline of a shoe comprising a strip of tough material, divided into two portions, a heel portion and a sole portion and a resilient strip of material of substantially the same outline as said heel portion secured to the underside of said strip of tough material, said resilient strip of material having a plurality of oval shaped grooves therein, said oval shaped grooves being spaced one within the other and being substantially the shape of an inverted U in cross section, the material between each of the said last grooves being provided with comparatively shallow grooves for causing narrow beads to be formed on the edges of said first groove, the parts being so arranged that the material between said grooves will be spread out and forced into said grooves when under pressure, thus giving a cushioning effect to any sudden pressure applied upon the heel portion of said insole all for the purposes stated.

1,456,844. POULTRY-PLUCKING DEVICE. NAOMI ISNOR DE BIE, West Medford, Mass. Filed Feb. 12, 1921. Serial No. 444,327. 4 Claims. (Cl. 7—11.)



2. In combination, a handle comprising spaced side pieces, a pair of elongate members interposed between said side pieces, rivets for securing said members and pieces in assembled relation, and integral extensions of said elongate members projecting from the end of the handle, said extensions being normally spaced apart and constituting a pair of tweezer blades.

1,456,845. FRAME MAKING. FRANZ A. FULLER, Newark, N. J., assignor to The J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed July 16, 1921. Serial No. 485,320. 3 Claims. (Cl. 29—148.)

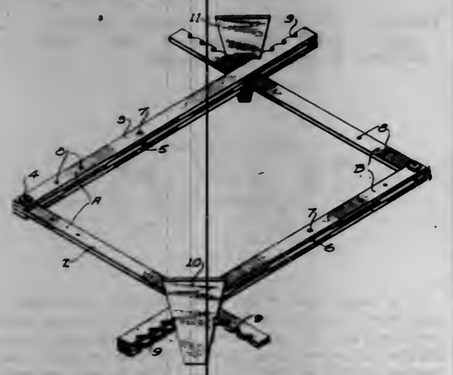


1. The process of forming channeled sheet metal frames consisting in forming a flat sheet metal blank, channelling the central portion of said blank longitudinally, bending the channelled member at an angle and simultaneously drawing the same, and thereafter rolling the corners to form a completed member with sharp corners.

1,456,846. THUMB LOCK. ARTHUR GAMWELL, Los Angeles, Calif. Filed May 2, 1922. Serial No. 557,990. 2 Claims. (Cl. 70—24.)

1. A thumb lock of the class described, comprising a body portion in combination with a set of extended arms positioned on each end thereof, a pair of swinging fingers adapted to be positioned between the said extended arms, toothed latches adapted to engage with the said swinging fingers, a dog adapted to hold the said latches in a locked position, a releasing means adapted to disengage the said dog from the toothed latches and the said toothed latches from the swinging fingers, as set forth.

1,456,847. ENGINE INDICATOR. HARVEY D. GRYMS, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 23, 1921. Serial No. 454,746. 6 Claims. (Cl. 234—21.)

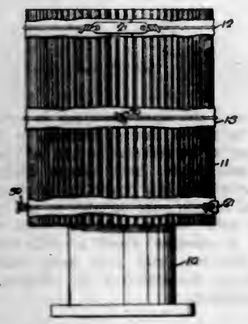


1. In a pressure element for optical engine indicators, means responsive directly to pressures within an engine cylinder; means adapted to exert a variable opposing pressure against the pressure responsive means; and means for indicating the opposing pressure.

1,456,848. PROCESS FOR PURIFYING ANTHRACENE PRESS CAKE. HARRY D. GIBBS, San Francisco, Calif., dedicated, by mesne assignment, to the people of the United States. Filed Feb. 8, 1919. Serial No. 275,904. 5 Claims. (Cl. 260—168.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

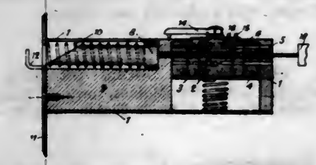
3. A process of treating anthracene press-cake, which comprises heating the same with an alkali to convert the carbazol present into a salt, then heating further to a temperature sufficient to fractionally sublime anthracene and other materials, and collecting such sublimed materials.

1,456,849. ADJUSTABLE FORM CLAMP. GEORGE E. GREENWOOD, San Francisco, Calif., assignor of one-third to Horace M. Woolley, Jr., Alameda, Calif., and one-third to Fred N. Vedder, San Francisco, Calif. Filed May 10, 1922. Serial No. 559,808. 6 Claims. (Cl. 144—291.)



1. In a clamp of the character described pivotally connected arms, and teeth formed in the outer ends of the arms, said teeth having their side walls disposed on an angle of 45° with relation to the longitudinal axis of the arms, and the bottom of said teeth being square and disposed at an angle of 90° with relation to the sides of the teeth.

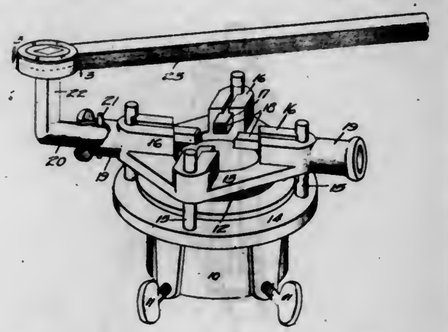
1,456,850. PROCESS FOR PREPARING A CONCENTRATED FERTILIZER. WILLIAM HAZEN and WILLIAM H. ROSS, Washington, D. C. Filed Dec. 20, 1922. Serial No. 608,073. 13 Claims. (Cl. 71—7.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A process for the preparation of a concentrated material containing the three essential constituents of fertilizers which consists in treating potassium chloride with an excess of concentrated phosphoric acid, heating the solution to drive off hydrochloric acid, diluting with water, neutralizing the excess of acid with ammonia, and separating the precipitated salts from the mother liquor.

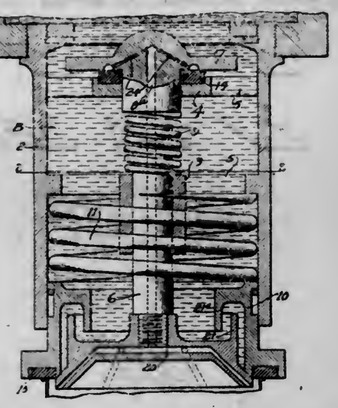
1,456,851. BINDING ELEMENT. CHARLES F. KETTERING, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 6, 1921. Serial No. 435,417. 5 Claims. (Cl. 204—64.)

1. A means for binding together assemblies of elements for treatment in induction furnaces, comprising a plurality of pieces of conducting material attached together by means of electrically insulating material.



1,456,852. SAFETY LOCKING DEVICE. WILHELMUS KOOT, Utrecht, Netherlands. Filed Aug. 11, 1921. Serial No. 491,360. 6 Claims. (Cl. 70—53.)

1. A permutation lock having a plurality of rotatable concentric cylinders having a plurality of radial dummy perforations therein and extending only partially therethrough, each of said cylinders having a perforation extending entirely therethrough, said last named perforations angularly inclined to the radial perforations and adapted to be brought into alignment in a common plane.



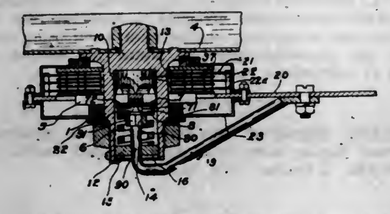
1,456,853. ATTACHMENT FOR PIPE-THREADING MACHINES. HARRY LYNCH, Des Moines, Iowa. Filed Dec. 22, 1921. Serial No. 524,153. 2 Claims. (Cl. 10—123.)

1. The combination of a pipe cutting device, having a rotatable die head provided with a lateral extending tubular member, an attachment therefor having a portion non-rotatably mounted in said tubular member and an extension projecting away from and beyond the pipe

threading device in a line substantially parallel with the axis of the pipe threading device, said extension being angular in outline, and a ratchet wrench mounted on said extension.

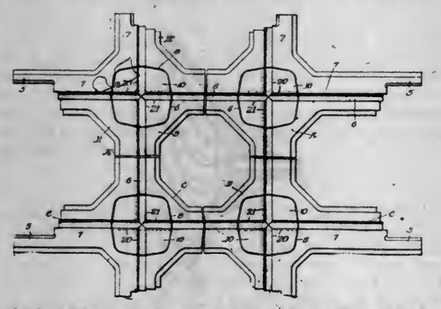
1,456,854. FILLING VALVE. THURMAN MCGHEE and PETER WOODHEAD, Hayward, Calif. Filed Sept. 29, 1920. Serial No. 413,514. 7 Claims. (Cl. 226—124.)

1. A valve of the character described, comprising a liquid receptacle having a liquid inlet opening at the upper end and a liquid discharge opening at the lower end, a liquid sealing member surrounding the discharge end and maintaining the discharge end partially submerged, a venting member extending below the discharge end and also communicating with the upper and interior end of the receptacle, and means for opening and closing the upper end of the venting member and for closing the inlet of the receptacle when the vent is closed.



1,456,855. METHOD OF JOINING METALS. THOMAS MIDGLEY, Jr., Dayton, Ohio, assignor, by mesne assignments, to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 30, 1919. Serial No. 307,640. 8 Claims. (Cl. 22—204.)

1. The method of casting iron around a metal which is a good conductor of heat, which comprises preheating said metal within the mold before the casting operation to establish a low temperature differential between the



good conducting metal and the casting metal, and substantially maintaining the low temperature differential during the casting operation.

1,456,856. VARIABLE ACTION SHOCK ABSORBER. HARRY R. MITCHELL, Seattle, Wash., assignor to Mitchell Products Company, Seattle, Wash., a Corporation of Washington. Filed May 23, 1922. Serial No. 562,967. 4 Claims. (Cl. 267—9.)

2. In a shock absorber, in combination, a hub adapted to be connected to a vehicle part and axially bored at one end, and having transverse bores intersecting the axial bore, two complemental series of friction plates, one series being fixed to said hub and the other being oscillatable relative to the first series, an arm fixed to the second series and adapted to be secured to a second vehicle part, a spider projecting through said transverse bores and bearing upon said friction plates, a spring in said axial bore operable to press said plates into frictional engagement, and cam members within said bore between the spring and spider, and relatively oscillatable with the hub and arm, respectively, thereby to increase the pressure between said plates.

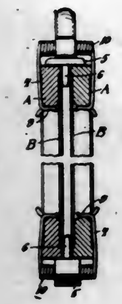
1,456,857. RAILROAD CROSSING WITH RENEWABLE CENTERS. WESLEY G. NICHOLS, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 10, 1921. Serial No. 499,762. 5 Claims. (Cl. 246—460.)

1. A railway crossing member constructed with trackage directed toward a point of intersection and having around such point, a center-piece cavity, providing a bottom support, and in said cavity and resting on said bottom support, an insert piece carrying upon its upper surface the intersecting portions of the trackage, and

upon its lower side a central supporting foot beneath the said intersecting portions, sustaining walls radiating from said foot and perimeter walls joining said radial walls; all of said walls, and said foot being extended downwardly to and resting upon the bottom support.

1,456,858. APPARATUS FOR MIXING DRY MATERIALS. THOMAS OTWAY PARTRIDGE, North Sydney, New South Wales, Australia. Filed Dec. 16, 1922. Serial No. 607,446. 2 Claims. (Cl. 83—73.)

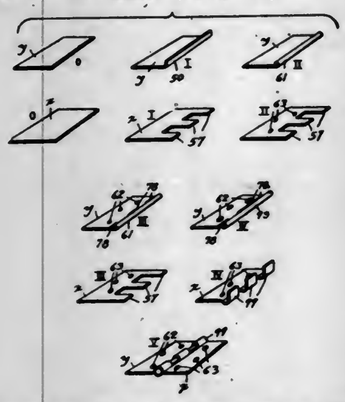
1. An apparatus for mixing dry materials comprising a series of conveyor belts arranged to discharge from one to the other in rotation, each successive belt being wider than the preceding one, and means for driving the belts at successively reduced speeds.



1,456,859. BOUQUET HOLDER. GEORGIA ROBINSON, Grand Rapids, Mich. Filed Sept. 11, 1922. Serial No. 587,499. 2 Claims. (Cl. 24—5.)

1. In a combined bodice shield and bouquet holder, a broad flat shield of water proof material and a water proof sack connected therewith and extending downwardly therefrom.

1,456,860. EARTHWORKING DEVICE. WILLIAM TURNER, East Chicago, Ind. Filed Apr. 27, 1921. Serial No. 464,885. 3 Claims. (Cl. 97—212.)

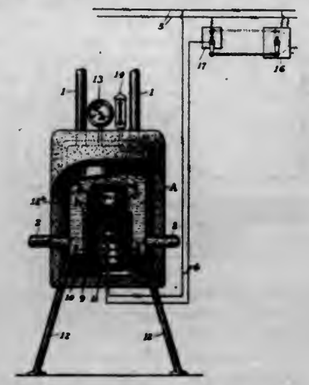


3. An earth working device for rotary plows comprising a hub member having a plurality of radially extending seats formed therein, and a plurality of flat curved cutting elements having their inner ends secured in said seats, the said seats being inclined longitudinally and transversely.

1,456,861. HOLDER FOR CANVAS STRETCHER FRAMES. OSCAR ANDERSON, East Gloucester, Mass. Filed Mar. 19, 1920. Serial No. 367,134. 3 Claims. (Cl. 224—45.)

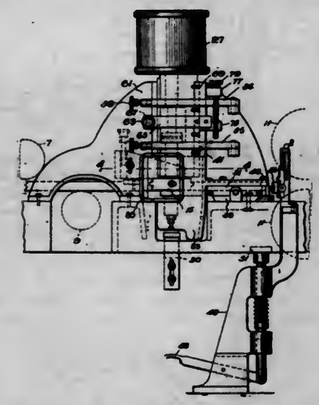
1. A holder of the kind described, comprising a base, a spacer mounted thereon, a spring support journaled in said base, and a pair of spaced arms carried by said support and having engaging means at their free ends.

1,456,862. PRODUCTION OF HINGES AND OTHER LIKE ARTICULATED ARTICLES. GEORGE WILLIAM BERRY, Wakefield, England, assignor to Berry Hinge Limited, London, England. Filed Jan. 7, 1921. Serial No. 435,652. 10 Claims. (Cl. 29—11.)



1. The method of producing hinges and like articulated articles consisting in providing a pair of flat blanks, bending one blank along one edge and slotting said blank in a succession of stages, and simultaneously therewith forming extensions on the other blank destined to provide bulbs and engaging tha same in the slots in the rear of the bent portion of the first blank and finally turning such extensions over the bent portion of the first blank to assemble the two blanks.

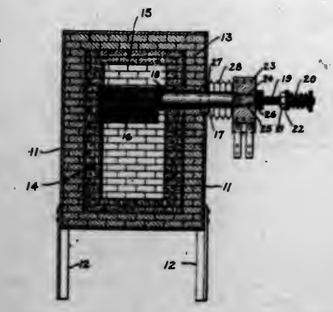
1,456,863. ELECTRO-HEAT-RADIATING DEVICE FOR WATER-HEATING SYSTEMS. THOMAS J. BLONG, St. Louis, Mo. Filed Feb. 14, 1921. Serial No. 444,771. 7 Claims. (Cl. 219—38.)



1. A heating system, comprising heat radiating devices through which a heating medium circulates, a heating apparatus comprising a water container connected by supply and return pipes with said heat radiating devices, a heating device in said container consisting of a closed shell immersed in the water in said container, an electric

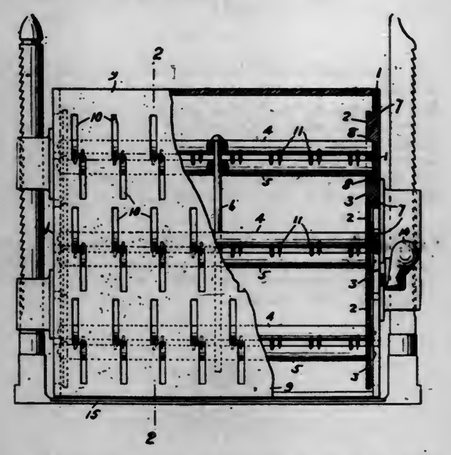
heating element in said shell, and a plurality of baffles arranged in concentric relation with said shell in such a

manner that they co-operate with said shell and with each other to form heating zones through which the water circulates in its passage through said container.



1,456,864. SIDE-HEAD CONSTRUCTION FOR MATCHERS AND THE LIKE. CHARLES W. H. BLOOD, Winthrop, and CARL G. OSTEMAN, Boston, Mass., assignors to S. A. Woods Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed July 7, 1920. Serial No. 394,450. 15 Claims. (Cl. 144—90.)

1. A matcher or like machine comprising the usual horizontal bed, opposed rotary tools operating substantially in the plane of said bed and rotary motors directly coupled thereto and disposed respectively above and below the plane, the former having a pivotal mounting remote from the tool providing an inward position in which the tool is adapted to operate on work passing over the bed and adapted to be swung outwardly through a wide arc to an inoperative position wherein the tool is distant from the bed of the machine and of convenient access.

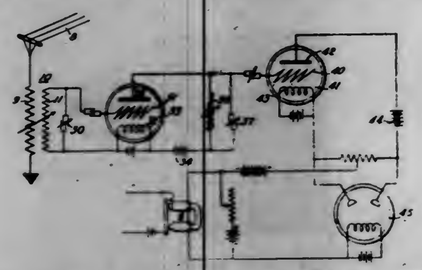


1,456,865. TERMINAL FOR ELECTRIC FURNACES. PORTER H. BRACE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1921. Serial No. 463,366. 1 Claim. (Cl. 204—64.)

In an electric-resistance furnace, the combination with a movable electrode and a stationary water-cooled collar surrounding said electrode, of a movable water-cooled terminal secured to one end of said electrode and an expansible metal tubular member secured to said collar and

said terminal for preventing the escape of a heated fluid leaking past said collar and for equalizing the temperatures of said collar and said terminal.

1,456,866. MEAT HOLDER. WILLIAM F. H. BRAUN, Philadelphia, Pa. Filed May 1, 1922. Serial No. 557,554. 1 Claim. (Cl. 17—14.)

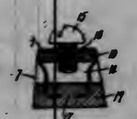


In a meat holder the combination of gears revoluble about their centers, rods eccentrically connected with the faces of the gears, means for preventing rotation of the rods about their own axes, curved skewers rigid with the rods, and a slotted surface with which the curved skewers co-operate by motion of translation to pull the meat against the surface.

1,456,867. APPARATUS FOR THE RECEIPT OF WIRELESS IMPULSES. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 15, 1919. Serial No. 297,314. 8 Claims. (Cl. 250—12.)

1. In a system for the wireless control of electrical apparatus, the combination with a source of electrical energy in proximity to said apparatus, of a hot-cathode tube connected therebetween, the voltage impressed upon said tube by said source being slightly below the critical voltage thereof, receiving means for the transmitted control impulses, said receiving means impressing said im-

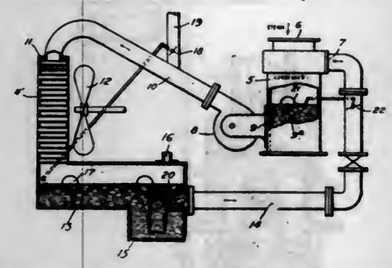
pulses upon said source to produce transient voltage increments thereof, said tube operating above its critical voltage during the passage of said increments and per-



mitting largely increased flow of current to said apparatus, and means for shunting the relatively slight current tending to flow through said apparatus therearound in the absence of said voltage increments.

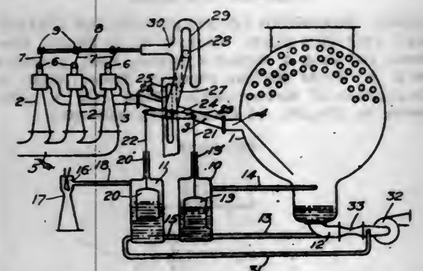
1,456,868. PROCESS OF MAKING METAL CASTINGS. DOMINICK CORDINO, Plymouth, Mass. Filed Oct. 18, 1921. Serial No. 508,512. 5 Claims. (Cl. 22—203.)

1. The hereinbefore described process of casting metals, consisting of incorporating into the mold a chaplet adapted to receive a screw threaded hole in the top, and having a core in the upper portion of the chaplet and a space below the core with an opening into said space, and then pouring the metal into the mold and filling said space and closing said opening with the molten metal and causing the chaplet to form an integral part of the casting.



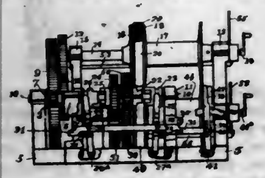
1,456,869. METAL CASTING AND PROCESS OF MAKING METAL CASTINGS. DOMINICK CORDINO, Plymouth, Mass. Filed Aug. 14, 1922. Serial No. 581,836. 3 Claims. (Cl. 22—203.)

1. The hereinbefore described process of casting metals consisting of forming a mold having a chaplet incorporated therein, said chaplet having openings on two sides, and having its upper portion filled with a core, and having a chamber located beneath the core, said mold being formed so as to permit one of said openings to be closed and the other to be partially closed with the molten metal, then pouring the molten metal into said mold and thereby filling said chamber and closing one of said openings and partially closing the other, whereby the casting is provided with a chamber closed at the bottom and with a side opening near the top adapted to receive a screw threaded nut.



1,456,870. CONDENSING APPARATUS. RAYMOND N. EBERHART, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Sept. 19, 1917. Serial No. 192,197. 11 Claims. (Cl. 257—25.)

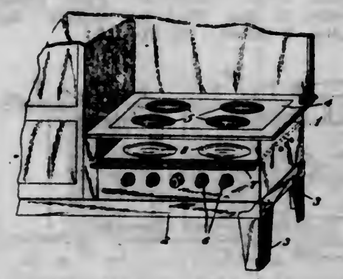
1. A condensing apparatus comprising a condenser, means for receiving and cooling the fluids withdrawn from the condenser, means for storing said fluids, means for delivering cooled fluid from the storing means to the condenser, and liquid-level responsive means for



maintaining the distribution of fluids throughout the apparatus so as to prevent any part of the apparatus from being robbed of fluid by another.

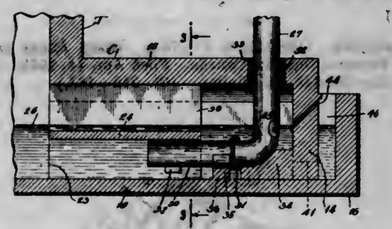
1,456,871. CONDENSER APPARATUS. RAYMOND N. EBERHART, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 8, 1918. Serial No. 261,707. 19 Claims. (Cl. 257—2.)

1. Condensing apparatus comprising in combination a condenser, means for extracting air from the condenser, and means for controlling the air extracting means, responsive to variations in excess of pressure within the condenser over the vapor pressure of the condensate.



1,456,872. TWO-SPEED, POWER STUMP PULLER. KNUTE EVERTZ, Bellingham, Wash. Filed July 21, 1921. Serial No. 486,322. 1 Claim. (Cl. 254—185.)

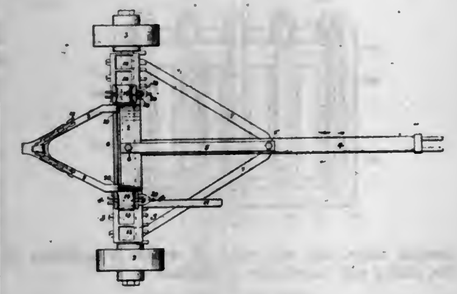
In a stump puller in combination, a stump puller frame, a prime mover-shaft mounted for revolution on said frame, a countershaft mounted for revolution on said frame parallel with said prime-mover shaft, positive gear connections between said prime-mover shaft and said countershaft, a puller-drum shaft mounted for revolution on said frame parallel with said countershaft, a large and a small spur gear mounted fixed on said puller-drum shaft, a small and a large spur gear respectively engaged with said large and small fixed spur gears mounted for revolution on said countershaft independently, a positive clutch mounted on said countershaft for reciprocation on a spline engageable with said loose,



small, countershaft gear, a positive clutch mounted on said countershaft for reciprocation on a spline engageable with said loose, large, countershaft gear, a pair of levers pivoted on said frame each engaged with one of said positive clutches adapted to permit its revolution and cause it to reciprocate on said countershaft when said lever vibrates on its pivot, a shifting bar having an upper edge of parallel lines connected by two inclined surfaces, also having two notches in its upper edge each engageable with a pin in one of said pivoted levers when said bar is in its upper position and having a lower edge parallel with said upper edge, mounted between two lower and two upper rolls, two lower and two upper rolls mounted on said frame adapted to alternately raise and lower the ends of said bar when it is reciprocated, and a hand lever pivoted on said frame and engaged with said shifting bar adapted to reciprocate the same.

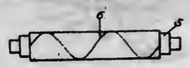
1,456,873. ALUMINUM DIRT TRAY AND REFLECTOR. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed July 19, 1920. Serial No. 397,291. 5 Claims. (Cl. 219—35.)

1. An electrical stove comprising an electrical heating element and a substantially concave aluminum heat reflector therefor.



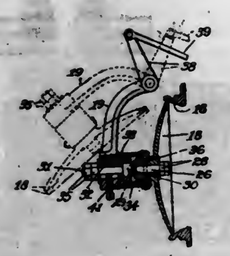
1,456,874. METHOD OF AND APPARATUS FOR CONCENTRATING LIQUIDS. INGENUIN HECHENBLEIKNER and THOMAS C. OLIVER, Charlotte, N. C., assignors to Chemical Construction Company, New York, N. Y., a Corporation of North Carolina. Filed June 26, 1922. Serial No. 570,996. 17 Claims. (Cl. 23—1.)

1. The method of concentrating liquids which consists in injecting hot gases into a body of the liquid below the level thereof and in constraining the said hot gases to move in contact with the liquid over a substantial horizontal distance for effecting a heat exchange between the gases and the liquid over a relatively long path.



1,456,875. TOWING DOLLY. CHRISTIAN T. JACOBSEN, San Francisco, Calif. Filed Apr. 18, 1922. Serial No. 555,342. 3 Claims. (Cl. 280—61.)

1. In a device of the class specified, the combination with a pair of wheels, an axle about which the wheels revolve, a frame attached to the axle, a U-shaped extension bar hinged by a pintle at one side of the frame and

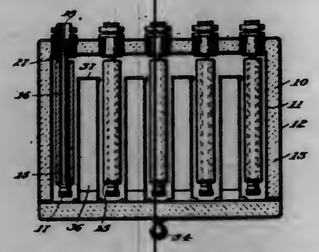


supported by a chain, and a rigid tongue attached to the other side of the frame for elevating the extension bar.

1,456,876. METHOD OF MAKING TUBES. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 3, 1919. Serial No. 321,494. 3 Claims. (Cl. 93—81.)

1. A method of making tubes that comprises cutting a sheet of material to provide tapered, substantially parallel ends therefor, impregnating the sheet with an adhesive, rolling the material to form a tube and applying heat and pressure thereto to compact the material and to harden the adhesive.

1,456,877. MIXING MACHINE. JOSEPH E. KENNEDY, New York, N. Y. Filed Feb. 18, 1920. Serial No. 359,718. 10 Claims. (Cl. 83—73.)

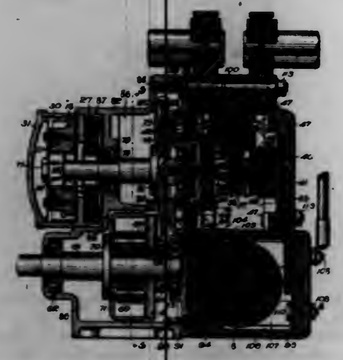


1. In a mixing machine, the combination of a revolubly supported drum having an opening axially at the end; a door for said opening; an arm pivotally supported to have movement toward and away from said drum opening; and means to mount the door upon the arm to have rotative movement and have adjustment on the arm transversely of the axis of rotation of the door.

1,456,878. ELECTRICAL HEATING DEVICE. MILTON M. KOHN, New York, N. Y. Filed Jan. 28, 1921. Serial No. 440,641. 11 Claims. (Cl. 219—35.)

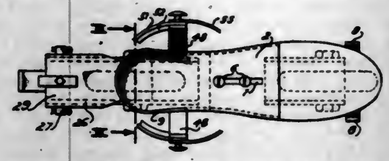
1. An electrical heating device comprising a casing, quickly removable, replaceable and interchangeable

heating units, quick detachable connectors each comprising two parts, one of which is removable with the



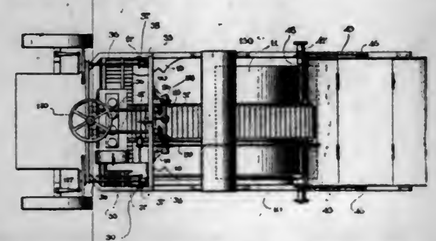
heating units and the other of which is attached to the casing and constitutes a terminal.

1,456,879. SHOVEL ATTACHMENT. THOMAS NEWMAN, Omaha, Nebr., assignor of one-half to Vernon B. Smith, Omaha, Nebr. Filed Aug. 7, 1922. Serial No. 580,126. 7 Claims. (Cl. 294—58.)



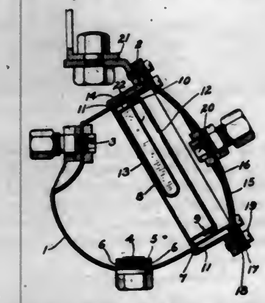
1. In an attachment for an implement having a handle, a lifting-bar pivotally mounted on said handle, and resilient means connected with the lifting-bar and handle and actuated by a swinging movement of said bar for resisting a movement of the bar in one direction.

1,456,880. BATTERY-IGNITION SYSTEM. ADOLPH ROSNER, Bridgeport, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed June 18, 1920. Serial No. 389,952. 16 Claims. (Cl. 123—148.)



1. In an ignition instrument taking current from an outside source, the combination of an induction coil having primary and secondary windings, forming, respectively, parts of the primary and secondary circuits, an interrupter for the primary circuit, a distributor for the secondary circuit and parallel driving and driven shafts, the latter driving said interrupter and said distributor, and means on said driving shaft responsive to variations in the speed of said driving shaft to change the timing of said driven shaft relatively to said driving shaft.

1,456,881. PAVEMENT GLIDE. WILLIAM O. CARLEY, Walla Walla, Wash. Filed June 27, 1921. Serial No. 480,592. 1 Claim. (Cl. 46—51.)



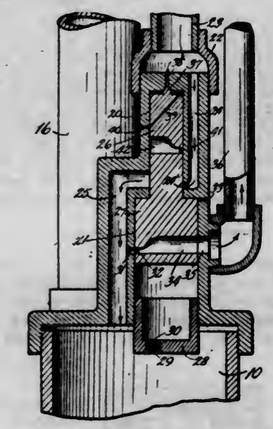
A pavement glide, comprising a front and a rear axle, a wheel rotatably secured on each axle, a foot base centrally supported over the wheels, brackets depending from the rear end of the base providing a bearing rearwardly of the rear wheel, a ground and a wheel brake pivotally supported in the bearing having means associated therewith for maintaining them in alinement, a spring for holding them in an operative position and means associated with the foot base adapted to render the wheel brake inactive.

1,456,882. ROAD MACHINE. KNUT CHRISTENSON, Benedict, N. Dak. Filed Jan. 4, 1921. Serial No. 434,914. 3 Claims. (Cl. 37—110.)

1. In a road machine of the character described, a main frame, earth working elements arranged below and at each side of said main frame, a hopper carried by the main frame, and means for conveying the material from said earth working elements to said hopper including lateral conveyors receiving the material from said earth working elements and extending inwardly toward the center of the machine, and a main elevator conveyor receiving the material from said lateral conveyors and delivering it to the hopper.

1,456,883. GASOLINE FILTER. HUGH ALLEN DEEKS, Toronto, Ontario, Canada. Filed Apr. 14, 1922. Serial No. 552,543. 9 Claims. (Cl. 210—165.)

1. In gasoline filters, the combination with a casing having a gasoline inlet in one end and a gasoline outlet in the other, of a filtering unit mounted in the casing comprising spaced apart filtering media, one of which is



impervious to water, and a by-pass for allowing the gasoline to reach the outlet without passing through the filtering medium impervious to water, upon such gasoline reaching a predetermined level in the casing.

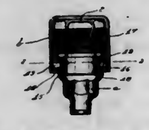
1,456,884. COMPOSITE PLATE. LOUIS T. FREDERICK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1919. Serial No. 296,660. 3 Claims. (Cl. 74—28.)

1. A self-sustaining gear comprising superimposed layers of woven, twisted strands of paper impregnated with a hardened phenolic condensation product.

1,456,885. DISPLACEMENT PUMP. FRANK GARDNER, Dallas, Tex. Filed May 27, 1922. Serial No. 564,007. 6 Claims. (Cl. 103—245.)

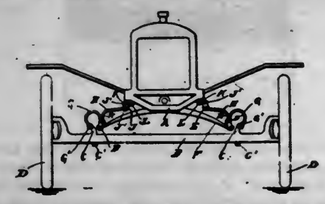
1. In a displacement pump, a displacement chamber having a valved liquid inlet and a valved liquid outlet, a controlling valve mounted on the chamber and having a high pressure fluid passage extending therethrough and connecting with the chamber, a fluid actuated member in the valve alternately intercepting the passage of high pressure fluid thru said valve subject to fluid pressure at each end, and variable pressure controlling means at one end of said member for governing the period for which a residual pressure is maintained at said end of said member.

1,456,886. LOCKING HINGE. KARL OTTO GOBER, Oakland, Calif. Filed Nov. 16, 1921. Serial No. 515,535. 3 Claims. (Cl. 16—146.)



1. The combination of a hinge made of two strips of metal pivotally connected to each other and a lock comprising a slot in one strip, a rigid member secured to the other strip having a projection engaging the slot when the hinge is turned into a desired position, and means for locking the projection to said slot.

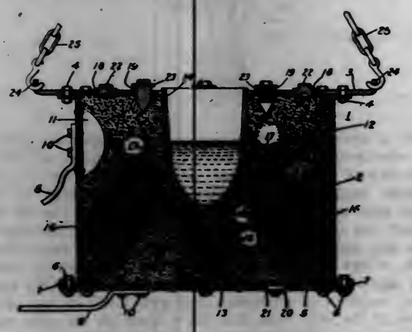
1,456,887. DRIVE-WHEEL CONSTRUCTION FOR TRACTORS. HENRY KROMBEIN, Oak Bank, Manitoba, Canada. Filed Feb. 7, 1922. Serial No. 534,832. 2 Claims. (Cl. 301—48.)



2. A drive wheel construction for tractors comprising in combination with the drive axle of the said tractor, a cam-shaped hub positioned on the said axle, a rim, spokes supporting the said rim and connected to the said axle, auxiliary spokes connected to the rim of the wheel and at their inner ends carrying rollers bearing on the hub, rods radially disposed from the said cam-shaped hub, rollers on the inner ends of the said rods and bearing against the face of the cam-shaped hub, earth gripping members or projecting lugs positioned on the outer ends of the said rods and coil springs on the said rods functioned to keep the same in normal position.

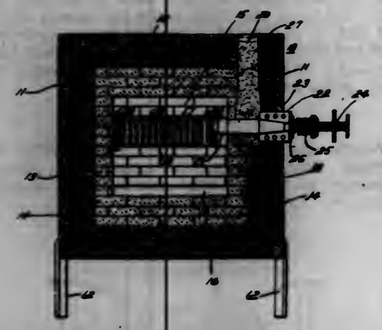
1,456,888. GREASE CUP. BRAYTON S. LEWIS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 8, 1921, Serial No. 459,661. Renewed Oct. 18, 1922. Serial No. 595,449. 1 Claim. (Cl. 184—38.)

In a grease cup, a base portion formed from a single piece of sheet metal having a head at one end, an annular fold in its side walls, and a rib between said head and fold; a gasket and a metallic washer between said head and fold; said washer having a notch receiving said rib; and a thread formed on the peripheral edges of said head, gasket and washer.



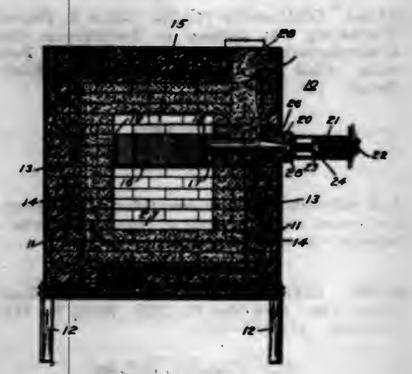
1,456,889. AUXILIARY SPRING FOR MOTOR VEHICLES. EARL W. LITTLE, Indianapolis, Ind., assignor to Edward W. Little. Filed Nov. 6, 1920. Serial No. 422,360. 4 Claims. (Cl. 267—19.)

1. A shock absorbing device comprising a vehicle spring, two auxiliary leaf springs, one comprising an inverted U pivotally connected at one end to an axle element, the



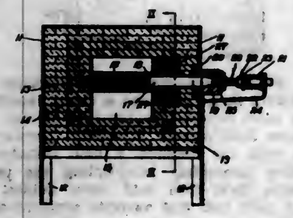
opposite end of said U, pivotally connected to one end of the main spring; the other auxiliary spring forming an arc and supported at one end by a vehicle element and the opposite end of said arc pivotally connected to the said end of the main spring, said auxiliary leaf springs forming a yielding contact with each other at a point intermediate their ends and yieldingly supporting the end of said main spring.

1,456,890. ELECTRIC RESISTANCE FURNACE. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 26, 1921. Serial No. 448,102. 3 Claims. (Cl. 204—64.)



1. An electric furnace comprising a metal container, a metal cover for said container, a metal base plate secured to and insulated from said container, means for attaching electric supply-circuit terminals to said container, granular resistor material surrounding said crucible, and means in said cover for compressing said resistor material in said container.

1,456,891. ELECTRIC FURNACE RESISTOR. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 24, 1921. Serial No. 472,091. 4 Claims. (Cl. 204—64.)

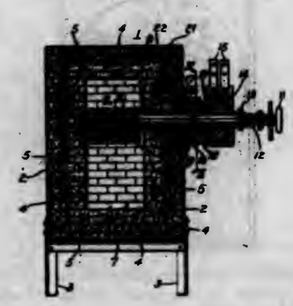


1. An electric-resistance furnace comprising a built-up resistor consisting of single flat carbonaceous plates of relatively large area of cross-section alternating consecutively with a plurality of flat carbonaceous plates of relatively small area of cross section, the area of cross-section of the small plates being in accordance with the kilowatt input of the furnace.

1,456,892. PROTECTED ELECTRODE FOR ELECTRIC FURNACES. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 24, 1921. Serial No. 472,093. 1 Claim. (Cl. 204—64.)

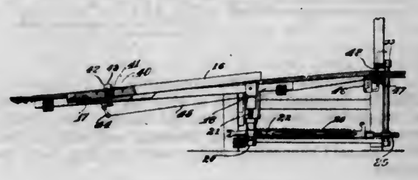
An electric furnace comprising a plurality of furnace walls, an electrode extending horizontally through one of said walls and movable relatively thereto during operation of the furnace, a well in said wall, a quickly renewable granular oxidizable barrier in said well surrounding said electrode over a portion of its length intermediate its ends, said barrier being adapted to prevent chemical action of entering air upon said electrode but permitting free movement of said electrode relatively to said wall.

1,456,893. ELECTRIC-FURNACE WALL CONSTRUCTION. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 24, 1921. Serial No. 472,095. 4 Claims. (Cl. 204—64.)



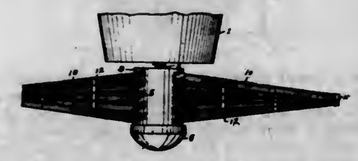
4. An electric furnace comprising a plurality of walls enclosing a furnace chamber, a resistor located in said chamber and supported at one end thereof by one of said walls, a plurality of electrodes operatively engaging said resistor to conduct current to and from said resistor, and means for reducing the current leakage between and from said electrodes said means comprising a plurality of spaced-apart refractory members surrounding said electrodes intermediate their ends and having only a relatively small area of surface contact between adjacent plates.

1,456,894. TELESCOPING ELECTRODE PROTECTOR. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 24, 1921. Serial No. 472,096. 2 Claims. (Cl. 204—64.)



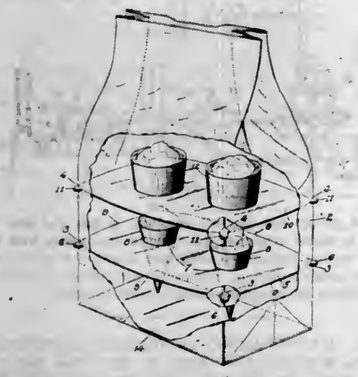
1. An electric furnace comprising a plurality of furnace walls enclosing a furnace chamber, a resistor in said chamber, a carbonaceous electrode extending through one

of said walls for conducting current to and from said resistor and having limited longitudinal movement relatively to said wall, a water-cooled terminal mounted on said electrode at its outer end, granular oxidizable mate-



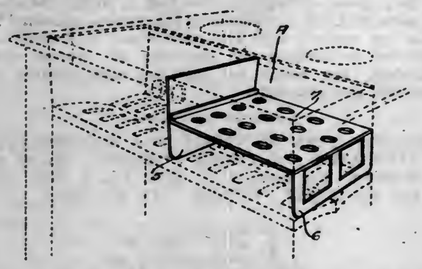
rial surrounding said electrode between said wall and said terminal and a two part telescoping container for said granular material, one part being secured to said wall and the other part being located against said terminal.

1,456,895. GARAGE DOOR. ALEXANDER MCCULLOCH, Govan, Saskatchewan, Canada. Filed July 3, 1920. Serial No. 393,999. Renewed Oct. 27, 1922. Serial No. 597,406. 1 Claim. (Cl. 268—9.)



In combination with a pair of garage doors, a pin locking means at the lower ends of one of said doors, an inclined platform to said doors, depressible longitudinal members hingedly connected at one end in said inclined platform, release means in one of said longitudinal members for releasing said locking pin, a means for opening said doors, a means for retaining said doors in open position, a means on the other of said longitudinal members for disengaging said retaining means, and a means on the other side of the door for releasing said retaining means.

1,456,896. PROPELLER. WILLIAM R. MCDONALD, Houston, Tex. Filed May 4, 1922. Serial No. 558,490. 4 Claims. (Cl. 170—165.)

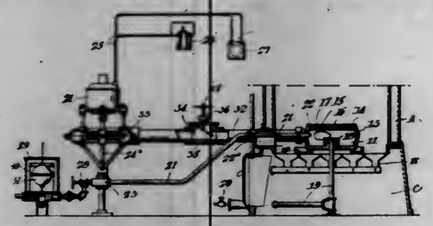


1. A propeller including a hub, and a plurality of series of propeller blades anchored thereto, and radiating therefrom, said hub having spiral mortises and the adjoining ends of the blades having tenons which fit in said mortises.

1,456,897. PAPER CONTAINER. CHARLES B. MCGRATH, Woodland, Me., assignor to the Grand Lake Company, Inc., Woodland, Me., a Corporation of Maine. Filed Apr. 15, 1920. Serial No. 374,049. 4 Claims. (Cl. 229—53.)

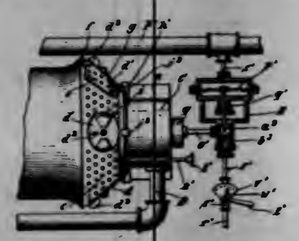
1. An article of the character described, comprising a paper bag of substantially rectangular outline in horizontal cross section, the vertical edges of said bag having notches cut therein at a substantially uniform distance from the bottom of the bag, and a shelf having projecting corners extending into said notches, whereby said shelf is removably supported in said bag by the engagement of said corners with the edges of said notches.

1,456,898. FUEL-SAVING DEVICE FOR DOMESTIC STOVES AND RANGES. ALFRED MANSFIELD, Victoria, British Columbia, Canada. Filed Sept. 15, 1920. Serial No. 410,368. 1 Claim. (Cl. 126—147.)



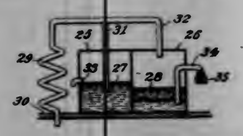
A fuel saver for insertion in a fire box, comprising a pair of end plates adapted to rest at their lower edges on the bottom of the fire box at one end of the latter, said plates being of unequal height and spaced apart a distance approximating one-half the length of the fire box, a perforated body plate secured at one end upon the upper edge of the shorter of the end plates and at the opposite ends to the intermediate portion of the remaining end plate, the last mentioned end plate, being of sufficient height to extend from the bottom to the top of the fire box.

1,456,899. OIL BURNER. ALLAN GILMOUR MATHER, Ottawa, Ontario, Canada, assignor of one-half to Albert Edward Bradbury, Ottawa, Ontario, Canada. Filed Mar. 7, 1922. Serial No. 541,710. 10 Claims. (Cl. 158—28.)



5. In an oil burner as described in combination a furnace grate, a burner thereon having an interchangeable apertured top, a pilot in the burner, oil and air supply conduits communicating with the burner, con-

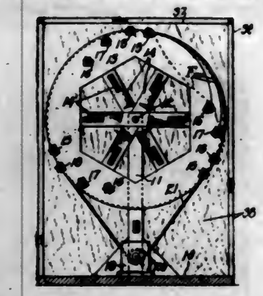
trol valves for regulating the supply of oil and air in said conduits, a perforated diaphragm in the oil conduit designed in combination with the contracted nozzle on the conduit to provide an even flow of oil for the



burner, a pump for the oil conduit, a fan for the air conduit, a motor designed to operate the pump and the fan and means connected with the source of power for operating said motor, a reservoir connected to the oil supply source designed to supply said pump.

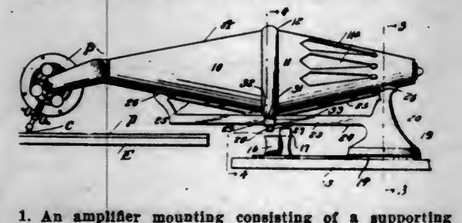
1,456,900. HYDROCARBON VAPORIZER AND BURNER. EDWARD MELTZER, New York, N. Y. Filed May 13, 1920. Serial No. 381,040. 1 Claim. (Cl. 158—56.)

In a device of the class described, a mixing chamber, a perforated cap for admitting air thereto, openings in said cap separate from said perforations, a plurality of shutters or dampers for admitting air through said openings, and means for operating said shutters or dampers simultaneously.



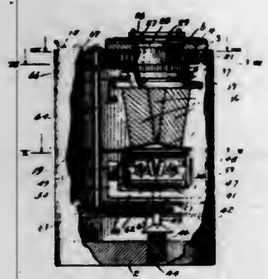
1,456,901. TANK OR VESSEL FOR ELECTROLYTIC APPARATUS AND OTHER PURPOSES. RALPH D. MERSHON, New York, N. Y. Filed Jan. 8, 1920. Serial No. 350,184. 7 Claims. (Cl. 175—315.)

1. A closed tank or vessel, and breathing means therefor comprising a closed chamber partially filled with liquid and having a gas-space in communication with the interior of said tank, a gas-inlet tube opening outside of the chamber and terminating below the surface of the liquid therein, a second chamber partially filled with liquid and having a gas-space communicating with the atmosphere, and a tube open at one end to the interior of said vessel and having another end immersed in the liquid in the second chamber.



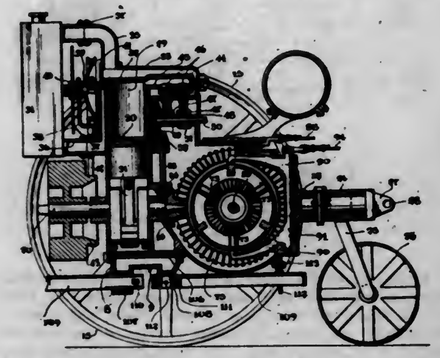
1,456,902. PHOTOGRAPHIC-FILM-DRYING APPARATUS. STEPHEN T. MICHELSEN, Washington, D. C. Filed Aug. 26, 1921. Serial No. 495,675. 6 Claims. (Cl. 34—26.)

1. A centrifugal drying apparatus for photographic films composed in part of an open cylinder carrying master means for securing one end of each of the films of different lengths and individual means for securing the other ends thereof, and means for rotating said cylinder



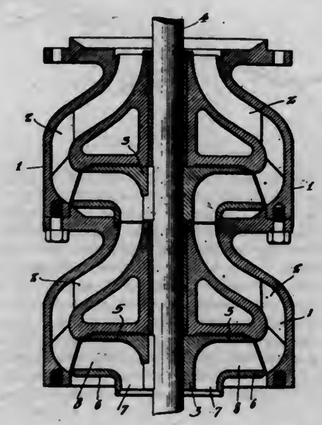
at a high speed to cause the said films to bow out of contact with certain of the said individual means, substantially as set forth.

1,456,903. PHONOGRAPH-AMPLIFIER MOUNTING. VINCENZO MINNELLI, Pittston, Pa. Filed Feb. 4, 1922. Serial No. 534,138. 3 Claims. (Cl. 274—16.)



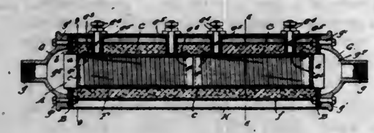
1. An amplifier mounting consisting of a supporting means, in combination with a stop lug extending from the supporting means, a bracket having an opening through which said stop lug projects, and said bracket embracing said supporting means and extending from the amplifier.

1,456,904. AUTOMATIC PENCIL SHARPENER. HARLAN M. MITCHELL, San Francisco, Calif. Filed June 19, 1922. Serial No. 569,197. 6 Claims. (Cl. 120—96.)



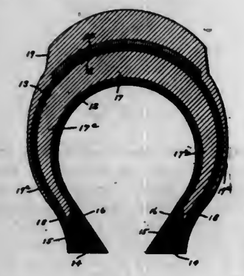
3. In a pencil sharpener of the character described, a pair of sharpening elements engaging the pencil point on opposite sides, and means for reciprocating each of them comprising a shaft having a guide fixed thereto, a slide on the same supporting the sharpening member having a longitudinal groove for clearing the shaft and a transverse groove, a rotary wheel, a pin projecting from the latter engaging the transverse groove in the slide for reciprocating the same and means for holding the slide stationary while the pin crosses the longitudinal groove, comprising a terminal stop preventing motion in one direction and co-acting projections on the wheel and the slide slidably engaging one another for preventing motion in the other direction.

1,456,905. TRACTOR. LEONIDAS JAMES MITCHELL, Huntington, W. Va. Filed Sept. 22, 1921. Serial No. 502,378. 6 Claims. (Cl. 180—17.)



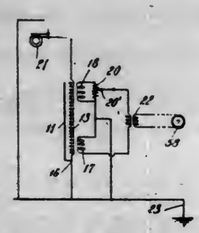
1. In combination, a pair of drive wheels, a stationary shaft mounted between said wheels, a pair of differential ring gears loosely mounted upon said shaft, a ring surrounding the ring gears and rotatably supporting a plurality of differential pinions disposed between the ring gears and adapted to constantly mesh therewith, power means for driving said ring gears in either direction, a clutch whereby each differential ring gear may be connected to its associated drive wheel, and means shiftable upon the shaft for locking the two ring gears together.

1,456,906. CENTRIFUGAL PUMP. JOHN D. NOLAND, Memphis, Tenn., assignor to Layne and Bowler Company, Memphis, Tenn., a Corporation of Texas. Filed Aug. 22, 1921. Serial No. 494,320. 2 Claims. (Cl. 103—115.)



1. In a centrifugal pump, the combination, with a pump bowl provided with water ways for conducting fluid around an approximately right-angled curve, of a drive shaft journaled to rotate in the pump bowl, and a centrifugal runner secured to the shaft and rotatable within the pump bowl, said runner having fluid passages in a plane at right angles to the axis of rotation and formed with the periphery of the runner at the point of discharge of the fluid passages angled proportionately to the curve of the water ways.

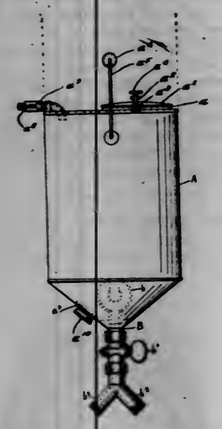
1,456,907. ELECTRIC HEATER FOR FLUIDS. CARL T. PENTON, Detroit, Mich. Filed Aug. 17, 1921. Serial No. 492,946. 14 Claims. (Cl. 219—39.)



1. In an electric heater for fluids, the combination of a plurality of lengths of flat metal tubes made of resilient material and arranged side by side to form a group, substantially flat electric heating elements adapted to be removably inserted between adjacent lengths of tubes, and brace members engaging the opposite sides of the groups of tubes to limit the expansion thereof, said tubes, when fluid under pressure is admitted thereto, expanding laterally to securely hold said elements in place therein and to facilitate the conducting of heat from said elements to the fluid.

1,456,908. PNEUMATIC TIRE. WILLIAM E. POWERS, Boston, and MARTIN F. HANNIGAN, Watertown, Mass. Filed May 1, 1922. Serial No. 557,528. 4 Claims. (Cl. 152—13.)

1. A pneumatic tire comprising an inner tread of rubber separately molded and vulcanized to semi-hardness, and including side portions extending to the edge portions of the tire, a fibrous outer facing secured to the outer surface of the inner tread, and an outer tread of relatively soft rubber secured to the outer surface of the outer facing, the semi-hardness of the inner tread providing exemption from rim cuts and blow outs, and minimizing liability of puncture of the inner tread and of an enclosed inner tube.



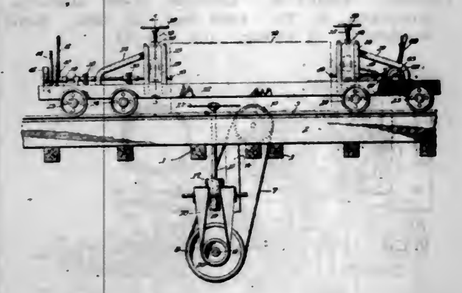
1,456,909. WAVE CONDUCTOR. MICHAEL IDVORSKY PUPIN, Norfolk, Conn., assignor to Westinghouse Electric and Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 10, 1918, Serial No. 257,570. Renewed Sept. 1, 1922. Serial No. 585,834. 14 Claims. (Cl. 175—183.)

2. A wave balance, comprising a conductor having substantially uniformly distributed inductance, resistance and

capacity, and a pair of secondary circuits inductively associated with said conductor and arranged to be positioned with respect thereto so that the electromotive forces induced in said circuits are of predetermined amplitude and phase relation with respect to each other and with respect to the electromotive force impressed upon the conductor.

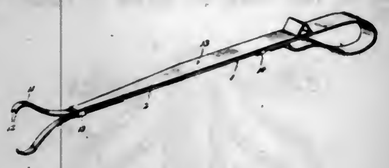
1,456,910. PAINTING DEVICE. ALFIO RAPISARDI, Boston, Mass. Filed June 21, 1921. Serial No. 479,377. 2 Claims. (Cl. 91—39.)

1. In a device of the kind described, a reservoir having a filling opening in its top surface, a valve located in said top surface to permit the injection of air pressure above the contents of said reservoir, a trap mounted upon a tube projecting into the outlet from said reservoir whereby sediment and dirt are prevented from clogging said outlet and an opening in the bottom of said reservoir to drain sediment and dirt therefrom.



2. In a device of the kind described, the combination of a chamber portion, a brush portion, means comprising a block within said chamber, having an opening extending downwardly through an extension thereof within the brush portion of said device, a spring controlled valve seated in said opening, and arms to position said valve, to permit a constant flow of liquid upon said brush portion and means cooperating therewith to controllably regulate said flow.

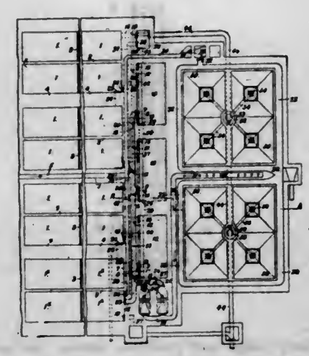
1,456,911. MOLD FOR BURIAL VAULTS. RICHARD REMING, Norwalk, Ohio, assignor to The Norwalk Vault Company, Norwalk, Ohio, a Corporation of Ohio. Filed Mar. 7, 1922. Serial No. 541,726. 3 Claims. (Cl. 25—130.)



1. In a cover mold for a container the combination of a base member, end and side members separably secured thereto and a cover adapted to be secured to said side members having a longitudinal slot near the middle thereof, and holes adapted to receive four handles at suitable intervals in said cover.

1,456,912. QUARTER-SAWING MACHINE. ROBERT THEODORE RUSH, Hattiesburg, Miss. Filed May 29, 1922. Serial No. 564,443. 6 Claims. (Cl. 143—30.)

1. In a sawing machine, a plurality of parallel vertical saws, a horizontal saw adapted to cut across the kerfs cut by the vertical saws, a carriage above said saws, a head stock and tail stock on the carriage, means for centering a log between said head stock and tail stock comprising a live center pin passing through the head stock and a dead center pin longitudinally adjustable in the tail stock, both of said centering pins being vertically adjustable, said live centering pin having a flexible extension journalled at its free end on the carriage and adapted to permit vertical adjustments of said pin, lever operable means on the carriage connected to said journalled extension for rotating the pin, and means for locking the pin in adjusted positions.



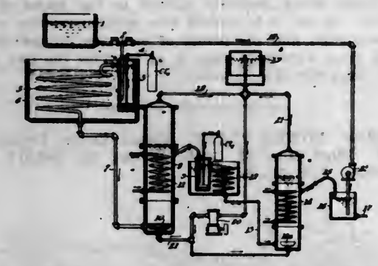
1,456,913. FORK. LOUIS W. BUSCH, Toledo, Ohio. Filed Apr. 4, 1921. Serial No. 458,212. 1 Claim. (Cl. 294—100.)

In an implement of the class described, a handle member, prongs having shanks secured at their inner ends to opposite sides of the handle member, the shanks being resilient and beyond their point of attachment being sprung outwardly in opposite directions away from the handle member and having terminal gripping portions directed inwardly toward each other, and means slidably mounted upon the handle member and including an element embracing the said shanks of the prongs whereby when the said means is slid in the direction of the attached ends of the shanks, the shanks will be permitted to spread apart through their resiliency and when the means is slid in the opposite direction the shanks will be moved inwardly toward the handle member against their resiliency.

1,456,914. SYSTEM FOR THE TREATMENT OF SEWAGE AND THE LIKE. JAMES ALGER COOMBS, Hampstead, London, England. Filed Nov. 14, 1922. Serial No. 600,952. 4 Claims. (Cl. 210—8.)

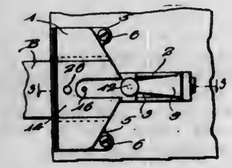
1. A sewage purifying system, comprising a plurality of treating tanks, a plurality of sludge aerating tanks, a plurality of auxiliary tanks, a plurality of settling tanks, each of said auxiliary tanks having inlet and outlet communication with the treating tanks, an outlet communication with the sludge aerating tanks, and means where-

by the material from the settling tanks may be delivered to the sludge aerating tanks or to the auxiliary tanks at will.



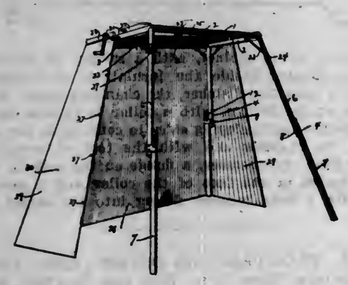
1,456,915. SHOE-HEEL STIFFENER. WILLIAM M. COURSON, Traverse City, Mich. Filed Aug. 17, 1922. Serial No. 582,486. 1 Claim. (Cl. 36—68.)

A shoe brace for fitting within the rear portion of a shoe, said brace being formed from a sheet metal blank including a base forming portion and a tongue forming portion, said blank being reduced intermediate its length and bent transversely at the reduced portion to provide a base conforming to the contour of the heel portion of a shoe and an upwardly extending tongue portion extending upwardly from the rear end of the base, said tongue being curved transversely and having its sides and upper edge portions bent to extend rearwardly.



1,456,916. PROCESS OF MAKING CHLORHYDRINS. GEORGE O. CURME, Jr., Clendenin, W. Va., and CHARLES O. YOUNG, Elmhurst, N. Y., assignors to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed May 12, 1922. Serial No. 560,391. 6 Claims. (Cl. 260—157.)

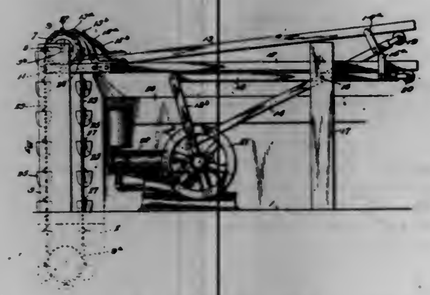
1. Process of making chlorhydrins from olefines, comprising reacting with the hydrocarbon upon a solution containing free hypochlorous acid and a hypochlorite, thereby preparing chlorhydrin substantially free from



ethylene or propylene chlorids; setting free hypochlorous acid from the residual hypochlorite; and reacting thereon with a further quantity of the hydrocarbon.

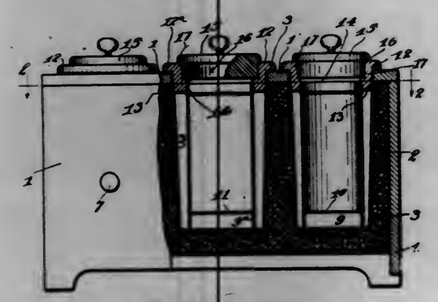
1,456,917. DOOR-LOCK KEEPER. FRANK DI BELLA, New York, N. Y. Original application filed May 9, 1921, Serial No. 468,002. Divided and this application filed Feb. 27, 1922. Serial No. 539,476. 5 Claims. (Cl. 70—15.)

1. A lock keeper comprising a jamb engaging socket including a wall section movable to an open position and yieldably held in a closed position, latch means for releasably holding the wall section in an open position to permit an extended bolt of a door-carried lock to enter the socket and engage said latch to move the latch to an inoperative position and permit movement of the wall section to a closed position, and additional means for engaging the movable wall section and releasably holding the movable wall section in an open position, the last mentioned means when in operative engagement with the movable wall section serving to prevent movement of the wall section to a closed position when the first mentioned latching means is moved to an inoperative position.



1,456,918. FOLDING TENT. BENJAMIN B. DUDLEY, Visalia, Calif. Filed Aug. 24, 1921. Serial No. 495,014. 2 Claims. (Cl. 135—4.)

2. In a folding tent, a rectangular elongated top frame centrally divided and hinged so as to fold downwardly



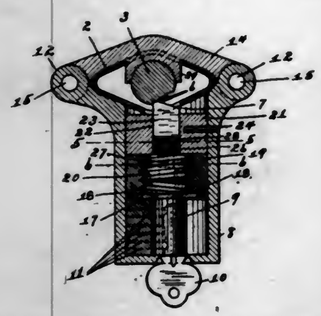
only, a leg for each corner extending in diagonal direction and a hinge for each leg allowing the same to swing into a plane parallel to the plane of the frame, said hinge being pivotally secured to the frame so as to allow the leg to be turned into parallel relation with a frame edge, and the pivots of each two hinges being spaced from a common edge so as to allow the two legs to lie alongside of each other.

1,456,919. POWER PLANT. HARRY EBERT, Frederick, Md. Filed Mar. 31, 1919. Serial No. 286,517. 2 Claims. (Cl. 74—54.)

1. A power plant comprising a lever, a crank member, a generator driving said crank member, a pitman interconnecting said crank and lever, a second lever resting upon the free end of said first lever, and means mounted upon said second lever for transmitting rotary motion to a member to be driven.

1,456,920. ICE-CREAM CABINET. GEORGE H. ECCLES, Seattle, Wash. Filed Aug. 16, 1922. Serial No. 582,255. 3 Claims. (Cl. 217—7.)

1. An ice cream cabinet, with a casing, an insulation lining a chamber inside the insulation, an adjustable drain tube from the chamber, the chambers larger at the top than at the bottom, with a collar to fit into the top of the chamber with sloping sides to conform to the inner edge of the chamber and with the tops of receptacles placed within the chamber, a flange on the collar's outer side, a socket in the face of the collar and a cap provided with a body member fitting into the socket.

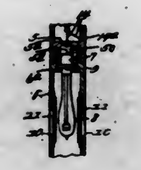


1,456,921. TRANSPLANTING DEVICE. HENRY DEMASCUS ELLIOTT, Tabor, N. C. Filed Dec. 22, 1921. Serial No. 524,273. 5 Claims. (Cl. 111—4.)

1. A transplanting device of the character described, comprising a delivery tube, an annular tamping member surrounding the lower end of said tube, a pair of pointed blades pivotally connected to each other intermediate their ends and disposed between the tampering member

and delivery tube, and yieldable means for urging the upper ends of said blades outwardly with respect to each other, and means whereby the upper ends of said blades may be moved toward each other.

1,456,922. AUTOMOBILE LOCKING MECHANISM. JOHN W. FLYNN, Waterford, N. Y., assignor of one-third to Frederick W. Kavanaugh and one-third to Charles H. Kavanaugh, both of Waterford, N. Y. Filed Mar. 8, 1922. Serial No. 542,122. 3 Claims. (Cl. 70—90.)

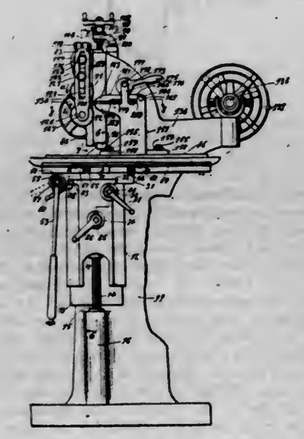


1. The combination with a rotatory steering-shaft of an automobile or the like; of a Yale-lock mounted upon a stationary support; a screw-threaded member in fixed relation to the rotatory barrel of said lock in engagement with a cooperating non-rotatory screw-threaded member; and a bolt carried by the latter screw-threaded member, said bolt being capable of ratchetwise engagement with the steering-shaft.

1,456,923. TRAFFIC SIGNAL OR INDICATOR. ANDREW C. FOWLS, New Philadelphia, Ohio. Filed Mar. 27, 1920. Serial No. 369,262. 2 Claims. (Cl. 177—329.)

1. In a socket for a signal arm for a traffic signal, having means for actuating the arm, said arm comprising a body section provided at one end with internal threads and a transverse disc wall at the base of the threads, a tubular lamp socket projecting from said wall and spaced from the internal threaded surface of the end of the body section, an electric light bulb having its plug end provided with an annular collar to engage the margin of the wall of said socket when the plug end of the bulb engages within said socket, a hand section having an

extension connected with the internal threaded surface of the end of the body section and fitting around the wall of the socket, said hand section having an internal

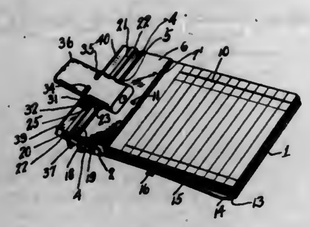


flange bearing upon the collar of the plug and holding it upon the wall of the socket, and electrical means for lighting the bulb when the arm is actuated.

1,456,924. PLASTER AND PROCESS OF MAKING THE SAME. PIERRE E. HAYNES, Buffalo, and GEORGE P. GERFIN, Niagara Falls, N. Y., assignors to The Linde Air Products Company, a Corporation of Ohio. Filed Apr. 29, 1921. Serial No. 465,480. 7 Claims. (Cl. 106—24.)

1. The process of treating lime sludge containing lime as the principal non-aqueous ingredient which comprises mixing it with a water-absorbing cementitious material in such proportions that a mixture of plaster-like consistency is formed.

1,456,925. MECHANISM FOR MAKING PISTON RINGS. HARRY A. HECKMANN, Cincinnati, Ohio, assignor to The United States Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 5, 1921. Serial No. 520,039. 7 Claims. (Cl. 90—16.)



1. In a metal working machine for making piston rings, the combination of a pair of arbors, means for rotating said arbors, a pair of cutter-blades on said arbors, means for adjusting said cutter-blades to locate the proximate sides of the teeth thereof in substantially the same plane and the points of closest approach in the paths of said respective teeth in substantially coincident positions, means for supporting a blank for a piston ring, and means whereby to cause approach between said blank and said cutter-blades to cut proximate grooves in opposite faces of said blank and sever said blank at the proximate ends of said grooves to form rabbets and tongues arranged to be received in said rabbets.

1,456,926. GRAVITY-CORRECTION DEVICE. WILLIAM ROBERT HOUNSELL, Okmulgee, Okla. Filed Jan. 10, 1922. Serial No. 528,230. 3 Claims. (Cl. 235—83.)

1. A calculating device comprising a disk provided with a scale on one face thereof, a sector provided with a scale and with an index element adapted to cooperate with the scale on the disk, means for supporting said disk and said sector for independent revoluble movement, and a pointer supported upon said supporting means and adapted to cooperate with both of said scales.

1,456,927. WRITING PAD. DAVID M. KUMPF, Pekin, Ill. Filed Apr. 14, 1922. Serial No. 552,710. 3 Claims. (Cl. 240—8.4.)

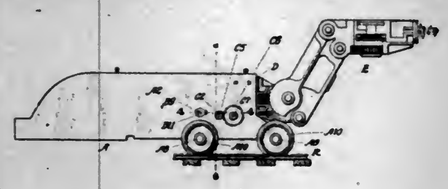
1. In a device for the purpose set forth, a plate on which a pad rests, a housing on the plate receiving one end of the pad therein, means between the housing and pad retaining the latter on the plate, links pivotally secured to the sides of the housing and projecting rearwardly therefrom, spring fingers supported from the plate and contacting the outer sides of the links for forcing the links toward the housing and for limiting the swinging of the links in one direction, a plate pivotally secured between the links, a revoluble element on the plate, and adjustable light supporting means on the revoluble element.

1,456,928. ELECTRICAL-CONNECTOR FORMING TOOL. JAMES LAKE, Jr., New York, N. Y., assignor to George G. Erb, New York, N. Y. Filed Mar. 19, 1921. Serial No. 453,808. 4 Claims. (Cl. 7—3.)

1. A tool as characterized comprising manually operated clamping jaws, forming pads mounted on the op-

posed faces of said jaws for supporting shank-provided eyelets in aligning relation and adapted for spreading and overturning the ends of the shanks thereof when

said jaws are actuated; and clipper blades mounted upon said jaws for severing the ends of wire passing between said eyelets.



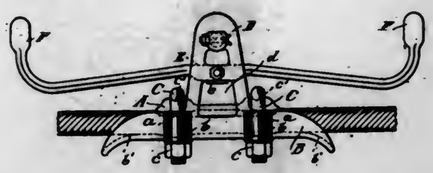
1,456,929. ANIMAL TRAP. OLE H. MOEN, Inwood, Iowa. Filed Nov. 2, 1922. Serial No. 598,626. 5 Claims. (Cl. 43—88.)

1. An animal trap comprising a base, a sliding member guided upon said base, a spring tending to slide said member in direction of springing the trap, a bait carrying element and means inserted between said element and said sliding member to hold the latter in set position; gripping jaws pivoted on said sliding member and other means on said base actuating the opening and closing of the jaws during the setting and springing of said sliding member, said other means including a staple and said gripping jaws having shanks engaging said staple.

1,456,930. MINING AND QUARRYING MACHINE. CYRUS S. OLDROYD, Cincinnati, Ohio, assignor to Oldroyd Manufacturing Company, Knoxville, Tenn., a Corporation of Tennessee. Filed June 24, 1919, Serial No. 306,335. Renewed Oct. 28, 1922. Serial No. 597,693. 10 Claims. (Cl. 262—25.)

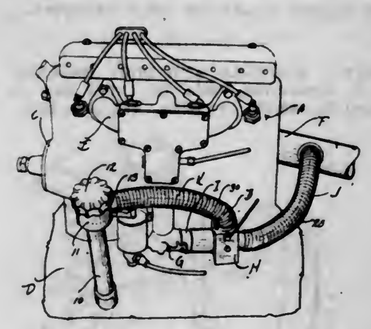
1. In a machine of the nature described, the combination with a body having a bearing which is on a longitudinal, horizontal axis, of a cutting mechanism supporting means having a neck seated rotatably in said bearing, a worm gear wheel seated on said neck, a worm shaft transverse to said neck and having a worm engaging said worm wheel, a power transmission shaft which is on said axial line, a first gear wheel on said shaft, a second gear wheel meshing with the first and having an axial

line which is transverse to said transmission shaft, and gearing intervening said second gear wheel and said worm shaft for transmitting motion to said shaft, substantially as described.



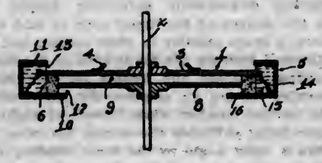
1,456,931. LOGGING HOOK AND LINK. LUKE EVERETT PARKER, Pe Ell, Wash. Filed Apr. 5, 1922. Serial No. 549,699. 2 Claims. (Cl. 24—230.5.)

1. A hook comprising a body portion provided with a bill at one end and with a loop portion at the other end thereof, the loop portion being arranged so that a portion thereof projects forwardly of the body portion, and a retaining and strengthening element positioned upon said body portion to restrict the passageway leading through the space between the bill and the body portion of the hook and extending in one direction to the forwardly projecting portion of the hook and in the opposite direction an appreciable distance along the body portion of the hook to strengthen the latter adjacent to the loop portion thereof and to stay the loop portion of the hook, the face of the retaining and strengthening element remote from the body portion of the hook lying in a plane tangent to the outer side of the bill.



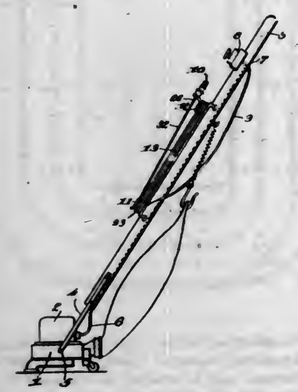
1,456,932. SUSPENSION CLAMP FOR ELECTRICAL CONDUCTORS. BENTLEY A. PLIMPTON, Lima, N. Y., assignor of one-half to The Porcelain Insulator Corporation, Lima, N. Y., a Corporation of New York. Filed Oct. 5, 1920. Serial No. 414,878. 1 Claim. (Cl. 24—135.)

In a clamping device for electric insulators, the combination with upper and lower transversely curved clamping members respectively provided with oppositely disposed projecting and recessed portions adapted to grip a cable between them and to crimp the same, one of said clamping members being provided with an exterior



recessed seat in the transverse plane of the projecting and recessed portions, and a retaining device arranged in said seat to straddle the clamping members and having tightening means reacting against the other clamping member.

1,456,933. HEATER AND FUEL SAVER FOR AUTOMOBILES. HARRY T. RASMUSSEN, Denver, Colo., assignor to The Auto Devices and Development Company, Denver, Colo. Filed Mar. 8, 1920. Serial No. 364,211. 5 Claims. (Cl. 123—119.)

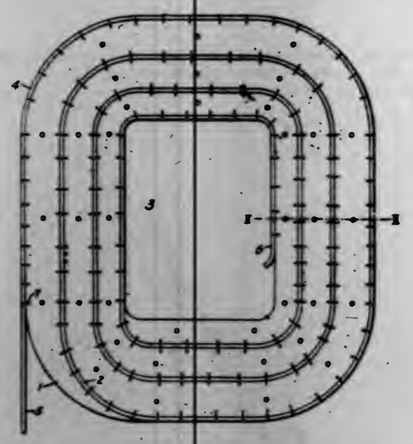


1. The combination with an internal combustion engine including a crank case, a carburetor and an exhaust pipe, of an attachment therefor including a casing having communication with the carburetor, means for introducing gases into the casing accumulated from the exhaust pipe, means for introducing vapor from the crank case to the casing, an electric coil in the casing, a source of electrical energy, and means for connecting and disconnecting the electrical coil with the source of electrical energy.

1,456,934. METHOD AND APPARATUS FOR SEPARATING MATERIALS. JOHN AINSWORTH RICE, San Francisco, Calif. Filed Oct. 16, 1920. Serial No. 417,392. 6 Claims. (Cl. 233—14.)

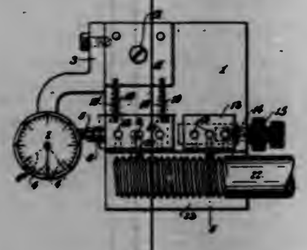
1. A centrifugal separator embodying in its construction a rotary shaft, a member on said shaft and onto which material to be separated is discharged, an annular chamber rotated by said shaft and receiving the periphery of said member, and a separation liquid of greater specific gravity than the material being treated, being contained within said chamber and a screen extending across said chamber.

1,456,935. CORD HOLDER FOR VACUUM CLEANERS. TILDA B. RICHARDSON, Spokane, Wash. Filed Dec. 1, 1922. Serial No. 604,229. 3 Claims. (Cl. 242—85.)



2. As an article of manufacture, one of a pair of holders for a plug equipped cord, said holder having an intermediate portion for receiving one bight of the coiled cord, one end portion being adapted for attachment to the handle, and the remaining end portion of said holder being forked to receive the plug end of the cord and form a seat for the plug.

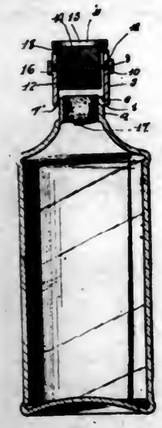
1,456,936. MARGINAL PRINTING PLATE. LOUIS A. SCHMIDT, New York, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Original application filed Dec. 1, 1921, Serial No. 519,042. Divided and this application filed Nov. 28, 1922. Serial No. 603,755. 5 Claims. (Cl. 101—378.)



1. In a marginal printing mechanism, the combination with a plate support, of a main printing plate mounted thereon so as to leave a margin space at one end of the plate, a supplemental printing plate secured on the support and having an unbroken printing surface for printing in the margin space at the end of the main plate, and means for locking up the supplemental plate by giving the plate a movement circumferentially of the plate support.

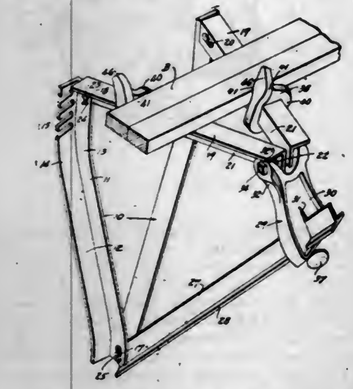
1,456,937. HIGH-VOLTAGE PANCAKE-TYPE COIL. ALFRED SCHNEEBERGER, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 13, 1917. Serial No. 174,471. 6 Claims. (Cl. 175—360.)

1. A pancake-type current-carrying coil comprising a plate of insulating material having a spiral slot extending therethrough and a winding so disposed in said slot that the opposite edges thereof are exposed on each side of said plate.



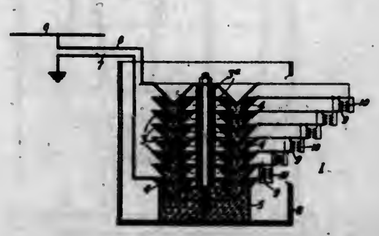
1,456,938. INSTRUMENT FOR TESTING AND COMPARING THE LEAD OF A SCREW THREAD. ARTHUR W. SCHOOF, Greenfield, Mass. Filed Oct. 7, 1921. Serial No. 506,074. 6 Claims. (Cl. 33—199.)

1. In an instrument for testing and comparing the lead of screw threads, the combination with a base piece, of a receiving member for the thread to be compared, a device for receiving a thread engaging member, said device being adjustable for positioning said member, a second device also carrying a thread engaging member, thin elastic strip devices for permitting the said second device to have a freely floating movement in either direction, and means operated by the floating device for indicating the amount of movement of the second device.



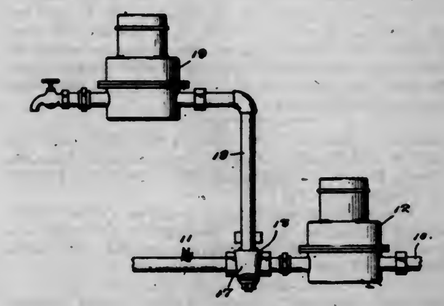
1,456,939. NONREFILLABLE BOTTLE. CHARLES WESLEY SHARP, Hamilton, Ontario, Canada. Filed Aug. 9, 1920. Serial No. 402,245. 1 Claim. (Cl. 215—34.)

A container provided with a neck, an extension formed from said neck, a much less resistant portion being between said neck and said extension, a packing ring between the upper portion of said neck and the lower portion of said extension, a cork fitted into the upper



end of said extension and a means for locking said cork against removal so that said portion must be broken before the cork in said neck can be withdrawn.

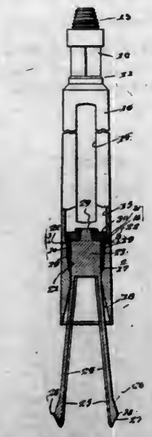
1,456,940. SCAFFOLD AND ROOF BRACKET. JAY B. F. SHOWALTER, Pekin, Ill. Filed May 11, 1921. Serial No. 468,790. 8 Claims. (Cl. 304—33.)



1. A scaffold bracket comprising a pair of vertically disposed members angular in cross section, the upper ends of said members being disposed in a parallel relation and the lower portions of the members extending convergently downward, the upper ends of said members being formed with nail engaging slots and the lower ends with nail engaging notches, arms angular in cross section having downwardly extending flanges loosely pivoted to the flanges at the upper ends of said supporting members, a brace angular in cross section and having a flange disposed between the lower ends of the flanges of the supporting members and loosely pivoted thereto, a locking member having an angular slot to receive said brace, said locking member when turned at right angles to the brace being shiftable therealong but when turned to less than a right angle to the brace binding thereon, said locking member being bifurcated at its upper end, and a bolt passing through the bifurcated end of the locking member and loosely through the vertically extending flanges at the adjacent ends of said arms.

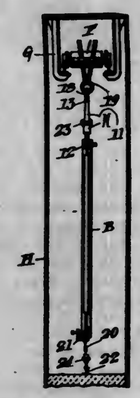
1,456,941. ELECTROLYTIC CELL. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 9, 1919. Serial No. 343,518. 8 Claims. (Cl. 175—316.)

1. An electrolytic condenser, lightning arrester or the like comprising a plurality of cell units, each cell unit including a plurality of film-forming electrodes and a suitable electrolyte and means for equalizing the voltage between the cell units, said means including a winding connected between the electrodes of one unit and another winding inductively related to the first winding and connected to adjacent cell units.



1,456,942. VALVE. JOHN D. SMITH, Cheraw, S. C. Filed July 19, 1922. Serial No. 576,084. 1 Claim. (Cl. 73—167.)

The combination with spaced pipes and a meter arranged between and communicating with said pipes, a means for testing the meter without separating it from the pipes, said means including a valve casing located in one of said pipes, a hollow boss projecting from the valve casing and communicating with the latter, a rotary plug valve operating within the valve casing and including a main bore, an auxiliary opening communicating with the bore at a point between its ends, said valve being designed to alternately close the communication between the meter and one of said pipes and open communication between the valve casing and said hollow boss, a pipe adapted to be associated with said hollow boss, and an auxiliary meter supported by said pipe.



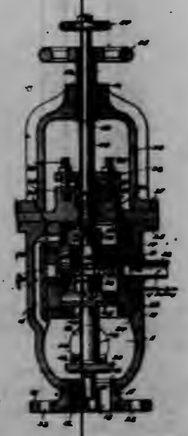
1,456,943. GRAPPLING TOOL. ROBERT E. SMITH, Thermopolis, Wyo. Filed June 2, 1922. Serial No. 565,312. 4 Claims. (Cl. 294—99.)

1. A grappling tool comprising a tubular supporting-member, a jaw-member consisting of a body portion seating in the supporting-member and having resilient jaws adapted to project from the latter, said jaws having a normal tendency to spread, means for so positioning the jaw-member relative to the supporting-member as to leave the jaws projecting from the latter, said members being free to move relative to each other to bring the supporting-member down over the jaws for closing the

same, and means for thereafter preventing a return movement of said members in a direction tending to effect opening of the jaws.

1,456,944. METHOD OF COOLING RAILS OR THE LIKE AFTER ROLLING. CARL STENBOL, Sault Ste. Marie, Ontario, Canada, assignor to Algoma Steel Corporation, Limited, Sault Ste. Marie, Ontario, Canada. Filed Feb. 11, 1922. Serial No. 535,816. 7 Claims. (Cl. 80—42.)

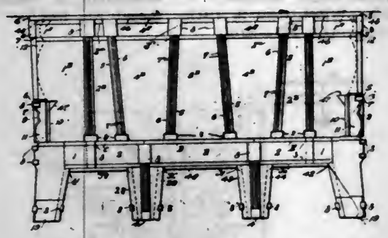
1. In the art of cooling rails and the like after rolling, the herein described step which comprises suspending the rail or the like vertically under tension during cooling.



1,456,945. COUPLER. NORMAN W. STORER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 11, 1922. Serial No. 593,680. 7 Claims. (Cl. 105—175.)

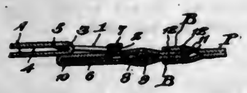
1. A locomotive articulated truck hinge comprising a pair of co-operating bumpers, a longitudinally disposed

link connecting said bumpers and a transverse link pivotally connected, at its respective ends, to supports associated with said bumpers.



1,456,946. AUTOMATIC STEAM-STOP VALVE. WILLIAM BOTELER STORK, Andover, Mass. Filed Jan. 26, 1921. Serial No. 440,098. 6 Claims. (Cl. 137—139.)

1. In an automatic stop valve, the combination with a valve body having a chamber therein provided with an inlet opening having an inwardly facing valve seat and an outlet opening and a cylindrical extension in line with the inlet opening, of a valve in said chamber fitting said valve seat and movable therefrom in the line of said cylinder, a piston in the end portion of said cylinder facing the valve, a connection between said piston and valve, a second piston in said cylinder beyond and spaced from said first piston, the said pistons being movable within limits with reference to each other, cooperating means for limiting the approach of said pistons towards each other, means for maintaining fluid pressure on the outer face of said second piston equal to that in said chamber to which the face of said first piston is exposed, mechanical means for moving said second piston to such position as to close said valve through the interposed first piston and connection or to a position such as will permit said valve to open, and a port with which said second piston cooperates for supplying fluid independent of but under substantially the same pressure as that in the chamber to the space in said cylinder between said pistons when the valve is open.



1,456,947. MOLD FORMS IN PAIRS OF COMBINATIVE ASSEMBLED FORMS FOR THE MAKING OF ARTIFICIAL-STONE FURNITURE, ETC. CHARLES FRANCIS STRAUSBAUGH, Detroit, Mich. Filed Aug. 16, 1920. Serial No. 404,042. 4 Claims. (Cl. 25—118.)

1. In a cementitious or plastic interchangeable furniture mold, the combination of changeable back sections formed in four parts, spaced from one another by interchangeable supplemental members and adapted means to receive the material for forming the back to the seat the foremost of said parts terminating at a right angle above the lower edge of the rearmost members, and members forming a space facing having supplemental members to the seat to receive the material for the ends and having intermediate members, projecting downwardly from the bottom sections parts for forming an intermediate changeable leg, and detachable front plates

forming a closure for said ends and permitting an intermediate changeable leg section on the mold.

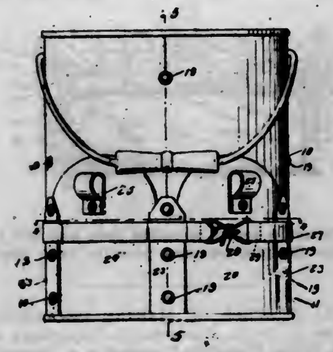
1,456,948. GARTER. HENRY H. TAYLOR and MYRON B. HAMMOND, Bridgeport, Conn., assignors to The Thomas P. Taylor Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 6, 1922. Serial No. 599,255. 5 Claims. (Cl. 24—225.)

5. In a garter clasp, a central non-elastic pad, leg encircling webbing secured at one end to one side of the pad, a female member carried by the free end of the webbing, a male member carried by the opposite side of said pad and including a metal plate having a plurality of studs to engage the female member, and means to secure the plate to the pad including a flexible member engaged about the plate and secured to the pad and having said studs projected therethrough.

1,456,949. PROCESS OF PURIFYING NATURAL BARIUM SULPHATE. ARMAND LOUIS ADRIEN TEILLARD, Paris, France. Filed June 30, 1922. Serial No. 572,033. 3 Claims. (Cl. 252.)

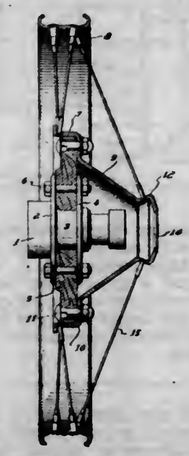
1. Process for the purification of barium sulphate which comprises grinding the ore, heating the pulverized material to split up the pure crystals and leave the impure crystals, and sifting the material.

1,456,950. SWITCH. RALPH SMITH TOWER, Cottage Grove, Oreg. Filed Nov. 17, 1920. Serial No. 424,621. 4 Claims. (Cl. 200—164.)



1. A control switch for electrically heated irons, comprising in combination, a base plate, a slidable conductor plate thereon, guide means for said conductor plate, a spring contact plate positioned adjacent each end of the base plate, said spring plates projecting toward each other and adapted to frictionally engage said conductor plate when moved therebeneath.

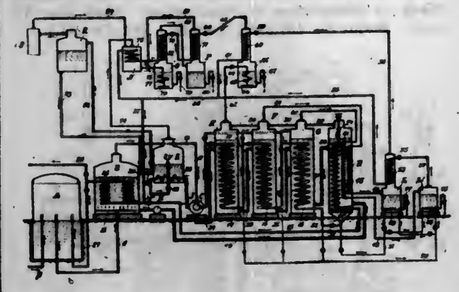
1,456,951. COMPARTMENT PAIL. ALBERT TWIGG, Garrett, Pa. Filed May 2, 1922. Serial No. 557,948. 3 Claims. (Cl. 220—16.)



3. A portable pail having partitions therein provided with securing flanges, the side wall of the pail having

openings therethrough and strips intermediate the openings, guide strips disposed against said strips, fastening elements passing through said flanges, first mentioned

strips and guide strips, slidable closures engageable intermediate the first mentioned strips and guide strips, and a pressure band surrounding said guide strips and closures and disposed intermediate said fastening elements.

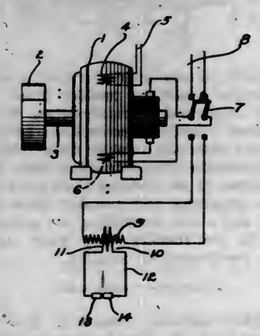


1,456,952. VEHICLE WHEEL. MORTON VAN METER, Cadillac, Mich. Filed Sept. 7, 1920. Serial No. 408,527. 5 Claims. (Cl. 301—9.)

1. In a vehicle wheel the combination with a hub having a fixed lateral flange and a similar flange movable longitudinally of the hub, of a wood disc centrally apertured to receive the hub and adapted to be secured between the said flanges, an auxiliary hub having a portion parallel with the plane of the disc and a portion at a right angle thereto fitting over the periphery of the disc, and bolts extending between the disc and the said parallel portion of the auxiliary hub detachably securing the auxiliary hub to the wood disc, a rim and a series of spokes extending between the rim and auxiliary hub.

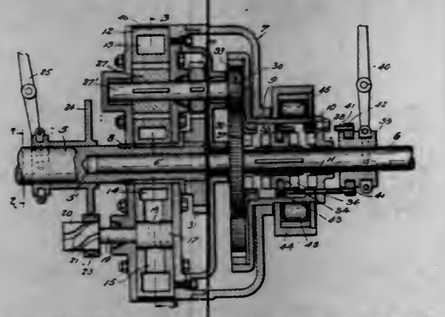
1,456,953. SEPARATION OF NATURAL GAS AND DISTILLATION GASES INTO GASOLINE AND OTHER CONSTITUENTS. ALBRECHT VON GROELING, New York, N. Y., assignor to National Refining Corporation, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 28, 1918. Serial No. 256,030. 32 Claims. (Cl. 196—25.)

2. The process of treating hydro-carbon gases, consisting in forcing a circulation of said gases and an absorbent liquid in opposite directions through distilling, cooling and absorbing apparatus, and varying the pressures of



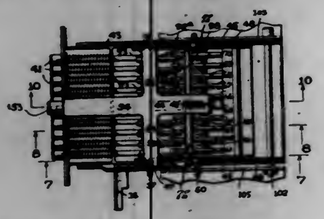
said gases at different steps to produce heat changes for absorption and distilling purposes.

1,456,954. METHOD OF PHOTOGRAPHICALLY REPRODUCING PICTURES REPRESENTED ON CURVED SURFACES. GOTTFRIED VON LÜCKEN, Berlin, Germany. Filed June 16, 1921. Serial No. 478,088. 1 Claim. (Cl. 95—5.)



The method of photographically reproducing pictures of curved surfaces, which consists in making a photographic negative of the curved picture surface, winding a sensitized paper on a body having an evolvable surface as similar as possible to that of the surface to be copied and then projecting the negative onto the sensitized paper.

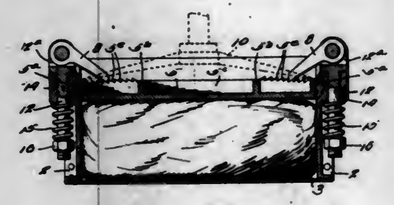
1,456,955. MEANS FOR OBTAINING HIGH MOMENTARY CURRENT. CHARLES F. WAGNER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 26, 1921. Serial No. 448,238. 6 Claims. (Cl. 219—13.)



1. In combination with a percussive welding apparatus, means for storing up energy, and means for liberating such energy in the form of an electric current into the welding circuit.

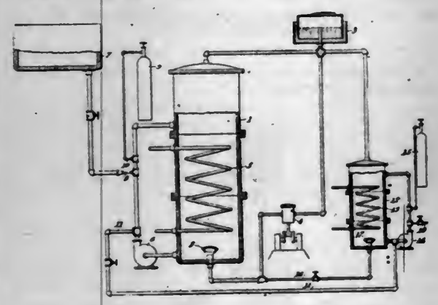
1,456,956. FLUID-CONTROLLED TRANSMISSION. ALVA J. WILLIAMS, Tacoma, Wash., assignor to Williams Oil Control Transmission Company, Tacoma, Wash., a Corporation of Washington. Filed Aug. 30, 1921. Serial No. 497,016. 1 Claim. (Cl. 74—34.)

In transmission apparatus, the combination of a driving shaft, a toothed gear rigidly mounted thereon, a driven shaft, internal and external tooth gears mounted on said driven shaft for independent rotary motion, a casing mounted on one of said shafts for rotation independently thereof, said casing being provided with annularly disposed fluid containing chambers connected by two sets of passages, pump rotors provided in one set of said passages, valves provided in the other set of passages, operative connection between the first named gear and the pump rotors for operating the same, operative connections between said first named gear and the gears aforesaid of the driven shaft, means for coupling either of the last mentioned gears to the driven shaft, means to regulate said valves for controlling the flow of fluid through the respective passages, and means for releasably securing said casing from rotating.



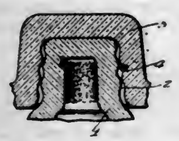
1,456,957. PERMUTATION LOCK. JAMES O. WILSON, Jersey City, N. J. Filed May 12, 1921. Serial No. 468,839. 30 Claims. (Cl. 70—54.)

1. In a lock of the character described, a series of concentrically arranged notched tumbler discs, a series of concentrically supported actuating discs for said tumbler discs, direct operating connections between certain of the actuating discs and tumbler discs, indirect connections between certain other actuating discs and tumbler discs and adapted to be rendered operative only by operation of the actuating and tumbler discs in a prearranged order, and a lock controlling bar adapted to enter the notches in the tumbler discs when the same are brought into pre-determined relation.



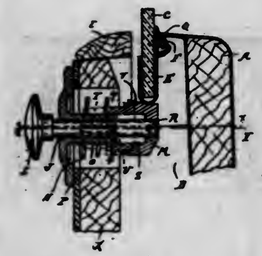
1,456,958. MEAT MOLD. OSCAR M. WOLFF, Chicago, Ill., assignor to B. B. Hanak Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 12, 1919. Serial No. 344,438. 5 Claims. (Cl. 100—75.)

1. A device for molding and cooking meats comprising a casing, a cover slidable therein, and provided with a rack, a bolt mounted for movement in a direction parallel to that of the cover and carrying a pawl to engage



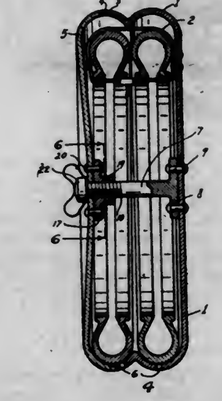
said rack, and a spring operating upon said bolt adapted to receive the predetermined pressure upon said pawl.

1,456,959. PROCESS OF MAKING CHLORHYDRINS. CHARLES O. YOUNG, Elmhurst, N. Y., assignor to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Filed May 5, 1922. Serial No. 558,830. 6 Claims. (Cl. 260—157.)



1. Process of making chlorhydrins from olefines, comprising reacting with the hydrocarbon upon a solution containing free hypochlorous acid in amount not exceeding 0.09% and a hypochlorite, thereby preparing chlorhydrin substantially free from ethylene or propylene chloride; setting free hypochlorous acid from the residual hypochlorite; and reacting thereon with a further quantity of hydrocarbon.

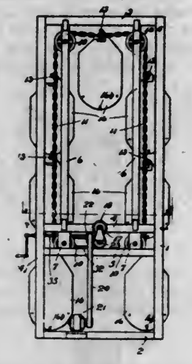
1,456,960. JOINT FOR ARTICLES OF CERAMIC AND SIMILAR MATERIALS AND METHOD OF PRODUCING SAME. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Original application filed Nov. 17, 1919, Serial No. 338,534. Divided and this application filed Mar. 31, 1922. Serial No. 548,331. 13 Claims. (Cl. 18—47.5.)



1. In combination, a plurality of ceramic bodies having connection with one another at a plurality of points of limited extent, said bodies being fused to one another at their points of connection to provide a yielding joint.

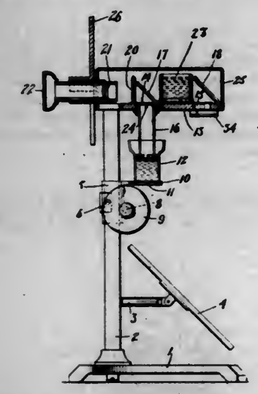
1,456,961. VEHICLE WINDOW. ANDREW BACHLE, Detroit, Mich. Filed May 29, 1922. Serial No. 564,543. 4 Claims. (Cl. 296—48.)

1. In a device of the character described, the combination with a vertically slidable window member and a frame in which said member is mounted, of a slide bearing carried by said frame, a plunger mounted in said slide bearing transversely of the window member and projecting from said bearing at the interior side of the frame, a latch head carried by said plunger and movable thereby into the path of the window member in the raised position of the latter to maintain said position, said head having a portion slidably embracing said slide bearing, means engaging the latch head with the slide bearing to prevent relative rotation, and a spring urging the plunger toward the window member.



1,456,962. SPARE-TIRE CONTAINER. COSTON S. BAKER, Chicago, Ill. Filed Aug. 15, 1921. Serial No. 492,389. 8 Claims. (Cl. 224—29.)

1. A protective tire casing having a post mounted therein; a cover mounted on said post; and locking means disposed within said post and adapted to engage said cover to prevent the removal thereof.

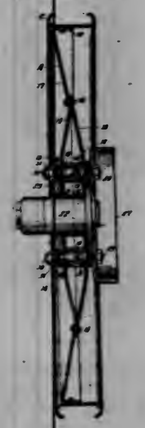


1,456,963. ENDLESS-CARRIER GARMENT-SUPPORTING STRUCTURE. JOHN THOMAS BATTS, Grand Rapids, Mich. Filed July 19, 1920. Serial No. 397,195. 3 Claims. (Cl. 211—20.)

1. In combination, a supporting frame having spaced apart sides, an endless chain mounted on each side of the frame, tubular rods disposed in spaced apart relation between the chains, a plug inserted in each end of each rod, a metal clip bent upon itself around certain of the

links of the chain at the ends of the rods, and securing means passing through the ends of the clips and into the plugs in the ends of the rods.

1,456,964. COMBINED COLORIMETER NEPHELOMETER. JOSEPH C. BOCK, Brooklyn, and STANLEY R. BENEDICT, New York, N. Y. Filed June 26, 1918. Serial No. 241,937. 12 Claims. (Cl. 88—14.)



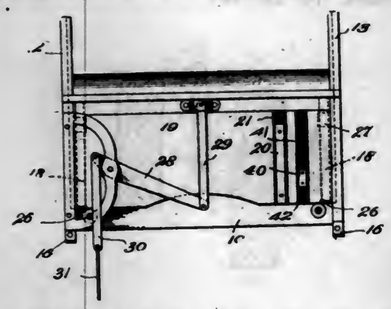
1. A stand carrying a cup and a flat bottom plunger, a mirror above the plunger for reflecting rays from the plunger horizontally, a diaphragm adjacent said mirror having a portion of its opening outside the rays from said plunger mirror, a rectangular cup for a standard solution, means for supporting the rectangular cup located in line with the portion of said diaphragm not covered by said plunger mirror, a second mirror beyond said first mirror for reflecting rays through said diaphragm parallel to the rays reflecting from the cup and plunger, and an eye piece for receiving the rays from both mirrors.

1,456,965. DISK WHEEL. ANDREW BENSON, Sterling, Ill. Filed June 28, 1920. Serial No. 392,340. 2 Claims. (Cl. 301—63.)

1. As an article of manufacture, a sheet metal wheel of disc type comprising: two discs, one of larger diameter than the other, each disc having a central hub opening and provided with a right angular inturned flange around said opening, the flanges extending in alinement in opposite directions and abutting, the portions of said

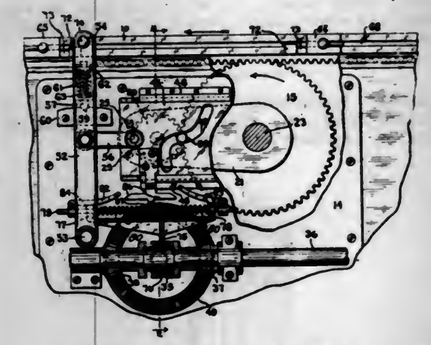
discs adjacent said opening being arranged in spaced parallel relation and converging outwardly thereof to the periphery of the smaller disc, the two discs being united around the periphery of the smaller disc, the larger disc being adapted to be provided with a rim; a perforated hub plate abutting the outer face of the parallel portion of one of said discs; a hub member extending

through said hub opening and through the perforation in said plate, and provided with a flange abutting the outer face of the parallel portion of the other disc, the periphery of said hub abutting the alined inturned flanges of said discs; and securing means for clamping said discs between the hub plate and hub flange with the inturned right angular flanges of said discs in abutting relation.



1,456,966. RESILIENT TIRE. ANDREW BENSON, Sterling, Ill. Filed Nov. 1, 1920. Serial No. 420,895. 5 Claims. (Cl. 152—6).

2. A continuous, annular, self-clinching, resilient tire adapted for application to a wheel provided with a rim of appreciable transverse and radial dimensions in cross section, said tire comprising a main exterior portion of generally semicircular cross section and annular, inwardly extending side flanges normally converged, the inner faces of said main portion and said flanges having a fabric reinforcing lining imbedded therein, portions of said fabric lining being also extended around the free edges of said flanges to the exterior faces thereof to thereby bind said free edges and prevent tearing thereof.



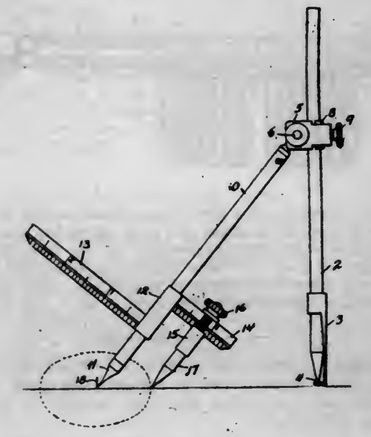
1,456,967. SIGNAL FOR AUTOMOBILES. CHARLES C. BIELITZ, Brooklyn, N. Y. Filed Oct. 22, 1921. Serial No. 509,639. 4 Claims. (Cl. 116—44.)

1. A signal for the purpose described comprising two parallel slidable plates, means for raising one of them, a temporary connection between said plates adapted to cause one to lift the other and means adapted to come

into play when both plates are partly raised for disestablishing said temporary connection.

1,456,968. MACHINE-TABLE-REVERSING MECHANISM. GREGORY BROWN and ALBERT TURNER, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 29, 1921. Serial No. 481,178. 14 Claims. (Cl. 74—98.)

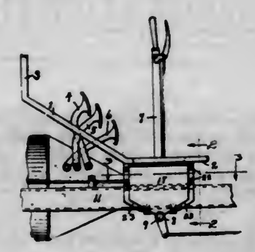
1. A driving and reversing mechanism for machine tool tables comprising a driver and a driven member in peripheral rolling contact and operatively connected with the table, means to move the driver uniformly and traverse the table at a normal rate for an indefinite period and mechanism effective at the period of reversal to impress upon the driver a secondary movement peripherally around the driven member which accelerates its driving action and gradually starts the table into motion.



1,456,969. PROCESS FOR THE MANUFACTURE OF AROMATIC AMINO COMPOUNDS. OLIVER W. BROWN and CLYDE O. HENKE, Bloomington, Ind. Filed June 5, 1922. Serial No. 566,144. 16 Claims. (Cl. 260—130.5.)

1. The process of producing aromatic amino compounds, which consists in subjecting an aromatic nitro compound in the gaseous state and mixed with hydrogen-containing gas to the action of a catalyst containing a compound of tin.

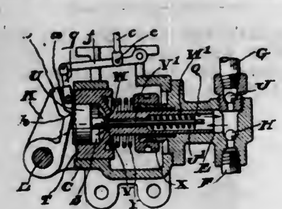
1,456,970. COMPASS ELLIPSOGRAPH. JOHN A. CALDWELL, Vancouver, British Columbia, Canada. Filed Oct. 20, 1921. Serial No. 509,172. 4 Claims. (Cl. 33—30.)



1. A compass ellipsograph, comprising a leg, a sleeve adjustable along said leg, means for clamping said sleeve

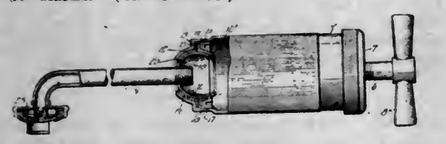
in adjusted position on said leg, a second leg pivotally connected to said sleeve, a second sleeve pivotally and slidably mounted on said second leg, graduated arms

extending radially from and in opposite directions on said second sleeve, a marking device adapted to be slidably mounted on either of said arms, and means for clamping said device to either arm.



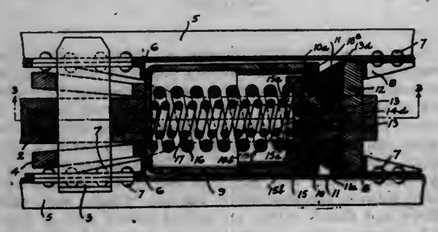
1,456,971. DRAFT PREVENTER. NATHEN K. CAPLAN, Detroit, Mich. Filed June 29, 1921. Serial No. 481,257. 3 Claims. (Cl. 74—81.)

1. A draft preventer comprising a two part casing extending from the floor of an automobile around a control lever, a vehicle frame member constituting a portion of the casing, one of the parts also attaching to a portion of the frame of the vehicle and the other part fitting against said frame and against the hub of the control lever and being of sufficient size to permit free operation of the control lever.



1,456,972. GOVERNING FUEL PUMP. ADOLPH F. CHRISTMAS, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 15, 1920. Serial No. 410,461. 4 Claims. (Cl. 123—140.)

1. In a fuel pump for internal combustion engines, a plunger adapted to reciprocate within a cylinder to force motive fluid from a source of supply into a combustion chamber, means for actuating said plunger, a movable stop within the plunger normally held against a bearing on the plunger, means operatively connected to the plunger actuating means for permitting relative movement between the plunger and the stop, a closed chamber within the pump plunger controlled by said stop for receiving and returning fuel from and to the plunger cylinder, and means controlled by a governor and located in operative engaging relation to said plunger actuating



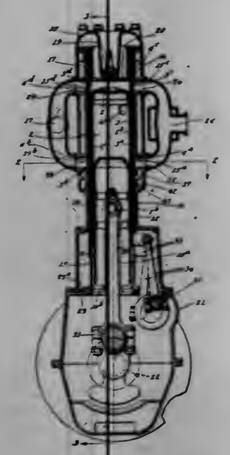
means for varying the opening of said chamber to vary the length of time during which fuel is admitted to the combustion chamber without by-passing fuel back to the supply pipe.

1,456,973. LUBRICANT COMPRESSOR. NORMAN W. CUMMINS, Bridgeport, Conn., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 2, 1921. Serial No. 441,743. 19 Claims. (Cl. 184—105.)

1. A lubricant compressor comprising a lubricant receptacle, a rigid discharge conduit having one end connected to said lubricant receptacle by a universally flexible joint, and other end of said conduit being bent at an angle thereto, and having a coupling member comprising a cap rigidly secured to said last-mentioned end, a collar threaded onto the open end of said cap and having an in-turned flange, a cup surrounding the open end of said conduit and having an outwardly convexed bottom, a gasket conforming to the bottom of said cup and having its edges confined between said flange and the bottom of said cup, said cup and gasket being provided with centrally disposed apertures communicating with said conduit, the last-mentioned end of said conduit and the bottom of said cup being provided with apertures for transmitting the pressure of the lubricant to the inner side of said gasket, and a bifurcated extension projecting from said collar transversely of said conduit, and in spaced relation to said gasket.

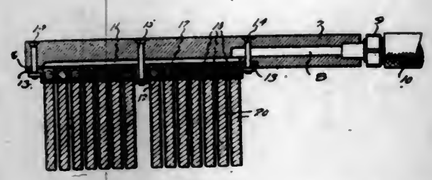
1,456,974. FRICTION DRAFT RIGGING. GEORGE BINET DOREY, Montreal, Quebec, Canada, assignor to William H. Miner, Chazy, N. Y. Filed Mar. 17, 1922. Serial No. 544,458. 11 Claims. (Cl. 213—26.)

1. In a friction draft rigging, the combination with a casing having beveled walls of friction mechanism disposed therein, the said mechanism including friction



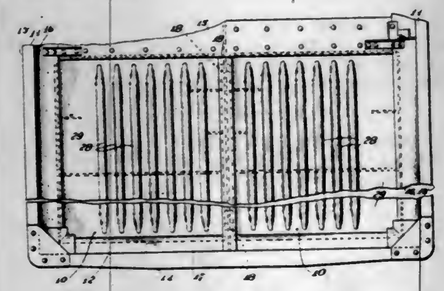
shoes and transversely movable wedge blocks, such transverse movement operating to force the friction shoes outwardly in a direction at right angles to the movement of the wedge blocks.

1,456,975. CRATE FOR LOADING AND UNLOADING BRICK AND LIKE MATERIALS. HOLLISTER G. FERGUS, Chicago, Ill. Filed Feb. 27, 1920. Serial No. 361,796. 5 Claims. (Cl. 220—41.)



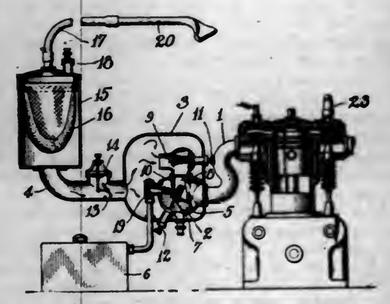
4. A transfer crate of the character described, comprising a rectangular box having vertical side walls and vertical end walls extending below the lower edges of said side walls, angle-iron strips riveted to the extensions of said end walls, a pair of rods disposed parallel with and below the lower edges of said side walls on the outer sides of the latter and at their ends journaled in said angle-iron strips, and a flat bottom plate movable edgewise to and from a position of rest on said rods.

1,456,976. INTERNAL-COMBUSTION ENGINE. HOWARD F. GAWNE, Euclid Village, Ohio. Filed May 8, 1922. Serial No. 559,342. 10 Claims. (Cl. 123—63.)



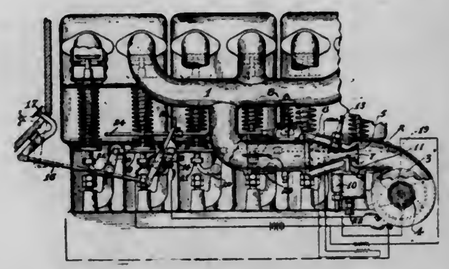
1. In a double acting internal combustion engine, the combination of a cylinder having inlet and exhaust ports at each end thereof, a fixed head projecting into one end of the cylinder and spaced from the wall thereof, a hollow piston in the cylinder, fitting around and reciprocating on said fixed head, a fixed sleeve between the piston and the cylinder wall, an inner sleeve valve between the piston and the fixed sleeve, an outer sleeve valve between the fixed sleeve and the cylinder wall, said sleeve and sleeve valves all having spaced sets of inlet and exhaust ports adapted to be registered with the cylinder ports, and the piston having inlet and exhaust slots registering with the said ports, and means to operate said valves.

1,456,977. FOUNTAIN BRUSH. BERNHARD D. GEIB, Cleveland, Ohio. Filed May 24, 1922. Serial No. 563,293. 3 Claims. (Cl. 15—127.)



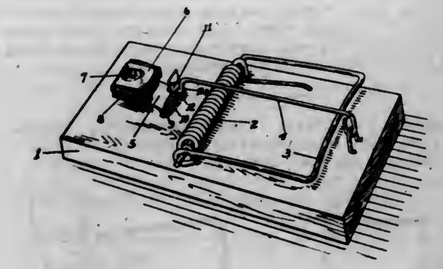
1. A fountain brush comprising a head having a water passage therein, a hollow face plate secured to the head, said face plate having openings in the front thereof and spaced cross partitions behind said front, and brush material extending through said openings, with loops in the spaces between said partitions.

1,456,978. DUMP CAR. GARTH G. GILPIN, Riverside, Ill., assignor to Walter P. Murphy, New York, N. Y. Filed Nov. 26, 1919. Serial No. 340,907. 6 Claims. (Cl. 105—244.)



1. A hinged door for a railway dump car, comprising a cast metal panel formed with outturned rigidifying flanges cast integrally therewith, hinge elements cast to said flanges and corrugations cast therein which terminates within the panel.

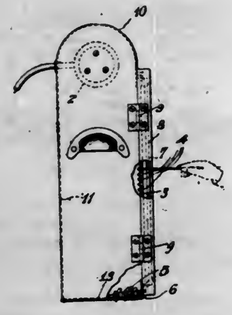
1,456,979. INTERNAL-COMBUSTION-ENGINE SYSTEM. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed Apr. 6, 1915, Serial No. 19,610. Renewed June 11, 1920. Serial No. 388,348. 9 Claims. (Cl. 123—198.)



1. A vacuum system comprising an internal combustion engine having a suction operated carburetor, a vacuum pipe connected to the intake of said carburetor, means for preventing disturbance in the operation of the carburetor by variation of the vacuum in said vacuum pipe and an automatic vacuum-operated throttle in said vacuum pipe.

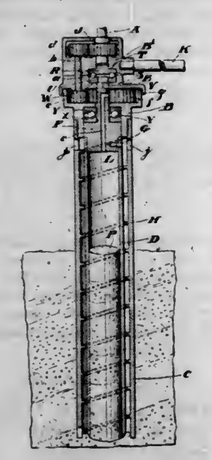
1,456,980. ENGINE PREHEATER. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed Feb. 14, 1918, Serial No. 217,066. Renewed July 20, 1921. Serial No. 486,188. 11 Claims. (Cl. 123—179.)

1. The combination with an internal combustion engine of means for coincidently opening its exhaust and intake valves and means for forcing a heating medium through the path through the engine thereby provided.



1,456,981. RODENT TRAP. WILLIAM HENRY GOSS, Hammonton, Calif. Filed Nov. 23, 1921. Serial No. 517,184. 3 Claims. (Cl. 43—81.)

1. A rodent trap including a spring controlled trap bar, a lever adapted to bear against and hold the bar against movement when the spring is in tension, a bait retaining treadle pivoted for vertical movement beyond the lever, a lip on the treadle above the level thereof and projecting beyond the pivotal connection thereof toward the lever, the end of the latter being adapted to be contacted with said lip, and an ear on the treadle to one side of and above the lip and under which the said end of the lever may then be slid to set the trap.

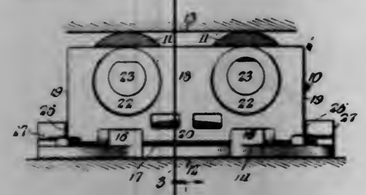


1,456,982. PERMUTATION ILLUMINATED SIGN. LOUIS A. GRAHAM, Chicago, Ill. Filed Mar. 3, 1922. Serial No. 540,928. 8 Claims. (Cl. 40—28.)

4. In an illuminated sign, a light controlling wall having an area of closely related light releasing perforations distributed thereover, and light obstructing closures removably and replaceably adapted to said perforations; said closures retaining their positions in said perforations by fitting therein when in place and being of no greater transverse dimension than said perforations

at any portion of their length so that they are adapted to be passed entirely through the perforations when displaced therefrom.

1,456,983. SOIL-CORING TOOL. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 2, 1921. Serial No. 512,239. 9 Claims. (Cl. 255—72.)

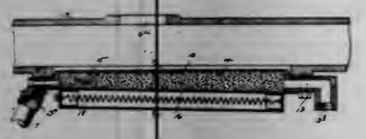


1. A soil coring tool, comprising a rotatable spindle, an outer cutting bit connected to be rotated by said spindle, a relatively non-rotatable head piece within the upper end of the bit supported from a stationary portion of the rotating mechanism, and an inner core barrel connected to said head piece, which descends without rotating and encloses a core cut by the rotating bit.

1,456,984. ANTIFRICTION BEARING. CHARLES D. JENKS and HUBERT M. PERRY, Chicago, Ill., assignors, by mesne assignments, to Sophie L. Woods, Chicago, Ill. Filed Mar. 15, 1915. Serial No. 14,329. 7 Claims. (Cl. 64—64.)

1. In an anti-friction side bearing, a bearing member, a roller carrier mounted on said bearing member, the said roller carrier and the said bearing member having opposed, relatively divergent surfaces adapted to pro-

vide a free rocking movement of the roller carrier on the bearing member, and means connecting said roller



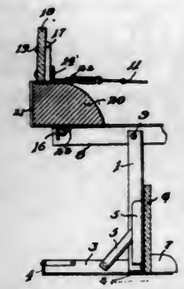
carrier and said bearing member adapted to hold them in cooperative relation but permitting a free rocking movement of the carrier upon the bearing member.

1,456,985. NAILING CONCRETE. JOHN E. KLEIST, New Rochelle, N. Y. Filed Nov. 14, 1922. Serial No. 600,960. 1 Claim. (Cl. 106—24.)

A nailing concrete mixture for structural slabs comprising cement, sand, asbestos fiber and pulverized slate in approximate proportions as follows:

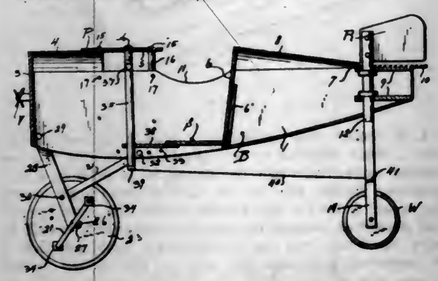
Cement	188 lbs.	2 cu. ft.
Sand	360 lbs.	4 cu. ft.
Asbestos	75 lbs.	1¼ cu. ft.
Pulverized slate	25 lbs.	⅜ cu. ft.

1,456,986. GAS GENERATOR FOR INTERNAL-COMBUSTION ENGINES. NICOLAS LEISTEN and CHARLES SENN, Detroit, Mich. Filed Feb. 20, 1920. Serial No. 360,185. 5 Claims. (Cl. 48—103.)



4. In a gas generator for internal combustion engines, the combination with an engine exhaust manifold, of a casing forming a part of said manifold, and having a liquid intake and a gas outlet, means within said casing for expediting a transfer of heat from the casing to its fluid contents, a closure for said casing, and an electric heater carried by said closure.

1,456,987. HAMMER. GEORGE P. LUCAS, Jersey City, N. J. Filed Jan. 4, 1923. Serial No. 610,628. 3 Claims. (Cl. 83—11.)

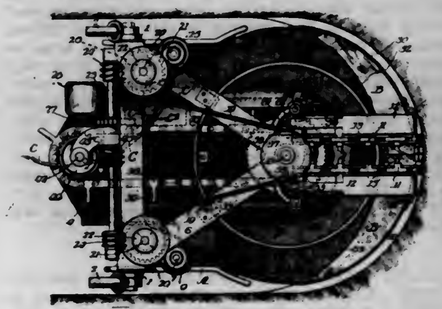


1. A hammer for a centrifugal device comprising an arm provided adjacent one end thereof with an opening for pivotal suspension, said arm extending at one of its lateral faces substantially rectilinearly for its entire length, the opposite end of said arm being cut away at an acute angle and provided with a dove-tail groove, and a removable head formed of material of greater refractory character than the material of said arm, said head having at one end thereof a dove-tail projection extending substantially the full length of said opposite end of said arm constructed to be received within said dove-tail groove of said arm, said head further including a projection extending laterally of said arm when said head is assembled on said arm and in face to face engagement with said lateral longitudinally extending face of said arm.

1,456,988. FOLDING BED. GEORGE R. MCALLASTER, Rochester, N. Y. Filed July 12, 1920. Serial No. 395,601. 4 Claims. (Cl. 5—37.)

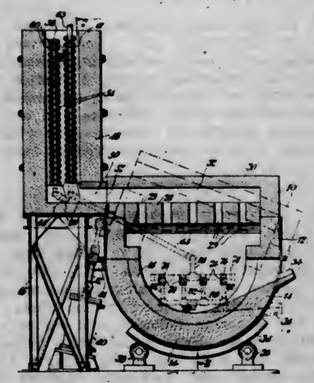
1. In combination with a suitable support, a bed frame comprising side bars pivotally mounted on the support between their ends, a cross piece connecting the outer ends of said side bars, a pair of blocks secured to the inner ends of the side bars and each formed with a seat, a cross piece secured to the seats on both blocks, a mattress supporting fabric connecting the cross pieces, a second cross piece connecting the inner ends of the side bars below the other cross piece at the inner ends of the side bars, a counterweight supported by said second cross piece under the other of said cross pieces, and connecting means between the cross pieces having hooks engaging the forward edges of both cross pieces and assisting in supporting said counterweight upon the movement of the bed frame to upright position.

1,456,989. VEHICLE. LESTER W. MALLORY, Junction City, Oreg. Filed Dec. 14, 1921. Serial No. 522,356. 2 Claims. (Cl. 208—42.)



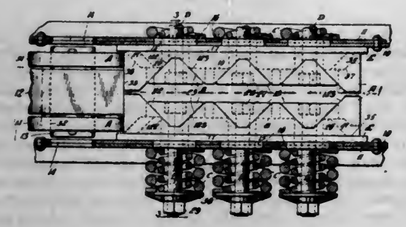
1. A vehicle of the class described comprising a body having a seat therein adjacent the bottom of the body, propelling means for the body, a plane disposed across and extending beyond opposite sides of the body, a steering rod depending from and in swivel connection with the plane, a member extending outwardly from the seat, said steering rod being loosely disposed through said member, a steering post rotatably supported by one end portion of the body, a ground engaging member carried by the post, a cross head carried by the lower portion of the steering rod, an operative connection between the cross head and the steering post whereby the steering post is turned upon rotating the steering rod, and means carried by the steering rod below the plane for rotating the steering rod.

1,456,990. CLASP. JOSEPH MONTGOMERY, West New York, N. J. Filed Oct. 6, 1921. Serial No. 505,772. 5 Claims. (Cl. 24—259.)



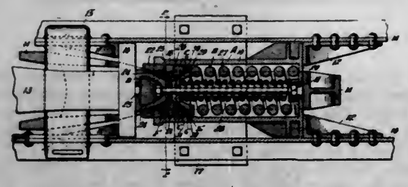
5. A clasp comprising two arms one of which has a bent-over portion extending longitudinally thereof and provided with a floating edge to provide a resilient flange bent transversely of the clasp and extending substantially the entire length of the clasp.

1,456,991. MINING MACHINE. EDMUND C. MORGAN, New York, N. Y. Filed Sept. 5, 1914, Serial No. 860,370. Renewed Dec. 11, 1919. Serial No. 344,111. 128 Claims. (Cl. 262—5.)



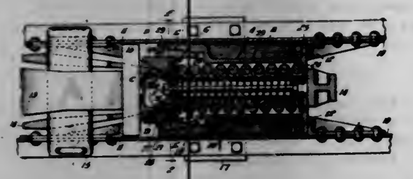
1. The combination of a pair of rotary cutting mechanisms having a common center of rotation and movable toward each other for cutting a section from the wall of a mine, and means for breaking the section into smaller sections and for returning the cutting mechanisms.

1,456,992. FURNACE. PAUL J. NUTTING, Watertown, N. Y., and HENRY W. HAYWARD, Mount Gilead, N. C., assignors to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed June 1, 1921. Serial No. 474,168. 11 Claims. (Cl. 263—16.)



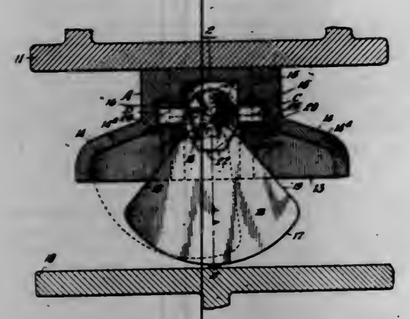
1. In an apparatus of the class described, a tiltable furnace formed to provide a flue in its upper portion and having a spout at its front end through which material may be introduced into it and discharged from it, a recuperator at the rear end of the furnace arranged to communicate with said flue in one position of the furnace, means for conducting pre-heated air from the recuperator to the furnace, and means for tilting the furnace between a position in which the flue communicates with the recuperator and a position such as to cause the contents of the furnace to be discharged through said spout.

1,456,993. FRICTION DRAFT RIGGING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Feb. 16, 1920. Serial No. 358,991. 9 Claims. (Cl. 213—39.)



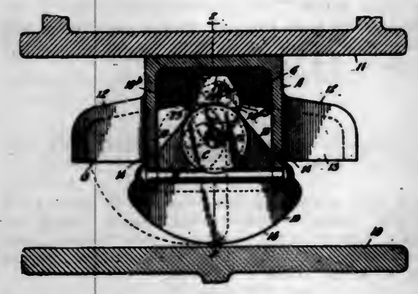
1. In a friction draft rigging, the combination with draft sills and a drawbar; of a laterally movable element, having a pair of oppositely extended wedge faces, said element being located between the draft sills; a spring disposed on the outer side of one of the draft sills to yieldingly resist lateral movement of said element; a heavy friction plate mounted on the inner side of said draft sill, on the outer side of which said spring is disposed, and a member longitudinally movable in both directions from its normal position and located between said element and said friction plate, said member being provided on one side with a pair of oppositely extending wedge surfaces cooperable with the wedge faces of said element for effecting lateral movement of the latter in both buff and draft, and on the other side with a friction face co-operating with said friction plate.

1,456,994. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed July 12, 1920. Serial No. 395,455. 3 Claims. (Cl. 213—32.)



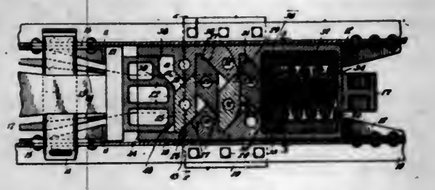
1. In a friction shock absorbing mechanism, the combination with the member having longitudinally extending friction surfaces; of friction shoes slidable on and cooperable with said friction surfaces, said shoes having inwardly converging faces at their inner ends; wedge acting means for pressing said shoes into frictional contact with said member; a spring resistance; a follower interposed between said spring resistance and the shoes, said follower, on its side adjacent the shoes having bearing seats; and roller anti-friction means interposed between said follower bearing seats and the converging inner faces of said shoes.

1,456,995. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Oct. 4, 1920. Serial No. 414,665. 7 Claims. (Cl. 213—34.)



1. In a friction shock absorbing mechanism, the combination with a shell having inwardly converging interior surfaces; of separate auxiliary friction shell elements mounted on said surfaces and adapted for limited movement with respect thereto, said elements providing main shell friction surfaces; friction shoes slidable on said main shell friction surfaces; for an amount substantially more than half of the total travel of the mechanism; spreading means cooperable with said shoes; a spring resistance; and means for positively insuring movement of said shell elements inwardly of the shell during the last portion only of the compression stroke.

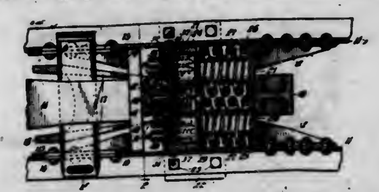
1,456,996. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Mar. 10, 1921. Serial No. 451,237. 5 Claims. (Cl. 64—65.)



1. In an anti-friction bearing of the character described, adapted to be secured in a depending position on the under side of a bolster or the like, the combination with a retaining member having an upper bearing surface and a fixed supporting means; of an anti-friction rolling element having upper and lower concentric bearing surfaces, the upper bearing surface being arranged to roll upon said bearing surface of the retaining member; co-operating means comprising laterally extending guide lugs on said element and co-acting guide ways in said retaining member, said means being operative in all positions of said element to maintain a predetermined relation therebetween and prevent bodily shifting of the element with respect to the retaining member; and means on said element, distinct from said first named means, fulcrumed on said fixed supporting means on said retaining member above the center of mass of said element, whereby the latter is adapted to return to its normal position, under the influence of gravity, after the removal of the actuating pressure.

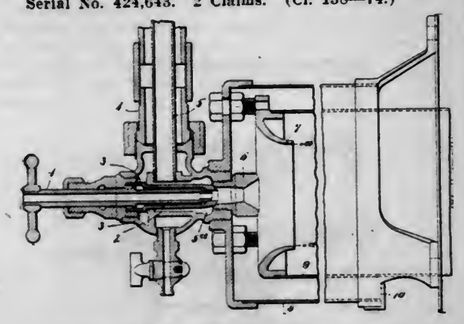
1,456,997. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed May 7, 1921. Serial No. 467,549. 6 Claims. (Cl. 64—65.)

1. In an anti-friction bearing, the combination with a retaining member adapted to be secured to the under side of a body bolster or the like, said member being provided with a downwardly facing bearing surface; of an anti-friction element, having upper and lower rounded bearing surfaces and adapted to roll on said bearing surface of the retaining member, said element being so designed that the center of weight thereof is elevated when rolled to either side of normal position; a roller-track carried by said member; a roller supported on said track; means for supporting said element from a point above its center of weight on said roller; and cooperating means on said member and element arranged to prevent bodily shifting of said element with respect to said member but permitting free rolling movement thereof, said means on said element being independent of said roller.



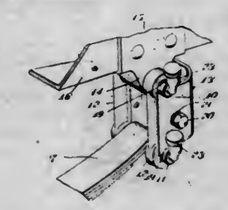
1,456,998. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Sept. 8, 1921. Serial No. 499,202. 8 Claims. (Cl. 213—31.)

1. In a friction shock absorbing mechanism for railway cars, the combination with a shell having internal friction faces; of pressure transmitting means; a spring resistance; and transversely arranged friction elements within the shell, said elements being interposed between said means and said spring resistance, and each of said elements being provided at opposite ends with friction faces adapted to co-act with the friction faces of said shell.



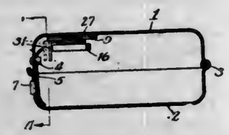
1,456,999. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Sept. 8, 1921. Serial No. 499,208. 5 Claims. (Cl. 213—26.)

1. In a friction shock absorbing mechanism, in combination, a shell; spring elements; friction plates; wedging elements; and a spring follower, said spring elements, friction plates, wedge elements and spring follower being located within the shell, the spring follower being provided with spaced apart forwardly extended wings to receive the wedge elements, the wedge elements comprising a central wedge member and lateral supplemental wedge members, the friction plates comprising intercalated longitudinally movable and longitudinally immovable plates, one of the latter plates being adjacent each of the supplementary wedge members and having an annular wedging face engaging a supplementary wedge



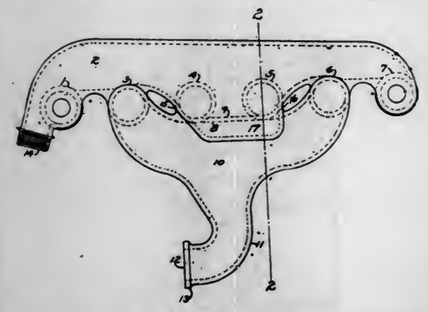
member, the supplementary wedge members moving laterally away from each other upon the spring follower on inward movement of the central wedge member and moving rearwardly with said follower, the said follower being yieldingly held by the spring elements.

1,457,000. HYDROCARBON BURNER. WILLIAM R. PARK, Taunton, Mass.; William R. Park, Jr., executor of said William R. Park, deceased. Filed Nov. 17, 1920. Serial No. 424,643. 2 Claims. (Cl. 158—74.)



2. A hydrocarbon burner comprising a small combining tube and a relatively large combustion tube collinearly arranged with the discharge end of the combining tube terminating at the intake end of the combustion tube, and an intake ring in the intake end of the combustion tube, proportioned to deliver the entrained air in a direction substantially parallel with the axis of the combining tube, the intake ring curving inwardly from the wall of the combustion chamber so that the discharge end of the ring is substantially parallel with said wall and spaced therefrom.

1,457,001. SHACKLE. ROBERT G. PILKINGTON, Chicago, Ill. Filed Nov. 10, 1919. Serial No. 336,800. 12 Claims. (Cl. 267—54.)

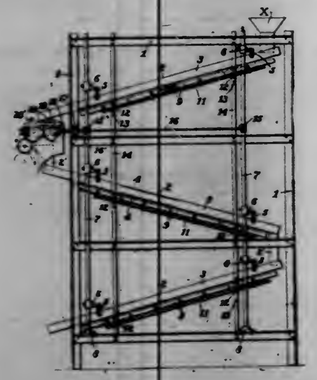


1. A shackle comprising a pair of links formed with registering perforations, weight carrying pins adapted to be inserted in said perforations, said pins each being formed with flat surfaces, a U-shaped retaining member associated with said links, certain edges of the arms of said member bearing against the respective flat surfaces of the pins, and means to secure said member against movement relative to said links, for the purpose described.

1,457,002. RECEPTACLE AND LOCK THEREFOR. GEORGE H. REIMER, Fulton, Ill., assignor to Patent Novelty Company, Fulton, Ill., a Corporation of Illinois. Filed Mar. 11, 1922. Serial No. 542,908. 5 Claims. (Cl. 70—53.)

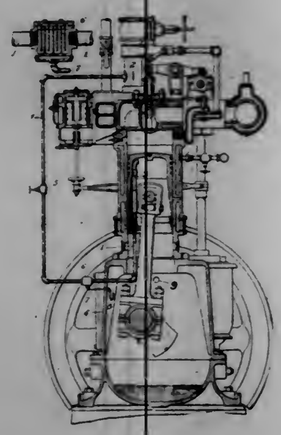
1. In permutation lock mechanism, the combination of a top wall with an opening therein, a plate secured to the inner side of said wall, to close said opening, with indicating means on the outer surface of said plate, a rotatable member forming a controller on the dial thus formed by the outer surface of said plate, and inclosed devices controlled by said rotatable member, said opening being countersunk and said rotatable member being flush with the outer surface of said wall, in combination with other walls combining with said first mentioned wall to form a box, and an automatic latch for said box controlled by said devices, adapted for inward movement toward the axis of said member to unlock the box, together with a push button on the front side of the box and independent of said controller and adapted for operating said latch to open the box.

1,457,003. MANIFOLD FOR GASOLINE ENGINES. PHILIP SAMUELS, Lowell, Mass. Filed June 25, 1920. Serial No. 391,745. 1 Claim. (Cl. 123—122.)



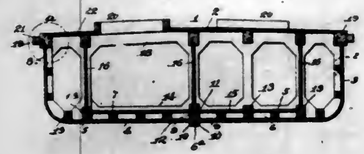
The combination with an explosive engine having an exhaust manifold wholly enclosed, of a Y-shaped intake manifold mounted adjacent to said exhaust manifold and having an opening in the crotch of the Y so positioned that a portion of the exhaust manifold forms a wall for the closure of the opening in and extends to form an offset chamber over the intake manifold.

1,457,004. EDIBLE CEREAL PRODUCT AND PROCESS OF MAKING. GEORGE H. SAUNDERS, Akron, Ohio, assignor of one-half to Addison T. Saunders, Chicopee, Mass. Filed Aug. 26, 1921. Serial No. 495,467. 7 Claims. (Cl. 99—11.)



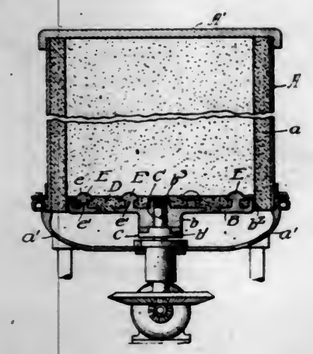
2. As a new article of manufacture, an edible product consisting of a cereal grain having a dry parched surface portion, and its interior body portion steam cooked, said grain being slightly expanded and with its parched por-

tion mechanically cracked, said grain being slightly flattened from its original form.



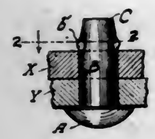
4. The herein described process, consisting in soaking the grain in water, subjecting the same to high heat to cause expansion and quick conversion of the starch before a drying out action of the interior of the grain can take place, and also to cause dry parching of the surface of the grain, mechanically cracking the parched shell and then subjecting the grain to further heat to re-expand and dry it, substantially as described.

1,457,005. COOLING DEVICE FOR INTERNAL-COMBUSTION ENGINES. JAMES B. SIMLER, Cleveland, Ohio, assignor to The Bruce Macbeth Engine Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 14, 1920. Serial No. 396,177. 2 Claims. (Cl. 123—171.)



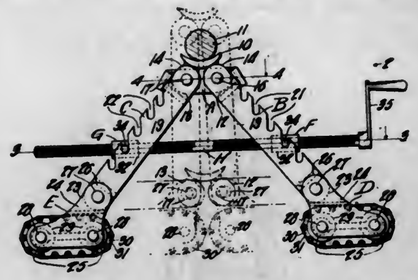
1. In an internal combustion engine, the combination of a crank case; a cylinder; a reciprocating piston in said cylinder and having a hollow chamber communicating with said crank case; and means extending into said chamber for establishing communication between the opposite sides of the piston to directly displace the gaseous content of said chamber by exhaustion; the interior of said crank case being directly connected with the atmosphere whereby a flow of atmospheric air is induced and caused to compensate for such displacement.

1,457,006. REENFORCED CONCRETE VESSEL. JOHN T. SIMPSON, Newark, N. J. Filed Jan. 2, 1918. Serial No. 209,817. 6 Claims. (Cl. 114—65.)



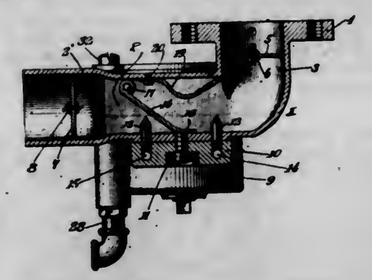
1. A vessel comprising field molded reenforced concrete field cast elements, and shop cast reenforced concrete plates of relatively small size, said members and plates being united to form a monolithic structure said plates forming the skin surface of the vessel, the exterior keel of the vessel being formed on the shop cast plates.

1,457,007. PEELING MACHINE. CHARLES F. SMITH, Chicago, Ill. Filed Apr. 14, 1923. Serial No. 631,997. 10 Claims. (Cl. 146—49.)



1. A peeling machine comprising a receptacle for articles to be peeled and a revoluble disk having an abrasive surface and having a relatively non-abrasive part extending above said abrasive surface and adapted to agitate the articles to be peeled.

1,457,008. SELF-ANCHORING RIVET. REUBEN STANLEY SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Oct. 20, 1919. Serial No. 331,994. 14 Claims. (Cl. 85—37.)

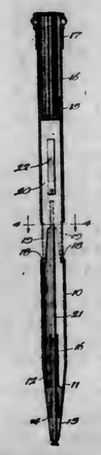


1. A rivet provided with means for preliminary anchoring or holding it in position pending the riveting operation, such means comprising an enlargement on the shank spaced from the head.

1,457,009. LIFTING APPARATUS. ADOLPH E. STARIK, Lakewood, Ohio. Filed Dec. 15, 1921. Serial No. 522,480. 10 Claims. (Cl. 254—122.)

1. An apparatus of the character described, comprising a head, a pair of legs pivoted on said head, a shoe pivoted on the lower end of each of said legs and provided with movable ground engaging means, and means for moving said legs on said pivot.

1,457,010. CARBURETOR. FREDERICK R. SUNDERMAN, Detroit, Mich., assignor to Sunderman Corporation, Newburgh, N. Y., a Corporation of New York. Filed Jan. 17, 1917. Serial No. 142,799. 3 Claims. (Cl. 261—41.)

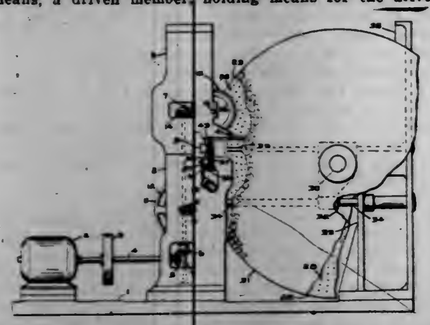


1. In a carburetor, the combination of a substantially rectangular horizontal passageway, a hydrocarbon nozzle discharging within the passageway at a point substantially above the lower wall thereof, a second nozzle discharging within the passageway at a point further inward than the first, a valve plate in the passageway hinged at the upper wall of the passageway and movable upwardly and inwardly and adapted to be acted upon by suction to be swung upwardly and inwardly by and according to the suction of an engine, said plate, when in normal position and when slightly lifted from normal position, extending inclined downwardly and inwardly from its hinge across the passageway toward the second nozzle and beyond the first to such a distance that its free end is sufficiently below the discharge opening of said first nozzle to substantially check the discharge of said first nozzle while the suction on the second nozzle is increased by said plate due to the latter's substantial throttling action on the air, whereby strong suction on the inner nozzle is attained at slow speeds and the discharge of the outer nozzle substantially retarded until the suction on the plate has been increased as at higher speeds.

2. In a carburetor, the combination of a substantially rectangular horizontal passageway, a hydrocarbon nozzle discharging within the passageway at a point substantially above the lower wall thereof, a second nozzle discharging within the passageway at a point further inward than the first, a valve plate in the passageway hinged at the upper wall of the passageway and movable upwardly and inwardly and adapted to be acted upon by suction to be swung upwardly and inwardly by and according to the suction of an engine, said plate, when in normal position, extending inclined downwardly and inwardly from its hinge across the passageway toward the second or inner nozzle and to the lower wall of the passageway and substantially closing the passageway to prevent said first or outer nozzle being brought into operation, and to throw the full suction of the engine on the second or inner nozzle by substantially excluding the admission of air.

3. In a carburetor, the combination of a passageway for hydrocarbon fuel, a nozzle discharging within the passageway, an air admission valve plate for controlling the flow of air to the nozzle, said plate hinged at one end to swing within the passageway and adapted to be acted upon by the suction of an engine to be lifted upwardly and inwardly according to the suction, and extending across the passageway a sufficient distance to regulate the supply of air past the nozzle according to the suction, and having its free end bent upwardly from the general direction of the body of the plate, said passageway being provided with an upper surface which is in general convexed and located above the free end of said plate to co-operate with said bent free end.

1,457,011. PENCIL. HORACE H. WELCH, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 1, 1920. Serial No. 407,462. 4 Claims. (Cl. 120—19.)

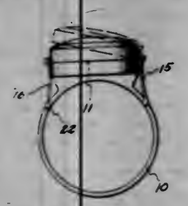


1. A pencil comprising a barrel having a lead receiving tube and tip at one end, the said barrel having diametrically disposed longitudinally extending slots, formed in the sides thereof, the edges of said slots being turned inwardly to form guides, a feed bar slidably mounted in said barrel, and having its edges projecting through said slots between said guides, the said feed bar having a push rod secured thereto slidable in said lead tube, and abutting the end of a lead in said lead tube, and a spring secured to said feed bar and having frictional engagement with the inner walls of said barrel.

1,457,012. MOTION-PICTURE APPARATUS. EDSON G. WHITMORE, Point Place, Ohio, assignor to The Pictures Development Co., Toledo, Ohio, a Corporation of Ohio. Filed Jan. 27, 1919. Serial No. 273,342. 36 Claims. (Cl. 88—18.8.)

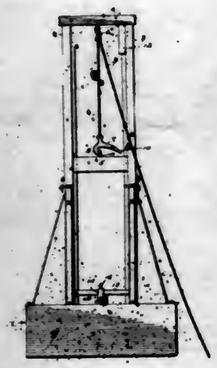
1. A rotary driving member having on opposite sides

thereof guide means, rock arms engaged by the guide means, a driven member, holding means for the driven



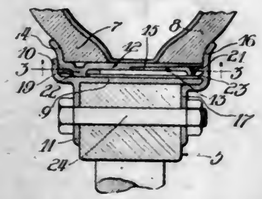
member actuable by one rock arm, and actuating means for the driven member actuable by the other rock arm.

1,457,013. VEHICLE WHEEL. WILLIAM G. WILSON, Bridgeport, Conn. Filed Sept. 25, 1922. Serial No. 590,396. 4 Claims. (Cl. 301—5.)



2. In an automobile wheel, a flanged metallic hub having at spaced intervals bolts which connect the flanged portions of the hub, reenforcing serpentine shaped metallic pieces whose inner extremities are anchored to said bolts, caps welded to the outer ends of said pieces, and an internal rubber structure having a hub portion, a tread and continuous ring-like body between the hub and tread, and spokes whose inner ends connect with the hub and whose outer ends merge into the inner circumference of the tread, said rubber structure surrounding said bolts and also surrounding said reenforcing serpentine shaped pieces in the formation of the spokes.

1,457,014. WATCH RING. HENRY ZWEIG and ISIDORE SCHNEIDERMAN, Brooklyn, N. Y., assignors of one-half to Frank Ross and one-half to Benni Bretan, both of Brooklyn, N. Y. Filed Dec. 2, 1922. Serial No. 604,461. 3 Claims. (Cl. 58—88.)



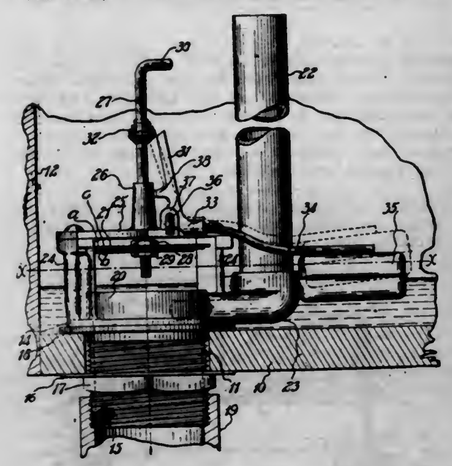
3. A ring having a watch case, a winding stem therefor, a handle hinged to said stem, and side ears on the free end of said handle adapted to engage said ring therebetween to prevent rotation of said handle.

1,457,015. METHOD FOR TESTING BITUMINOUS PAVING MIXTURES. FRANK S. BESSON, Washington, D. C. Filed Aug. 5, 1921. Serial No. 490,172. 3 Claims. (Cl. 265—13.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A method for testing bituminous paving mixtures consisting in selecting paving specimen of known service value and composition, forming it into a block of predetermined form and weight, subjecting the block to the impact of an element actuated by a body falling through a given distance, recording the number of blows required to cause the element to become imbedded in the block or to pulverize or crack it, similarly treating a like formed block of original mixture and comparing the number and effect of the blows on the latter with those on the first mentioned block to determine the probable service value of the original mixture.

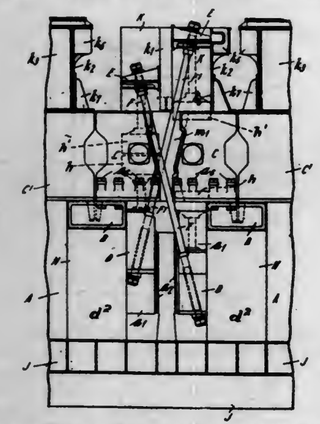
1,457,016. DEMOUNTABLE RIM FOR WHEELS. WILLIAM L. BRANSTOOL, Chicago, Ill. Filed Nov. 13, 1922. Serial No. 600,508. 3 Claims. (Cl. 301—35.)

1. A demountable rim for the purpose specified comprising in combination a pair of telescoping ring members, one of which is provided with an outstanding flange for engagement by the tire base, and is also provided on its inner surface with a circumferential recessed portion establishing a shoulder, the other ring member being adapted to seat into said recessed portion when the two sections are telescoped together, and said member being provided with an outstanding flange adapted to engage the other tire base portion, an inwardly projecting portion on the last mentioned ring member adapted to engage the felly band when in place on the wheel for the purpose of accurately spacing the demountable rim thereon, and a series of hooks for locking the two ring members together, a pivotal mounting for each hook on the inner surface of the first mentioned ring member, comprising a semi-perforation of said ring member extending through the hook and upset to hold the hook in place, a lug on the other ring member suitably positioned for engagement by each of said hooks, and comprising a semi-perforation of said ring member, and a shoe on the base portion of each hook offset with respect to its pivotal point and adapted to engage a part of the felly band when the rim



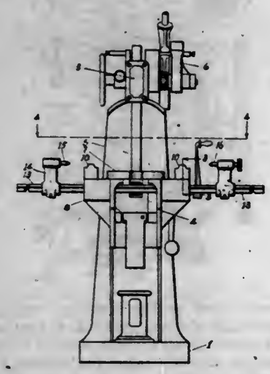
is set thereon to thus prevent turning of the hook when the rim is in place on the wheel, substantially as described.

1,457,017. KEYHOLE GUARD. HARVEY BROWN, Buffalo, N. Y., assignor of one-half to Aloysius H. Schaefer, Buffalo, N. Y. Filed Sept. 15, 1921. Serial No. 500,739. 2 Claims. (Cl. 70—8.)



1. A guard for key-holes having escutcheons, comprising a guard portion and integral springy arms at one end of said guard portion having outer free ends and lock prongs extending laterally therefrom in different planes, said prongs being adapted to engage opposite sides of an escutcheon at marginal portions of its key-hole.

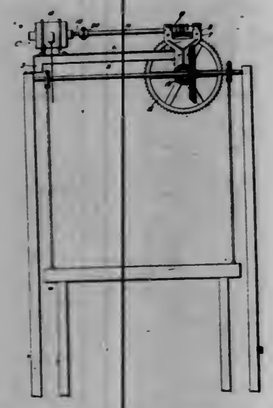
1,457,018. OUTLET VALVE FOR WATER-CLOSET TANKS. ALEXANDER A. CARSON, Braintree, Mass. Filed May 2, 1919. Serial No. 294,181. 1 Claim. (Cl. 4—5.)



The combination of a tank, an outlet therefrom for supplying water for the siphonic discharge of a water-closet, a valve associated with said outlet and having a central shouldered stem by which it may be bodily raised, a stationary guide for loosely engaging and guiding said stem as the valve is moved toward and away from said outlet, a pivoted latch having only a single abutment face for engaging only said shoulder on the stem and locking said valve in fully open or raised position, said latch having a finger or stop to engage said stationary guide and prevent said latch from bearing against said stem when said valve is closed, and a float connected to said latch to cause the same to engage and release the shoulder on the stem of said valve, said float and latch being rigidly connected and so related, and said float being so located in respect of said outlet, that said latch will not release said valve from its fully open or raised position until after the level of the water in the tank has been lowered to a plane at which the flow of water through said outlet is insufficient to fill the same or to maintain said siphonic discharge, whereby a diminished volume of water is delivered through such outlet to refill the bowl before the valve is released and closed.

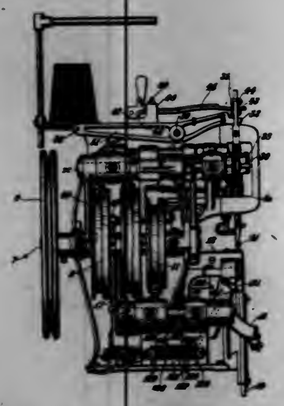
1,457,019. INTERNAL-COMBUSTION ENGINE. GEORGE J. CARTER, Bromborough, and LAUCHLAN GRANT MCFARLANE, Liverpool, England. Filed Oct. 22, 1918. Serial No. 259,252. 4 Claims. (Cl. 121—100.)

1. In a multiple cylinder marine type engine, a main cylinder casting including a pair of vertical cylinders, a pair of oppositely moving pistons in each cylinder, a crank shaft beneath said cylinder casting to which the lower pistons are connected, upper and lower pairs of cross heads connected respectively to the upper and lower pistons, upper and lower pairs of guides for said cross heads, two pairs of obliquely crossed rods connecting the upper cross heads of one cylinder with the lower cross heads of the other cylinder respectively, the outer guides for the upper cross heads being removable and the cylinder casting having clearance recesses for the cross rods, said recesses being provided with gaps whereby said crossed rods may be withdrawn laterally without dismantling the working parts.



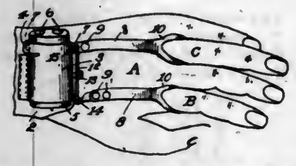
1,457,020. MANDREL AND STRAIGHTENING PRESS. JAMES G. COLLINS, Kalamazoo, Mich., assignor to Atlas Press Company, Kalamazoo, Mich. Filed Nov. 6, 1919. Serial No. 336,021. 1 Claim. (Cl. 153—48.)

In a structure of the class described, the combination of a base, a standard, a ram and actuating means therefor, a work table having lateral projections at its sides, such projections having aligned grooves therein in the



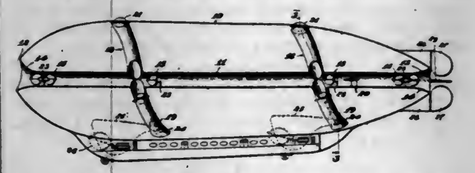
plane of the ram, work supporting blocks adjustable in said grooves, a supporting bar disposed horizontally through the table at the rear of said ram, and arms provided with centering pivots adjustably mounted on said supporting bar.

1,457,021. ELEVATOR HOIST. HAROLD ALTON DAVIS and PAUL SILIS NEWCOMER, Fostoria, Ohio. Filed Apr. 8, 1922. Serial No. 550,880. 1 Claim. (Cl. 74—36.)



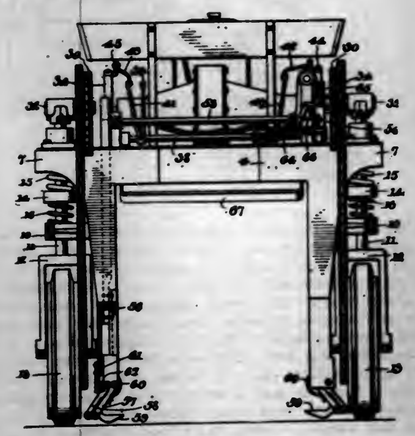
In combination with a beam, substantially Y-shaped brackets mounted thereon and at the opposite sides thereof, a shaft journaled between the upper branches of the brackets and carrying a worm which is located between the branches, a shaft journaled in the lower portions of the brackets and a worm wheel mounted upon the last mentioned shaft and having a peripheral portion meshing with the worm.

1,457,022. SHOE-SEWING MACHINE. STEPHEN A. DOBYNE, St. Louis, Mo., assignor to Champion Shoe Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 15, 1918. Serial No. 262,686. 3 Claims. (Cl. 112—41.)



1. In a wax thread sewing machine having a frame and thread handling devices thereon, a heating system, comprising, heating jets for said devices, a gas chest accessibly located on said frame and having a gas connection, gas pipes leading from said chest to said several jets, and valves on said chest adapted to independently control at the chest the admission of gas from said chest to said pipes.

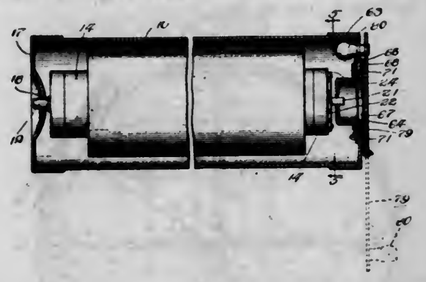
1,457,023. AUTOMOBILE HAND SIGNALING DEVICE. ALAN R. FERGUSSON, Buffalo, N. Y. Filed Oct. 5, 1920. Serial No. 414,927. 10 Claims. (Cl. 177—339.)



8. In a signaling device, a flexible wrist band, a flexible holder adapted to receive a flashlight having a plurality of lights and a plurality of switches, a tension member attached to said holder and engaging a switch, a lever having a part thereof engaging a switch, a second tension member connected to said lever, said tension members having means for connection with fingers of the hand, whereby upon movement of the hand in a predetermined manner said lights will be actuated.

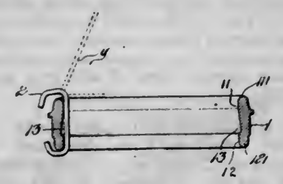
1,457,024. CONTROL FOR AIRCRAFT AND THE LIKE. HENRY M. FRANZEN, Los Angeles, Calif. Filed June 29, 1920. Serial No. 392,640. 3 Claims. (Cl. 244—10.)

1. In an air-craft, a gas container having an air duct opening at one end thru the wall of the container and leading to and opening thru the rear end thereof, means for inducing a current of air thru said duct, a plurality of stabilizing fins on the rear portion of said container adjacent the duct opening, and a rudder attached to each of said stabilizing fins projecting into the current of air passing thru said duct.



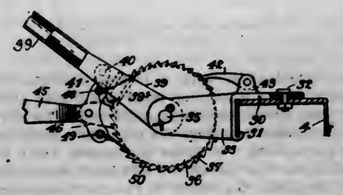
1,457,025. LUMBER CARRIER. CARL F. GERLINGER, Dallas, Oreg. Filed Mar. 30, 1922. Serial No. 548,177. 6 Claims. (Cl. 212—141.)

5. A lumber carrier comprising a frame, a load lifting means mounted therein, means for transmitting power to the load lifting means comprising a clutch, means for moving the clutch to neutral position at a time when the load lifting means has moved to a predetermined extent



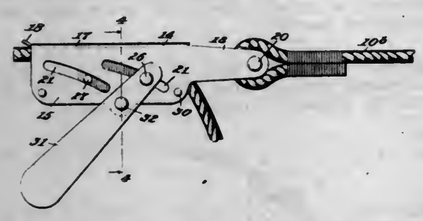
in either direction, a spring mounted to yield if too great a strain is applied to the load lifting means, and means whereby the yielding of the spring throws the clutch to neutral position.

1,457,026. MAP CASE. WILLIAM A. HANSES, Chicago, Ill., assignor to Rand, McNally & Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 27, 1922. Serial No. 532,102. 4 Claims. (Cl. 40—85.)



1. In combination with a spring roller, a support comprising a frame, means on the frame for rotatably supporting the pivot pin of the roller which moves with the roller, adjustable means on the frame for supporting the spring holding pin of the roller, and means whereby said last named means may be rotated in either direction for tension adjustment of the spring of the roller.

1,457,027. TWISTER RING. JOHN T. HANTON, Putnam, Conn. Filed Sept. 5, 1922. Serial No. 586,106. 2 Claims. (Cl. 118—59.)

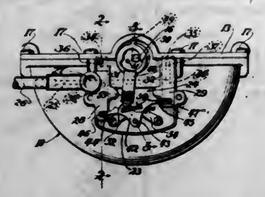


2. A twister ring or the like formed with an interior annular lubricant-containing recess, tapering vertically toward the upper edge of the ring, the said recess having a smooth, continuous wall merging without break or shoulder with a smooth adjoining surface next toward the said edge.

1,457,028. AUTO TABLE. KELLY B. HARVEY, New York, N. Y. Filed Oct. 26, 1921. Serial No. 510,523. 2 Claims. (Cl. 254—88.)

1. The combination with a structural bar having a top plate and a depending flange, of an angle plate bracket for a hoisting device consisting of a flat top plate arranged to extend along the top of said bar, and an upright plate depending from the front longitudinal edge of the top plate which has its lower edge extending rearward and upward to hook around the lower edge of the bar flange with the top plate resting on top of the bar, means for directly securing the top plate to the structural bar, said depending plate being provided with bars extending forward at each end that are arranged to act as journal bearings for a shaft that carries a winding drum and a lever.

1,457,029. LOCKING DEVICE. GRANT HAZLETT and CHARLES H. MITCHELL, Binghamton, N. Y. Filed Mar. 17, 1922. Serial No. 544,676. 4 Claims. (Cl. 24—136.)



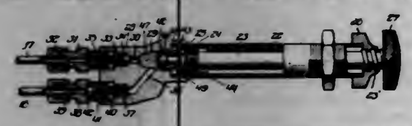
1. In a device of the class described, a housing having a multiplicity of slots in opposite walls thereof, the slots in the same wall being eccentric but of substantially the same curvature, there being a slot in each wall similar to and opposite each slot in the other of said walls, a pressure member within said housing and movable in the slots thereof into and out of contact with the object to be retained.

1,457,030. METHOD OF TREATING SLUDGE ACIDS AND SEPARATED SLUDGE ACIDS. INGENUIN HECHENBLEIKNER and FRANK J. BARTHOLOMEW, Charlotte, N. C., assignors to Chemical Construction Company, New York, N. Y., a Corporation of North Carolina. Filed June 15, 1922. Serial No. 568,629. 15 Claims. (Cl. 23—1.)

14. In the method of treating sludge acids or separated sludge acids, the steps which consist in first internally heating the sludge acid or separated sludge acid to effect concentration thereof to an intermediate strength while retaining the carbon impurities in a state of suspension therein, and in then diluting the same for effecting separation of the impurities and removing the impurities therefrom.

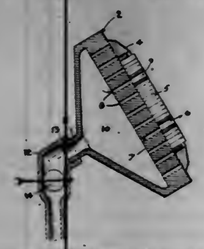
1,457,031. MOTOR FOR WINDSHIELD WIPERS. EDWARD J. HUDSON, Glencoe, Ill. Filed May 11, 1922. Serial No. 560,005. 7 Claims. (Cl. 123—97.)

1. In a device of the class described the combination with an arcuate cylinder, a rock shaft extending across the upper portion thereof, and a piston carried by said rock shaft and working within the cylinder, and there being a suction passage adjacent to said cylinder, of valve mechanism for controlling communication between said suction passage and each end of the cylinder alternately, including a port reaching through the wall of the cylinder to each end thereof, a vertically movable slide valve slidably mounted on the wall of the cylinder adjacent



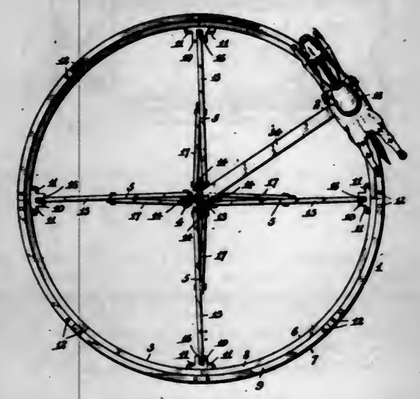
to each said port, the sliding face of each said valve being cut away to provide a recess therein, a balance lever pivotally mounted between the slide valves, an operative connection from each end of the balance lever to the adjacent slide valve, a toggle pin having its upper end pivotally mounted with respect to the cylinder and provided with an opening, an eccentric pin on the rock shaft working in said opening and adapted to engage the sides thereof to swing the toggle pin back and forth, there being a stationary abutment adjacent to the lower end of the toggle pin and immediately above the central portion of the balance lever, and a spring pressed ball in the lower end of the toggle pin adapted to travel over said abutment and into contact with the balance lever alternately at opposite sides of its pivotal point, substantially as described.

1,457,032. BUCKLE. EMIL L. JOHNSON and OLOF LUNDSTEN, Attleboro, Mass. Filed Nov. 12, 1920. Serial No. 423,558. 1 Claim. (Cl. 24—191.)



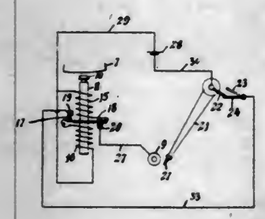
A buckle comprising in combination a clamping member formed of a sheet-metal plate with one edge rolled under into tubular form providing an integral clamping edge, said plate being provided with integral laterally-extending pivot lugs and a body member having portions of its side walls folded inwardly forming stock of a thickness double that of the body and said lugs bearing in both the inward fold and also the body member providing a pivotal mounting in said double side walls.

1,457,033. PRIMING DEVICE. CLARENCE H. JORGENSEN and PETER J. JORGENSEN, Waupaca, Wis., assignors to Jorgensen Mannfacturing Company, Waupaca, Wis., a Corporation of Wisconsin. Filed Feb. 7, 1921. Serial No. 442,923. 2 Claims. (Cl. 103—154.)



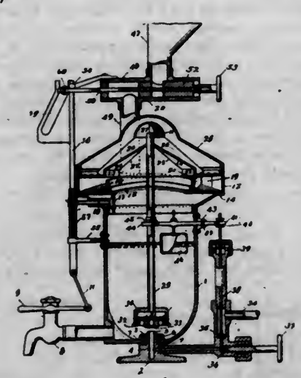
1. In a pump having a fluid passage therein, a piston having a ball headed stud extended therefrom, a valve member having a ball seat engaging the ball head on the stud in such manner as to permit limited play therebetween, the valve member serving to close the fluid passage in one position of the piston.

1,457,034. PRINTING PRESS. UTAKICHI KAWASAKI, San Francisco, Calif. Filed Nov. 17, 1921. Serial No. 515,752. 2 Claims. (Cl. 101—297.)



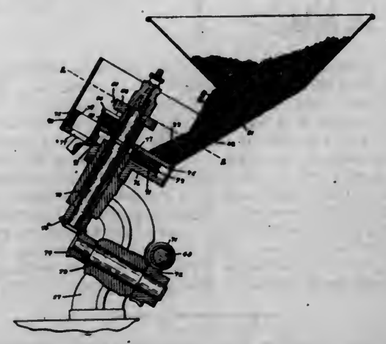
1. The combination with a platen and chase carrying element of a printing press wherein said elements are moved rapidly towards and away from one another, of means providing for the discharge of air from the chase carrying element onto the paper which has been printed, and the holding of the paper against removal from the platen by the action of the chase carrying element, immediately when said elements move away from one another.

1,457,035. ROUNDABOUT. JOSEPH E. KOTLIK, Hamburg, N. Y. Filed May 8, 1920. Serial No. 379,809. 10 Claims. (Cl. 46—27.)



9. A roundabout comprising a circular track having two traction surfaces in different elevations, and a traveling element having two spaced pairs of wheels adapted for traction along said traction surfaces, the wheels of each pair being of different diameters, said traveling element including a carrying element mounted for rocking movement, and connecting rods between said carrying element and the large traction wheel of each pair of wheels.

1,457,036. AUTOMATIC STOP AND START FOR PHONOGRAPHS. PAUL M. KREE, New York, N. Y., and FERNAND DAUTEUIL, Dumont, N. J. Filed Aug. 25, 1922. Serial No. 584,294. 4 Claims. (Cl. 192—123.)

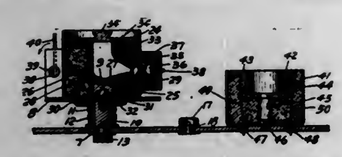


1. In combination with a talking machine having a turn-table, brake means for same and a tone arm having reproducing means, electromagnetic means for moving the brake mechanism to engage the turn-table, electromagnetic means for moving the brake mechanism away from the turn-table, an open circuit for said electromagnetic means, means for closing the circuit to the electromagnetic means for moving the brake away from the turn-table, operable by the outward movement of the tone arm, and means adapted to be provided on a record to be engaged by the reproducing means of the tone arm, to close the circuit to the electromagnetic means for applying the brake to the turn table.

1,457,037. APPARATUS FOR AND PROCESS OF AUTOMATICALLY PERCOLATING A FRESH QUANTITY OF COFFEE FOR EACH ONE DRAWN FROM AN URN. VERNON C. KREUTZ, Portland, Oreg., assignor of one-half to Edwin B. Wheat, Portland, Oreg. Filed Aug. 11, 1921. Serial No. 491,475. 10 Claims. (Cl. 53—3.)

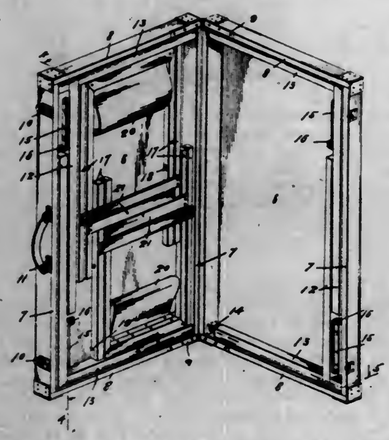
9. The combination of a coffee urn mounted on a percolating pedestal with a sliding percolating stem having a percolating valve at its lower end and having a float within said urn adapted to raise said percolating valve from its seat on the bottom of said urn.

1,457,038. MACHINE FOR MEASURING AND DELIVERING LOOSE MERCHANDISE. JOHN D. LANE, Boston, and JAMES MACNAUGHTAN, Brookline, Mass., assignors, by mesne assignments, to Gordan Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed May 4, 1921. Serial No. 466,839. 4 Claims. (Cl. 221—108.)



1. A merchandise-measuring and delivering machine comprising a fixed hopper, including a continuous annular confining wall having an inlet in one side, and a merchandise-supporting bottom having a delivery port out of alinement with the said inlet; a circular turret closely fitting and rotatable in said confining wall, and having a circular series of open-ended tubular receivers, whose lower ends are in sliding contact with, and closed by the hopper bottom, the receivers being caused by the rotation of the turret to revolve in a circular path, and register singly and successively with said port, to permit the discharge of their contents, a gravity feed chute outside the hopper, and communicating with said inlet, and adapted to deliver, upon a portion of the turret and in the path of said receivers, a loose bank of merchandise, the external form of which is determined by the angle of repose of the merchandise, so that the merchandise forming said bank is free from crushing pressure from the weight of the merchandise in the chute, and is adapted to flow loosely into receivers passing under the bank, the arrangement being such that each receiver is charged from said bank when in its non-registering position.

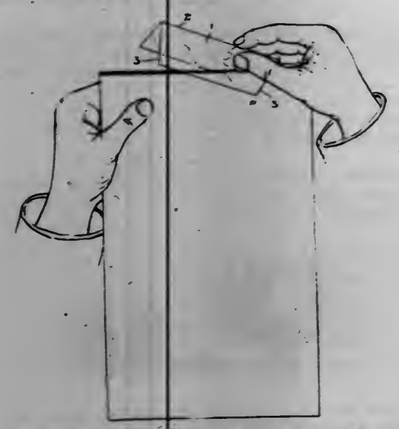
1,457,039. FASTENING DEVICE. EDWARD G. LEHMAN, Canton, Ohio. Filed Apr. 25, 1921. Serial No. 464,316. 1 Claim. (Cl. 85—32.)



In a device of the character described, a sheet formed with an aperture adapted to engage a screw-threaded bolt or the like, the edge of such aperture being displaced to one side of the plane of the sheet so as to lie on a helix corresponding with the thread on such bolt, and being bent to present one corner of such edge for engagement with such thread.

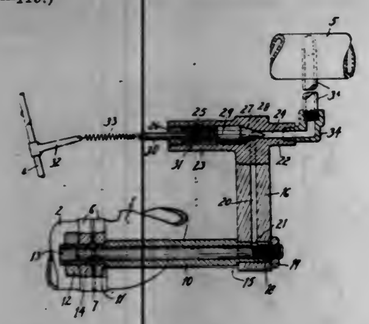
1,457,040. CASTING MACHINE. JOHN A. MCMANUS, Lynn, Mass. Filed Oct. 11, 1919. Serial No. 330,151. 6 Claims. (Cl. 22—65.)

1. In a casting machine, the combination of an electrical resistance furnace deriving its heat by means of current passed through an electrical resistance wire in operative relation with said furnace, means for delivering electrical energy to said resistance wire, means for controlling the amount of electrical energy supplied to said furnace, and a means for transferring fused material from the furnace to the mould under the action of centrifugal force.



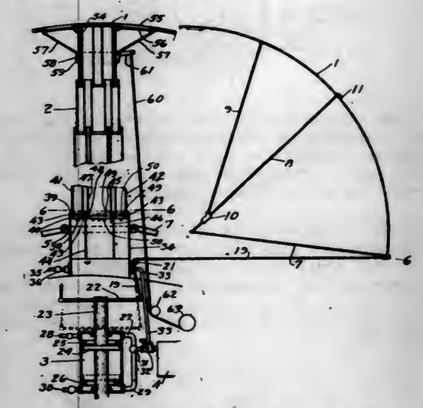
1,457,041. FOLDING CAMP TABLE AND STOOL SET. BENJAMIN F. OREAR, Minneapolis, Minn. Filed June 30, 1921. Serial No. 481,537. 1 Claim. (Cl. 190—11.)

A folding table comprising two top sections adapted to be folded, the one upon the other, to afford a closed con-



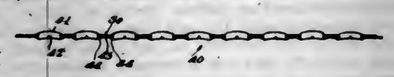
tainer, a pair of legs pivoted in the outer corners of each top section for folding movements therein, the free end of each leg, when folded, terminating short from the opposite end of the top section in which it is pivoted, and a toggle link between the end of each leg and the adjacent end of the respective top section, said toggle links connecting the legs to the top sections and arranged, when straightened, to hold the legs in operative positions and, when buckled and the legs folded, to extend between the free end of the legs and the adjacent ends of the top sections.

1,457,042. PAPER CLIP. CHARLES EDWARD POTTER, Toronto, Ontario, Canada. Filed Oct. 6, 1922. Serial No. 592,826. 3 Claims. (Cl. 24—255.)



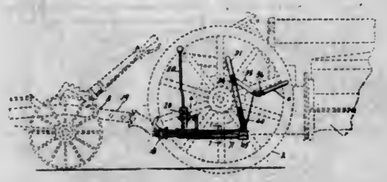
1. A paper clip, comprising, a strip of thin flexible resilient material folded longitudinally and permanently creased to receive and grip the paper sheets.

1,457,043. HOT-AIR SUPPLY TO INTAKE MANIFOLDS. FREDERICK W. SCHRAMM, Springfield, Mass. Filed Aug. 3, 1922. Serial No. 579,352. 12 Claims. (Cl. 123—119.)



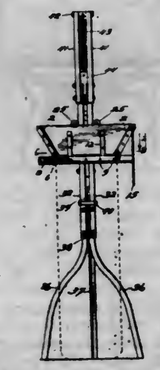
11. The combination, in an attachment of the class described, with laterally-extending perforated flanges on adjacent ends of a carburetor and an intake manifold, a centrally-perforated and longitudinally-slotted gasket between said flanges, with the perforation therein registering with the passages in said carburetor and manifold, and the slots therein registering with the perforations in said flanges, and an exhaust pipe, of tubes the rear terminal portions of which are introduced into the perforations in said flanges and pass through said slots, and have orifices therein to open into said slots, said tubes being shouldered to abut the manifold flange, and said terminal portions being externally screw-threaded, nuts on the screw-threaded part behind the carburetor flange, a distributor mounted on the forward terminal portions of said tubes, the latter being shouldered to form abutments for said distributor behind, and internally screw-threaded at their forward ends, adjusting screws in said ends, nuts on said screws to abut the front side of said distributor, said tubes having therein orifices adjacent to said screws, and said distributor having therein passages which open into said last-named orifices, and other passages which open into said first-named passages, a tubular connection leading from one of said last-named passages to said exhaust pipe outside of the same, a valve arranged in said distributor to open and close the passage therein into which said tubular connection opens, and operating means for said valve.

1,457,044. SAFETY DEVICE FOR FLYING MACHINES. JOHN C. SHERAY, Seattle, Wash. Filed Dec. 16, 1922. Serial No. 607,269. 5 Claims. (Cl. 244—21.)



1. A safety device of the class described embodying a large bag which when opened will conform to a little more than half of a sphere, said bag having its outer edge secured to a large ring that is attached to the top of an airplane, and its inner edge attached to a telescoping member in the center; means for holding the folded bag downward; a cylinder below the telescoping member with suitable attachments for releasing the means that holds the bag downward when air is admitted to the cylinder; a valve within easy access of the aviator by which air may be admitted to the cylinder and telescoping member; and a ventilator in the bag around the telescoping member with means for regulating it from the cock-pit.

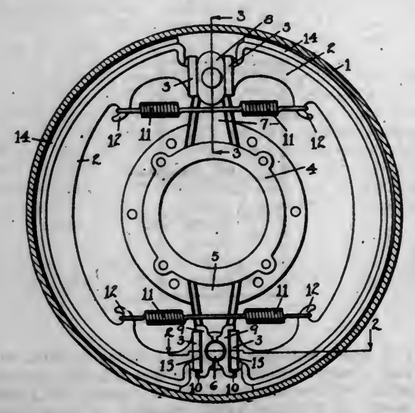
1,457,045. APRON FOR PHOTOGRAPHIC DEVELOPING EQUIPMENT. JOSEPH W. C. SHIPMAN, Los Angeles, Calif. Filed June 17, 1919. Serial No. 305,698. 4 Claims. (Cl. 95—100.)



1. In an apron for separating the successive turns of a roll of photographic material upon a reel, comprising: axially disposed rods of proper length to accommodate the width of said photographic material to be wound thereupon; blocks of proper thickness to separate said turns mounted upon the ends of said rods; and hinged links connecting said blocks at right angles to said rods.

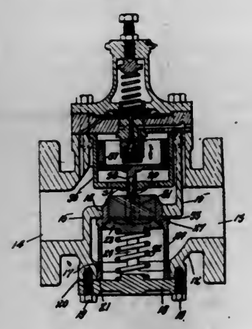
1,457,046. HITCH AND CLUTCH RELEASE DEVICE FOR TRACTORS. WILLIAM P. STOUGH, Sherwood, Mich. Filed June 17, 1922. Serial No. 568,027. 11 Claims. (Cl. 180—14.)

1. In a device of the class described, the combination with a tractor provided with a clutch control lever, of a draft frame mounted on said tractor and provided with a rearwardly facing curved way at its rear end and with forwardly projecting arms connected by a downwardly offset cross piece, a draw bar pivotally mounted on said cross piece; a slide carriage mounted on said way and pivotally connected to said draw bar, a draft lever pivoted on said carriage and adapted to be connected to an implement to be drawn, a draft spring connected to said draft lever, operating connections for said draft lever to said clutch control means, an adjusting means for said carriage comprising a segment having a series of teeth at its lower edge, an adjusting lever pivotally and laterally adjustable on said segment to directly engage said teeth, and a link connecting said carriage to said lever adjacent its point of engagement with said segment teeth.



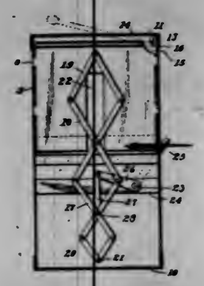
1,457,047. SACK HOLDER. EDWIN TAYLOR, Edwardsville, Kans. Filed Jan. 9, 1922. Serial No. 527,890. 6 Claims. (Cl. 83—26.)

1. A sack holder comprising a hopper having back and end walls, a pair of horizontal prong-equipped bars pivotally suspended from the hopper and a wedge plate to be forced between and against said bars to swing them outwardly to dispose their prongs in position to impale and form a suspension support for a sack.



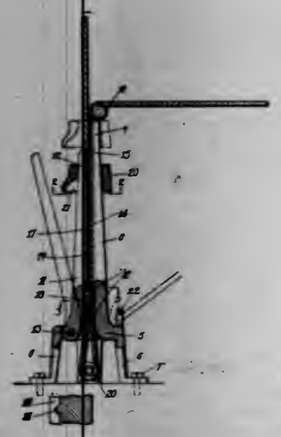
1,457,048. BRAKE. GEORGE J. THOMAS, Lansing, Mich. Filed Jan. 20, 1922. Serial No. 530,541. 2 Claims. (Cl. 188—79.)

2. The combination of a drum, segmental shoes having rests at each end, a shoe supporting pin, an actuating cam; pivot blocks mounted on said pin and having seats adapted to receive the rests at one end of said shoes with the rests at the other end coacting with said



actuating cam, and springs connecting the ends of said shoes whereby they are yieldingly held upon their pivot blocks and against said actuating cam.

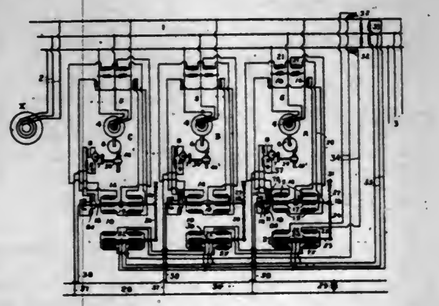
1,457,049. PRESSURE-REDUCING VALVE. EDWARD WEBB, Reading, Mass., assignor of one-half to Julian D'Este Company, Charlestown, Mass., a Corporation of Maine. Filed Mar. 16, 1922. Serial No. 544,100. 3 Claims. (Cl. 50—11.)



1. A pressure-reducing valve comprising, in combination, a valve body having an angular internal bridge provided with a circular opening, the body being provided with a larger circular opening coaxial with and spaced from the bridge opening; a cap detachably secured to the body and forming an imperforate closure for the body opening; a cage including an outer ring seated on the cap and having a sliding fit in the body opening, and an inner ring provided with a shoulder seated on the bridge, a valve disc seat, an external annular face having a sliding fit in the bridge opening, and an internal annular guiding face forming a valve disc guide, said rings being connected and spaced apart by rigid bars; a valve disc formed to close on said seat, and having a winged stem slidable in said guiding face; and a closing spring interposed between the cap and the valve disc, the cap constituting a spring abutment and a clamp, releasably confining the cage shoulder against the bridge, the cage being guided to and from its operative position by the walls of the body and bridge openings.

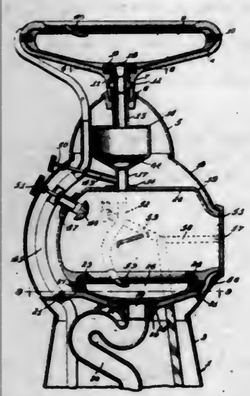
1,457,050. SINGLE-MATCH DISPENSER. ALBERT ABBATICCHIO, Latrobe, Pa. Filed June 17, 1922. Serial No. 568,982. 7 Claims. (Cl. 206—23.)

1. A match dispenser including a casing provided with a slot, a match tilting arm arranged adjacent said slot, a match delivery slide provided with means for holding a match, a lazy-tong frame composed of cross levers and terminal links and connected with the slide, and operating mechanism pivotally connected with the lazy-tong frame for moving the slide toward said slot whereby to contact the match with said projecting arm to tilt the match and cause the same to project through the slot.



1,457,051. ROPE CLAMP. CHARLES BEECKEN, New York, N. Y. Filed June 14, 1922. Serial No. 568,213. 8 Claims. (Cl. 24—136.)

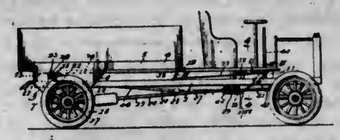
1. A stationary clamping device of the class described comprising a base having a vertical standard, a clamping arm pivotally mounted on the base and movable with respect to the standard, means disposed on the inner faces of the standard and clamping arm for crimping a rope and a retaining element for said arm and standard.



1,457,052. SYSTEM OF ELECTRICAL DISTRIBUTION. EZEKIEL B. BIRCH, Pittsburgh, Pa. Filed June 25, 1921. Serial No. 480,344. 23 Claims. (Cl. 171—312.)

1. In an electric distribution system, service lines, main and auxiliary means for supplying current to said lines, means controlled by the total load on the said lines for varying the output of the said auxiliary means,

and means controlled by the output of the auxiliary means for controlling the varying means.

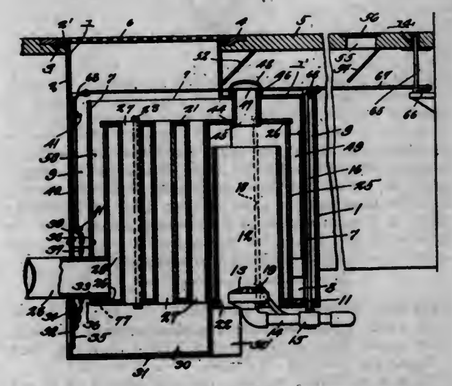


1,457,053. SPITTOON AND WASTE FLUSH. CHARLES ELMORE BOWLES, Pulaski, Va. Filed July 17, 1922. Serial No. 575,679. 9 Claims. (Cl. 4—40.)

1. In a device of the class described, a rotatable spittoon; a source of water supply discharging into the spittoon to secure a rotation thereof; a waste receiver; a rotatable basin cooperating with the receiver; a conduit leading from the spittoon and discharging into the basin to secure a rotation thereof; a reservoir interposed in the conduit and constituting means for securing a substantially continuous flow from the spittoon to the basin; means under the control of an operator for securing a flow of water through the conduit independently of the spittoon; means under the control of an operator for securing a flow of water into the receiver independently of the spittoon; a vessel having an outlet; and a removable waste collector in the vessel and having an outlet communicating with the vessel, the basin discharging into the collector.

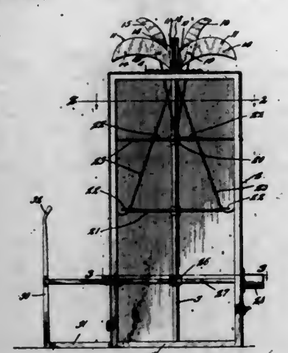
1,457,054. LOADING AND UNLOADING APPARATUS. BARNABUS P. BRATT, Baker, Oreg. Filed May 9, 1921. Serial No. 467,955. 13 Claims. (Cl. 214—77.)

1. The combination with a motor driven truck, of a platform fulcrumed thereon for tilting movement from a horizontal position to a vertical position, arcuate racks mounted on the platform and whose radii extend from the fulcrum of the platform, means operatively connecting with the racks for moving the platform on its fulcrum and including a pair of members alternately



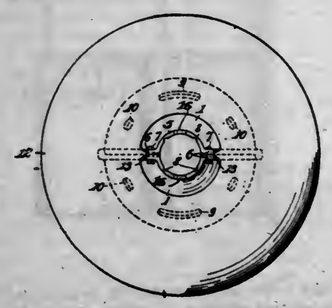
operatively connecting with the motor shaft of the truck, for moving the platform from a horizontal position to a vertical position and vice versa.

1,457,055. FLOAT BALL. PHILIP J. BERWINGTON, Temple, Tex. Filed July 23, 1921. Serial No. 487,036. 3 Claims. (Cl. 137—104.)



3. A float ball having a pair of diametrically disposed openings therein surrounded by inwardly tapered flanges, a conical gasket received in each of said openings, a tube extending through the float ball and gaskets, one end of said tube being flanged to abut the adjacent gasket, the other end of the tube being threaded, a rod adjustably mounted in said threaded end of the tube, a nut mounted on said threaded end and adapted to abut the gasket arranged adjacent thereto, and means for retaining said nut in adjusted fixed relation to said rod.

1,457,056. FLOOR HEATER. BENJAMIN F. CALDWELL, Pomona, Calif. Filed Mar. 14, 1921. Serial No. 452,022. 4 Claims. (Cl. 126—116.)



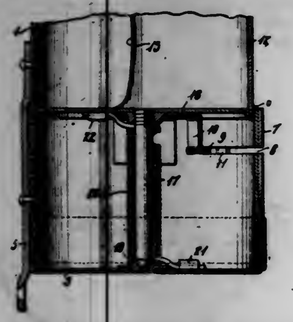
3. In a furnace the combination with a bottom plate, a top plate, and a casing connecting said plates to form a radiator, of a combustion tube opening through the bottom plate and discharging into the upper portion of the radiator, a burner supported within the lower end of the combustion tube, an outer casing housing the radiator and spaced therefrom, said bottom plate constituting the bottom of the outer casing, an inner casing interposed between the outer casing and radiator and spaced therefrom to form annular air spaces, said inner casing being spaced from the bottom plate to provide a passage for the flow of descending cold air inwardly against the radiator and for the ascent of said heated air within the inner casing and around the radiator, a secondary casing supported below a portion of the bottom plate and communicating with a portion of the space between the outer and inner casings, and air flues connecting the top and bottom plates and opening into the upper portions of the secondary casing and of the inner casing.

1,457,057. SIGNAL. GEORGE DANIELS, St. Louis, Mo. Filed Feb. 5, 1923. Serial No. 617,036. 3 Claims. (Cl. 116—63.)

3. In a signal of the class described, a supporting structure, a head mounted on the upper end of said structure and including pairs of oppositely extending guide arms, the arms of each pair being laterally spaced and connected at their outer ends, an arcuate wing pivotally mounted at one end between each pair of said arms and adapted to rest at its free end on the connection at the outer end thereof, cables connecting the pivoted ends of said wings with said structure, a shaft mounted for rotation in said structure, arms fixed to said shaft and having guides through which said cables pass, and means for rotating the shaft to exert a pull on alternate pairs of the cables for raising and lowering the swinging wings.

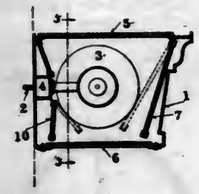
1,457,058. COMBINED GLOBE HOLDER AND REFLECTOR. CHARLES LEE FITCHET, Lancaster, Pa. Filed Mar. 27, 1922. Serial No. 547,053. 3 Claims. (Cl. 240—115.)

1. A combined globe support and reflector for electric lamps, comprising a two-part holder of substantially bell



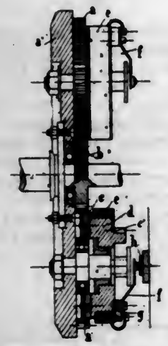
shape having a neck for embracing a suspended lamp socket, the two parts of said holder being identical in form and complemental one to the other, corresponding ears formed on the neck portions of said two parts, attaching bolts directed through said ears, said holder having an internal annular rib adacent to its lower edge for embracing the neck of a globe, and a reflector encircling said holder and having supporting lugs mounted upon said bolts.

1,457,059. SAFETY DEVICE FOR GAS WELDING PLANTS. CHARLES FERRONARA, Lyon, France. Filed July 9, 1920. Serial No. 395,085. 2 Claims. (Cl. 48—192.)



1. A safety device for gas welding plants comprising a pipe, means at the opposite ends of the pipe for the attachment of the gas lines comprising plugs fitted into the ends of the pipe, a plurality of tubular members fitted into the pipe and confined between the inner ends of the plugs, foraminous discs disposed at their peripheries between the adacent ends of adjacent ones of said tubular members and thus retained in place and forming a series of compartments extending longitudinally of the pipe, and a filling within each compartment.

1,457,060. MILK-BOTTLE HOLDER. MIKE G. GARDONYI, Cleveland, Ohio. Filed Aug. 21, 1922. Serial No. 583,229. 7 Claims. (Cl. 232—41.)

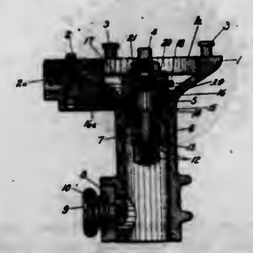


1. A milk bottle holder comprising a casing, a rotatable receiving member within said casing, means for locking said receiving member in one position within said casing, a bottle supporting member carried by said casing, said bottle supporting member being adapted when in one position to retain the rotatable member in open position, and means to return said rotatable member to closed position when released from said bottle supporting member.

1,457,061. LIGHTING FIXTURE. EDWIN F. GUTH, St. Louis, Mo., assignor to St. Louis Brass Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 16, 1919. Serial No. 317,865. 3 Claims. (Cl. 240—4.)

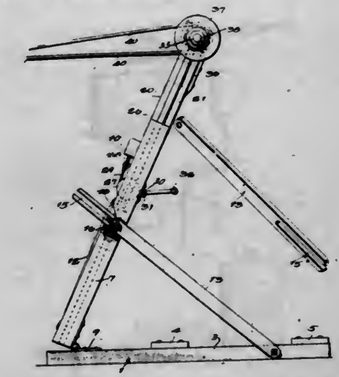
1. A lighting fixture comprising a light source; a horizontally disposed container with opaque side walls and a translucent upper and a translucent lower portion; a pair of longitudinally disposed reflectors, one adjustably secured in advance of the light source and the other adjustably secured behind and below the light source, each of said reflectors having independent means for retaining it in any desired position, substantially as shown and described.

1,457,062. PROGRESSIVE CHANGE-SPEED GEAR. CHARLES EDOUARD HENRIOD, Neuilly-sur-Seine, France. Filed Mar. 23, 1921. Serial No. 454,831. 9 Claims. (Cl. 74——53.)



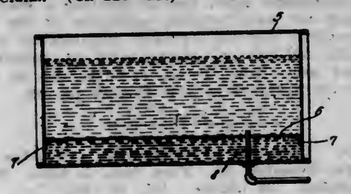
1. In a progressive change-speed mechanism, the combination, with a motor fly wheel adapted to turn at the speed of the motor, a resistance gear disposed concentric with the fly wheel, and a set of planetary gears carried by the fly wheel to revolve bodily therewith and constantly meshing with the resistance gear; of means, including a magnetic clutch, associated with each planetary gear to lock the same against axial rotation at a predetermined point in the revolution of the planetary gear with the fly wheel; and means for automatically energizing each clutch in succession as it reaches such point.

1,457,063. SWIVELING SUPPORT. GREENE C. HOSCH, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation. Filed Mar. 31, 1919. Serial No. 286,380. 3 Claims. (Cl. 248—41.)



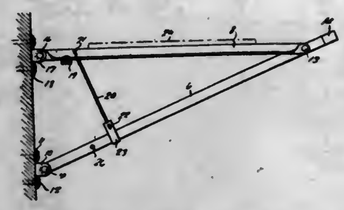
1. In a swiveling support, the combination of a relatively fixed bracket member having a post, a swivel-head supported on the upper end of the post, a pivot stud connecting the swivel-head and the post and rigidly secured

to the post, a socket-plate attached to the swivel-head and having a plurality of recesses on the face thereof circumferentially disposed about the axis of the stud, a collar on said stud connected to the stud so as to rotate therewith and capable of a movement longitudinally on the stud, said collar having a projection seating on the



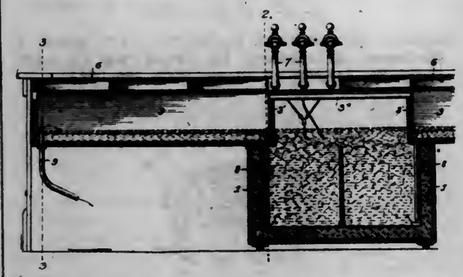
said socket-plate to engage with any of the recesses to hold the rotary head against rotation, and a spring carried on the stud to force the collar against the socket-plate and permitting the collar to move away from the socket-plate when said head is given a swiveling movement.

1,457,064. SHARPENING MACHINE. CHARLES M. HUFF, Albion, Wash. Filed June 12, 1922. Serial No. 567,794. 2 Claims. (Cl. 51—170.)



1. A portable grinding machine comprising a base, a main frame hingedly carried by the base, an auxiliary frame slidably mounted in the main frame, grinding means carried by the auxiliary frame, winding means carried by the main frame, and a flexible element connected to the winding means and to the auxiliary frame, whereby upon movement of the winding means, the auxiliary frame will be raised or lowered within the main frame.

1,457,065. GASOLINE TANK. CHARLEY JOHNSON, Wilmot, Ohio. Filed Aug. 9, 1921. Serial No. 490,928. 1 Claim. (Cl. 220—22.)

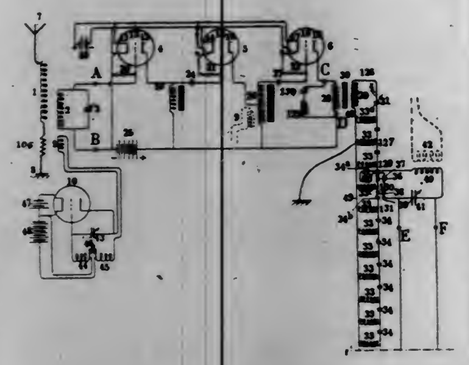


In a gasoline tank, a chamber divided into two compartments by a perforated wall, one of which being adapted to contain gasoline and the other water whereby the two liquids, by contact, will intermingle, and a liquid fuel pipe passing through the tank and disposed in close proximity to the perforated wall whereby to conduct the intermingled liquids away from the tank.

1,457,066. SCAFFOLD BRACKET. FREDERICK J. KESTNER, Cleveland, Ohio. Filed May 24, 1922. Serial No. 563,331. 3 Claims. (Cl. 304—33.)

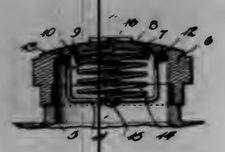
1. A folding scaffold bracket comprising a single arm provided with a hook at one end, and a pair of brace arms loosely pivoted at one end to said single arm, to swing vertically and laterally toward the single arm, the pivotal connection being adjustable to either end of said single arm, a folding tie connecting the single arm and the pair of arms, and folding links connecting the brace arms, said tie being slidable along the single arm.

1,457,067. SODA FOUNTAIN. STANLEY H. KNIGHT, Chicago, Ill. Filed Feb. 24, 1920. Serial No. 360,643. 2 Claims. (Cl. 62—84.)



1. In a soda water fountain, the combination of a lower deep main chamber adapted to contain a cooling medium, soda water tanks and ice cream cans, a superimposed and offset comparatively shallow auxiliary chamber providing a cooling receptacle for fruit juices and the like, the lower portion of the auxiliary chamber extending below the upper portion of the main chamber, a pipe connection between the lower portion of the main chamber and the bottom of the auxiliary chamber and adapted to convey upwardly the cold water in the lower portion of the main chamber into the bottom of the auxiliary chamber, and an overflow pipe connected to the auxiliary chamber at a point remote from the aforesaid pipe connection.

1,457,068. PROCESS OF REFINING HYDROCARBON OILS. HENRY M. LASHER, Kansas City, Kans., assignor to The Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Filed June 23, 1920, Serial No. 391,184. Renewed Sept. 12, 1922. Serial No. 587,848. 1 Claim. (Cl. 196—25.)



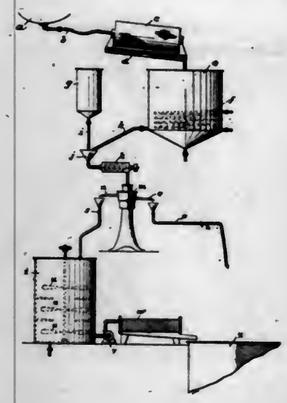
The process of cracking petroleum oil which consists in heating the same to cracking temperature at low pressure with a subdivided mass of sodium chloride suspended in the liquid.

1,457,069. RECEIVING SYSTEM FOR ELECTRIC WAVES. LUCIEN LEVY, Paris, France. Filed Sept. 27, 1919. Serial No. 326,993. 16 Claims. (Cl. 250—20.)

1. In an antiparasitic selecting receiving system for electric waves:—means for selectively receiving on one tuned device electrical oscillating damped energy as well as sustained energy of the same primary frequency,—means for converting the frequency of this energy to lower but ultra-acoustical frequency energy,—means for separating in the ultra-acoustical frequency energies the sustained energy from the damped energy,—means for utilizing the ultra-acoustical energy for actuating the indicating means of the receiving station.

1,457,070. AUTOMOBILE RADIATOR CAP. HARRY A. MAYBERRY, McLeansboro, Ill. Filed Mar. 7, 1922. Serial No. 541,808. 1 Claim. (Cl. 220—24.)

A closure having a central opening, a valve normally-seated in the opening, a pair of U-shaped members arranged at right angles to each other, each provided with an extension at its upper end, said extensions secured to the underface of the closure, a coil spring having convolutions of substantially the same area as the area of the valve and engaged with the under face of the valve, the lower end of the coil spring being extended through the U-shaped members at its places of intersection and formed with a head wherein the lower end of the spring is held against lateral movement, and a depending flange carried by the under face of the valve and receiving the top convolution of the spring, whereby this end of the spring is held against lateral movement.

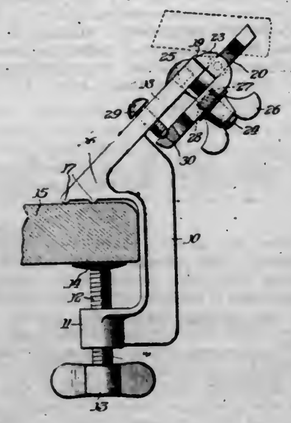


1,457,071. METAL PULLEY. HENRY J. GILBERT, Saginaw, Mich., assignor to Saginaw Manufacturing Company, Saginaw, Mich., a Corporation of Michigan. Filed Apr. 5, 1921. Serial No. 458,683. 16 Claims. (Cl. 64—18.)

1. A metal pulley adapted for use on a shaft and formed in two halves, said pulley comprising rim sections, means clamping the pulley on the shaft, and automatic centering means resisting the distorting action

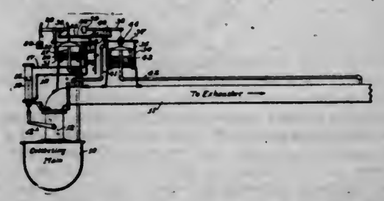
on the rim when the clamping means are applied, whereby clamping and centering are simultaneously effected.

1,457,072. PROCESS FOR REFINING VEGETABLE OILS. CYRUS HOWARD HAPGOOD, Nutley, and GEORGE FREEBORN MAYNO, East Orange, N. J., assignors to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed June 29, 1921. Serial No. 481,396. 6 Claims. (Cl. 87—12.)



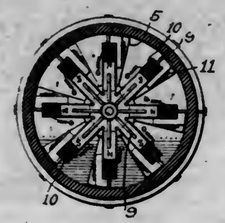
1. A continuous process for refining vegetable oils which comprises filtering out the coarser solid particles, subjecting the same to a temperature of not less than approximately eighty degrees F. and not higher than one hundred degrees F., flowing a stream of a saponifying agent into contact with a flowing stream of said heated oil and subjecting the mixture during the flow to a mechanical mixing action to effect a primary saponification of the fatty acids, subjecting the flowing mixture to centrifugal force, thereby effecting a relatively very short but more intimate admixture of the constituents with a resultant secondary saponification of the fatty acids followed by separation of the saponifying agent and soaps from the oil, agitating the oil with an inert clarifying agent and filtering the oil.

1,457,073. CUTLERY SHARPENER. WILLIAM L. HOENKE, Evanston, Ill. Filed Sept. 7, 1920. Serial No. 408,560. 14 Claims. (Cl. 76—86.)



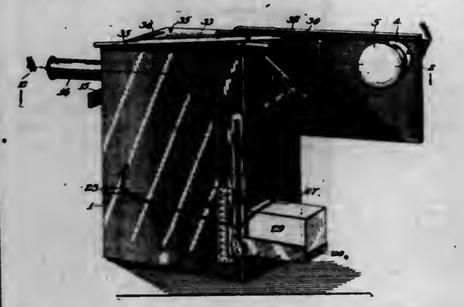
1. A sharpener of the class described, comprising a support, a clamping plate fulcrumed at one of its ends

on said support and having a notch at its other end, cutting means arranged in the notch of the clamping



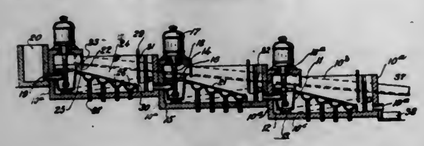
plate, and clamped by the latter to said support, and locking means for holding the plate and the cutting means in clamped relation to said support.

1,457,074. CONSTANT-FLOW GOVERNOR. CARL R. HOUGHTON, Connersville, Ind., assignor to The Connersville Blower Co., Connersville, Ind., a Corporation of Indiana. Filed Sept. 9, 1921. Serial No. 499,492. 16 Claims. (Cl. 48—191.)



2. In combination, a gas collecting main for a battery of gas ovens, a pipe extending therefrom to an exhauster, a valve controlling the flow of gas from said collecting main to said pipe, operating mechanism for said valve, and means for controlling said operating mechanism by the gas-flow along said pipe.

1,457,075. DEVICE FOR PRODUCING OR REPRODUCING SOUND. CLINTON H. HULBERT, Chicago, Ill. Filed Mar. 21, 1917, Serial No. 156,428. Renewed Oct. 18, 1922. Serial No. 595,463. 1 Claim. (Cl. 179—119.)

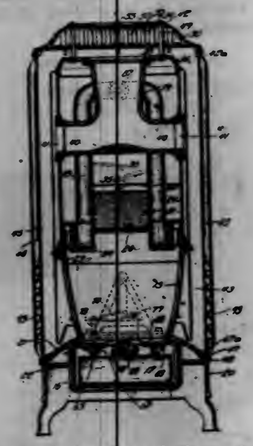


In a device of the class described, permanent magnets, electro-magnets connected thereto consisting of six or more located all on one side of the diaphragm arranged in pairs of like poles, the poles of said electro-magnets being disposed in circular series, the north and south poles being arranged in alternating relation and a diaphragm cooperating with said poles.

1,457,076. PHOTOMETER. FREDERIC E. IVES, Philadelphia, Pa. Filed Apr. 11, 1922. Serial No. 551,600. 4 Claims. (Cl. 88—23.)

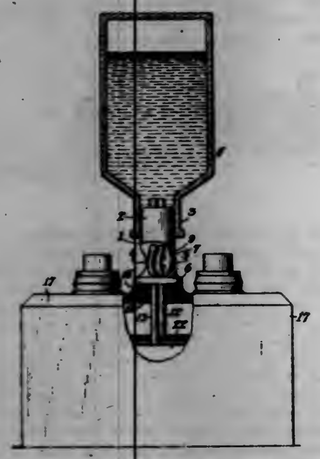
1. The combination in a photometer in optical sequence of a source of light having materially extended area of even luminosity, an adjustable diaphragm or shutter with scale, a diffusely reflecting white surface, a reflector and a divided field.

1,457,077. FLOTATION MACHINE. THOMAS A. JANNEY, Garfield, Utah. Filed Aug. 21, 1919. Serial No. 318,958. 7 Claims. (Cl. 83—85.)



1. The combination in a flotation machine, of an agitation vessel open at its upper end, means for agitating ore pulp in said vessel and discharging the same over the upper end thereof, an inclined perforated medium adapted to receive the pulp and froth discharged over the upper end of said vessel, means for inclosing said perforated medium to form a separating box, means for introducing air through said perforated medium, a plurality of chambers at the lower end of said separating box, overflow lips leading to said chambers, means for conveying pulp from one of said chambers to a succeeding agitation vessel, and a return conduit for conveying pulp from another of said chambers back to said first named agitation vessel.

1,457,078. HEATER. BERTRAND B. KAHN, Cincinnati, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio, a Corporation of Ohio. Filed Sept. 16, 1921. Serial No. 501,100. 3 Claims. (Cl. 126—67.)



1. In a portable heater adapted to be placed in a living room, the combination of a base formed with a peripheral shoulder; an ash-box formed with a peripheral flange removably seated on the shoulder, the flange being provided with a peripheral upwardly opening channel; a combustion chamber having a fire-pot supported on the ash-box; a casing having its lower edge loosely seated in said channel and laterally enclosing and spaced from the combustion chamber and fire-pot, the casing being formed with air inlet openings surrounding and directly

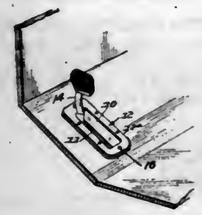
opposite the fire-pot; and a dome secured to and spaced above the top of the combustion chamber and slidably

contacting with the surface of the casing, the dome being encircled with air escape openings.

1,457,079. FILLING DEVICE FOR BATTERIES AND THE LIKE. OTTO H. KOLB, Philadelphia, Pa. Filed Mar. 5, 1921. Serial No. 449,675. 4 Claims. (Cl. 137—68.)

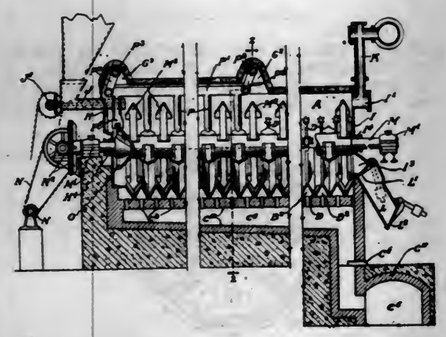
1. A filling device comprising a stopper having a body portion, a head portion, a connecting member between the body portion and the head portion, flexible tubes extending through the said body portion and the head portion and projecting predetermined lengths beyond the head portion whereby the head portion will limit the distance the tubes may be inserted into a receptacle, and said connecting member being constructed to permit the tubes to be compressed between the said body and head portions.

1,457,080. POLISHING COMPOSITION. FRANK FRED KUHN, Minneapolis, Minn., assignor to Lynda M. Ley, Minneapolis, Minn. Filed Sept. 22, 1922. Serial No. 589,922. 3 Claims. (Cl. 134—24.)



3. A polishing composition consisting of six ounces of turpentine, fifty-seven ounces of paraffin oil, twenty-two ounces of boiled linseed oil, ten ounces of a ten per cent solution of ammonia, thirty-two ounces of vinegar, and, one-fourth ounce of ether.

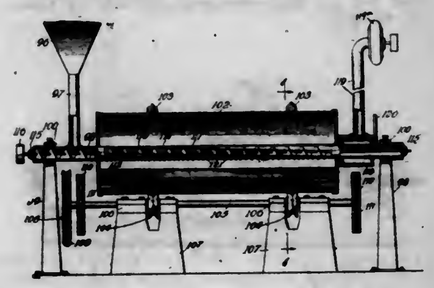
1,457,081. THRUST BEARING. WILLIAM H. LIEBER, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 24, 1921. Serial No. 455,017. 19 Claims. (Cl. 64—25.)



1. In a thrust bearing for a shaft, relatively rotatable bearing members having opposed bearing surfaces, and a bearing element interposed between said bearing members and comprising a plurality of bearing portions having bearing faces co-operative with the bearing surfaces of said bearing members, one half of said bearing portions being co-operative with the bearing surface of only one of said bearing elements and the other half being cooperative with the bearing surface of only the other one of said bearing elements, the bearing portions of the two groups being arranged in alternating relation.

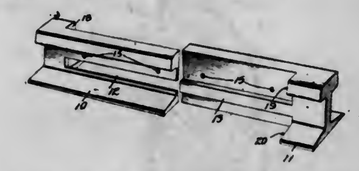
1,457,082. LEVER-SLOT CLOSURE. PAUL J. MCCLOSKEY, New Brunswick, N. J. Filed Mar. 29, 1921. Serial No. 456,770. 1 Claim. (Cl. 74—81.)

A closure for the guide slot of an auto clutch lever or the like, having laterally projecting yielding leaves or wings spanning the slot and transversely deflectable by the lever in traversing the slot, said leaves or wings having obliquely disposed cam end edges in the path of the lever.



1,457,083. RETORT FURNACE. CHARLES V. MCINTIRE, East Orange, N. J. Filed June 18, 1921. Serial No. 478,466. 8 Claims. (Cl. 202—9.)

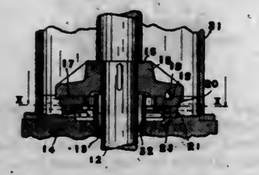
8. A horizontally disposed retort having a bottom wall portion in the form of a section of a cylinder corrugated



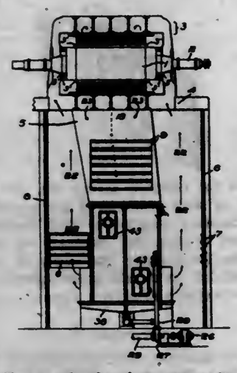
to provide alternating internal and external grooves extending circularly about the cylinder axis and a retort housing formed with a cavity receiving said retorts and the wall of which unites with the external corrugation grooves to provide retort heating flues, burner inlet openings to said flues, and outlets therefrom for products of combustion.

1,457,084. PULVERIZING APPARATUS. WILSON L. MCLAUGHLIN, Decatur, Ill. Original application filed Sept. 25, 1918, Serial No. 255,618. Divided and this application filed Jan. 20, 1919. Serial No. 272,073. 12 Claims. (Cl. 83—9.)

1. A pulverizer comprising in combination a cylindrical horizontally supported drum the length of which is considerably greater than its diameter and a plurality of cylindrical smooth faced pulverizing rollers therein, of substantially the same length as the interior of the drum, and all of which are without connection one with the other so as to be free to roll and tumble over each other when the drum is revolved, and of a multiplicity of different diameters so that the interstices between those of larger diameter are as nearly filled as practicable by those of smaller diameter, and so that a rubbing action on the material treated is produced by the rolling movement of said rollers, the rollers forming a compact mass filling the bottom portion of the drum with the voids between the rollers reduced to a minimum.



1,457,085. RAIL JOINT. WILLIAM H. MCNEIL, Hardy, Miss. Filed Sept. 27, 1922. Serial No. 590,931. 3 Claims. (Cl. 238—236.)



3. A joint for structural iron or steel, comprising a pair of bars having cut away corners providing vertical end and side faces, the side faces being hollowed out and one of said side faces having a horizontally extending slot, bolts extending transversely of the bars and positioned between the said slot and the tops of the bars, and nuts on said bolts said nuts being locked by the resiliency of the bars, substantially as set forth.

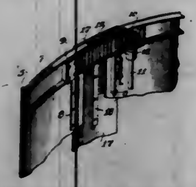
1,457,086. THRUST BEARING. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 27, 1919. Serial No. 348,502. 28 Claims. (Cl. 64—25.)

1. A unitary bearing element having a bearing surface and comprising a plurality of circumferentially spaced relatively rigid and substantially non-deflectable portions having bearing faces, and a resiliently yieldable intermediate portion connecting said relatively rigid portions adjacent the bearing faces thereof, said intermediate portion being of reduced thickness in an axial direction and readily deflectable during operation of said bearing element to cause a tilting of a portion of the bearing surface of said element.

1,457,087. METHOD AND APPARATUS FOR COOLING AND CLEANING AIR. JAMES JARVIS PREBLE, Waltham, and LEE H. PARKER, Boston, Mass., assignors to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 13, 1920. Serial No. 409,997. 9 Claims. (Cl. 261—15.)

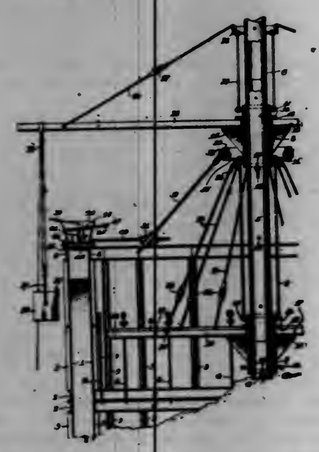
1. Air cooling and cleaning apparatus adapted for use with structures to be cooled comprising in combination a closed circuit for the circulation and recirculation of the air, said circuit including said structure, and means for spraying water or the like directly upwardly into the air in said circuit, whereby the air is directly subjected to the cooling and cleaning effect of said sprayed water and is in such condition circulated past or through said structure.

4. Air cooling and cleaning apparatus adapted for use with a superposed body through or past which the air is circulated, comprising in combination, a cooling chamber through which the air is passed vertically downward, an outer chamber surrounding the same to receive the cooled and cleaned air upwardly therethrough, nozzles within said cooling chamber directed upward to spray water upwardly against the descending air current, and one or more passages communicating between said chambers at the lower portions thereof, the whole constituting a substantially closed circuit.



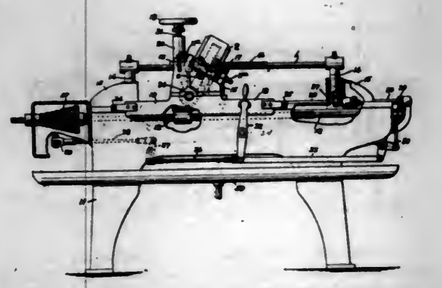
9. In an apparatus for cooling, cleaning and conditioning the ventilating air for use with structures to be cooled, in combination, a warm air receiving chamber through which the air to be cooled, cleaned, and conditioned is passed vertically, spray means in said chamber, a return chamber or chambers, said receiving and return chambers together with said structure constituting a closed circuit for the flow of the air, and passages in the side walls of said warm air receiving chamber to permit the lateral escape of the air to said return chamber or chambers.

1,457,088. TANK CAP. JAMES A. REASONER, Athens, Ohio. Filed Apr. 22, 1922. Serial No. 555,966. 2 Claims. (Cl. 220—24.)



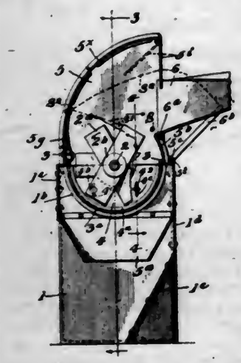
1. A tank cap of the class described comprising a body portion of circular formation and having an internal groove, a reduced threaded portion on the body, a bulge provided on the interior of the reduced threaded portion, a valve hinged in the reduced portion so as to normally seat on said bulge, means for holding the valve in a closed position, a removable cap seatable on said bulge, and means for holding the cap in engagement with the bulge, said means comprising a spring element having its intermediate portion attached to the cap and its terminal engageable with said groove.

1,457,089. MOLD FOR CONCRETE STRUCTURES. HENRY G. SELLMAN, Detroit, Mich. Filed Oct. 2, 1919. Serial No. 327,872. 4 Claims. (Cl. 25—124.)



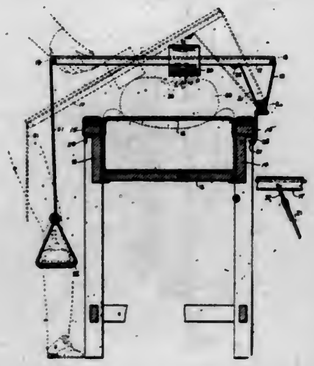
1. In a mold for concrete structures, the combination of a plurality of wall sections, a horizontally disposed channel iron member secured to each section, a guide member engaged within the channels of said channel member, a plate overlapping the edges of adjacent sections and suspended from said guide member and means for moving the sections relatively toward and from each other.

1,457,090. APPARATUS FOR BUILDING CONCRETE STRUCTURES. HENRY G. SELLMAN, Detroit, Mich. Filed Jan. 29, 1920. Serial No. 354,833. 8 Claims. (Cl. 25—124.)



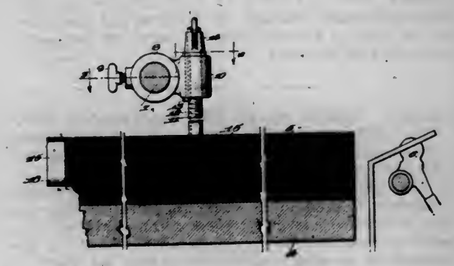
1. In an apparatus of the character described, the combination of a supporting mast, a member sleeved upon the mast to slide freely thereon, means for holding the member in adjusted position upon the mast, upper and lower parallel annular flanges upon said member, said lower flange being of greater width than the upper flange and adapted to engage beneath and form a support for radial arms, said upper flange being adapted to engage over the ends of said arms, and radial arms loosely engaged at one end between said flanges and extending radially from the mast.

1,457,091. MACHINE FOR CUTTING FILE TEETH ON CURVED SURFACES. FRANK F. SORENSEN, Philadelphia, Pa., and WALTER D. CRAFT, Newark, N. J. Filed Oct. 15, 1920. Serial No. 417,165. 8 Claims. (Cl. 76—12.)



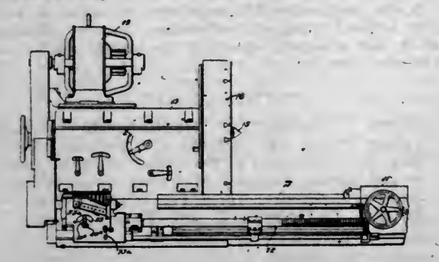
1. A machine for cutting or milling file teeth on curved faces of files comprising the combination of a rotary internal ring cutter, a file blank carrier adapted to expose the curved face of a file blank through the cutter, means for relatively feeding the carrier and cutter, and provisions for rotating the cutter about an axis inclined to the axis of the file blank.

1,457,092. GRINDER. CHARLES H. STANFIELD, Wichita, Kans. Filed Mar. 9, 1920. Serial No. 364,507. 8 Claims. (Cl. 83—11.)



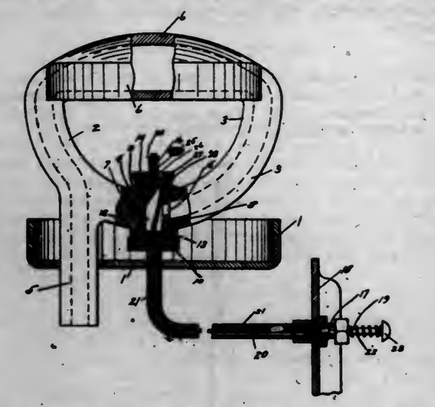
1. In a grinder, a casing formed of lower and upper sections; the end members of the lower section being provided with bearings for a grinding cylinder shaft, and with semi-annular brackets on their inner faces concentric with said bearings; and a semi-cylindric screen supported on said brackets concentric with said bearings, substantially as described.

1,457,093. OPERATING-TABLE ATTACHMENT. GEORGE C. TAPLIN, Brookline, Mass. Filed Jan. 14, 1922. Serial No. 529,191. 6 Claims. (Cl. 128—72.)



1. An operating-table attachment comprising an elongated bar, having pulleys at its ends, and a pressure pad between its ends, a strap connected at one end with the inner end portion of the bar and extending from the connected end over said pulleys to the outer end of the bar, one end of the strap being free and depending from the outer end of the bar, and an anchoring pulley provided with securing means engageable with a fixture on the table, and engaged with a portion of said strap between the attached end and the inner bar pulley, the arrangement being such that when the anchoring pulley is secured to the table, and the pad bears on a patient's body, the anchoring pulley-engaging portion of the strap forms a variable bight, permitting free endwise movements and various inclinations of the bar and pad.

1,457,094. PAPER-FEEDING APPARATUS. ROBERT J. THOMPSON, Harrisburg, Pa., and RAYMOND S. DALTON, Cleveland, Ohio, assignors of one-half to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio, and one-half to The W. O. Hickok Manufacturing Company, Harrisburg, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1921. Serial No. 503,659. 6 Claims. (Cl. 271—26.)



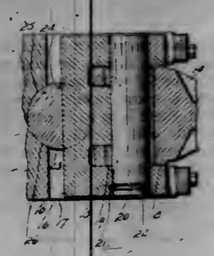
1. In paper feeding apparatus, the combination with means for supporting a pile of paper and means for delivering a blast of air against one end of the same, of means for preventing the free escape of the air so delivered from the lateral sides of the pile, said air delivering means and air escape preventing means permitting the free edgewise removal of the topmost sheets from the pile.

1,457,095. LATHE HEADSTOCK AND FEED MECHANISM WITH RAPID TRAVERSE. WALLACE E. WARD, New York, N. Y., assignor to Arthur H. Ingle, Rochester, N. Y. Filed May 16, 1919, Serial No. 297,587. Renewed Oct. 20, 1922. Serial No. 595,865. 7 Claims. (Cl. 82—21.)

1. Lathe mechanism comprising a spindle, a high speed drive shaft, a feed shaft, means for connecting said high speed drive shaft directly with said feed shaft for rapid traverse, including a countershaft mounted in parallelism with said feed shaft and also with said high speed drive shaft and with said spindle, there being a disconnecting clutch between said high speed drive shaft and feed shaft adapted to disengage the same in either direction of movement, and change feed gearing connections from said spindle to said feed shaft, also including a disconnecting clutch.

1,457,096. OIL BURNER. NELSON J. WARREN and WILLARD C. SMITH, Sioux City, Iowa. Filed May 14, 1921. Serial No. 469,447. 6 Claims. (Cl. 158—63.)

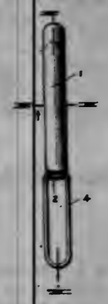
6. A burner including a cylindrical nozzle having an opening in one end thereof, and an eccentric opening in the other end thereof, a plate rotatable on the latter end and having a circular series of openings therethrough, any chosen one of which may be placed in registration with said eccentric opening by rotation of the plate, a tube secured to said first end and bent at an angle thereto, and a flexible element slidable in the tube to extend through said eccentric opening, and any of said plate openings registering therewith.



1,457,097. VACCINE AND METHOD OF PREPARING SAME. EUGENE R. WHITMORE, U. S. Army. Filed Mar. 8, 1919. Serial No. 281,474. 9 Claims. (Cl. 167—7.)

2. The method of preparing living micro-organisms for use in vaccines and like preparations, which consists

in propagating the organisms; attenuating and sedimenting the same; freezing; drying; grinding in anhydrous lipoid; and finally, grinding in neutral, sterile, anhydrous oil to discrete or separate without killing the living cells or organisms, and to individually coat them with and suspend them in the oil.



8. The herein described preparation consisting of suitably prepared living micro-organisms, discreted, suspended in, and completely enveloped by, neutral, sterile, anhydrous cotton-seed oil.

1,457,098. CONNECTION MECHANISM. RICHARD LESTER WILCOX and CLIFFORD O. PETITJEAN, Waterbury, Conn., assignors to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 6, 1922. Serial No. 534,621. 12 Claims. (Cl. 287—93.)

1. In a device of the character described, a gate; a block movably mounted therein: and a wedge between said block and gate adjustable in relation to said gate to accommodate the relative positions of the block thereon.

1,457,099. HAIR CURLER. JOHN O. WINKS, San Francisco, Calif., assignor of one-half to Bradley L Benson, San Francisco, Calif. Filed Aug. 24, 1921. Serial No. 494,755. 2 Claims. (Cl. 132—42.)

1. A hair curler comprising a flexible tubular member, a tongue member integral with said tubular member and adapted to be inserted in said tubular member, and an elastic band engaged by said tongue member when so inserted.

1,457,100. EXTENSION LADDER. ROBERT S. BOLGER, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 26, 1921. Serial No. 503,356. 1 Claim. (Cl. 228—66.)

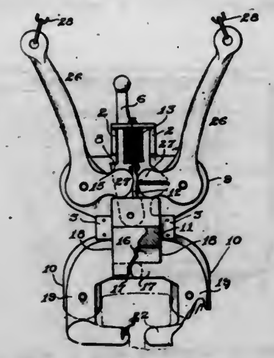
In an extension ladder, a bed ladder, a fly ladder, the lowermost round of which is provided with a tangential grove at one end, ladder locks carried at the lower end of the fly ladder, said locks serving to support the lowermost round of the fly ladder on a level with one of the upper rounds of the bed ladder, one of said locks being

provided with a split hub and a nut and bolt for tightening up said hub, the bolt being adapted to engage in said tangential groove.

1,457,101. ARMOR PLATE AND PROCESS OF MAKING SAME. FRANCIS BRADLEY and HARRY L. FREVERT, Philadelphia, Pa. Filed June 27, 1922. Serial No. 571,301. 3 Claims. (Cl. 148—13.)

1. The process of so treating armor plate as to render it resistant to penetration, which comprises treating the plate to produce a hardened front with a carburized face and a tough back, and then drawing the plate at a temperature not below 500 degrees F. or above 1100 degrees F., thereby removing from the front practically all its brittleness and a large portion of its hardness, while maintaining the stiffness required to offer extraordinary resistance to displacement.

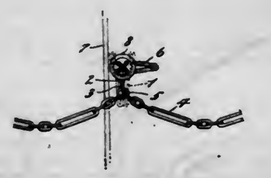
1,457,102. ARMOR PLATE AND PROCESS OF MAKING SAME. FRANCIS BRADLEY and HARRY L. FREVERT, Philadelphia, Pa. Filed June 27, 1922. Serial No. 571,302. 2 Claims. (Cl. 148—13.)



1. The process of so treating armor plate as to render is resistant to perforation, which comprises treating the plate to produce a tough back and a carburized face hardened front to a depth of from forty-five to sixty-five per cent of the thickness of the plate, and then drawing the plate at a temperature not below 500 degrees F. nor above 1100 degrees F.

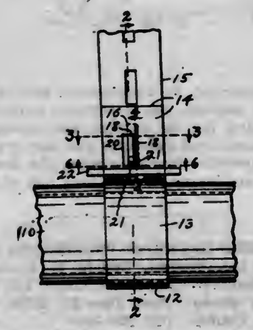
1,457,103. ARMOR PLATE AND PROCESS OF MAKING SAME. FRANCIS BRADLEY and HARRY L. FREVERT, Philadelphia, Pa. Filed June 27, 1922. Serial No. 571,303. 4 Claims. (Cl. 148—13.)

1. The process of so treating armor plate as to render it resistant to perforation, which comprises treating the plate to produce a tough back and a front hardened to a depth of from forty-five to sixty-five per cent. of the thickness of the plate, and then drawing the plate at a temperature not below 500 degrees F. nor above 1100 degrees F.



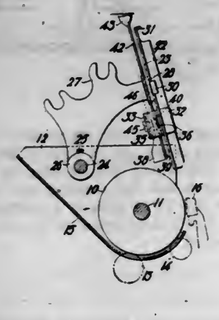
1,457,104. LIFTING TONGS. EDWIN J. CONNOR and ARTHUR R. RALSTON, Omaha, Nebr. Filed Apr. 12, 1922. Serial No. 551,863. 7 Claims. (Cl. 294—116.)

1. An apparatus for the purpose set forth comprising a pair of opposed coacting load-engaging jaws, a locking head arranged above and adapted to engage between the jaws to lock them to a load, means acting constantly on the head and actuated by a lifting force to move it into



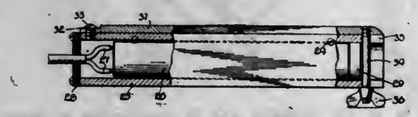
engagement with the jaws, and means for withdrawing the head from between the jaws when the lifting force is removed.

1,457,105. WATCH-CHAIN HOLDER. CHARLES H. J. DILG, New York, N. Y. Filed Feb. 11, 1922. Serial No. 535,707. 4 Claims. (Cl. 24—3.)



1. A holder for watch chains and the like comprising a retaining member adapted to bear against the rear face of a garment above and below a button hole and having its top part bifurcated to straddle the button securing means, and a stem outstanding from substantially the bottom of the bifurcation adapted to extend through the button hole and having chain-engaging means at its outer end.

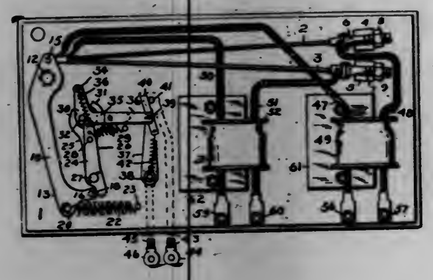
1,457,106. PIPE HANGER. JOHN B. ESTEP, Cleveland, Ohio. Filed Apr. 10, 1922. Serial No. 551,231. 6 Claims. (Cl. 248—31.)



1. A pipe-hanger comprising a metal strap which is adapted to extend under and form a seat for a pipe and has two opposite flexible portions arranged and contoured as required to embrace opposite sides respectively of said pipe and spaced at their upper ends and each terminating at its upper end in an upwardly projecting arm, a supporting member which is adapted to support said strap and extends between the upwardly projecting arms of said opposite portions of the pipe-embraceable strap and is provided between said arms with a hole extending laterally through the strap-supporting member and having a bottom wall, and a collar adapted to hold said arms in close relation to said strap-supporting member, each of said arms having a tongue which projects through the aforesaid hole and into the other of said arms and is adapted to rest on the aforesaid wall.

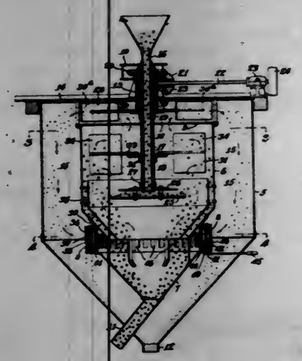
1,457,107. TYPEWRITING MACHINE. EWELL E. FOWLER, East Point, Ga., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 10, 1920. Serial No. 372,968. 10 Claims. (Cl. 197—142.)

1. In a typewriting machine, the combination with a platen and a paper-table having an opening, of a side gage upon the table, a resilient member behind the table and fast thereto, a turned-up end of said member projecting through an opening in said table to form a second gage, a cam pivoted on the table between it and the member, and a finger-piece extending beyond the table for swinging the cam to make the second gage ineffective at will.



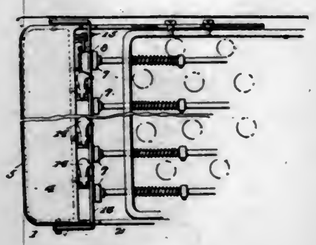
1,457,108. ELECTRICALLY-HEATED FORMER FOR ROUNDING THE BACKS OF BOOK COVERS. ADOLPH TROST, Chicago, Ill., assignor to Joseph J. White, Chicago, Ill. Filed Sept. 1, 1920. Serial No. 407,342. 2 Claims. (Cl. 11—3.)

2. In a casing-in machine, the combination of a magazine for receiving the book covers, means for feeding the covers from said magazine to the casing-in mechanism, and an electrically heated rounding former in the bottom of said magazine for rounding the backs of said covers before feeding the same to said casing-in mechanism, said rounding former comprising a housing extending parallel to and below the backs of the book covers, an electrical heating element in said housing, a convex



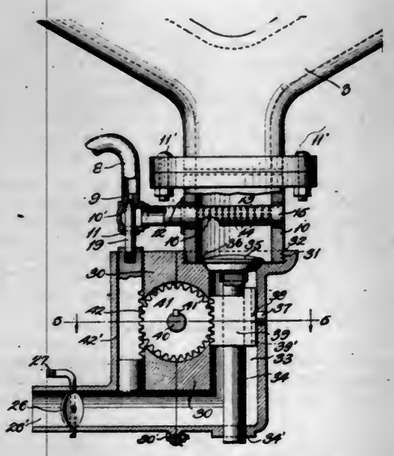
form secured to the upper wall of said housing, and an attaching bolt extending between said form and an opening in said housing, whereby said form can be conveniently substituted.

1,457,109. OVERLOAD DEVICE. HOMER E. FROST, Cleveland, Ohio, assignor to The Electric Controller & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 1, 1921. Serial No. 488,990. 5 Claims. (Cl. 200—113.)



1. In an overload device for alternating current systems, two expansive wires, one in each of two phases, an overload switch controlling the opening of the circuit of the wires, and means for tripping the switch when either or both of the wires expand a predetermined distance, but with less consumption of current when one wire is open circuited.

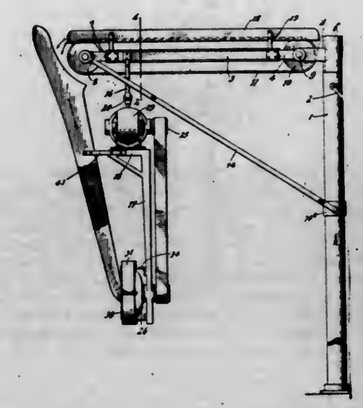
1,457,110. AIR SEPARATOR. RUBERT M. GAY, Hanover, N. J. Filed Apr. 6, 1921. Serial No. 459,055. 8 Claims. (Cl. 83—54.)



1. In an air separator and in combination, a frame structure having a separating chamber to receive material to be separated, said chamber having an air inlet opening in the lower portion thereof and an air outlet opening in the upper portion thereof, a movable device adapted to be actuated to induce a current of air in an upward direction through said chamber, and a movable device adapted to be actuated to rotate said current of air within said chamber, the last named movable device being spaced a substantial distance from said outlet opening to produce a substantial classifying zone between them.

1,457,111. FINGER-ACTUATED KEY-OPERATED MACHINE. FREDERICK P. GORIN, Seattle, Wash. Filed July 16, 1920. Serial No. 396,708. 12 Claims. (Cl. 197—176.)

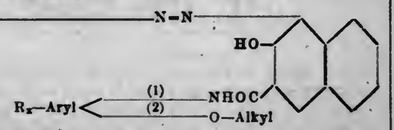
1. A series of tabulating keys, a mask, and means whereby said mask is normally cooperative with a single key and means whereby the mask selectively cooperates with any other key.



1,457,112. CARBURETOR. DENNIS A. GORMLEY and DANIEL W. REID, Atlantic City, N. J. Filed Aug. 16, 1920. Serial No. 404,010. 2 Claims. (Cl. 261—51.)

1. In a carburetor, in combination with a body providing an air passage, and a throttle, a fuel atomizing tube intersecting the air passage and provided with a plurality of small fuel apertures and also provided with a larger air aperture directed against the flow of air in said passage, and means for supplying fuel to the tube at one end.

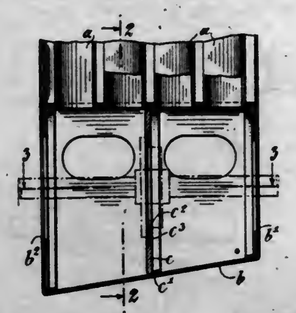
1,457,113. MOLD-MATERIAL-PROJECTING MACHINE. EDWARD P. LANGWORTHY, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed June 15, 1920. Serial No. 389,101. 5 Claims. (Cl. 22—36.)



1. A molding machine comprising a support, a rotary member mounted thereon having a recessed central portion and a horizontally-projecting peripheral flange portion extending therefrom, tapering radially-disposed blades in said recessed central portion and curved blades fixed upon said horizontal portion adjacent to the outer ends of said tapering blades, a casing enclosing said rotary

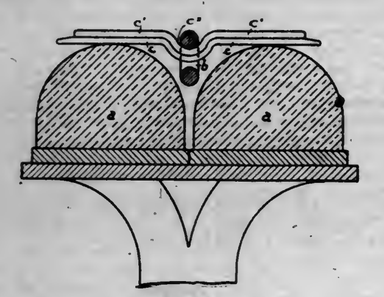
member and provided with a central inlet, means for delivering mold material to said inlet; said casing having an outlet, and means for actuating said rotary member to project the mold material through said outlet, substantially as specified.

1,457,114. AZO DYESTUFFS AND PROCESS OF MAKING SAME. AUGUST LEOPOLD LASKA and ARTHUR ZITSCHER, Offenbach-on-the-Main, Germany, assignors to the corporation Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed Jan. 8, 1923. Serial No. 611,503. 4 Claims. (Cl. 134—92.)



1. As new articles the azodyestuffs, which can be obtained by combining any diazo-compound with an ortho-alkyloxyarylid of 2.3-oxynaphthoic acid, having probably the general formula:

wherein R means hydrogen or any radicle, which can be used for the production of color lakes of an excellent fastness to light and give, when produced on the fiber, orange to blue and black shades of a singular fastness to light, they are when dry orange to blue and black powders, insoluble in water, soluble in sulfuric acid to a violet to green solution yielding upon reduction withstannous chloride an amin and an ortho-alkyloxyarylamin of the 1-amino-2-oxy-3-naphthoic acid.

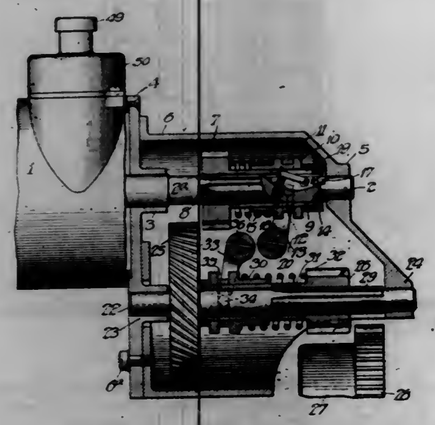


1,457,115. METHOD OF ASSEMBLING MIDDLE BEARINGS FOR INTERNAL-COMBUSTION MOTORS. AUGUST H. LEIPERT, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 2, 1921. Serial No. 497,937. 3 Claims. (Cl. 29—149.5.)

1. The herein described method to provide a mounting for a center bearing to insure its alinement with the end bearings, which consists in securing a center partition within the crank case, introducing a cutting tool through the end main bearings and boring out a center circular

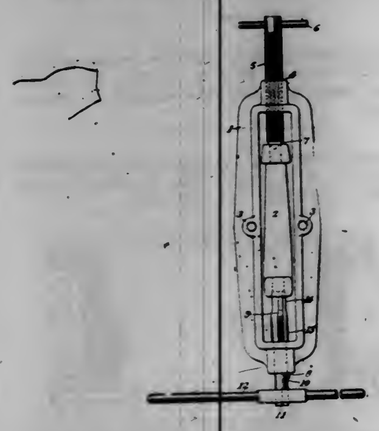
opening in said partition with said cutting tool co-axially with said end main bearings.

1,457,116. ANTISKIDDING DEVICE FOR DUAL TIRES. WALTER LION, Dresden, Germany. Filed Oct. 28, 1921. Serial No. 511,896. 2 Claims. (Cl. 152—2.)



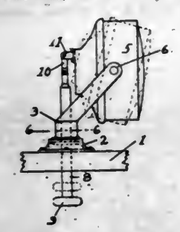
1. An anti-skidding device for dual tires having in combination a chain disposed between the tires and metal treads loosely mounted in the links and held in contact with the tires.

1,457,117. AUTO CREEPER. SAMUEL LONDON and LOUIS WEDER, Newark, N. J. Filed Aug. 10, 1920. Serial No. 402,595. 4 Claims. (Cl. 280—61.5.)



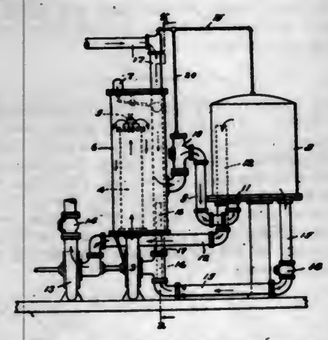
1. A creeper comprising a frame-work consisting of longitudinally extending side-bars, laterally extending end-bars, and intermediately placed and laterally extending auxiliary bars, a body-supporting medium attached to and carried by said longitudinally extending side-bars and said laterally extending auxiliary bars, and a pair of rollers secured to the lower surface of each end-bar and its adjacent auxiliary bar, one set of rollers being larger than the other set of rollers, so as to provide an inclined body-support.

1,457,118. ENGINE STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Aug. 25, 1920. Serial No. 405,835. 35 Claims. (Cl. 74—7.)



1. An engine starter drive comprising a driving shaft, a driving member mounted thereon for longitudinal movement thereof and rotary movement therewith, a driven member with which the driving member engages when moved longitudinally, a device which cooperates with such driving member and which when shifted moves the same longitudinally, and means for holding such device in its shifted position and permitting the release thereof upon full engagement between said members.

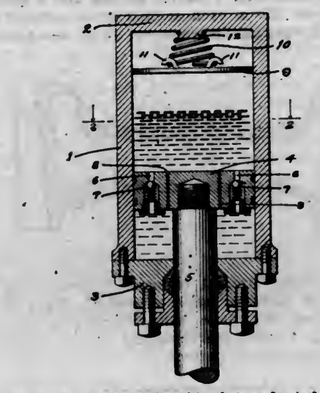
1,457,119. AXLE-BEARING-REPAIRING TOOL. JOHN J. MCGUCKIN, Brooklyn, N. Y. Filed Aug. 5, 1921. Serial No. 490,041. 4 Claims. (Cl. 77—2.)



1. An axle bearing repairing tool, embodying a centrally slotted frame adapted to straddle the axle lugs, a feeding and centering screw threaded through one end of said frame, said screw having a larger diameter than the axle pin, and provided with a centering end, and a machining tool rotatively mounted in the other end of the frame, the end of the feed screw and the free end of the tool being adapted to enter the opposite ends of the axle-pin socket, and to center the tool in operative relation thereto.

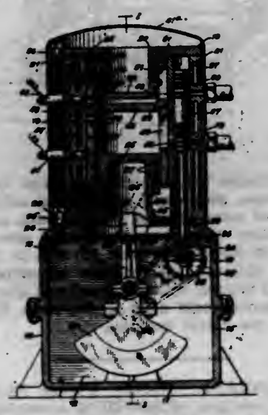
1,457,120. SPOTLIGHT. CHARLES LOUIS MADDEN, Bay City, Mich. Filed July 27, 1920. Serial No. 399,320. 1 Claim. (Cl. 240—7.)

In combination, a centrally apertured base, a pair of angularly disposed branching arms revolvably mounted on said base, a lamp case horizontally pivoted at its sides between the ends of said arms, said pivoted connection being laterally offset with respect to the axial line of said base, a rearward projection on the back wall of said lamp case, a rod longitudinally slidable in the aperture of said base and in substantial alignment with the outer end of said projection, a link pivotally connected at its lower end to the upper end of said rod and pivoted at its upper end to the outer end of said projection.



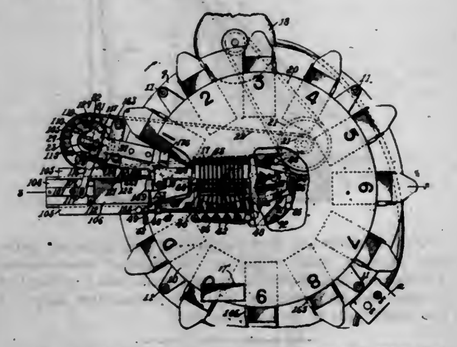
1,457,121. TURBINE OR CENTRIFUGAL VACUUM PUMP DEVICE. JAMES D. MUDGE, Seattle, Wash.; Nina S. Mudge administratrix of said James D. Mudge, deceased. Filed Oct. 13, 1919. Serial No. 330,356. 3 Claims. (Cl. 103—1.)

1. A device of the class described embodying an inlet or return pipe, a vacuum pump to pump fluids and liquids out of said return pipe, a discharge pipe for said pump, a check valve in said discharge pipe, a discharge chamber enclosing the outlet of said discharge pipe, a vapor or gas relief valve for said discharge chamber, a receiving tank, a connecting pipe between said discharge chamber and said receiving tank, a check valve in said connecting pipe, an outlet pipe for said receiving tank, a second pump to act upon the liquids in said outlet pipe, a check valve in the discharge outlet of said last named pump, a second outlet pipe for said receiving tank connecting said receiving tank and said first named pump, and a pressure adjusting pipe connecting said inlet or return pipe and said receiving tank.



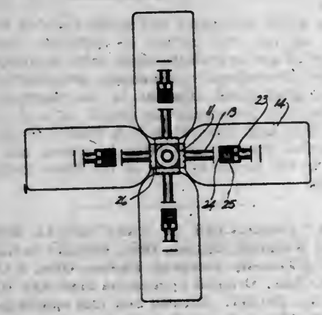
1,457,122. SHOCK ABSORBER. ALBERT C. REE, Libertyville, Ill. Filed Apr. 13, 1920. Serial No. 373,635. 1 Claim. (Cl. 188—88.)

A shock-absorber, including a fluid container having therein a piston provided with fluid passages, means for closing certain of said passages on the down stroke of the piston, a plate suspended within said container and provided with integral fingers engaging its supporting means, said means comprising a coiled spring the other end of which engages a projection formed integral with



the container head, and said plate adapted to close all passages within the piston on the extended upward movement of the same.

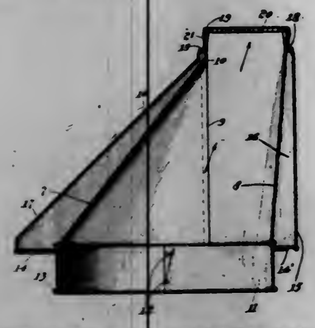
1,457,123. COMBUSTION ENGINE. ARTHUR A. RIGNY, Milford, Pa. Filed Nov. 22, 1921. Serial No. 517,001. 3 Claims. (Cl. 123—61.)



3. In a double acting internal combustion engine, a crank case, a vertical cylinder block mounted above said crank case, a lower cylinder head disposed between said block and said crank case, said head having an upstanding cylindrical portion arranged within said block with its walls spaced therefrom, piston rings surrounding said cylindrical portion, an upper cylinder head similar in shape to said lower cylinder head being mounted on the top of said block with its cylindrical portion extending downwardly within said block, piston rings surrounding the cylindrical portion of said upper cylindrical head, flanges upon said blocks, at the top and bottom thereof, means passing through said flanges to secure said cylinder heads in position relative thereto, a piston with opposite cylinder extensions cooperating with said cylinder block to divide the block into upper and lower combustion combustion chambers, one side of said block having circular openings formed therein, spark plugs mounted therein, each of said extensions of said piston having intake and exhaust openings therein corresponding in size and number to the spark plug openings in the cylinder block, the piston openings permitting communication between the spark plug openings and the combustion chambers at the proper times during the operation of the engine, elongated intake and exhaust ports in the wall of each extension of the piston opposite from the above mentioned piston openings, the wall of said block opposite from said spark plug openings having circular intake and exhaust ports to register with said elongated ports, and reciprocating plunger valves for controlling the opening and closing of said circular ports.

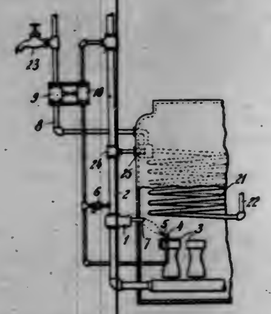
1,457,124. CARD-SORTING MACHINE. FRANK C. RINSCHE, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 5, 1917. Serial No. 140,705. 21 Claims. (Cl. 214—11.)

1. In a device of the class described, a card magazine, means for feeding cards singly therefrom, a series of card receptacles, a distributer movable into registry with said card magazine and card receptacles, intermittently acting means for moving the distributer successively into registry with the magazine and respective receptacles, means operable when the distributer is at rest in registry with the magazine for delivering a card from the magazine to the distributer, a stripping device associated with each receptacle and movable into and out of position to strip a card from the distributer, mechanical means for moving each said stripper into operative position, and selective means on the distributer which may be set when the distributer receives a card adapted to operate said mechanical means to actuate the stripper.



1,457,125. FAN. CONRAD ROSINE, Chicago, Ill., assignor of one-half to William Robertson, Chicago, Ill. Filed Oct. 24, 1921. Serial No. 510,002. 2 Claims. (Cl. 170—160.)

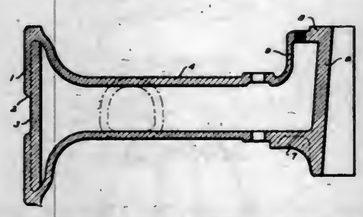
1. In a device of the class described, a rotatable member having a polygonal extension at one end, the faces of said polygonal extension being provided with grooves,



supports extending centrally of said faces, and fan blades yieldingly mounted upon said supports with their inner edges yieldingly pressed into said grooves for the purpose set forth.

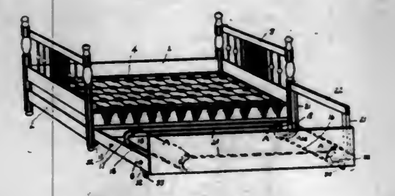
1,457,126. PIPE CONNECTION OR BOOT. ALBERT G. SCHERER, Chicago, Ill., assignor to Excelsior Steel Furnace Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1922. Serial No. 569,859. 5 Claims. (Cl. 137—75.)

2. A boot for air duct comprising two tapering walls, one of said walls being of rectangular cross-section throughout, and the other of said walls being cylindrical at one end and merging into the rectangular shape of the other wall at its opposite end.



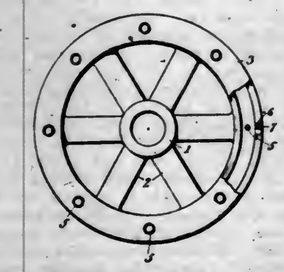
1,457,127. SAFETY GAS-CONTROL SYSTEM. CONRAD SCHUCK, Jr., and GEORGE LAYER, East Orange, N. J. Filed May 13, 1922. Serial No. 560,546. 12 Claims. (Cl. 67—116.)

1. In a safety gas supply and igniting system for burners and the like, the method of indirectly controlling the supply of gas to a thermostatic valve controlled main burner which comprises continuously maintaining a non-impinging pilot flame adjacent to the thermally actuated valve and increasing the length of said flame to impinge upon said valve when it is desired to ignite the main burner, whereby the valve is opened and gas is supplied to the burner as long as the flame impinges on said valve.



1,457,128. PRODUCING OF CAST METAL WHEELS. GEORGE WALTHER, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Original application filed May 10, 1920, Serial No. 380,217. Divided and this application filed June 16, 1921. Serial No. 478,131. 2 Claims. (Cl. 22—13.)

1. The combination with a pattern for a cast wheel comprising a master portion and a series of interchangeable hub ends, each of the same external diameter but varying one from the other in length; of a core box for a hub core comprising a master portion and a series of interchangeable fillers, each of said fillers varying from the others in external diameter and all of said fillers be-

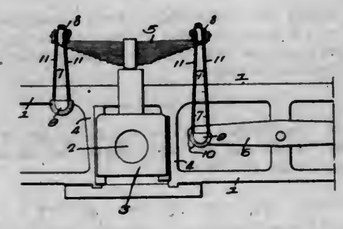


ing of the same internal diameter whereby they are adapted to fit interchangeably a common place on the master core box, said fillers further varying the one from the other in lengths corresponding to the detachable elements of the master pattern.

1,457,129. EXTENSION BED. EDMUND E. WANAMAKER, New Hartford, N. Y. Filed Apr. 5, 1921. Serial No. 458,691. 1 Claim. (Cl. 5—21.)

In an extension bed, an extension frame supporting a spring mattress, rock shafts mounted on said extension frame, curved arms adapted to rock with said shafts, rods connecting the upper ends of said arms, whereby said arms will move in the same direction to elevate and lower said mattress, and brackets supporting a cross piece, formed integral with certain of said arms, whereby to aid in moving said arms in the same direction to elevate and lower said mattress.

1,457,130. PULLEY. WARREN WESLEY YALE, Chickasha, Okla., assignor of one-half to Alexander B. Hickman, Chickasha, Okla. Filed Mar. 23, 1921. Serial No. 454,649. 3 Claims. (Cl. 64—18.)



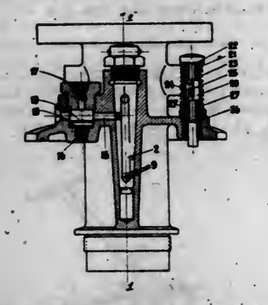
1. A pulley wheel provided with a peripheral chamber adapted to contain an antislipping substance, and means for feeding said substance to a belt adapted to pass over said pulley wheel.

1,457,131. CELLULOSE ACETATE. JOH OLGIERD ZDANOWICH, London, England. Filed Nov. 27, 1922. Serial No. 603,660. 7 Claims. (Cl. 260—101.)

1. An improved process for obtaining acetose in a condition for the direct production of films, filaments and the like by extrusion in or into a coagulating bath according to which the acetose is formed by reacting on cellulose with halogen acetic acids produced in the presence of cellulose in an acetylating mixture containing a large proportion of a non-precipitating solvent, namely, about nine times the weight of the cellulose, reaction being completed in the presence of a small proportion of a strong condensing agent, namely, not more than about 2 per cent of the weight of the cellulose.

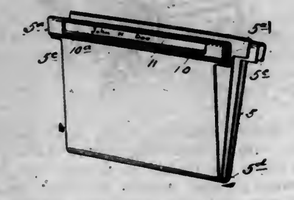
1,457,132. COUPLING FOR EQUALIZING APPARATUS FOR LOCOMOTIVES. GEORGE C. ABBE, Lansdowne, Pa., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1921. Serial No. 453,251. 6 Claims. (Cl. 105—82.)

1. The combination of a locomotive frame; an equalizing lever pivoted to the frame; an axle box; a spring mounted on the axle box; and a flexible member connecting the spring to the lever and frame.



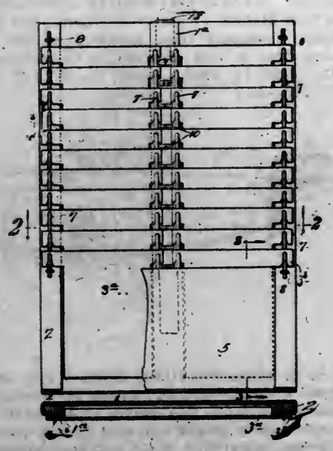
1,457,133. CLASP. JOSEPH ACITO and PAUL TIMEN, New York, N. Y., assignors to Stap Co., New York, N. Y., a Corporation of New York. Filed Aug. 17, 1922. Serial No. 582,381. 4 Claims. (Cl. 24—230.)

1. A clasp having a head provided with an elongated slot, a catch for disposition in said slot through turning movement relatively to the head, a cross head on said catch, said cross head adapted for disposition within the slot to resist displacement of the catch from said slot in a direction transversely of the head, and an abutment located out of said slot and within the head for engagement by said cross head to limit longitudinal movement of the latter in one direction.



1,457,134. SPRAY CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. BRUNO ADLER, Dresden, Germany. Filed Aug. 22, 1922. Serial No. 583,582. 1 Claim. (Cl. 261—72.)

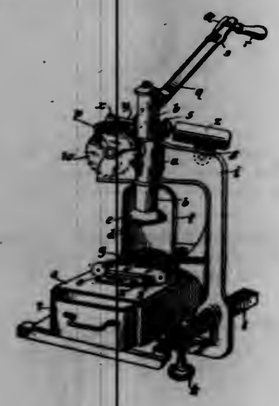
In combination with a carburetor having a float chamber and a mixture passage, a conduit connecting said mixture passage and float chamber, an air inlet orifice in said conduit and a tickler having a valve on its stem and means for normally holding said tickler raised and



alternative means for fixing the raised position of the tickler so that in one raised position the valve is held open and in the other the valve is closed.

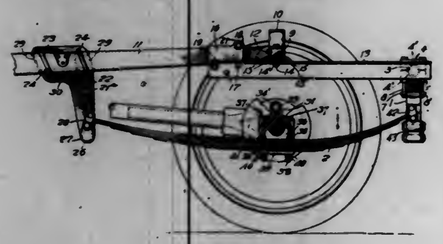
1,457,135. FOLDABLE CARD. ZEMACH AUERBACH, New York, N. Y. Filed Apr. 6, 1922. Serial No. 550,233. 5 Claims. (Cl. 129—16.7.)

1. A card of the class described, comprising a piece of flexible material having lateral projections at its ends, the material being folded between its ends and provided with lateral projections adjacent to such fold.



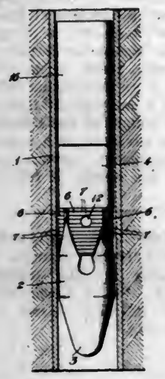
1,457,136. FILING RACK. ZEMACH AUERBACH, New York, N. Y. Filed Apr. 6, 1922. Serial No. 550,234. 1 Claim. (Cl. 129—16.)

A rack of the class described comprising a body having series of spaced stops spaced apart to receive and support folders or cards therebetween, a strip extending along the front of the rack and provided with spaced



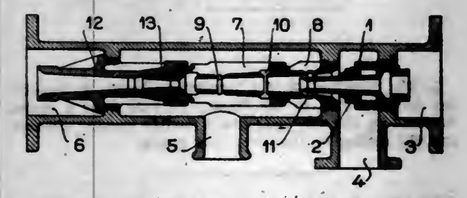
openings corresponding in relation to the several stops, and a strip of material provided with spaced time designations fitted to the rack along said strip to show the time designations through said openings.

1,457,137. MACHINE FOR CUTTING UP FRUITS AND VEGETABLES OF ALL KINDS, ESPECIALLY POTATOES. HENRI BARBEY, Schiltigheim, Alsace, France. Filed Sept. 25, 1922. Serial No. 590,366. 9 Claims. (Cl. 146—7.)



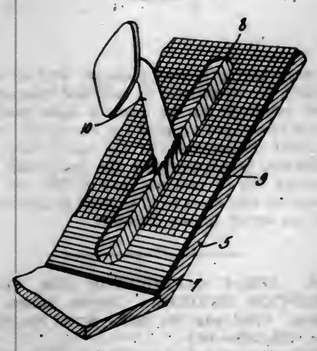
1. In a cutting machine of the class described, the combination with a supporting bracket having an opening in the upper end thereof, a reciprocating punch having a serrated pressing surface extending through said opening, a segmental rack operatively connected to said punch, stationary cutters positioned beneath said punch, longitudinally movable knives below said cutters, means for regulating the downward movement of said punch associated with said rack, thereby regulating the amount of vegetable cut off by said movable cutters, and means connected to said rack for actuating said punch.

1,457,138. PLATFORM-SPRING SUSPENSION FOR AUTOMOBILES. ANDREW J. BARRON and HOWARD E. CROW, Cincinnati, Ohio, assignors to The Cincinnati Horse Shoe & Iron Company, a Corporation of Ohio. Filed Sept. 12, 1922. Serial No. 587,732. 6 Claims. (Cl. 276—36.)



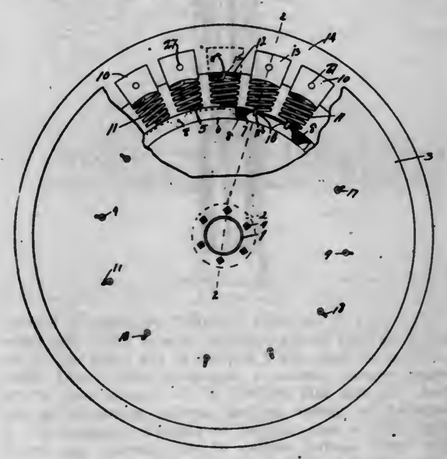
1. In an automotive vehicle having a rear axle-housing provided with a flanged end having an opening, a saddle on said axle-housing, and having a portion thereof bearing against said flanged end, said portion provided with an opening registering with said flanged-end opening, saddle-securing means passing through said registering openings, a side spring underslung relative to said axle-housing, and means for supporting said slide spring from said saddle.

1,457,139. FISHING TOOL. ASA L. BELL and THOMAS E. RAINES, Shreveport, La. Filed July 3, 1922. Serial No. 572,676. 6 Claims. (Cl. 294—86.)



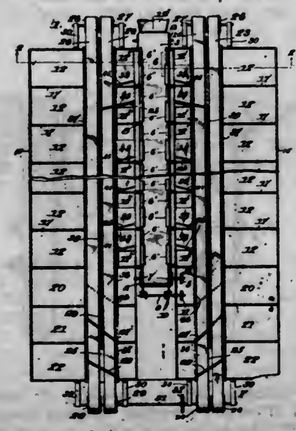
1. A fishing tool comprising a head, expansible jaws carried by the head, and fluid pressure means connected to the head and the said jaws for expanding the latter, substantially as described.

1,457,140. INJECTOR. EMANUEL BLAUHORN, Vienna, Austria. Filed Aug. 22, 1921. Serial No. 494,139. 6 Claims. (Cl. 162—1.)



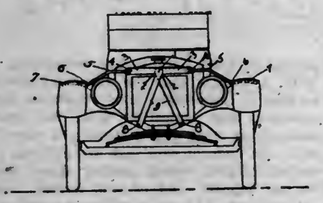
1. A delivery cone for injectors having a diverging bore, the cone comprising relatively separable constituent elements one of which forms the part of the bore which is of smallest cross section.

1,457,141. MAT. WALTER L. BOCKOVER and JOHN W. MCNAMARA, Tipton, Ind. Filed Jan. 12, 1922. Serial No. 528,830. 1 Claim. (Cl. 74—81.)



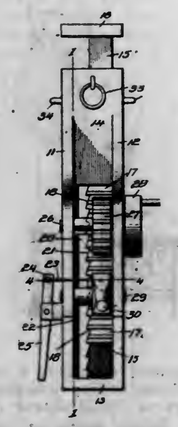
In combination with a pedal shank and the walls of the slot in which the same operates, a floor mat including a plurality of flexible fingers inclined towards one end of the slot, and a cover plate having an opening and adapted to be positioned on the mat, and said fingers adapted to closely engage the pedal shank.

1,457,142. VEHICLE WHEEL. FLETCHER O. BOSWELL, Philadelphia, Pa. Filed Oct. 11, 1920. Serial No. 416,106. 2 Claims. (Cl. 152—29.)



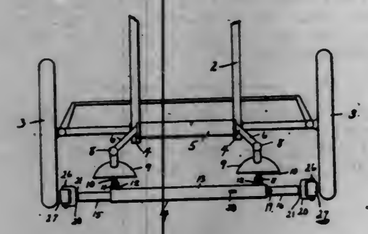
1. In a vehicle wheel, the combination of a hub, a ring concentric with said hub, two discs bolted to said hub and ring, a sectional rim fitted to slide between the discs, each section of said rim having a curved bottom, a spring interposed between each of said sections and the ring, the ends of said spring projecting through the bottom of its section and ring, and a rubber tire fitted within the sectional rim.

1,457,143. APPARATUS FOR THE SIZING AND DISTRIBUTION OF FRUIT. ERNEST M. BROGDEN, Winter Haven, Fla., assignor to Brogdex Company, Winter Haven, Fla., a Corporation of Florida. Filed Oct. 3, 1922. Serial No. 592,153. 11 Claims. (Cl. 130—32.)



1. Apparatus for sizing fruit which comprises the combination, with sizing means having a series of graduated sizing outlets, and a cooperating series of receptacles each arranged normally to receive sized fruit delivered from a corresponding one of said outlets, of auxiliary receptacle means, and means whereby fruit delivered from any of said outlets may be diverted to said auxiliary receptacle means without interfering with the normal delivery of fruit from the other outlets to their respectively cooperating receptacles.

1,457,144. FENDER BRACE FOR AUTOMOBILES, CARRIAGES, AND THE LIKE. FRED L. BRONSON, Wichita Falls, Tex. Filed Oct. 3, 1922. Serial No. 592,180. 1 Claim. (Cl. 280—152.)



A brace for the wheel fenders of a motor vehicle, comprising arms arranged in front of and extending transversely of the radiator and having their outer ends attached to the fenders, arms extending downwardly from the inner ends of said first arms and attached at their lower ends to a convenient portion of the vehicle adjacent the base of the radiator, and means pivotally connecting the first named arms.

1,457,145. JACK PROP. STEPHEN L. BUCHANAN and FRANK J. LYTTON, Coeburn, Va. Filed July 17, 1922. Serial No. 575,705. 2 Claims. (Cl. 254—95.)

1. A mine prop comprising a tubular support, a stock provided with a bearing head and movable in said support, said stock having gear teeth in one face and ratchet teeth in another face, a bar movable in said support and having ratchet teeth adapted to be engaged with the ratchet teeth of the stock, an operating appliance carried by said support and engageable with the gear teeth of the stock, and means carried by said support for disengaging the bar from the stock.

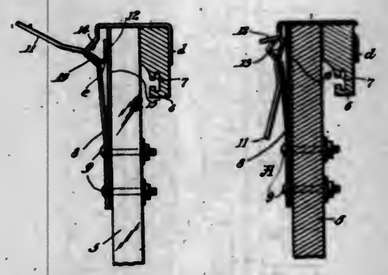
1,457,146. AUTOMATIC HEADLIGHT TURNER. MATTHEW J. CANAVAN, Dunmore, Pa. Filed Aug. 8, 1921. Serial No. 490,469. 3 Claims. (Cl. 240—62.)

1. An automatic head light turner comprising in combination with a vehicle and the front wheels thereof, brackets secured to the vehicle, lamp standards journalled in said brackets, legs projecting from the lower ends of said standards at right angles thereto, a barrel having lugs to which the ends of said legs are pivoted, a sleeve fixed in one end of said barrel, another sleeve adjustably mounted in the opposite end of said barrel, means for holding said last named sleeve in different positions, forks slidably mounted in the outer ends of said sleeves, means for normally forcing said forks outward, and rollers journalled in said forks for coaction with the vehicle wheels.

1,457,147. REDUCING GARMENT. BLANCHE CERVELLI, San Francisco, Calif. Filed Aug. 15, 1922. Serial No. 582,060. 3 Claims. (Cl. 2—73.)

3. A reducing garment comprising a bust portion and a hip portion, said bust portion consisting of a sheet of material adapted to be placed around the bust of the wearer, said sheet having means for securing its ends together at the back of the wearer to place said sheet under tension whereby the enclosed portion of the body of the wearer is drawn rearwardly, said hip portion consisting of a single sheet of material impervious to air adapted to encircle the body of the wearer above and below the hips, the front portions of said sheet converging from points near the hips to the ends of the sheet, and means for securing the ends together to adjust the tension of the sheet and to draw the enclosed portion of the body of the wearer forwardly.

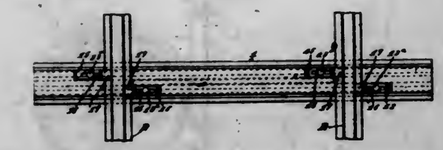
1,457,148. WELL PLUG. ROBERT J. CRABBE, Weston, W. Va. Filed Mar. 27, 1922. Serial No. 547,130. 4 Claims. (Cl. 166—13.)



1. A plug of the class described comprising a counter bored mandrel having reversely tapered upper and lower external portions, and a stop rib at the upper end of the upper tapered portion, a supporting disk, a stud rising from the disk and received in the counter bore of the mandrel, a tubular packing member supported by the disk with a bore tapered to conform substantially to the lower tapered portion of the mandrel, and breakable means for coupling the mandrel to the stud.

1,457,149. PREPARING ALUMINUM OR ITS ALLOYS FOR ELECTROPLATING. HARRY DOUGLAS CUNNINGHAM, Brighton, England. Filed May 10, 1920. Serial No. 380,360. 5 Claims. (Cl. 91—68.2.)

1. The process of electro-plating articles of aluminum and its alloys, comprising an initial cleaning of the article, then treating the article with a mixture of an abradant and a solution of copper sulphate so as to remove oxide and simultaneously impart a coating of copper to the article, and finally electroplating the article.



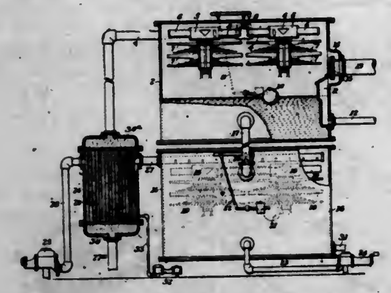
1,457,150. CLAMPING DEVICE. MICHAEL J. DE GRAVE, Chicago, Ill. Filed Feb. 11, 1922. Serial No. 535,805. 2 Claims. (Cl. 45—24.)

1. In a clamping deivce comprising in combination with a pair of curtain stretching members arranged substantially at right angles with respect to each other and a clamping plate of an opening formed in the body of said plate, there being outwardly fixed portions of said plate

at opposite sides of said opening; and a lever having one end passing through said opening, for engagement with the adjacent stretching member whereby said stretching members are clamped together by movement of the lever in one direction, said lever having trunnions on said lever adapted to engage recesses formed by the fixed portions of said plate.

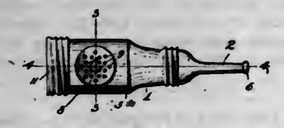
1,457,151. CONCRETE TIE AND RAIL CLAMP. WILLIAM TAYLOR DICKEY, Portsmouth, Va., assignor to American Concrete Tie Corporation, Portsmouth, Va. Filed Sept. 7, 1922. Serial No. 586,697. 4 Claims. (Cl. 238—89.)

1. A cement railroad tie having bolt receiving openings therein and sockets adjacent said openings, rail clamps mounted on said bolts and having toes to enter said sockets, said toes being beveled on their outer faces at their terminals to exert pressure at an oblique angle on the tie.



1,457,152. ADJUSTABLE STEP FOR AUTOMOBILE RUNNING BOARDS. JOSEPH DISCH and JOHN G. FRESE, St. Louis, Mo. Filed May 27, 1922. Serial No. 564,024. 1 Claim. (Cl. 280—169.)

A step of the character described comprising an ornamented foot plate having a front contacting flange, a scraper formed by said flange, said plate attached to the running board and a toe section slidably mounted on said plate and brought in contact with the body of the machine, thereby taking the full depth of the running board, substantially as specified.



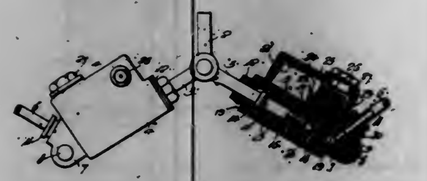
1,457,153. WATER HEATING AND DEGASIFYING APPARATUS. WILLIAM S. ELLIOTT, Pittsburgh, Pa. Original application filed Mar. 31, 1915, Serial No. 18,268. Divided and this application filed Mar. 29, 1917. Serial No. 158,238. 13 Claims. (Cl. 183—25.)

1. In apparatus for deaerating liquid, a receiver having a liquid space and a steam space, a service connection leading from the liquid space of said receiver to convey substantially air-free liquid therefrom to a point of utilization of such liquid, automatic means for supplying to said receiver substantially wholly in accord with the demands of said service connection liquid which is at a temperature higher than the temperature in said receiver and which has a substantially constant difference

in temperature thereover, and means connected to said receiver for maintaining said substantially constant difference in temperature.

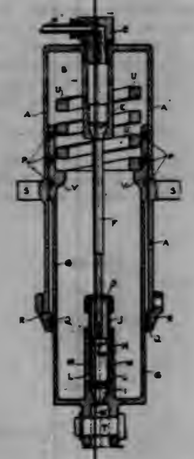
1,457,154. SMOKER'S ACCESSORY. THOMAS C. ERSKINE, Columbus, Ohio. Filed Feb. 7, 1921. Serial No. 442,916. 2 Claims. (Cl. 131—51.)

2. A smoker's accessory comprising a mouth piece, having a socket formed in one end thereof for the reception of an article of tobacco, a metallic casing removably positioned upon one end of said mouth piece, said casing including a longitudinally extending chamber arranged to receive and enclose an article of tobacco projecting from the socket of said mouth piece, the outer end of said casing being provided with a perforated wall, and a perforate dome formed with and projecting from said casing at a point intermediate of its length.



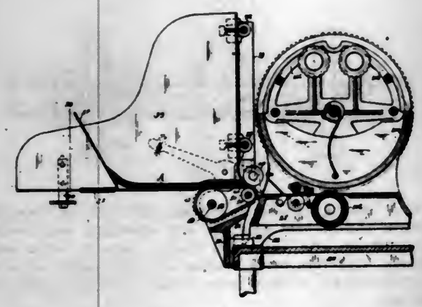
1,457,155. CONTAINER. FRANK E. FEY, Seattle, Wash., assignor of one-half to Eugene A. Balsley, Chicago, Ill. Filed Feb. 13, 1922. Serial No. 536,323. 9 Claims. (Cl. 220—5.)

1. A stamped metal container comprising two sections, the adjacent ends of which are open and the remote ends of which are closed, said sections tapering toward their closed ends, a ring surrounding each section adjacent its open end and provided with spaced outwardly extending lugs projecting toward the other section, the lugs of one section projecting between the lugs of the other section, the lugs of said sections having beveled faces coacting to form an interrupted outwardly flaring annular channel extending around said container, a split locking ring having a beveled rib extending into said annular channel, means for tightening said ring to draw said sections toward each other, a gasket confined between



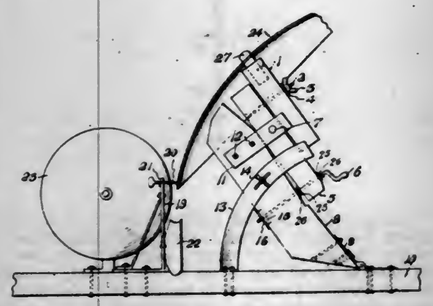
the adjacent ends of said sections, and an annular guard ring surrounding each section adjacent the cam ring of said section and projecting outwardly beyond said cam ring.

1,457,156. PRESSURE-EQUALIZING BRAKE-APPLYING DEVICE. OSCAR J. FROCK, Wilmington, Del. Filed May 12, 1922. Serial No. 560,429. 13 Claims. (Cl. 138—23.)



1. In a hydraulic brake applying structure, cylinders pivotally mounted for swinging movement towards and away from each other, pistons in the cylinders having piston rods extending through the free ends of the cylinders in converging relation, and operating means including a plunger having one end pivotally connected with the outer ends of said piston rods for imparting movement to the rods and pistons and setting up brake applying pulsations in columns of fluid leading to fluid brakes.

1,457,157. PNEUMATIC SUSPENSION FOR WHEELED VEHICLES. ALEXANDER GALBRAITH, Dalmuir, Scotland. Filed Nov. 25, 1921. Serial No. 517,608. 5 Claims. (Cl. 267—65.)

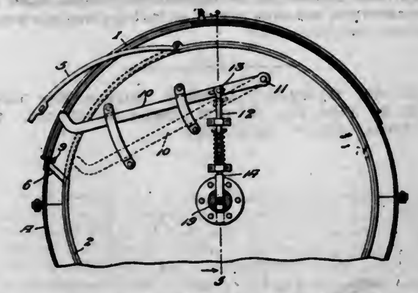


1. A pneumatic suspension device for wheeled vehicles comprising a pair of hollow cylinders, telescoping one within the other and closed at their outer ends, one cylinder adapted to be connected to the body and the other to the running gear, an inlet connection to a supply of pressure air in the closed end of one cylinder and an outlet to the atmosphere in the closed end of the other cylinder, valve seats at said inlet and outlet ports, valves normally resting on said seats, the inlet valve having a pendent valve stem connected with lost motion to the outlet valve and serving to operate both valves in predetermined position of the cylinders.

1,457,158. MECHANISM FOR FEEDING PAPER, CARDS, ENVELOPES, ETC. HARRY C. GAMMETER, Cleveland Heights, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 7, 1920. Serial No. 415,344. 18 Claims. (Cl. 271—35.)

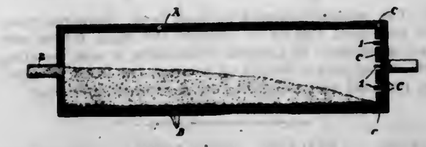
1. In a paper feeding mechanism, the combination with a propelling belt having its upper reach positioned to support the forward portion of a stack of paper, of a retarding device cooperating with said belt, and a movable lever carrying the retarding device.

1,457,159. PLOWDISK-SHARPENING MACHINE. CARL T. GROVE, Great Falls, Mont. Filed Mar. 20, 1922. Serial No. 545,373. 3 Claims. (Cl. 51—236.)



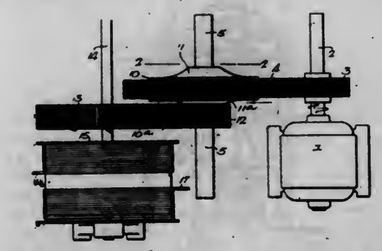
1. A work holder for cultivator disks while being ground, consisting of an upper block having a pin capable of acting as a pivot for the disk, a base, a lower block pivoted to the base, a middle block pivoted to the lower block and upon which the upper block is mounted to slide, and a guide bracket and straps for holding the blocks in place.

1,457,160. ROTARY WASHING MACHINE. FRANK GUAY, Whitefish, Mont. Filed Mar. 8, 1922. Serial No. 542,079. 5 Claims. (Cl. 68—18.)



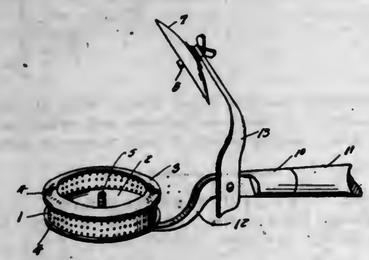
1. A washing-machine including an outer and an inner cylinder spaced apart, a door for the inner cylinder,

and a spring-actuated slidably mounted guard which automatically projects itself to cover the space between



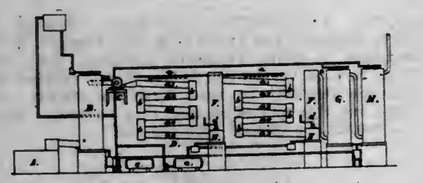
the two cylinders at the edge of the door-way when the door is open.

1,457,161. METHOD FOR MAKING PLASTIC GYPSUM. ROBERT E. HAIRE, Paris, Ontario, Canada. Filed May 27, 1922. Serial No. 564,248. 1 Claim. (Cl. 222—4.)



The herein described method of making plastic gypsum, consisting in passing calcined gypsum through a tube mill with substantial exclusion of air in circulation through said mill to thereby prevent loss of the water content during the grinding, the material being allowed to discharge at the periphery of the mill when the desired degree of plasticity is reached.

1,457,162. DOUBLE-ACTING LOAD BRAKE. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1921. Serial No. 463,012. 2 Claims. (Cl. 192—16.)

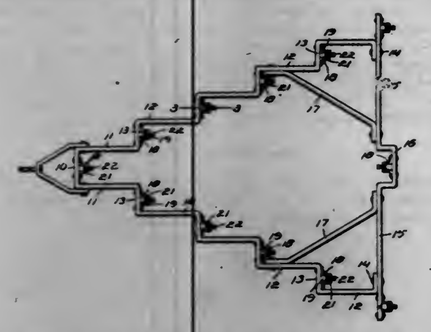


1. The combination in hoisting mechanism, of a power shaft; an intermediate shaft; a driven shaft; a drum thereon arranged to have two ropes wound thereon, one leading from the opposite side thereof; an intermediate shaft having a screw thread; a wheel on the said shaft driven from the power shaft and having an internal thread in its hub meshing with the thread on the intermediate shaft; two friction disks keyed to the said shaft, one on each side of the wheel; ratchet disks on each side of the wheel located between the wheel and the friction disks; pawls engaging the ratchet disks so that one disk will turn in one direction only and the other disk will turn in the opposite direction only so that when the wheel is turned in one direction it will move into frictional contact with the disks on one side of the wheel, turning the shaft in one direction and, when the rotation of the wheel is reversed, it will be moved into frictional contact with the other disks, causing the shaft to move in the opposite direction; and means connecting the shaft with the drum shaft so that the drum shaft will be reversed with the intermediate shaft, the pawls preventing the load running away with the mechanism.

1,457,163. TENNIS-COURT MARKER. JULIAN B. HALLER, Wytheville, Va. Filed May 25, 1922. Serial No. 563,623. 3 Claims. (Cl. 221—119.)

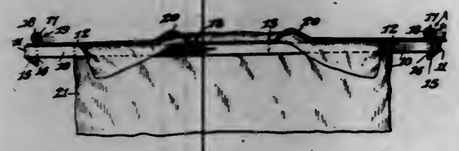
1. A tennis court marker comprising a marking drum having a perforated band periphery and an open side, a removable cover for closing the open side of the drum, means for securing the cover in closed position, and a handle including a fork, one of the members of which is pivoted and the drum and cover being journaled to the respective fork members.

1,457,164. METHOD AND APPARATUS FOR MANUFACTURING SULPHURIC ACID. THOMAS R. HARNEY, Short Hills, N. J., assignor to New Process Acid Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 1, 1921. Serial No. 512,000. 9 Claims. (Cl. 23—1.)



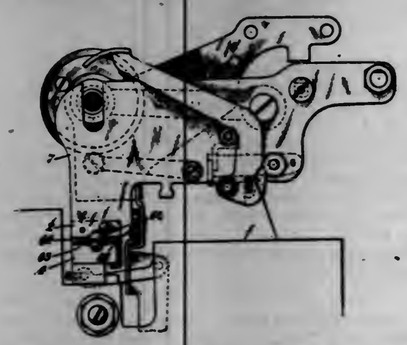
1. The method of producing sulphuric acid from a gas containing sulphur dioxide, which consists in introducing into said gas nitrogen oxides, then passing said gases through a relatively long circuitous passage to convert the sulphur compound to a higher state of oxidation, then adding water from an external source, then subjecting the gaseous mixture thus formed to the scrubbing action of large surfaces to form sulphuric acid, then removing the sulphuric acid thus formed, then passing the remaining gases through a relatively long circuitous passage, and forming and removing sulphuric acid therefrom as above described.

1,457,165. CULTIVATOR. EDWARD C. HARVEY, Franklinton, La. Filed Oct. 5, 1922. Serial No. 592,502. 2 Claims. (Cl. 55—3.)



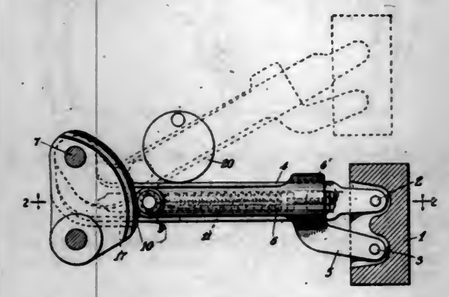
1. A cultivator frame formed from a single bar bent intermediate the ends to form a transverse portion and

rearwardly directed portions in spaced parallel relation, and thence directed rearwardly and reversely diverging,



the diverging portions being formed with alternating longitudinal and transverse portions, and means for coupling earth engaging devices to said transverse portions.

1,457,166. TOWEL AND GARMENT HOLDER. JOSEPH J. HAYES, Elkhart, Ind. Filed Mar. 1, 1922. Serial No. 540,219. 3 Claims. (Cl. 45—32.)

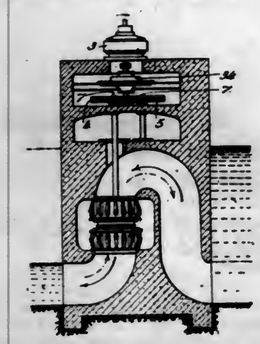


2. In a device of the class described a supporting bar having outwardly opening recesses at the ends, a rod bearing upon said bar and with downturned portions engaging in said recesses, the parts of the rod in advance of the downturned portions being directed laterally and coupling the rod to the bar thereby and adapted to be attached to a support.

1,457,167. TYPEWRITING MACHINE. EDWARD B. HESS, Brooklyn, and LEWIS C. MYERS, Freeport, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Original application filed May 11, 1920, Serial No. 380,601. Divided and this application filed June 19, 1922. Serial No. 569,322. 2 Claims. (Cl. 197—69.)

1. In a typewriting machine: an upper and a lower ball raceway having longitudinal grooves, the groove of the lower raceway having a central gutter and a longitudinally extending raised portion on each side of the gutter, rack teeth disposed on the opposite longitudinal edges of the raceways, and balls having encircling gears interposed between said raceways.

1,457,168. HAMMER. ALFRED E. HORMAN, New York, N. Y. Filed Feb. 16, 1922. Serial No. 537,129. 12 Claims. (Cl. 78—31.)



1. The combination of a hammer head, elongated members connected thereto to support the same for up and down movement, and means comprising a cam coacting with one of said members to position the same to maintain the head vertical during its downward movement.

1,457,169. ANTIRUST COMPOSITION. CHARLES C. HOWE, Wyoming, R. I., and STEPHEN W. LIBBY, Watertown, Mass., assignors to Warren Soap Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 2, 1922. Serial No. 533,647. 2 Claims. (Cl. 134—1.)

2. A new composition of matter, consisting of petrolatum, mineral oil, wool fat and mica in substantially the relative proportions above described.

1,457,170. TIDAL WATER-POWER PLANT. ALBERT HUGUENIN, Zurich, Switzerland. Filed Oct. 5, 1921. Serial No. 505,511. 3 Claims. (Cl. 290—4.)

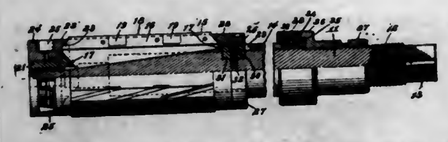
1. In a tidal water power plant, in combination, at least one aggregate composed of an asynchronous generator and a turbine, means interposed between said turbine and said generator for altering the transmission ratio between turbine and generator, two controllable guide apparatus for said turbine, means to render one of same operative when the turbine works in the one of the two rotary directions and to render the other inoperative by removing it from the supply passages to the turbine.

1,457,171. CONDUIT END FITTING. FREDERICK I. JOHNSON, Warren, R. I., assignor to Mary W. Johnson, Warren, R. I. Filed Aug. 27, 1920. Serial No. 406,337. 4 Claims. (Cl. 247—6.)

1. A conduit and fitting comprising an insulating head member, a nut-engaging neck member having an integral outturned flange and a band member having its edges turned inwardly to connect said flange portion to said head whereby one may rotate relative to the other, a nut in said member, and means in said neck member for firmly embracing said nut.

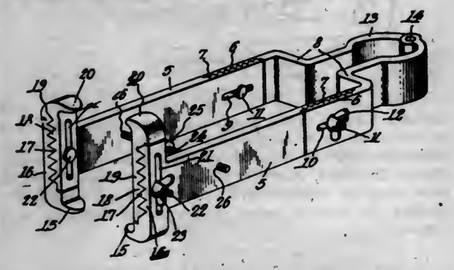
1,457,172. LINTER-GIN-RIB MOUNTING. TOLLIVER M. JONES, Birmingham, Ala. Filed Mar. 25, 1922. Serial No. 546,672. 12 Claims. (Cl. 19—62.)

4. A rib rail for gin saw breasts having spaced rib centering shoulders thereon which taper in transverse cross-section.



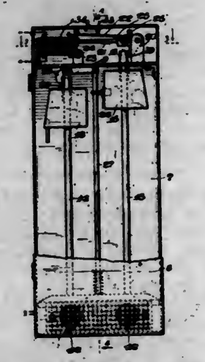
1,457,173. ELECTRICAL DIRECTION INDICATOR. HOSAKU KAGEYAMA, Los Angeles, Calif. Filed May 1, 1918. Serial No. 231,851. 14 Claims. (Cl. 177—337.)

1. A signal comprising two concentrically revolvable indicating members, means for operating said indicating members into various predetermined angular positions to indicate different signals, an auxiliary electric signal for indicating to the operator whether said indicating members are operated or not and switch means comprising two switch operating members for controlling the circuit of said auxiliary electric signal, said switch operating members being carried by the respective indicating members and adapted to come into engagement with one another for closing the circuit of said auxiliary signal when said indicating members are operated into any of their predetermined indicating positions.



1,457,174. REAMER. CHARLES A. KELL, Elkhart, Ind. Filed June 29, 1921. Serial No. 481,302. 4 Claims. (Cl. 77—76.)

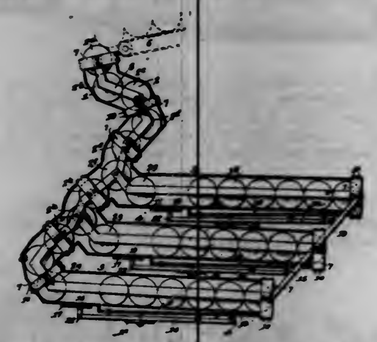
1. In a reamer, the combination of a shank having a tapered portion, an annular head enclosing and movable longitudinally upon said shank, said head being provided with longitudinal slots opening through its inner and outer faces, recessed blade holders mounted in said slots and having inwardly projecting extensions with inclined surfaces resting upon the tapered surface



of the shank, blades held in the recessed portions of the holders, means for moving the head longitudinally of the shank and fixing it in adjusted position, and means carried by the head for engaging the opposite ends of the blade holders and fixing the same in adjusted position.

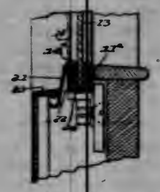
1,457,175. VALVE REPLACER. ELMER P. KRAY, Los Angeles, Calif. Filed Nov. 5, 1921. Serial No. 513,128. 5 Claims. (Cl. 29—86.3.)

1. A valve spring replacing tool comprising, a pair of spaced arms pivotally connected at corresponding ends whereby said arms may be adjusted toward and away from each other, means adjustably connecting said arms at points remote from their pivotal connection and adapted to shift the arms toward and away from each other, and pairs of inwardly projecting jaws carried by the ends of said arms, the jaws in each pair being spaced.



1,457,176. BURGLAR ALARM. JOHN E. LEE, Milwaukee, Wis. Filed Oct. 9, 1920. Serial No. 415,788. 6 Claims. (Cl. 177—314.)

6. An alarm device comprising a pair of vertically movable gravity-actuated firing hammers, guide means for said hammers, cartridge holding means under said hammers, movable suspension hooks engageable with said hammers, a spring-pressed rod connected to the

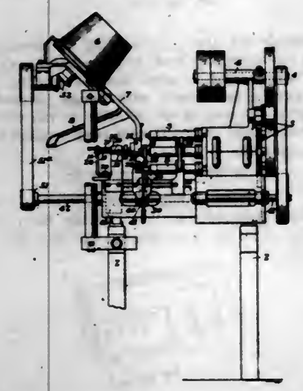


hook for the second hammer and provided with a stop engageable with a part on the first firing hammer to release the second hammer on the descent of the first hammer, and means for releasing the first hammer from its hook.

1,457,177. CAN-FEEDING MECHANISM. JOHN A. LEE, Coopersville, Mich. Filed Oct. 25, 1922. Serial No. 596,854. 8 Claims. (Cl. 193—32.)

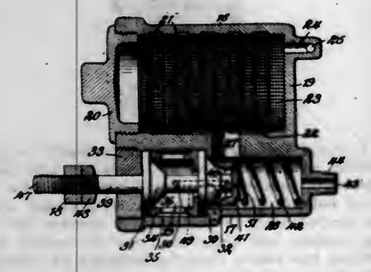
1. The method of feeding cylindrical metal cans through a guide chute, consisting in permitting the cans to roll about their longitudinal axes in a direct line of travel through the chute on opposite sides of the center line of the chute, in order, to direct the cans in units of short lengths, and providing diverting chute lengths for guiding the cans in longer groups to the discharge ends thereof.

1,457,178. VEHICLE SASH CONSTRUCTION. JOHN MCARTHUR, Detroit, Mich. Filed Feb. 14, 1922. Serial No. 536,481. 2 Claims. (Cl. 296—48.)



1. A sash for vehicle tops having a sliding frame provided with an inwardly directed groove or channel fitted with a yielding cushion for seating the edges of a sash light, and a weather strip having a downwardly and outwardly inclined wing extending into the sash receiving slot to bear against the outer wall thereof and provided with an inner cross-sectionally L-shaped retaining flange seated in the groove or channel between the walls thereof and the light seating cushion.

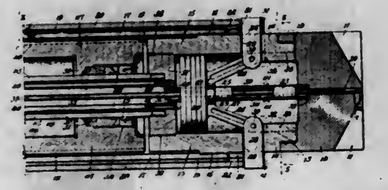
1,457,179. MACHINE FOR THE MANUFACTURE OF COLLAPSIBLE METAL TUBES. JOHN A. MCGINNIS, Wheeling, W. Va., assignor to Wheeling Stamping Company, Wheeling, W. Va., a Corporation of West Virginia. Filed June 28, 1921. Serial No. 481,042. 22 Claims. (Cl. 29—38.)



1. The combination with a machine for threading the necks of collapsible metal tubes and for trimming the tubes, of cap feeding and attaching devices operating in co-relation with the threading and trimming devices, to apply caps to the threaded necks of the tubes while the tubes are still on the machine, substantially as described.

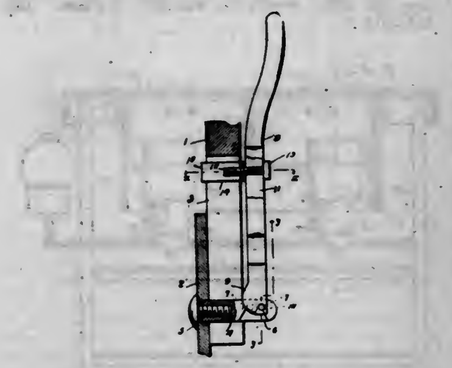
13. In mechanism of the character described, the combination with a feed chute having means for delivering caps in definite predetermind positions, of a chuck carrier mounted to reciprocate below the discharge end of said chute, a cap holding chuck on said carrier adjacent the lower end of said chute, a plunger for moving the caps from the lower portion of the chute into the chuck, means for periodically repicrocating the plunger, and means for periodically reciprocating the carrier, said reciprocating means operating to move the plunger forwardly in advance of the forward movement of the chuck carrier, substantially as described.

15. In mechanism of the character described, the combination with a machine having a tube holding mandrel adapted to prevent collapse of the tube, of a cap holding chuck adapted to cooperate with the mandrel, means for periodically feeding a cap into said chuck, and means for periodically moving the chuck toward and away from the mandrel, substantially as described.



1,457,180. VALVE DEVICE FOR HOSE REELS. JOSEPH B. MCMULLIN, Oskaloosa, Iowa, assignor to Western Manufacturing Company, Oskaloosa, Iowa. Original application filed Aug. 13, 1919, Serial No. 317,294. Divided and this application filed Aug. 17, 1920. Serial No. 404,071. 6 Claims. (Cl. 251—156.)

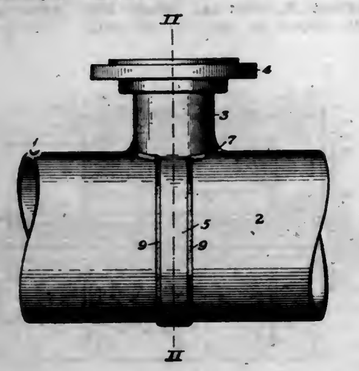
5. A valve device for controlling the flow of fluid under pressure, including a chamber with packing heads therein and a spacer separating the heads, thereby forming a compartment between the heads and one of the heads constituting a valve seat, a valve member in operative relation to the valve seat and having a normal tendency to engage said valve seat, and a push rod extending through the packing heads and engaging the valve member for moving it in opposition to its normal tendency and provided with passages for placing the interior of the valve member and the compartment between the packing heads in communication, said valve



device including another chamber communicating with the first named chamber and adapted to communicate with a supply of fluid under pressure, and a screen within the last named chamber for filtering out undesirable material from the fluid under pressure.

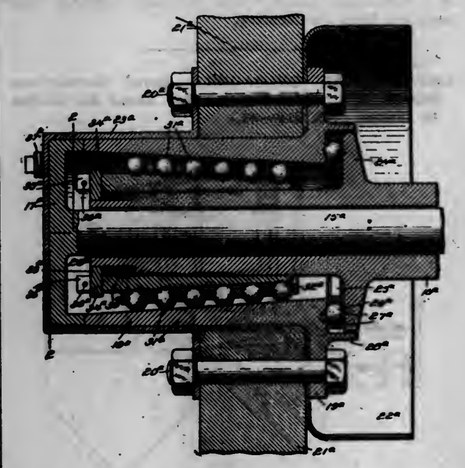
1,457,181. PNEUMATIC DRILL. WILLIAM MABLE, Fort Collins, Colo., assignor of one-half to Della Goodale, Fort Collins, Colo. Filed June 5, 1920. Serial No. 386,717. 24 Claims. (Cl. 255—4.)

1. A pneumatic drill for earth boring comprising a cutter, a cylinder supporting the cutter, a drill casing connected to the cylinder, reciprocating dogs supported by the cylinder for reaming out the hole in advance of the well casing, and positively reciprocated means in the cylinder for actuating the reaming dogs.



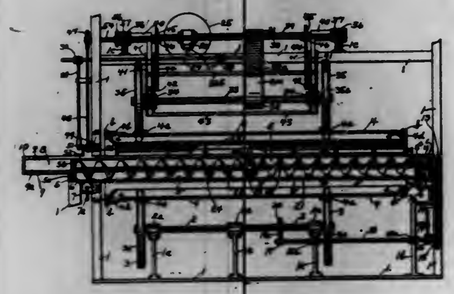
1,457,182. CLAMP BOLT. JOHN W. MALLORY and WILLIAM M. JOHNSTON, Grand Saline, Tex. Filed June 17, 1921. Serial No. 478,455. 5 Claims. (Cl. 287—58.)

2. Fastening means of the character specified comprising a bolt, an operating lever therefor, a yoke having outer extensions, and a screw loosely engaging the lever and threaded into the yoke and serving to hold the lever in the required adjusted position.



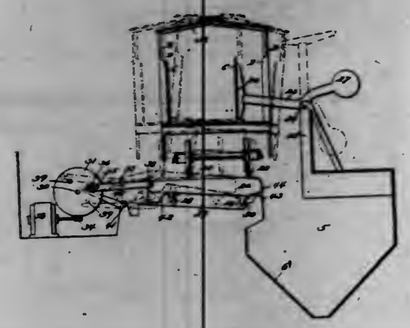
1,457,183. NECK OR NOZZLE CONNECTION FOR PIPE LINES. HARBOUR MITCHELL, Pittsburgh, Pa., assignor to American Foundry & Construction Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 26, 1921. Serial No. 440,209. 16 Claims. (Cl. 137—73.)

3. The method of attaching a nozzle or neck member to a metal pipe, which consists in forming a circular opening in the pipe, providing a nozzle having an internal diameter substantially equal to the diameter of said opening and having integral strap members, seating the nozzle on the pipe around said opening, bending the integral strap members around the pipe, and welding both the nozzle and the strap members to the pipe, substantially as described.



6. A nozzle connection for pipe lines, comprising a nozzle member seated around the opening in the pipe and welded thereto, said member also having integral strap portions which extend entirely around the pipe and are secured thereto, substantially as described.

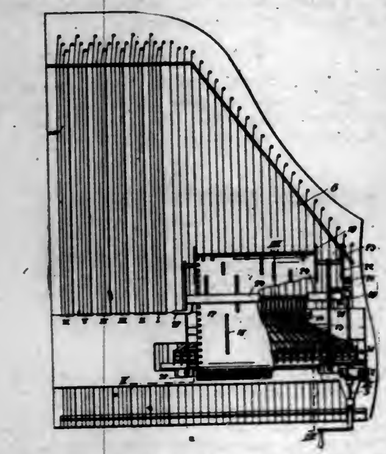
1,457,184. ADJUSTABLE BALL BEARING. SWENEY MUNSON, Fowler, Colo. Filed May 11, 1921. Serial No. 468,638. 5 Claims. (Cl. 64—36.)



1. In an anti-friction bearing, a rotating hub, a driven axle extending concentrically through the bore of said hub, and having means detachably engaging in the hub for rotating the latter, a housing surrounding said axle and extending within the bore of said hub, an annular flange formed with said housing and spaced from the inner end of said hub, a ball cage in the form of a flat annulus interposed between the opposed faces of the inner end of said hub and said flange and having a circular set of ball bearings contacting the faces thereof, a sleeve adjustably movable on said housing within said hub, the opposed faces of the bore of said hub and said sleeve being correspondingly tapered, a tapered ball cage interposed between the wall of the hub bore and said sleeve and having circular sets of ball bearings contacting the opposed faces thereof, and movable with the latter during its movements of adjustment, and means for locking said sleeve in any of its positions of adjustment.

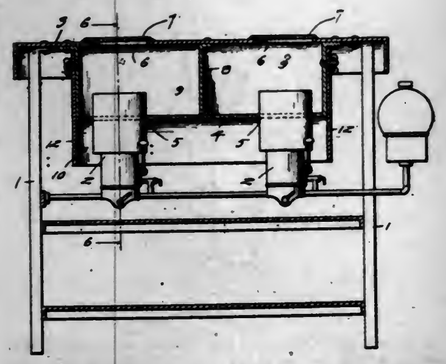
1,457,185. MACHINE AND PROCESS FOR MANUFACTURING ARTICLES FROM PLASTIC MATERIALS. CLIFFORD R. NICHOLS, Dallas, Tex. Filed Apr. 5, 1923. Serial No. 630,113. 24 Claims. (Cl. 25—30.)

15. In a centrifugal plastic ware making machine, a rotary mold, a trough having a discharge extending throughout substantially its length to discharge material into the mold throughout substantially the length of the mold, means to move the trough into and out of the mold, means in the trough to feed the material through the discharge and means controlling the discharge to open and close the latter whereby to allow the material to be discharged and to enable the mold to collect water resultant from the molding.



1,457,186. CAR UNLOADER. HENRY RICHARDSON, Passaic, N. J. Filed Dec. 2, 1920. Serial No. 427,793. 14 Claims. (Cl. 214—44.)

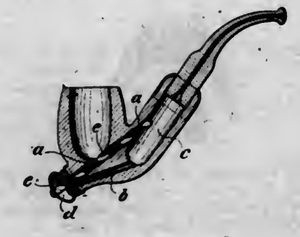
1. In a car unloader, in combination, a car-door opener, and means for supporting a car to move bodily in a direction laterally of its length toward the door opener while the latter is in engagement with the door.



1,457,187. MECHANISM FOR PLAYING ZITHERS. PAUL RIESSNER, Luckenwalde, Germany. Filed July 19, 1920. Serial No. 397,538. 5 Claims. (Cl. 84—8.)

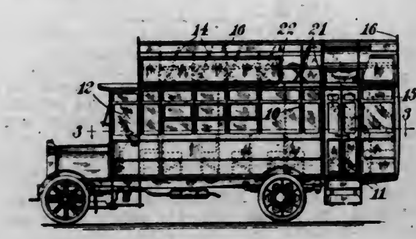
1. Mechanism for playing zithers, comprising in combination plucking devices for plucking the melody strings, a resiliently suspended bar adapted to be oscillated longitudinally, means for effecting the longitudinal oscillating movement of said bar and of the plucking devices, mounted within notches of the bar, means including a note sheet for selecting the melody strings to be plucked, signs on said note sheet, indicating the accompaniment chords or groups of strings to be manually plucked at

the some time by the player and means for returning the note sheet into the initial position after the piece of music has been played.



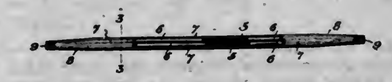
1,457,188. MULTIPLE HOLE TOP FOR BURNER STOVES. ERASTUS W. ROGERS, Durham, N. C. Filed Apr. 30, 1921. Serial No. 465,817. 1 Claim. (Cl. 126—214.)

In combination with a stove having a top, an upstanding burner at a distance below the top, a casing depending from said top having a bottom wall and an outwardly extending marginal flange at the upper edge secured to the under surface of the top, said casing having an opening in its bottom wall through which said burner extends, the burner terminating short of the top, said top having a plurality of outlet openings, and a windshield surrounding said casing and depending below the same and about the burner.



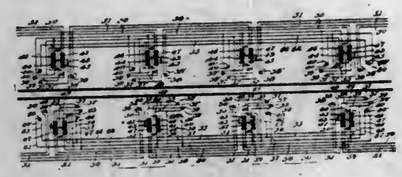
1,457,189. TOBACCO PIPE. MAX SCHIERS, Grossenbaum, near Dusseldorf, Germany. Filed July 8, 1920. Serial No. 394,857. 2 Claims. (Cl. 131—12.)

2. In a tobacco pipe a straight smoke channel connecting the bowl hole with a saliva chamber and a smoke chamber in the shaft discharging high above the bottom of this chamber, the saliva chamber consisting of a removable basin, a straight saliva channel connecting the saliva chamber with the bottom of the smoke



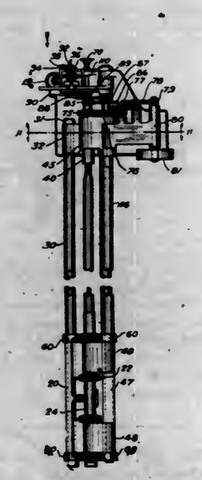
chamber, the axis of both channels crossing in the saliva basin, and a spiral grooved pin in the smoke channel fastened to the saliva basin.

1,457,190. PASSENGER VEHICLE. GEORGE JAMES SHAVE, Westminster, London, England, assignor to The London General Omnibus Company Limited, Westminster, London, England, a British Limited Liability Company. Filed Mar. 22, 1921. Serial No. 454,465. 5 Claims. (Cl. 296—28.)



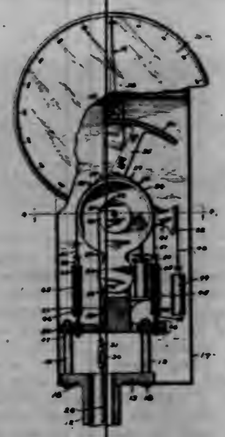
1. A passenger vehicle comprising in combination a body, permanent seats for passengers on said body, a staircase communicating between the floor and the roof of the body, readily removable means for securing the staircase in position, supplementary seats for mounting on the floor of the body in substitution for the staircase when the latter is removed, and readily removable means for securing said supplementary seats in position, said means including metal sockets sunk in the floor of the body, metal plates carried by a supplementary seat, and screws for securing said plates to said sockets.

1,457,191. HAIR CURLER. PAUL SINCLAIR, Williamsport, Pa., assignor to Sinclair Hair Curler Company, Williamsport, Pa. Filed May 6, 1922. Serial No. 559,019. 1 Claim. (Cl. 132—43.)



A device or article of the character described, comprising a plurality of flexible cores arranged in parallelism with each other, means enveloping the cores, a woven fabric housing concealing said means and tips closing the ends of said housing, the means covering the cores being compressed within the housing at the end portions thereof for outward tapered formation thereto.

1,457,192. ELECTRIC SAFETY SYSTEM FOR RAILROADS. JOHAN SKINDERVIKEN, Chicago, Ill., assignor of one-half to Olaf E. Ray, Chicago, Ill. Filed Sept. 24, 1917. Serial No. 192,908. 12 Claims. (Cl. 246—60.)



3. In an electric safety system for railroads, the combination of a worm wheel on each train; a motor having a shaft provided with a worm thread adapted for meshing with said wheel; a valve interposed in the air brake system of the train operable upon the rotation of said wheel; a normally open electric circuit on each train, adapted, when closed, to effect rotation of said wheel; a plurality of make-and-break devices spaced along the track, each of which is adapted, when actuated, to close the mentioned circuit of a train passing the same; means on each train for effecting opening and closing of said make-and-break devices; a station located along the track; and means in said station for co-operation with certain of said make-and-break devices along the track for opening and closing the same at the will of an operator located in the station, substantially as described.

1,457,193. DEVICE FOR PERFORATING OIL-WELL CASINGS. EDWARD M. SMITH and RICHARD E. HEIDRICH, Los Angeles, Calif.; said Heidrich assignor to said Smith. Filed Feb. 21, 1922. Serial No. 538,220. 6 Claims. (Cl. 81—194.)

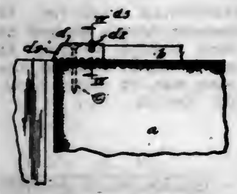
1. In a device for cutting slots in pipe, the combination of: a head, small enough to go entirely inside the pipe which it is desired to slot; locking means carried by said head for locking said head inside said pipe; means by which said locking means may be actuated from a point outside said pipe with said head in place inside said pipe; a rotary cutter carried by said head; and means for positively driving said cutter from a point outside said pipe with said head in place inside the pipe.

1,457,194. SPRING SCALE. WALTER S. SMITH, Columbus, Ohio. Filed Dec. 30, 1920. Serial No. 433,968. 10 Claims. (Cl. 265—69.)

1. In a scale, a beam structure and a weighing platform associated therewith, an oscillatably mounted actuator, a connection between said actuator and said beam structure, balanced spring mechanism cooperative with axially opposite portions of said actuator for normally maintaining the latter in neutral position, said mechanism being flexibly connected with the actuator and weight indicating mechanism arranged to register in accord with the movement of said actuator.

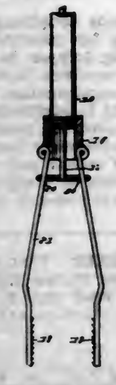
1,457,195. JACK BOLSTER. HERBERT V. SOUDERS, Wilmington, Calif., assignor of one-half to Jesse M. Frost, Long Beach, Calif. Filed Mar. 9, 1922. Serial No. 542,292. 8 Claims. (Cl. 254—100.)

1. In combination, a vehicle including a spring, a jack adapted for arrangement beneath the spring and in the rear or advance of the adjacent wheel, and a bolster interposed between the head of said jack and spring and formed with a jack head receiving portion adjacent to the outer end thereof whereby the operating lever of the jack is so disposed as to permit actuating thereof without reaching beneath the vehicle.



1,457,196. JEWEL SETTING. SOLOMON STEIN, Washington, D. C. Filed Apr. 14, 1922. Serial No. 552,441. 1 Claim. (Cl. 63—29.)

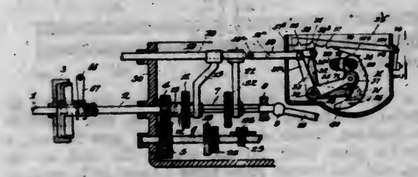
A jewel mounting comprising a top composed of a relatively thin plate, having an opening in its centre proportioned and adapted to serve as a centering guide for a reamer to be applied from the under side to ream out the opening with a taper the larger end of which is below, the smaller end being sufficiently smaller than the jewel to engage the periphery of the jewel and position it within the taper, said mounting being provided also with an internally threaded bore larger than the larger end of the tapered portion and concentric therewith, and an externally threaded member fitted to the threaded bore and provided at its upper end with a central cavity, the end margin of which is proportioned



and adapted to engage the under side of the jewel when the member is screwed home and maintain it rigidly within said taper with a portion extending through the smaller end and exposed above the top.

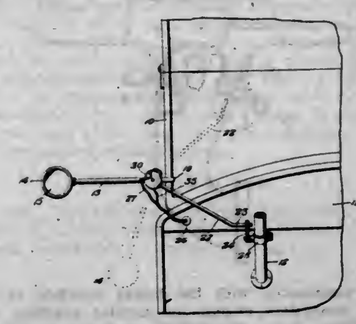
1,457,197. APPARATUS FOR FINISHING UPHOLSTERING. HORACE T. THOMAS, Lansing, Mich. Filed Feb. 12, 1921. Serial No. 444,366. 3 Claims. (Cl. 155—184.)

1. The combination of a finishing strip, a ferrule embracing the end of said strip, said ferrule being provided with a transverse ridge having a concavity within said ferrule for the purpose described.



1,457,198. GRAPPLING DEVICE. ARTHUR B. UTLEY, Springfield, Mo. Filed Mar. 17, 1921. Serial No. 453,113. 1 Claim. (Cl. 294—115.)

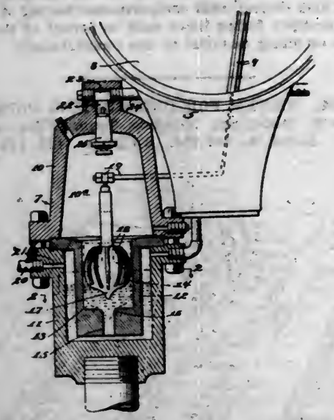
A tool for the purpose indicated comprising a tubular shank, a grip carried at the upper end of the shank, a stem passing slidably through the grip and centrally through the shank and provided with a collar at an intermediate point, a spring in surrounding relation to the stem and enclosed within the shank and bearing respectively against the grip and the collar, a knob carried at the upper extremity of the stem, a sleeve engaged with the lower end of the shank, jaws pivoted to the sleeve at diametrically opposite points and formed at their extremities with facing roughened surfaces for engagement with



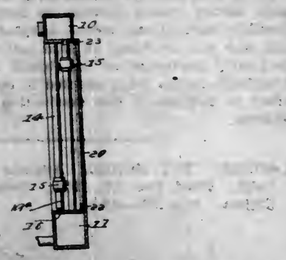
interposed objects, the said jaws being formed with divergent portions extending from the pivotal points to points adjacent said roughened faces, and a follower carried at the lower extremity of the stem and provided with guide openings slidably engaging the divergent portions of the jaws.

1,457,199. TRANSMISSION-GEAR-SHIFTING MECHANISM. ALBERT G. WAGNER, Norwood, Ohio, assignor of two-eighths to Henry A. Meyer, two-eighths to Felix Elsbach, and two-eighths to Jacob Bloch, all of Cincinnati, Ohio. Filed June 30, 1921. Serial No. 481,624. 12 Claims. (Cl. 74—58.)

1. In a gear shifting mechanism, the combination with a gear shifter bar, of a lever connected to said bar, a series of cams swinging as a unit, formed to respectively, raise, lower and centralize said lever relative to its upper and lower limits of movement, and means for selectively engaging said cams with said lever.



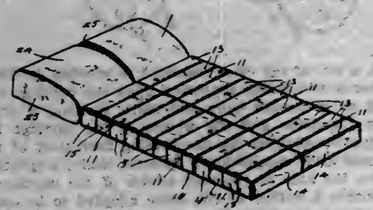
1,457,200. AUTOMOBILE SIGNAL. WILLIAM F. WEDEMEYER, Sheboygan, Wis. Filed Jan. 8, 1921. Serial No. 435,860. 3 Claims. (Cl. 116—54.)



1. An automobile signal comprising a stationary support adapted to be fixed to one side of an automobile, a rotatable element connected to said support, a signal arm carried by said rotatable element, a rearwardly inclined hand lever projecting inwardly from said rotatable support and formed with an angle shaped inner end, and an angle shaped latch device adapted to be carried by the steering column of an automobile and engageable with said angle shaped inner end of said lever for retaining said signal arm in its operative position.

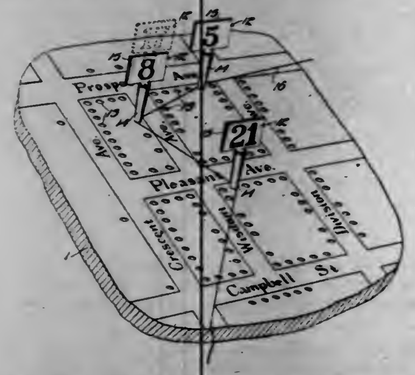
1,457,201. DIFFERENTIAL-PRESSURE GAUGE. HENRY P. WESTCOTT, Erie, Pa. Filed Oct. 20, 1919. Serial No. 332,063. 3 Claims. (Cl. 73—31.)

1. In a gauge of the class specified, the combination with a chambered casing having a dome thereover, a mercury pot mounted in the chambered casing and provided with a bottom opening and a fully open top portion, a metal float mounted in said pot and having a lower depending tapering check valve fixed thereto to extend into the said opening in the bottom of the pot, the check valve having a stem rising from the upper portion thereof, gauge means to which the stem is operatively connected, and valve means located above the float and stem and with which the upper part of the float stem is adapted to contact to open said valve means.



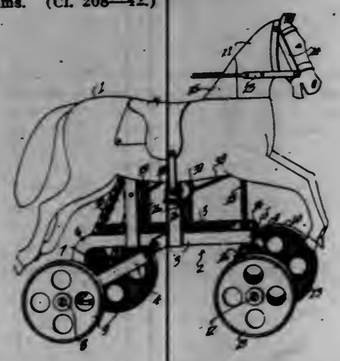
1,457,202. AUTOMOBILE RADIATOR. DAVID H. WEYANDT, Sidman, Pa. Filed May 4, 1921. Serial No. 466,813. 1 Claim. (Cl. 257—129.)

A radiator for automobiles having upper and lower tanks, and upright tubular circulating elements connecting said tanks, the tanks being formed with seats for the extremities of the tubular elements and the latter being of sectional construction with the elements connected by couplings the rotation of which extends the effective lengths of the elements to bring the extremities into firm engagement with said seats.



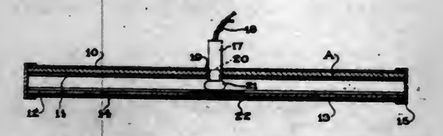
1,457,203. MATTRESS. SARAH J. WICK, Lonerock, Oreg. Filed Feb. 24, 1922. Serial No. 538,839. 1 Claim. (Cl. 5—13.)

A mattress having a base or bottom sheet consisting of a single sheet of material, parallel series of compart-



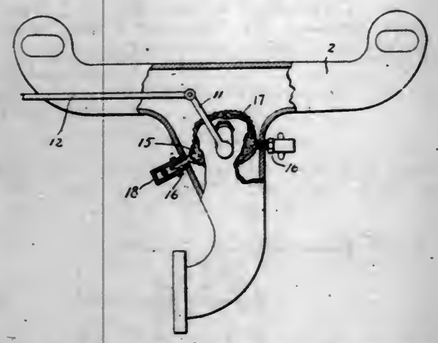
ments supported by said sheet, each of said compartments having their longitudinal edges arranged transversely of the bottom or base sheet and extending from the longitudinal edges thereof inward to the longitudinal central axis thereof, said compartments having originally open oppositely facing inner ends to permit of the introduction of filling material to the compartments.

1,457,204. SYSTEM FOR DISTRIBUTING PACKAGES. JOHN R. ALEXANDER, Memphis, Tenn. Filed Aug. 31, 1920. Serial No. 407,154. 6 Claims. (Cl. 116—136.)



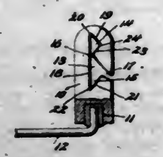
1. In a system of distribution, the combination of a map having means thereon so located as to indicate possible destinations, means adapted for attachment to the map and markings on said latter means adapted to be readily duplicated on the objects to be delivered, said attachable means being adapted to be superposed on each other to indicate a like destination for a plurality of objects.

1,457,205. TOY HORSE. ANDREW S. BAKER, Gilroy, Calif. Filed Dec. 17, 1921. Serial No. 523,115. 5 Claims. (Cl. 208—42.)



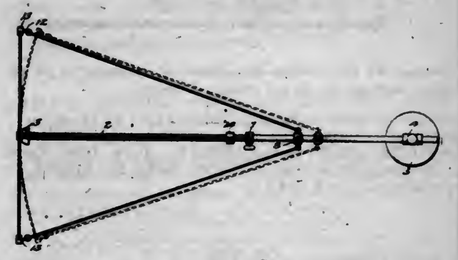
1. In a toy of the class described, a wheeled carriage, a toy horse or the like supported upon the carriage and adapted to be rocked back and forth thereon, a drive between the horse and the wheels of the carriage for propelling the carriage by the rocking movement of the horse, said drive comprising a sprocket chain, a sprocket wheel on the axle of the rear wheels of the carriage, a shaft within a hollow of the horse adapted to be oscillated by the horse, a sprocket on said shaft, said sprocket chain connecting said sprocket wheels, a dogging device for the sprocket wheel on said shaft adapted to lock the same in driving relation with the horse in one direction of its rotation but adapted to leave the sprocket wheel free to rotate in the shaft in an opposite direction, and spring actuated take-ups operating oppositely to one another and associated with the said drive, substantially as described.

1,457,206. LICENSE-PLATE HOLDER, TAIL LIGHT, AND PARKING LIGHT. JACK BENJAMIN, New Kensington, Pa. Filed June 30, 1922. Serial No. 571,878. 2 Claims. (Cl. 40—132.)



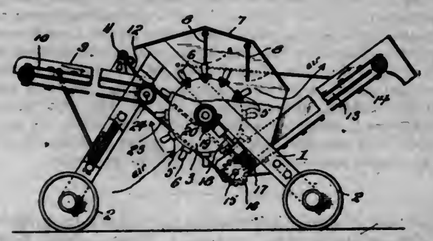
1. A device of the character described comprising an elongated rectangular casing adapted to hold a license plate disposed therein against the back wall thereof, a removable glass front for the casing, the back of the casing, and the license plate being formed with registering holes, a socket passing through said holes, an incandescent lamp within the casing engaged within said socket and a transparent red area on the glass plate opposite the incandescent lamp.

1,457,207. AUXILIARY AIR SUPPLY. ALBERT BOONE, Sawtelle, Calif. Filed July 21, 1922. Serial No. 576,501. 5 Claims. (Cl. 48—180.)



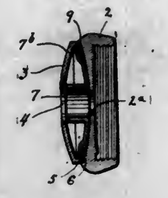
1. In combination with the intake manifold of an internal combustion engine, an exterior auxiliary air supply device, and a disc-shaped reticulated basket arranged in the manifold and against which the air entering through the supply device impinges, and a fibrous filling in the basket.

1,457,208. THREAD GUIDE FOR TEXTILE MACHINES. FREEMAN CASS, Brooklyn, N. Y. Filed Feb. 28, 1922. Serial No. 539,944. 2 Claims. (Cl. 242—157.)



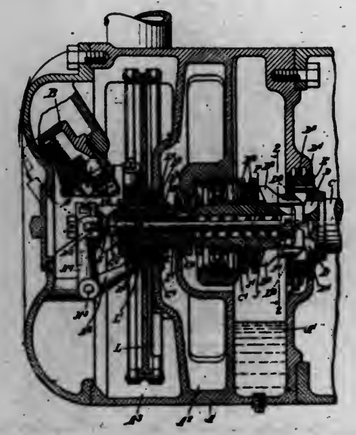
1. A thread guide for textile machines comprising a body having an eye provided with a substantially straight rear wall, said eye consisting of an upper portion and a lower portion with a narrow passageway connecting the same, the upper wall of said upper portion and the lower wall of said lower portion of the eye being arranged at an acute angle to said rear wall, whereby a sharp corner is formed at the top and bottom of said eye, and an inlet slot communicating with said lower portion of the eye opposite said rear wall.

1,457,209. METHOD AND APPARATUS FOR PRODUCING DISTORTED IMAGES. GASTON L. CHANIER, Short Hills, N. J., assignor to Pathe Exchange, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 18, 1922. Serial No. 554,683. 6 Claims. (Cl. 88—1.)



1. A device for producing distorted images, which includes a flexible sheet of reflecting material, a shaft or bar one end of which bears against the rear face of the sheet and extends therefrom, slidable members disposed on said bar, and connections extending between each of said slidable members and the sheet whereby the movement of the members will cause the flexing of the sheet, the connections from one member adapted to extend to different edges of the sheet than the connections extending from another slidable member.

1,457,210. APPARATUS FOR TREATING SOIL. WILLIAM E. CRANE, Oakland, Md. Filed May 11, 1920. Serial No. 380,689. 3 Claims. (Cl. 83—11.)

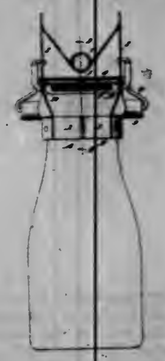


1. An apparatus for treating soil comprising in combination with a frame having a rotary beater cylinder of slatted construction thereon, an open ended hood mounted over said cylinder, buffer plates depending from said hood, and means to feed material to be treated to the upper part of said cylinder along the line of the air current created beneath the hood by the rotation of said slatted cylinder.

1,457,211. RECEIVER FOR TELEPHONES. VIRGIL C. CRITES, Los Angeles, Calif., assignor to Frank C. Mason, Los Angeles, Calif. Filed June 29, 1922. Serial No. 571,675. 4 Claims. (Cl. 179—182.)

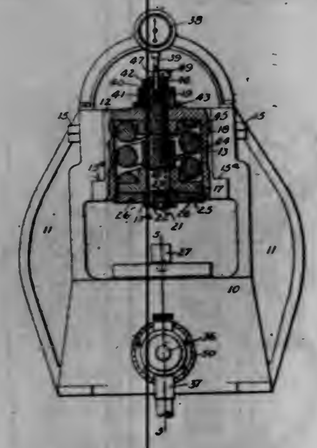
1. In an instrument applicable to the human ear to facilitate hearing, and having a hard shell, a cushion means attached to the face of the shell and which is adapted to rest against the ear, said means including a collapsible shield having an aperture, and a tube leading from the sound aperture of the shell through the shield so as to advance therethrough to project into the ear when the shield collapses.

1,457,212. GOVERNOR FOR STEAM TURBINES. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 9, 1920. Serial No. 402,251. 14 Claims. (Cl. 253—59.)



1. In a governor for a steam turbine comprising in part a valve and a valve stem, the combination of a hollow shaft portion with a governor rod centrally mounted and movable therein, a governor weight at one end of the rod, means for connecting the valve stem with the rod at the other end of the rod, an oil chamber to which the governor weight is exposed, a steam chamber in which the said valve connections are located, and an air chamber disposed between the said steam chamber and the oil chamber.

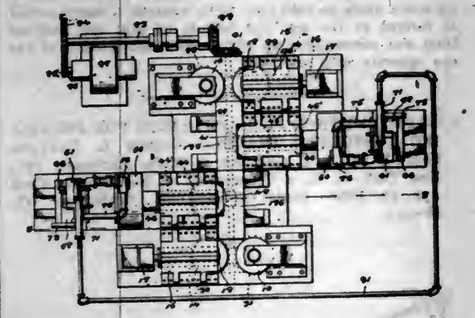
1,457,213. CARRIER. EDWARD JAMES DALTON, Davenport, Iowa. Filed Feb. 13, 1922. Serial No. 536,203. 3 Claims. (Cl. 215—100.)



1. A carrier of the class described comprising a pair of

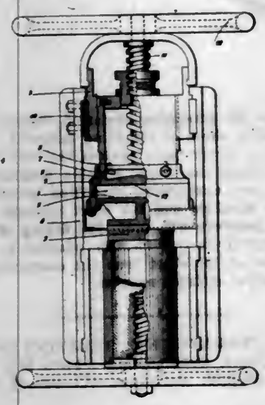
jaw members, each including a jaw part and a stem, a ball connected with the stems, means for hinging the

stems together and means for locking the stems to the ball for holding the jaw parts in gripping position.



1,457,214. MACHINE FOR TESTING HARDNESS OF MATERIALS. DONALD C. DAVIS, Buffalo, N. Y. Filed Apr. 26, 1919. Serial No. 292,815. 13 Claims. (Cl. 265—12.)

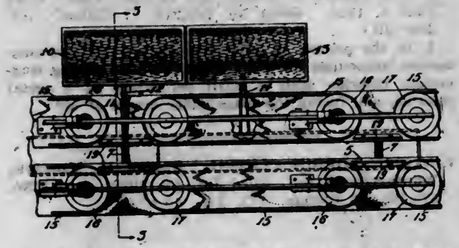
1. In a hardness testing machine, the combination of a movable testing member, means for yieldingly resisting movement thereof, means for causing a sample to press against said testing member and move the same against said resistance, a gage which is actuated by said testing member and indicates the travel thereof, a measuring member which moves relatively to the testing member when the latter is moved, and a device which is moved by said measuring member and which is additionally movable relatively thereto to further actuate the gage to indicate the depth of the indentation made in the sample by the testing member.



1,457,215. RAIL-STRAIGHTENING PRESS. JAMES S. DAYTON, Cumberland, Md. Filed Dec. 13, 1920. Serial No. 430,298. 36 Claims. (Cl. 153—80.)

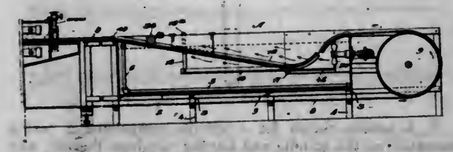
1. In a machine of the class described, power operated means for applying pressure to the work, and means controlled by the initial pressure of the work on an element of the means first named, and by the movement of said

means, for controlling the degree of pressure to be applied through the power operated means.



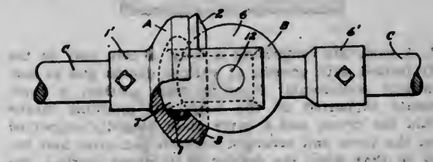
1,457,216. MOLDING MACHINE. PAUL DEHÈ, Paris, France. Filed Aug. 15, 1919. Serial No. 317,791. 1 Claim. (Cl. 49—35.)

In a molding press, the combination of a mould having stationary vertical walls, a coaxial compressing piston of smaller cross-section than that of the mould, a peripheral portion slidable on the said coaxial piston and adapted to bear upon the edge of the mould on the descent of the coaxial piston, a sleeve wherein the coaxial piston is vertically guided, and guideways having the said sleeve horizontally slidable therein in order that when the said sleeve and the said piston are separated from the mould the plastic material can be poured into the latter.



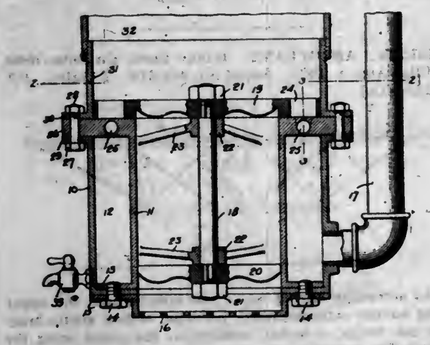
1,457,217. APPARATUS FOR APPLYING PARAFFIN TO SOAP CAKES. GEORGE A. DOSTAL, New York, N. Y., assignor to Pictorial Soap Manufacturing Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1921. Serial No. 452,149. 6 Claims. (Cl. 91—38.)

1. An apparatus of the character described comprising in combination parallel spaced ways arranged to support soap cakes adjacent their side edges only, a paraffin tank beneath said ways, heating means therefor, said tank being arranged to radiate heat against the soap cakes on the ways, a wick arranged to conduct paraffin from the tank and apply it to the under face of soap cakes moved along said ways, and conveyor means for moving soap cakes along said ways and over said wick.



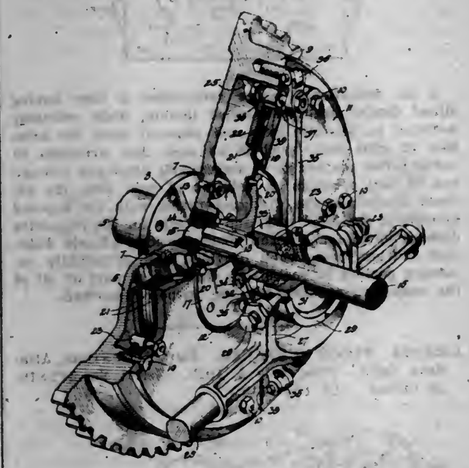
5. The method of applying paraffin to soap cakes which comprises applying successively a plurality of coats of paraffin to one face of a soap cake and applying heat to said soap cakes between the applications of paraffin substantially as and for the purpose described.

1,457,218. METHOD OF AND APPARATUS FOR AUTOMATICALLY CLEANING, SCALDING, AND PEELING FRUIT. ALFRED I. DU PONT, Wilmington, Del., and HIRAM R. HARDING, Baltimore, Md., assignors to The Harding Peeling Machine Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 24, 1922. Serial No. 531,498. 6 Claims. (Cl. 146—194.)



1. The method of preparing fruit such as tomatoes, for a peeling and coring operation, which consists in immersing the fruit in a water bath, creating a current in the upper portion thereof to cause a definite movement of the fruit adjacent the surface of the water, separating the moving fruit into parallel channels and conveying it in a continuous succession in spaced alinement.

1,457,219. UNIVERSAL JOINT. MAURICE G. DUSSEAU, Los Angeles, Calif., assignor of one-twentieth to Adolphe Danziger, Los Angeles, Calif., and nineteen-twentieths to Positive Traction Motors Corporation. Filed Apr. 29, 1920. Serial No. 377,652. 3 Claims. (Cl. 64—91.)

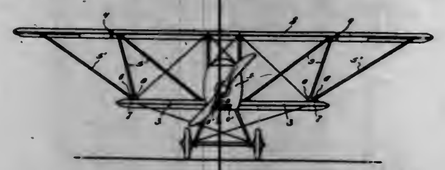


1. A universal joint comprising a concave member and a spherical member arranged to seat against said concave member, and a dovetailed locking rim extending around a portion of said sphere and pivoted thereto at diametrically opposite points, said concave member having a locking guideway correspondingly dovetailed and arranged to receive said locking rim, said locking rim being slidable into said locking guideway by turning said locking rim upon said sphere until its circumference is at right angles to the axis of said spherical member of the joint and then rotating said spherical member upon said axis.

1,457,220. PUMP. MAXIME P. FERRES, Brooklyn, N. Y. Filed Aug. 18, 1921. Serial No. 493,870. 7 Claims. (Cl. 103—87.)

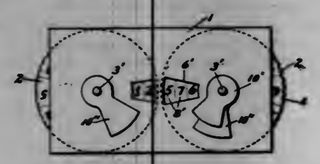
1. A steam pump of the class described comprising a jacketed pump cylinder bodily submergible with its jacket in the material to be pumped, steam supply means for the steam jacket of the cylinder, and drive means in position to be submerged with the submergence of the cylinder and actuated by the steam escaping from the steam jacket.

1,457,221. DRY-PLATE CLUTCH. OTTO E. FISHBURN, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 20, 1921. Serial No. 438,690. 12 Claims. (Cl. 192—52.)



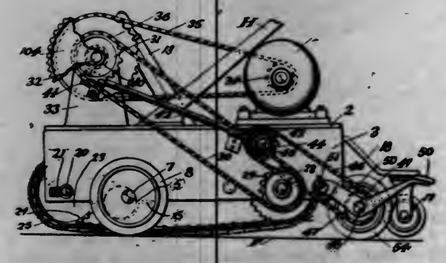
1. In a clutch, the combination of driving and driven members having respectively friction surfaces adapted to be brought into engagement, one of said members being flexible, operating means adapted to cause bending of said flexible member when the said means is actuated to disengage the clutch surfaces, and means for engaging said members whereby portions of said friction surfaces are brought into contact previous to the contacting of other portions thereof.

6. In a clutch, the combination of a driving shaft, a driven shaft, friction members carried on said shafts respectively, non-rotating clutch-operating means surrounding said driven shaft but out of contact therewith, and clutch-releasing means carried by the driving shaft



and adapted to be actuated by said non-rotating means, said operating means being supported independently of said releasing means and normally out of engagement therewith when the clutch is engaged.

1,457,222. AEROPLANE. HARRY FREY, Du Bois, Nebr. Filed Aug. 1, 1921. Serial No. 488,876. 1 Claim. (Cl. 244—12.)



An aeroplane having upper and lower wings, the upper wing having extended hinge portions, hollow struts bracing the wings, a socket member on the lower wing for detachably receiving the lower end of the strut which is connected with each foldable part and a socket on the fuselage for receiving said strut when the wing is folded.

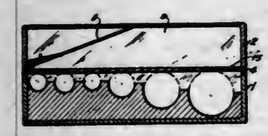
1,457,223. EDUCATIONAL DEVICE. LUKE L. GALLUP, Los Angeles, Calif. Filed Apr. 28, 1921. Serial No. 465,260. 2 Claims. (Cl. 35—2.)

1. An educational device comprising a base having alined display openings formed therein, disks rotatably mounted on separate axes and disposed upon the same face of said base, symbols on each disk arranged in radial series adapted to be successively displayed through one of said openings on rotation of said disk, the exposed symbols of one disk cooperating with the exposed symbols of the other disk, and shutters for the respective disks mounted for rotation about the axes of said disks, said shutters being each provided with a radially extending portion to enable the covering of part or all of the respective openings for the purpose described.

1,457,224. FLOOR SURFACER. EMIL B. GUNTHER, Altadena, Calif. Filed July 5, 1922. Serial No. 572,816. 25 Claims. (Cl. 144—115.)

1. A floor surfacer having an endless traveling link-mat chain of surface-scraping means.

1,457,225. METHOD OF MAKING MAGNESIUM. GEORGE HUTCHINSON, Arcadia, Calif., assignor of one-half to Thomas H. Wright, Los Angeles, Calif. Filed June 1, 1922. Serial No. 565,214. 7 Claims. (Cl. 204—19.)

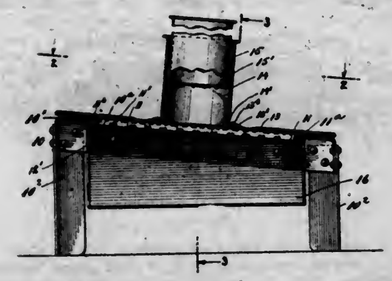


1. In the process of producing magnesium from magnesium compounds the steps which comprise mixing magnesium chloride with a small percentage of a metal chloride, and fusing the mass under access of air.

1,457,226. BOBBIN CLUTCH. GEORGE H. MAGRATH, Whitinsville, Mass. Filed July 29, 1922. Serial No. 578,435. 5 Claims. (Cl. 242—46.4.)

1. A bobbin clutch for a spindle comprising a casing mounted on the spindle and having openings therein, and a plurality of spring fingers mounted in fixed position within said casing and having outwardly displaced portions of their free ends projecting outwardly through said openings to engage and hold a bobbin on said spindle.

1,457,227. CASH BOX. LORA G. PRICE, Los Angeles, Calif. Filed Oct. 14, 1920. Serial No. 416,807. 2 Claims. (Cl. 133—11.)

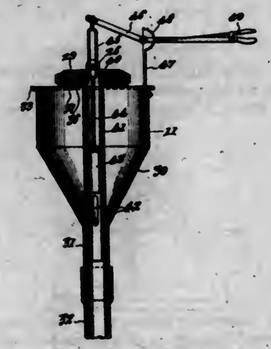


1. A cash box comprising a body, a coin tray in the body formed with grooves at various depths and of substantially semicircular form in cross section, a cover hingedly supported on the body, bill retaining means within the cover, and a cover plate hingedly supported upon the cover and arranged between the cover and the body so that when the former is in closed position the plate will engage the coins contained in the grooves and prevent movement of the latter within the grooves.

1,457,228. GRATER. JACOB I. ROBIN, New York, N. Y. Filed Sept. 26, 1921. Serial No. 503,769. 2 Claims. (Cl. 146—15.)

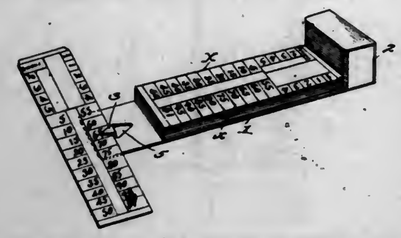
1. In a device of the character described, an elevated base having a longitudinal opening, a dish shaped grater formed with a marginal flange adapted to engage the marginal edge of said opening and to removably support said grater on said base, a removable slide on said base

formed with an opening to receive the article to be grated, means on said slide engaging the sides of said base to guide it longitudinally and a tubular member



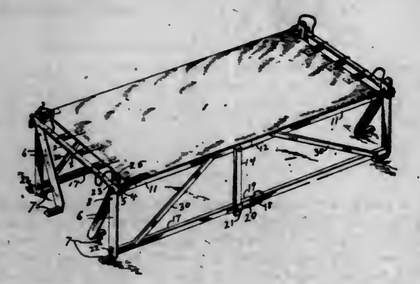
removably clamped to said slide over said opening to form a receptacle for the article to be grated and serve as a handle.

1,457,229. RAILROAD SWITCH. MARION ROBINSON, Princeton, W. Va., assignor of one-half to Mrs. Louisa Markland, Jenkins, Ky. Filed May 12, 1922. Serial No. 560,319. 3 Claims. (Cl. 246—318.)



1. A switch mechanism for controlling the communication between a sliding and the main line and including movable switch rails, having a rocker operatively connected with the switch rails for alternately positioning them in operative relation with opposite track rails and trips operatively connected with the rocker and located adjacent to the track rails respectively inside and outside of the siding for actuation in a common direction corresponding with the direction of movement of a car, for shifting the switch rails successively in opposite directions, each trip being provided with a beveled contact terminal and full stroke mechanism connected therewith for holding the trip alternately in its set positions.

1,457,230. COMBINED PLANTER AND FERTILIZER DISTRIBUTOR. FRANCIS B. ROUBIQUE, Napoleonville, La. Filed Jan. 30, 1922. Serial No. 532,766. 6 Claims. (Cl. 221—141.)

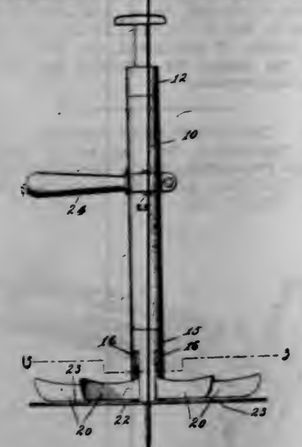


1. A machine as described comprising a hopper having an outlet nozzle, a cylindrical barrel fitted through the hopper and nozzle and having its interior in communication with the interior portion of the hopper, means to continuously rotate said barrel, means in the barrel for restricting the flow of the material from the hopper and into the interior of said barrel, and means on the exterior of the hopper for adjusting said means, substantially as described.

1,457,231. CHECK-NOTCHING DEVICE. WALTER C. SCOTT, Philadelphia, Pa., assignor to Globe Ticket Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1922. Serial No. 538,354. 7 Claims. (Cl. 211—37.)

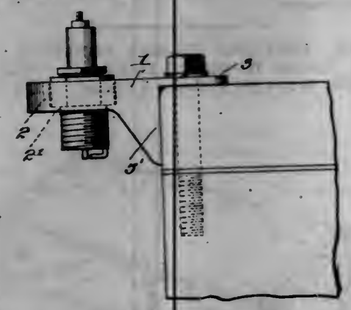
1. A check notching device comprising a support to hold a pack of checks, a notching tongue spaced from the support to receive an edge of a check to be notched, and means operable relatively to the notching tongue to hold such edge of the check immovable relatively to the notching tongue.

1,457,232. PORTABLE FOLDING SECTIONAL CAMP COT. JOSEPH H. SHENEY, Decatur, Ill. Filed Dec. 4, 1922. Serial No. 604,965. 3 Claims. (Cl. 5—114.)



1. A folding sectional cot, comprising folding side arms having shouldered headers, other side arms having key locks, legs having feet pointing in different directions, the legs provided with openings to engage the side arms, end cross arms constructed to engage the headers of the side arms, means to clamp the headers, legs, and end cross arms, and a detachable pad arranged to engage the end cross arms.

1,457,233. PIE-CUTTING DEVICE. JOSEPH J. SLOVACK, Sunderland, Mass. Filed Nov. 14, 1921. Serial No. 515,005. 2 Claims. (Cl. 146—7.)

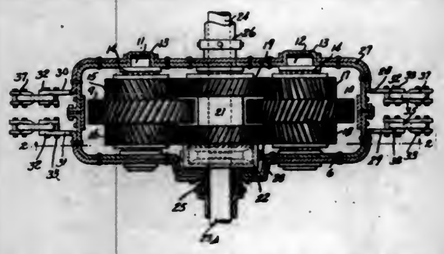


1. A device of the class described comprising a supporting element, a reciprocable element carried thereby, said element being movable manually with reference to the supporting member, a spring for returning the reciprocable element to normal position after the manual operation, radial blades carried by the reciprocable element, a plate member provided with radial slots, the

angle between the slots corresponding with the angle between the blades, and means carried by the supporting

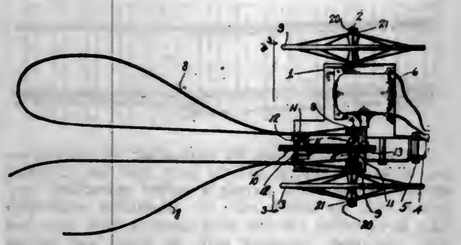
member for guiding the blades, a pin mounted for vertical movement within the lower end of the reciprocable element, and a spring acting to force the pin downwardly.

1,457,234. PLUG HOLDER. ELMER J. STROUT, Utica, Ill. Filed Oct. 9, 1922. Serial No. 593,314. 1 Claim. (Cl. 81—121.)



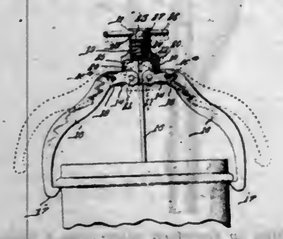
A spark plug holder comprising a plate having a socket in its upper part shaped to fit a spark plug and a hole in the lower part which passes through the bottom wall of the socket, a rear extension on the plate of less thickness than the plate and having a hole therein and a depending part on the plate having its rear face extending at right angles to the bottom of the extension, said depending part having a slot therein and bracing parts connecting the depending part with the bottom of the plate.

1,457,235. AZO DYESTUFFS. RICHARD STÜSSER, Dentz, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Dec. 23, 1921. Serial No. 524,483. 4 Claims. (Cl. 260—80.)



1. The herein described new azo dyestuffs, which are after being dried and pulverized in the shape of their alkaline salts dark powders soluble in water and in concentrated sulfuric acid generally with from a yellow to blue coloration; yielding by reduction with stannous chlorid and hydrochloric acid 4.4'-diaminodiphenyl-3.3'-dicarboxylic acid, and two aromatic amines, one and only one of which contains an acid group; dyeing cotton from yellow to orange to violet to blue shades which by an aftertreatment with copper salts generally change into deeper shades fast to light and to washing, substantially as described.

1,457,236. TRANSMISSION-GEARING UNIT. PAUL V. TROUPE, Moline, Ill. Filed Nov. 4, 1921. Serial No. 512,720. 3 Claims. (Cl. 74—7.)



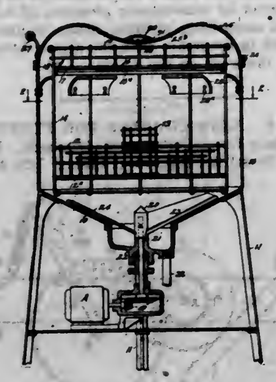
1. A gearing unit which comprises a driving shaft, a pair of worms thereon, a pair of ring gears meshing respectively with the worms, smaller gears connected rigidly on opposite sides of each ring gear, a driven sleeve, and a pair of driven gears connected thereto, each of said driven gears being meshed on opposite sides thereof respectively with the gears associated with the said ring gears.

1,457,237. CARPET-BEATING MACHINE. MARTIN VAN BUREN, Dayton, Wash. Filed May 23, 1921. Serial No. 471,749. 1 Claim. (Cl. 15—92.)

A carpet beating machine of the class described comprising a wheeled frame, a handle adjustably secured to said frame and a motor rotatably mounted upon the frame, a pair of beaters secured upon the frame which are formed of wire looped upon itself and having its ends secured to a part of the frame and spirally wound thereon to provide springs which are adapted to hold the beaters against a part of the frame, a rotatable disc mounted in the frame between the beaters, a series of pins carried by said disc and adapted to engage projections provided on the beaters, said disc having teeth provided on the periphery thereof and a gear provided on the shaft of a motor which is adapted to mesh with said teeth for rotating the disc upon rotation of the motor.

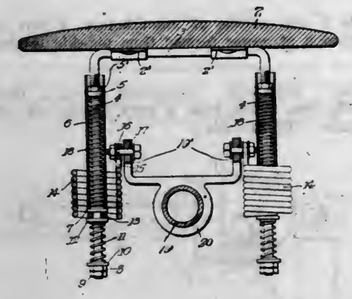
1,457,238. CAN LIFTER AND ICE TONGS. GUSTAVE VERGOTH, Marshall, Minn. Filed Jan. 24, 1922. Serial No. 531,398. 3 Claims. (Cl. 294—106.)

1. A device of the character described comprising a hollow head, a plurality of downwardly extending arms



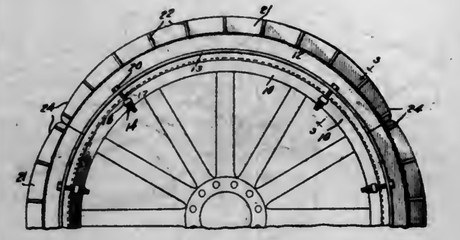
pivotally connected with said head and terminating inwardly extending hooks, a bolt member slidable through the head and pivotally connected with the inner ends of said arms, spring means normally swinging said arms with their inner ends inwardly, a handle connected with said bolt member, and finger engaging loops projecting laterally from said head.

1,457,239. LAMP FILAMENT AND SUPPORT. ALEXANDER SAMUEL VOLPIAN, Savannah, Ga. Filed Oct. 25, 1921. Serial No. 510,374. 6 Claims. (Cl. 176—16.)



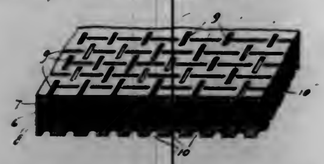
1. A filament support having two ring-like frames one within the other, and both disposed in a plane transverse to the longitudinal axis of the lamp enclosing said frame, and a filament running back and forth between said frames and alternately making contact with the respective frames.

1,457,240. DISHWASHING MACHINE. ULYSSES S. G. WELSH, Brooklyn, N. Y. Filed May 15, 1920. Serial No. 381,779. 11 Claims. (Cl. 141—9.)



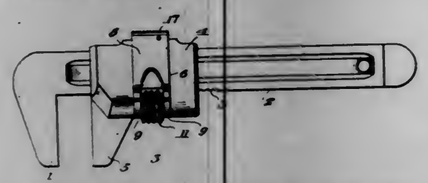
11. In a machine of the class described, a container adapted to receive articles to be washed, water-agitating means therein at the bottom adapted to direct water upwardly to said articles as well as toward the sides of the container, and means to deflect the water continuously inwardly and downwardly to the articles from the sides of the container.

1,457,241. MOTOR-CYCLE ATTACHMENT. CHARLES S. WILLIAMS, North Billerica, Mass., assignor to Charles A. Persons, Worcester, Mass. Filed Oct. 31, 1921. Serial No. 511,716. 4 Claims. (Cl. 208—100.)



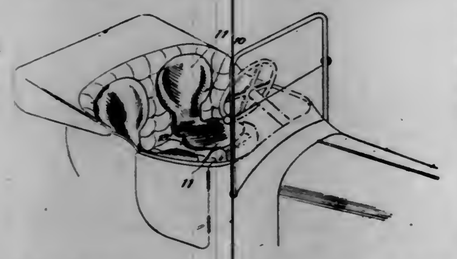
1. The combination with a motorcycle, of a seat support therefor, comprising members secured to the seat, depending therefrom and straddling the top bar of the machine, a shock absorbing spring and a rebound spring adjustably sustained on said members, and a supporting spring surrounding each of said members having its upper convolution secured to the machine frame and having its lower convolution extended inwardly and formed with eyes arranged for slidable movement on the respective members between the shock absorbing and rebound springs.

1,457,242. TRACTION SHOE FOR WHEELS. FREDERICK PETER GIRODO, New York, N. Y. Filed Nov. 5, 1921. Serial No. 513,185. 1 Claim. (Cl. 152—4.)



A traction shoe for vehicle wheels, comprising a segmental body adapted to be removably secured upon the tire of the wheel, said body being provided with a longitudinal rib having its ends gradually decreasing in height, and with a plurality of transverse ribs on each side of the longitudinal rib, the transverse ribs adjacent the ends of the body being reduced in height corresponding to the height of the ends of the longitudinal rib, the longitudinal rib being approximately double the thickness of the transverse ribs.

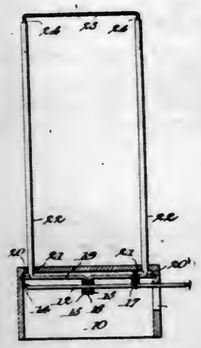
1,457,243. DRIVE-BELT MATERIAL. HAROLD M. GUSDORF, Indianapolis, Ind. Filed Apr. 19, 1920. Serial No. 375,160. 2 Claims. (Cl. 74—62.)



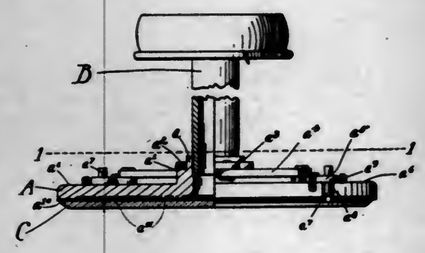
1. As a new article of manufacture, a belt for the transmission of power formed from pig-skin leather.

1,457,244. WRENCH. ALPHONSE GUTTLY, Wisconsin Rapids, Wis. Filed Sept. 6, 1921. Serial No. 498,817. 1 Claim. (Cl. 81—158.)

A wrench including a jaw having a toothed shank, a carriage slidable on the shank and provided with a jaw, said carriage having aligning grooves in its sides and tap and it lower edge notched in alignment with the grooves, said carriage being also provided with a depression in the grooved portion of its top, a yoke having its arms mounted within the grooves of the sides and extending beyond the top of the carriage, said arms being provided with channels in their opposite faces near their outer ends, a screw mounted in the bottom of the yoke within the notch in the carriage, a plate mounted in the channels of the arms and provided with a recess opposite that in the top of the carriage, and a coil spring mounted between said plate and carriage having an end seated in each recess.



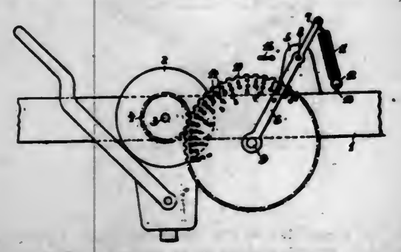
1,457,245. SEAT. ERSKINE POLK HARLEY, Oklahoma, Okla. Filed June 7, 1921. Serial No. 475,614. Renewed Apr. 5, 1923. 7 Claims. (Cl. 155—131.)



5. An auxiliary vehicle seat comprising a convoluted element and means to support the successive convolutions at equally spaced distances and an enclosure for said element and means, held extended by said element and means, to allow free passage of air therethrough.

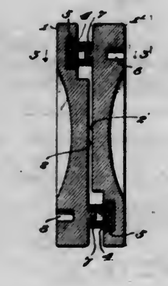
1,457,246. BAG HOLDER. CHARLES J. HAUSE, Asbury Park, N. J. Filed Apr. 7, 1922. Serial No. 550,531. 3 Claims. (Cl. 83—26.)

1. In a device of the class described, the combination of a base, a plurality of frames pivotally mounted therein, a pivotally mounted member connected to both of said frames, means for holding said member in a predetermined position, and a treadle for holding said member, uprights extended from said frames through said base, and bag holding elements adjustable on said uprights.



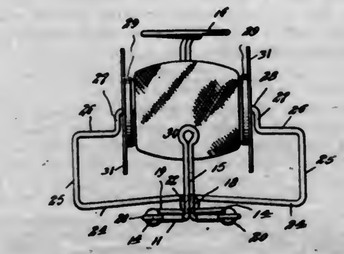
1,457,247. CENTERING CHUCK. WALTER J. HERSCHEDE and WALTER EBERHARDT, Cincinnati, Ohio. Filed July 26, 1920. Serial No. 398,995. 7 Claims. (Cl. 279—3.)

1. The combination with a chuck adapted to have work retained thereon by atmospheric pressure, of a work centering device comprising yielding means mounted on the chuck adapted to cooperate with the atmospheric pressure in retaining the work on the chuck.



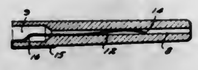
1,457,248. LINE COUNTER FOR TYPEWRITERS. KONRAD RIGH JAHN, Copenhagen, Denmark. Filed Dec. 29, 1922. Serial No. 609,708. 1 Claim. (Cl. 235—132.)

The combination with a typewriter including a carriage and a shaft supported platen rotatable in said carriage, of



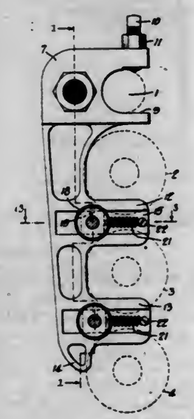
a gear wheel carried by said shaft, a lever pivotally mounted on said carriage, a gear wheel journaled in said lever and movable into mesh with the first mentioned gear wheel and having a plurality of openings therein, a stop member selectively engageable in said openings and projected laterally of the second mentioned gear wheel adapted to engage said lever to arrest the rotary movement of the second mentioned gear wheel at a predetermined point, means normally retaining the second mentioned gear wheel in mesh with the first mentioned gear wheel, and a plurality of series of opening identifying characters on the second mentioned gear wheel.

1,457,249. ELECTRICAL PROTECTOR. GEORGE W. JANSON, Brooklyn, and LEWIS H. ROVERE, Richmond, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed July 12, 1921. Serial No. 484,238. 4 Claims. (Cl. 175—30.)



4. A protector, comprising two identical blocks, each having a plane conducting surface and a recessed cut-away portion, and a heat softenable insulating post embedded in the recess in said cut-away portion and extending beyond said conducting surface.

1,457,250. HOLDER. HENRY L. JOHNSON, Dawson, Minn. Filed Aug. 25, 1922. Serial No. 584,375. 5 Claims. (Cl. 242—141.)

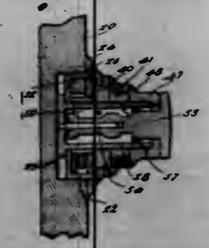


1. A holder embodying a base, a transversely pivoted yoke mounted thereon, a holder carried by the yoke and adapted to removably support a ball of thread and a stationary thread guide located intermediate the ends of the ball.

1,457,251. CIGARETTE HOLDER. WINSOR JOSSELYN, Carmel, Calif. Filed Nov. 26, 1919. Serial No. 340,759. 7 Claims. (Cl. 131—10.)

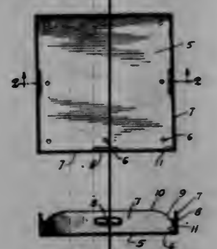
6. The combination with a cigar or cigarette holder having a longitudinal bore therethrough of a butt ejector mounted therein and being capable of reciprocatory motion with respect thereto, and a resilient scraper element carried by said ejector, said scraper engaging the walls of the bore to frictionally retain the ejector in any one of a plurality of predetermined positions and to clean the walls of said bore when the ejector is operated.

1,457,252. INK DISTRIBUTOR. DAVID VARIUS KAUFMAN, New York, N. Y., assignor of one-half to Isidore Schmertzler, New York, N. Y. Filed May 25, 1921. Serial No. 472,380. 5 Claims. (Cl. 101—348.)



1. In an ink distributor for printing presses, a hinged supporting frame, rollers carried by said frame and adapted to engage the distributing rollers of the press, means for removably connecting said frame to the printing press, said rollers reciprocating in a direction transverse to the direction of the frame, and resilient means acting on each of the rollers for yieldingly holding the same against the distributing rollers, said rollers and said frame being attachable on said press as a unit.

1,457,253. LOCK. ANDREW KENDECHY, Cleveland, Ohio. Filed Apr. 12, 1922. Serial No. 551,806. 5 Claims. (Cl. 70—53.)



1. A permutation lock comprising a casing, a locking bolt operating therein, a hollow cylindrical member mounted for rotation within the casing and extending beyond one wall thereof, a collar mounted for rotation within the casing upon the hollow cylindrical member, means for holding the collar against movement, means for operatively connecting the latter and the locking bolt, whereby rotation of the collar will operate the bolt, a plurality of indicia carrying members mounted for rotation upon the hollow cylindrical member upon the outside

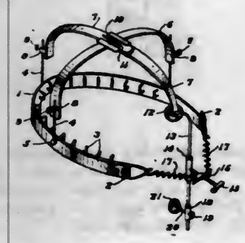
of the casing, means including an operating knob, whereby all of the indicia carrying members may be locked together

and means whereby the indicia carrying member locking means will release the collar holding means to permit of the operation of the locking bolt.

1,457,254. SOAP HOLDER. MILTON B. LOEB, New York, N. Y., assignor to Brillo Manufacturing Co., a Corporation of New York. Filed June 17, 1922. Serial No. 569,126. 1 Claim. (Cl. 45—28.)

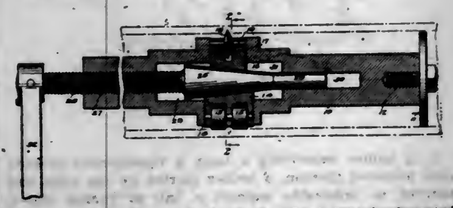
A rectangular holder for holding a cake of abrasive or polishing soap while in use comprising a bottom portion provided with outwardly pressed corrugations, such corrugations forming supports for the holder and serving as stiffening ribs for the bottom portion thereof, the corrugations being apertured for drainage purposes, and vertically disposed side walls extending all the way around the bottom portion, the holder being deeply notched at each corner by the cutting away of adjacent end portions of the side walls down to the bottom of the holder, for permitting access to the soap in the angles and corners thereof.

1,457,255. SIGN. FRED E. LOVELESS, Chicago, Ill., assignor of one-half to Leroy M. Fudge, Hammond, Ind. Filed Aug. 26, 1922. Serial No. 584,423. 7 Claims. (Cl. 40—125.)



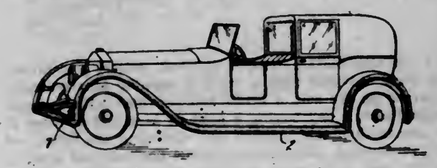
7. In a sign, a combination with a support of a display surface, an integral resilient clamping means associated with opposite edges of said display surface and extending throughout the length thereof for removably locating it upon the support.

1,457,256. TORCH. JOHN R. MCKELLAR, Oakland, Calif. Filed June 10, 1922. Serial No. 567,350. 1 Claim. (Cl. 158—10.)



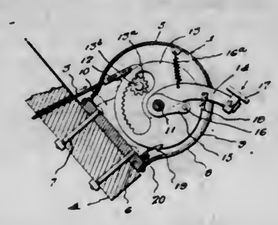
A torch of the class described, comprising a rod, a frame and wicking twisted around the bars of the frame and means for expanding the frame to bow the said bars.

1,457,257. HAIR-BOBBING DEVICE. PHILIP A. MCLAUGHLIN, Chester, Pa. Filed July 29, 1922. Serial No. 578,374. 2 Claims. (Cl. 132—45.)



1. In a device of the character described, the combination of a resilient gripping member, oppositely diametrically disposed, transverse bridging members adjustably carried thereon, vertically adjustably supporting means carried by one of said bridging members and adapted for facial contact, adjusting spring members co-operating with said resilient gripping member and said supporting means, and a series of hair retaining stays on the inner face of said resilient gripping member adapted to hold the hair of a wearer against displacement during the operation of cutting.

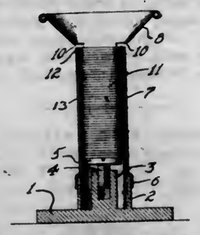
1,457,258. BOILER-TUBE CUTTER. MICHAEL MAHER, Bay City, Mich. Filed Aug. 22, 1922. Serial No. 583,546. 1 Claim. (Cl. 81—195.)



A tube cutter including a body adapted to be inserted into the tube to be cut, a cylindrical chamber formed in said body, said chamber merging at one end into a blind bore and at the other into a threaded bore, a cone formed at one end with a spindle to fit into said blind bore and at the other with a threaded shank guided in said threaded bore arranged in said cylindrical chamber, said body adjacent its center between its ends presenting an opening merging into said cylindrical chamber, and a block carrying a circular cutter at one side and formed at the other with a tapering face transversely curved and longitudinally arranged in said opening, said tapering face of said block mating with the tapering surface of the cone so as to move laterally when the cone is moved longitudinally.

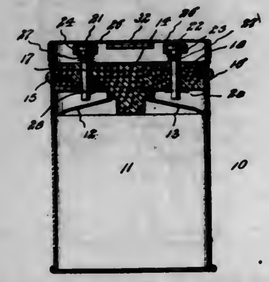
1,457,259. RESILIENT BUMPER FOR MOTOR VEHICLES. ASSAD M. MALLUK and JEAN U. KORZE, New York, N. Y., assignors to International Patent Investment Corporation, New York, N. Y., a Corporation of Delaware. Filed June 9, 1922. Serial No. 567,023. 10 Claims. (Cl. 293—55.)

10. In combination with an automobile, a resilient bumper secured thereto and arranged to protect the sides of the vehicle as distinguished from the ends thereof, said bumper comprising a resilient outer casing and a wire reinforced inner tube.



1,457,260. AUTOMOBILE DIRECTION SIGNAL. GEORGE W. MASON, Lincoln, Nebr. Filed Feb. 11, 1922. Serial No. 535,844. 2 Claims. (Cl. 74—39.)

1. A direction-signal control including a casing, a shaft journaled in bearings in the casing, a rock shaft journaled in bearings in the casing and equipped with resilient and beveled keepers, and also equipped with a handle operable without the casing, manually operable levers loose on the first named shaft and extending without the casing and movable relative to the casing, lugs fixed to the first named shaft and having portions opposed to and adapted to be engaged by said levers, spring means to return the levers to normal position, a drive gear fast on the first named shaft and having an internal arcuate toothed portion, and a gear meshed with said toothed portion.



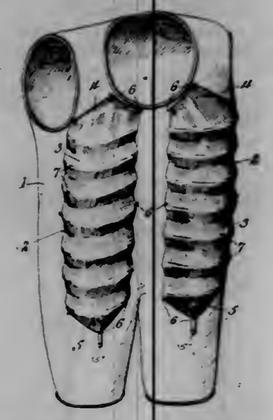
1,457,261. COIN COUNTER. JAMES CREIGHTON MATHEWES, Los Angeles, Calif. Filed Apr. 11, 1921. Serial No. 460,272. 2 Claims. (Cl. 133—1.)

1. In a coin counting device, a base having an upstanding sleeve, a post on the base extending centrally through the sleeve, said post having a threaded opening, a screw engaging therein, a disk head for the screw, and a coin

receiving tube having its lower end flanged and resting on the sleeve, as and for the purpose set forth.

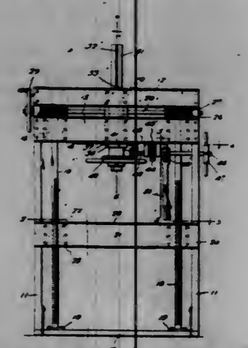
1,457,262. SHOT-FIRING DEVICE. HENRY NEAL, Yukon, Pa. Filed Feb. 25, 1922. Serial No. 539,282. 2 Claims. (Cl. 204—38.)

2. In a device of the class described, a casing, a battery including terminals received by the casing, an element for retaining the battery in position, said element being countersunk in the casing at one end, providing a chamber between the end of the casing and said element, the element so countersunk being apertured at points opposite the terminals of the battery, spring held contact devices mounted within the apertures, a cap for the casing, and insulating guard members surrounding and projecting beyond the outer ends of the contact devices for preventing electrical contact with the cap of the casing, and retaining a straight conducting element laid across the contact devices out of electrical contact therewith until pressure is applied to said conductor for depressing the latter into engagement with the contact devices.



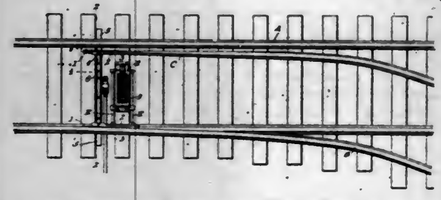
1,457,263. AUTOMOBILE SIGNAL. GEORGE WASHINGTON NICHOLSON and ARTHUR JAMES KELLY, Indianapolis, Ind., assignors to Safety First Auto Tail-Light Company, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 4, 1919. Serial No. 287,511. 1 Claim. (Cl. 177—337.)

In a vehicle signaling mechanism, a caution signal, a right-turn signal, a left-turn signal, circuits therefor



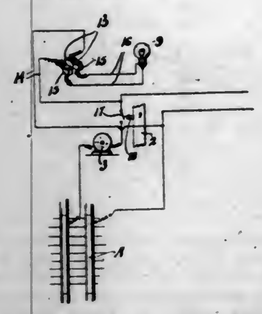
having spaced contacts, and a drum member having a single bridge piece for the contacts of each of the turn signals, and a plurality of bridge pieces for the contacts of the caution signal, including a bridge-piece in alinement with each of the turn-signal bridge-pieces, the opposed contacts being symmetrically disposed about the axis of the drum member, substantially as set forth.

1,457,264. BATHING SUIT. ANATOLE PANALLE, New Orleans, La., assignor of one-fourth to Lewis R. Lester, New Orleans, La. Filed Apr. 27, 1921. Serial No. 464,778. 1 Claim. (Cl. 9—20.)



In a safety device for bathing suits, the combination of a member formed of a single piece of water and air proof material and having upper and lower walls adapted to be securely fastened to a bathing suit, ribs in triangular shape in cross-section adapted to be fastened at equi-distant points within the member whereby it will assume a triangular appearance with respect to the bathing suit; said ribs being further constructed to bear one upon the other when the suit is folded, and means arranged in the lower end of the member for inflating the same.

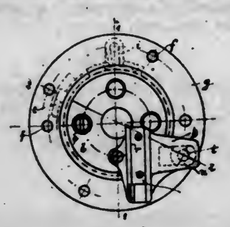
1,457,265. PRESS. LELAND E. PECK, Wyoming, Iowa. Filed Mar. 25, 1921, Serial No. 455,471. Renewed Apr. 21, 1923. 3 Claims. (Cl. 164—101.)



1. A device of the character described comprising a vertical frame presenting a work-table at its lower portion and a vertically disposed internally threaded bearing at its upper end and overlying the said table, a gear swiveled in a bracket at the lower end of the bearing and presenting a threaded bore in line with the bearing, a tool-holder threadedly engaging the said bearing and the threaded bore of the said gear, a shaft journaled in bearings horizontally of the said frame, a pinion on one end of the shaft engaging the said gear, and means at the other end of the said shaft for rotating the shaft.

1,457,266. SWITCH LUG. DAVIS A. PICKENS, Jackson, Miss. Filed Dec. 13, 1921. Serial No. 522,032. 2 Claims. (Cl. 246—435.)

1. In combination with a railroad switch, a reinforcing strip provided with a vertical opening longitudinally enlarged at the top, a bridle rod provided with a longitudinal slot, a key having a head at each end adapted to be passed thru said opening and slot when the bridle rod and reinforcing strip are in parallel position and adapted to lock said parts upon swinging the reinforcing strip to its position against a side and flange of the rail at right angles to the bridle rod, reinforcing strips mounted on said bridle rod having notched ends adapted to engage the key shanks and flanges of the rails, a block mounted between the rails, a spring plunger mounted in said block, a cross piece mounted on said plunger, and rods connected with said cross piece bearing under pressure of the spring plunger against one of the rail reinforcing strips.

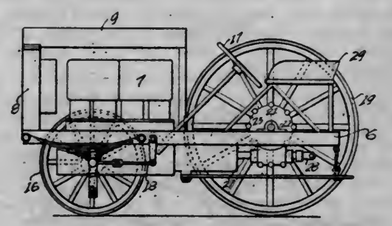


1,457,267. SIGNAL. JOSEPH D. PUTERBAUGH, Fremont, Ohio. Filed Aug. 23, 1922. Serial No. 583,882. 3 Claims. (Cl. 246—128.)

1. A signal of the class described comprising a housing, a vertically movable member therein, a motor for raising the member, means for closing the circuit to the motor by a train approaching the crossing, means for breaking the circuit of the motor when the member reaches a certain position, a latch for holding the member in raised position and means actuated by the train for disengaging the latch after the train passes the crossing.

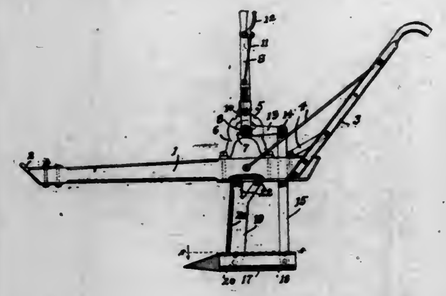
1,457,268. AUTOMATIC CHUCK. RUDOLF REINERT, Kabel, Germany. Filed Nov. 5, 1921. Serial No. 513,199. 2 Claims. (Cl. 10—100.)

2. In a self opening chuck, in combination, a body, chaser holders pivoted to said body, a head adapted to rotate on said body and operatively connected with said chaser holders, means for rotating said head, a spring se-



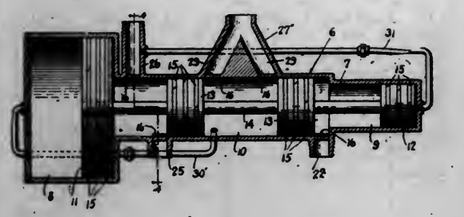
cured to said head and a pin secured to said body and adapted to be engaged by said spring when the head is rotated in a given direction.

1,457,269. TRAFFIC SIGNAL. BENJAMIN A. REXFORD, Alton, Ill. Filed Jan. 30, 1922. Serial No. 532,788. 1 Claim. (Cl. 88—1.)



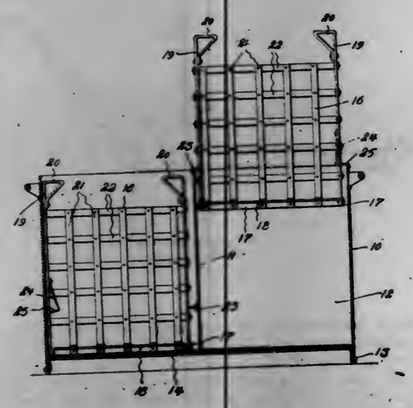
A device of the character described comprising a post adapted to be arranged at the center of street intersections, said post having a reduced upper extremity defining a shoulder, a spherical post of hollow formation having a mirrored surface, said body having diametrically opposed openings to receive the reduced end of said post, whereby said post reposes upon the said shoulder, and a disk centrally supported on said post and of a diameter greater than the diameter of said spherical post to project beyond the sides thereof, said disk constituting a shade for the purpose specified.

1,457,270. COMBINED TRUCK AND TRACTOR. JOHN RIEDER, Burlingame, Calif. Filed Apr. 7, 1922. Serial No. 550,409. 1 Claim. (Cl. 280—106.5.)



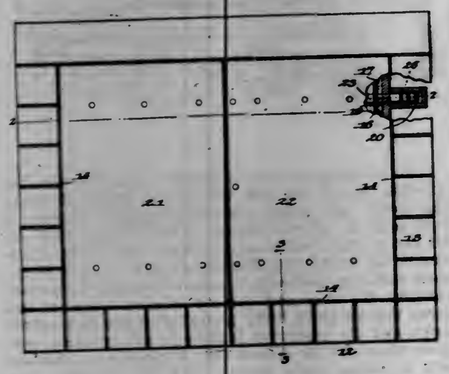
In a device of the character described, the combination of a tractor, having a frame, an axle mounted below said frame, springs secured to said frame and said axle, links pivoted to said frame, and adapted to have their opposite ends removably pivoted to said axle the pivotal connections of said links to said frame being on an angle of 90° with respect to the pivotal connection of said links to said axle for the purpose of causing said springs to be inoperative in all directions during the period of connection of said links to said axle.

1,457,271. DRAIN PLOW. LORON RINEHART, Woodburn, Oreg. Filed July 8, 1921. Serial No. 483,359. 1 Claim. (Cl. 37—193.)



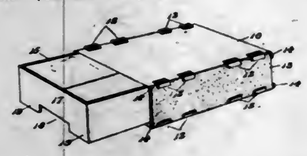
In an implement of the class described, a drill adapted to be pulled through the ground beneath the surface thereof in substantially a horizontal position, a mounting for the drill having draft connecting means and means for manually changing the horizontal angular position of the drill without withdrawing the same from beneath the ground surface, comprising a standard suspended below the said mounting and having a pivoted connection with the forward part of the drill and a manually controlled lever on the mounting including a vertically actuated rod with one end of the rod pivotally connected to the drill rearwardly of said standard, and the opposite end of the rod connected to said lever by a bell crank, said drill comprising a hollow cylindrical body with a solid pointed nose detachably connected to the body.

1,457,272. DRIFTING VALVE. HUGH LEONARD ROBERTS, Roanoke, Va. Filed July 31, 1920. Serial No. 400,311. 3 Claims. (Cl. 121—137.)



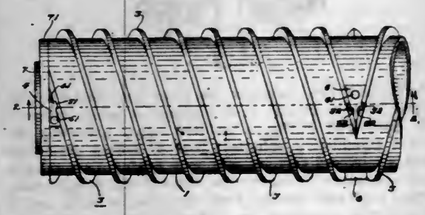
1. In a locomotive, a drifting valve connected with the cylinders thereof and with the exhaust of the air pump and stoker, said valve comprising a casing forming a medium sized central chamber, a small chamber at one end and a large chamber at the other end, a pair of pistons in the central chamber and a piston in each of the small and large chambers, a stem connecting the pistons together, the inlet port for the exhaust steam of the stoker and air pump being controlled by the first middle piston and the connection leading to the cylinders communicating with the central part of the central chamber, said connection being formed with two branches, one branch being controlled by the second middle piston, a pipe for delivering steam from the steam dome to the space between the small piston and one of the middle pistons, a pipe leading from the middle chamber to the outer end of the large chamber for leading steam from the cylinders and backing up into the middle chamber to the large chamber, and an exhaust connected with the space between the large piston and one of the middle pistons.

1,457,273. CLOTHES BOILER. MILES ROLFE, Vaxanda, Mont. Filed Oct. 10, 1921. Serial No. 506,747. 1 Claim. (Cl. 68—30.)



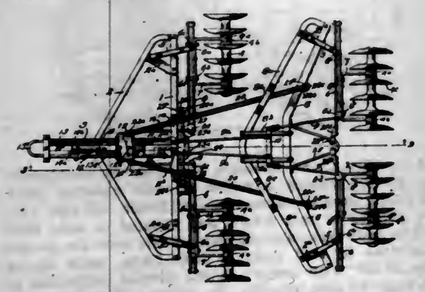
A clothes boiler of the class described comprising a partition dividing said boiler into compartments, drainers in said compartments respectively, handles on said drainers, a headed stud on one of said handles extending outwardly therefrom, a spring latch on the remaining handle normally in contact with the inner wall of the compartment when the drainer is in lowered position and adapted to spring outwardly when the drainer is withdrawn from the compartment to cooperate with said stud and engage the top of the compartment to hold the drainer in draining position.

1,457,274. SIDEWALK DOOR. MARION J. ROSS, Lynbrook, N. Y., and GEORGE T. ATKINSON, Philadelphia, Pa. Filed May 9, 1921. Serial No. 467,906. 4 Claims. (Cl. 94—34.)



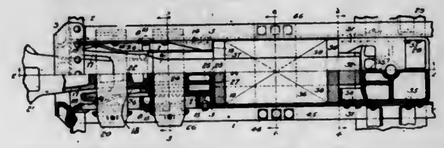
1. In a device of the class described, the combination of a framework having a counter-sunk opening and formed with ways from the margin of said framework to the bottom of said countersink, doors mounted so as to seat themselves in said opening and on the shoulder formed by the countersink, and sealing means between said doors and said shoulder.

1,457,275. SELF-CLOSING MATCH BOX. RAMON GONZALEZ, Manila, P. I. Filed Aug. 7, 1920. Serial No. 401,870. Renewed Oct. 26, 1922. Serial No. 597,139. 3 Claims. (Cl. 206—33.)



1. A device of the character described comprising a shuck formed as a rectangular casing, abrasive strip retaining means on the sides of said shuck, retaining lugs formed at the opposite ends of the shuck, a tray slidably disposed within the shuck and of less depth than the latter whereby to define a space between the bottom of the tray and the shuck, a spring of serpentine form disposed within said space and having its endmost convolutions engaging against said lugs, and the end walls of the tray being recessed for the accommodation of said lugs and to define at each end of the tray spaced lugs likewise engaging the endmost convolutions of the spring.

1,457,276. SPREADER CYLINDER AND THE LIKE. ARTHUR ISHERWOOD, Readville, Mass., assignor to Thomas Leyland & Co., Inc., Readville, Mass., a Corporation of Massachusetts. Filed June 20, 1922. Serial No. 569,747. 9 Claims. (Cl. 26—8.)

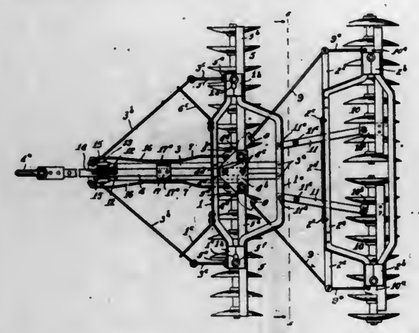


1. A helically ribbed or bladed spreader cylinder or the like comprising a helically grooved body and a pre-formed helical blade making at least one complete turn around said body, of a diameter to fit with tension closely around the cylinder in the helical groove, with fastenings engaging the ends of the helical blade to hold the ends from lifting out of the groove.

1,457,277. DISK HARROW. FREDERICK C. WARNE, Mansfield, Ohio, assignor to Roderick Lean Manufacturing Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Apr. 10, 1920. Serial No. 372,825. 14 Claims. (Cl. 55—83.)

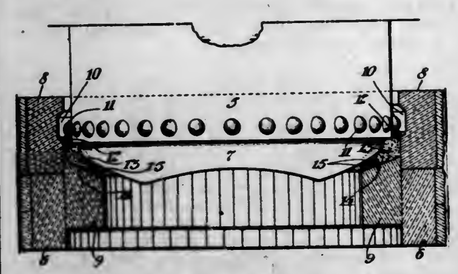
1. In a tillage implement, the combination of tandem frame units; a pair of bars pivotally connected to each of said units; means for simultaneously adjusting the angular relation of said bars to said frame units; a gang of disks for each bar; and means for securing said gangs in place at different positions along said bars.

1,457,278. DRAFT RIGGING. IRA ORVILLE WAIGHT, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 29, 1920. Serial No. 377,477. 9 Claims. (Cl. 213—67.)



1. In a draft rigging, the combination with the center sills, of a coupler, a yoke slidably connected thereto, a cushioning mechanism within the yoke, a block interposed between the coupler and said mechanism and movable in one direction with the said coupler, means for connecting said block to the said sills, said means serving to transmit draft strains thereto, and means carried by the said sills and projecting inwardly therefrom for receiving draft strains when the same exceed the capacity of the first named means.

1,457,279. LIQUID-WEIGHING DEVICE. WILLIAM G. FINCH, Grand Rapids, and LEON R. FINCH, Ionia, Mich. Filed Sept. 17, 1921. Serial No. 501,326. 5 Claims. (Cl. 249—52.)

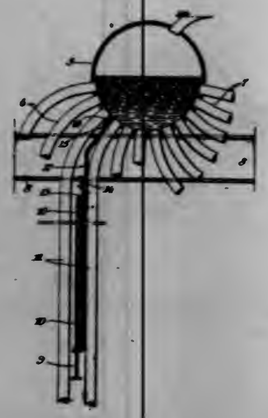


1. A device of the class described, comprising a tubular vertical support, a tube slidably mounted in the support said support and tube having openings in opposite sides located at different heights, the upper openings in said tube and support being adapted to come into conjunction at one position of the tube and the lower openings at another position of the tube, an inlet pipe connected with the support at the upper opening, an outlet pipe connected with the support at the lower opening, a plug in the tube below the lower opening thereof, a container attached at the upper end of the tube, a supporting bracket secured to and extending from the tubular support, an arm pivotally connected to the bracket, weights adjustably mounted on the arm, a lever pivotally mounted between its ends on said bracket, a link connecting one end of the lever with the weight arm, means operatively connecting the other end of the lever with the tube to raise or lower the tube on pivotal movement of the lever, and latching means for automatically holding the tube in lower position when moved thereto, substantially as described.

1,457,280. DISK HARROW. RICHARD H. GRIFFITH, Bellevue, Ohio, assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Filed Nov. 1, 1920. Serial No. 421,050. 18 Claims. (Cl. 55—83.)

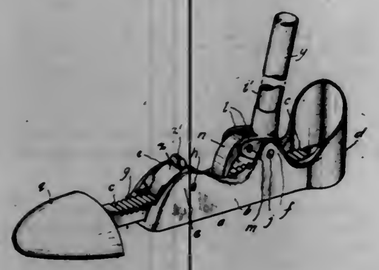
1. In a harrow, tandem frame units and tillage gangs, a relatively fixed draft guide on one of said frame units, relatively movable draft connections guided by said guide and connected to the inner and intermediate portions of said front and rear tillage gangs, respectively, and relatively longitudinally fixed draft connections connected to one of said frame units and the opposite inner portions of said rear tillage gangs.

1,457,281. BOILER CONSTRUCTION. EDGAR KIDWELL, Milwaukee, Wis., assignor to Kidwell Boiler Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 12, 1920. Serial No. 416,393. 3 Claims. (Cl. 110—97.)



1. A boiler having a setting with an opening in the wall thereof, and a drum having its head and a portion of its cylindrical shell loosely entered in the opening, said opening being formed by a ring structure built into the setting and presenting two internal face portions whereof one encircles the shell and is in spaced relation thereto and has an annular groove in proximity to the drum head rivets, and whereof the other face portion is inclined and in spaced relation to the drum head, and packing material disposed between the ring structure and the adjacent portions of the drum head and shell, so as to bear against the opposing rivet heads and be restrained thereby.

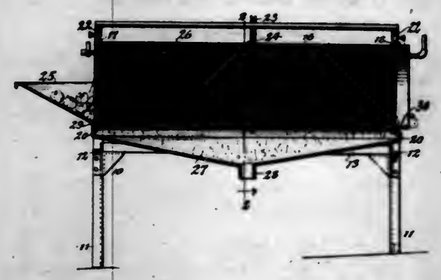
1,457,282. BAFFLE FOR WATER-TUBE BOILERS. EDGAR KIDWELL, Milwaukee, Wis., assignor to Kidwell Boiler Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 12, 1920. Serial No. 416,394. 3 Claims. (Cl. 110—98.)



1. In a boiler of the series drum and tube type, the combination with a rearward drum and a rearward bank

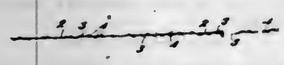
of water tubes extending therefrom, of a baffle element associated with said tubes, said element comprising a tile structure spaced below the drum and a metal member occupying the space between said structure and the drum and shaped to lie in the upper curved space between ad-

jacent rows of tubes, a rigid support below the drum, and a connection between said support and the plate member for vertically adjusting said member to force its upper edge into close contact with the opposing wall of the drum.



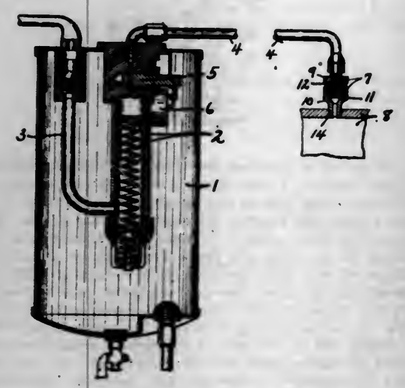
1,457,283. SHOE STRETCHER. JACOB SCHWIND, Portland, Oreg. Filed June 7, 1922. Serial No. 566,510. 6 Claims. (Cl. 12—128.6)

1. In a shoe stretcher of the type described, a base constituting a guide way, a rack-bar slidable in said guide-way, the latter being substantially of the same length as the rack-bar, a toe block rigidly attached to one end of the rack-bar, and means including a pawl for advancing the rack-bar, the planes of the under sides of the toe-block and the rack-bar making an acute angle with each other for the purpose specified.



1,457,284. WASHER FOR VEGETABLES, ETC. OGDEN S. SELLS, Buffalo, N. Y. Filed Feb. 7, 1923. Serial No. 617,520. 3 Claims. (Cl. 146—200.)

1. A washer for vegetables and the like comprising a rotary reel having a plurality of longitudinal bars arranged in an angular row, and a supporting ring upon



which said bars are mounted and the inner sides of which are flush with the innermost surface of said ring.

1,457,285. WALL BOARD MADE FROM BAGASSE AND ANALOGOUS FIBERS. JOHN K. SHAW, Minneapolis, Minn. Filed Oct. 23, 1920. Serial No. 419,045. 10 Claims. (Cl. 154—45.9.)

1. The herein described fiber board composed of bundles of fibers interlaced with each other, and more than ten per cent of said fiber bundles carrying natural pith like protuberances and hook like projections serving as entangling agents between the fibers, substantially as described.

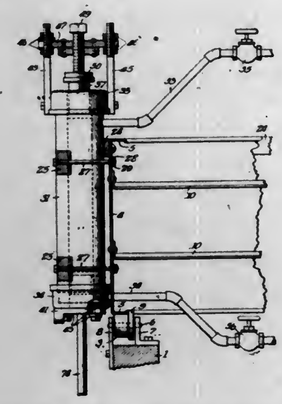
1,457,286. FUEL-FEEDING DEVICE. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed Dec. 11, 1920. Serial No. 430,005. 3 Claims. (Cl. 158—36.)

1. A fuel feeding device comprising a pumping device, a tank for receiving liquid from the pumping device, a conduit connecting the pumping device to an engine cylinder, means actuated by the liquid in said tank for controlling the flow of motive fluid from the engine cylinder

to the pumping device, and additional means for cutting off communication between the pumping device and the engine cylinder upon sudden expansion of the gases in the latter while permitting communication between the pumping device and the engine cylinder during the gradual compression of gas in the latter.

1,457,287. SINGLE-TUBE BICYCLE TIRE. ARTHUR K. TRENHOLME, Portland, Oreg. Filed Apr. 27, 1922. Serial No. 556,946. 2 Claims. (Cl. 152—20.)

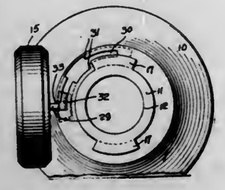
2. The combination of a wheel having spokes projecting thru and beyond its rim, a single piece tire, having therein imbedded a reinforcement of penetration resisting material, adapted to permit the projecting spoke ends to partially penetrate the walls of said tire, thereby to effect an engagement between said projecting spoke-ends and the said side of the tire casing, when the tire is inflated, to hold the tire against longitudinal movement on the wheel rim.



1,457,288. BRONZE ALLOY AND PROCESS FOR ITS PRODUCTION. PETER OSTENDORF, Berndorf, Austria. Filed Oct. 4, 1922. Serial No. 592,410. 3 Claims. (Cl. 75—1.)

1. An improved bronze alloy consisting of not less than 87 parts by weight of copper, 4½ to 10 parts by weight of tin, 1 to 5 parts by weight of nickel and 1 to 5 parts by weight of zinc.

1,457,289. COPPER AND ZINC ALLOY. PETER OSTENDORF, Berndorf, Austria. Filed Oct. 4, 1922. Serial No. 592,411. 2 Claims. (Cl. 75—1.)



1. An improved alloy consisting of 40 to 55 parts by weight of copper, 3 to 15 parts by weight of nickel, 1 to 3 parts by weight of manganese, 1 to 2 parts by weight of iron, ½ to 3 parts by weight of aluminum and 25 to 40 parts by weight of zinc.

1,457,290. APPARATUS FOR MAKING RUBBER ROLLERS. SIMON E. SCHROEDER, Oak Park, Ill., assignor to Washington Rubber Co., Cicero, Ill., a Corporation of Illinois. Filed Feb. 17, 1922. Serial No. 537,143. 7 Claims. (Cl. 18—20.)

5. In an apparatus of the class described, the combination of a rotatable frame having a plurality of tubular molds mounted on the periphery thereof, means for heating the molds during rotation of the frame, a filling mechanism adjacent the path of the molds for inserting a roller endwise into the mold, and an ejecting mechanism adjacent the path of the molds for forcing the roller therefrom.

1,457,291. CLOSURE FOR TUBES. CHARLES JOHN HAUK, Jr., Yonkers, N. Y. Filed Dec. 30, 1920. Serial No. 434,102. 1 Claim. (Cl. 221—60.)

In a tube closure, a tube, an elongated recess formed in the neck of said tube and of substantially circular cross sectional form, the top walls of said recess having a cut-out portion intermediate of its ends, a closure cap, and means in the form of a headed stop carried by said cap and having sliding engagement with the recess of the tube to retain the cap in position upon the tube, said headed stop being insertible into the elongated recess through the cut-away portion intermediate of its ends.

ALPHABETICAL LIST OF REGISTRANTS OF TRADE-MARKS.

Abbey Effervescent Salt Company, Inc., New York, N. Y. Dry chemical mixture or effervescent salt. 167,597; May 1; Serial No. 169,695; published Feb. 6, 1923.

Abels, Sophie, Plainfield, N. J. Healing salve for all swelling and cancer. 167,596; May 1; Serial No. 169,696; published Jan. 9, 1923.

Aberdeen Creamery Company, Aberdeen, Miss. Butter. 167,384; May 1; Serial No. 164,793; published Jan. 30, 1923.

Abrams, Dr. Albert, San Francisco, Calif. Electrical medical instrument. 167,541; May 1; Serial No. 170,744; published Feb. 27, 1923.

Adams, Thomas H., doing business as Cushman Drug Co., Vincennes, Ind. Salve or skin balm which is an antiseptic dressing. 167,471; May 1; Serial No. 166,970; published Jan. 23, 1923.

Albrecht, Fred W., Grocery Company, The, Akron, Ohio. Crackers. 167,478; May 1; Serial No. 163,663; published Jan. 30, 1923.

American Cellulose & Chemical Manufacturing Company, Ltd., New York, N. Y. Composition used in the manufacture of moldings, castings, etc. 167,512; May 1; Serial No. 166,212; published Jan. 9, 1923.

American Excelsior Trading Company, New York, N. Y. Face powder. 167,342; May 1; Serial No. 163,024; published Dec. 26, 1922.

American Mineral Production Company, Chicago, Ill. Plastic calcined magnesite. 167,634; May 1; Serial No. 166,620; published Dec. 19, 1922.

American Radio & Electric Co., New York, N. Y. Radio sets and parts thereof. 167,581; May 1; Serial No. 169,572; published Jan. 23, 1923.

American Steel Foundries, Chicago, Ill. Draft arms. 167,430; May 1; Serial No. 164,216; published Jan. 23, 1923.

American Stove Company, St. Louis, Mo. Gas, coal, oil, and gasoline stoves. 167,529; May 1; Serial No. 166,163; published Jan. 2, 1923.

American Toilet Goods Company, Boston, Mass. Face, talcum, sachet, toilet powders, compacts, lip sticks, etc. 167,504; May 1; Serial No. 166,429; published Jan. 2, 1923.

Ames, F. A., Company, The, Owensboro, Ky. Buggies and carriages and bodies and tops of the same and automobile bodies and tops, etc. 167,488; May 1; Serial No. 153,426; published Jan. 23, 1923.

Anchor Stove & Range Co., New Albany, Ind. Stoves, ranges, and heaters. 167,493; May 1; Serial No. 150,425; published Jan. 9, 1923.

Andersen, Charles M., doing business as Andersen Specialty Co., Chicago, Ill. Liquid wood cleaners and the like for preparing wooden surfaces. 167,577; May 1; Serial No. 166,546; published Jan. 23, 1923.

Andersen Specialty Co. (See Andersen, Charles M.)

Army and Navy Register Publishing Co., assignor to Army and Navy Publishing Co., Inc., Washington, D. C. Newspapers. 22,896; renewed May 2, 1923.

Arobin Drug Company, Milwaukee, Wis. Preparation for neuralgia, neuritis, headaches, and colds. 167,612; May 1; Serial No. 152,668; published Jan. 2, 1923.

Artemesia. (See Lequy, Jules.)

Aspegren & Co., Inc., New York, N. Y. Corn oil for food purposes. 167,517; May 1; Serial No. 165,436; published Jan. 30, 1923.

Atlanta Milling Company, Atlanta, Ga. Wheat flour. 167,434; May 1; Serial No. 163,250; published Dec. 19, 1923.

Aunt Jemima Mills Company, St. Joseph, Mo. Prepared and semiprepared breakfast cereals. 167,387; May 1; Serial No. 164,624; published Jan. 30, 1923.

Aunt Jemima Mills Company, St. Joseph, Mo. Wheat flour. 167,394; May 1; Serial No. 164,090; published Dec. 19, 1922.

Ayer, Harriet Hubbard, New York, N. Y. Perfumes. 167,345; May 1; Serial No. 162,975; published Aug. 22, 1922.

B. B. Drug & Chemical Co. (See Jarvis, Henry C.)

Bachmahn Bros., Philadelphia, Pa. Sheeting made from nitrocellulose compounds. 167,571; May 1; Serial No. 166,931; published Jan. 9, 1923.

Baer, Howard W., Atlantic City, N. J. Antiseptic powder. 167,601; May 1; Serial No. 165,224; published Jan. 2, 1923.

Bailbe, George, doing business as The Vocalese Company, Fort Wayne, Ind. Aromatic medicinal liquid for relief of throat irritations, colds, hay fever, etc. 167,374; May 1; Serial No. 167,970; published Dec. 26, 1922.

Baker, Clarence I., Indianapolis, Ind. New and second-hand furniture. 167,610; May 1; Serial No. 154,426; published Oct. 10, 1922.

Baldwin, Joseph T., Baltimore, Md. Portable metallic garages. 167,511; May 1; Serial No. 166,341; published Jan. 30, 1923.

Baltic Chemical Co., The, Chicago, Ill. Liquid preparation for use on the skin to keep the mosquitoes away. 167,426; May 1; Serial No. 165,341; published Jan. 30, 1923.

Barclay, Douglas M., doing business as Standard Granite Company, Barre, Vt. Granite blocks. 167,622; May 1; Serial No. 167,761; published Dec. 19, 1922.

Barna, Nicholas, doing business as Cosmos Laboratory, Keyport, N. J. Antiperspiration compounds. 167,514; May 1; Serial No. 164,857; published Jan. 30, 1923.

Bassett, Rudolph A., Long Beach, Calif. Cleaning fluid for cleaning fabrics. 167,526; May 1; Serial No. 165,850; published Jan. 30, 1923.

Baumert, F. X., & Co. Inc., New York, N. Y. Cheese. 167,397–8; May 1. Serial Nos. 166,928–9; published Jan. 9, 1923.

Beck, William and Charles, Inc., Lawrence, Mass. Fabric hose. 167,444; May 1; Serial No. 160,740; published Jan. 23, 1923.

Bell Tire Company Incorporated, New York, N. Y. Pneumatic tires and inner tubes. 167,513; May 1; Serial No. 164,784; published Jan. 2, 1923.

Bernet, Craft & Kauffman Milling Co., St. Louis, Mo. Wheat flour. 167,479; May 1; Serial No. 163,032; published Dec. 19, 1922.

Birchfield Boiler Company, Tacoma, Wash. Steam and hot-water heating boilers. 167,569; May 1; Serial No. 166,974; published Jan. 2, 1923.

Bishop, R. G., and Company. (See Bishop, Robert G.)

Bishop, Robert G., doing business as R. G. Bishop and Company, Dallas, Tex. Medicine for aiding digestion. 167,406; May 1; Serial No. 168,195; published Jan. 9, 1923.

Blackburn Products Co., The, Dayton, Ohio. Kidney and bladder medicine. 167,470; May 1; Serial No. 166,979; published Jan. 23, 1923.

Boro Chemical Co., Inc., Binghamton, N. Y. Germicide. 167,560; May 1; Serial No. 165,267; published Dec. 26, 1922.

Boston Harbor Oil Company, Boston, Mass. Lubricating oil. 167,568; May 1; Serial No. 167,379; published Dec. 19, 1922.

Bourjois, A., & Co. Inc., New York, N. Y. Toilet preparations. 167,378; May 1; Serial No. 167,766; published Dec. 26, 1923.

Bowden, J. B., & Company, New York, N. Y. Type of finger rings known as wedding rings. 167,354; May 1; Serial No. 144,273; published Jan. 30, 1923.

Bowker Insecticide Company, New York, N. Y. Insecticides. 167,421; May 1; Serial No. 169,749; published Jan. 9, 1923.

Brissette, Armand J., Webster, Mass. Medicinal preparation for coughs, colds, bronchitis, etc. 167,623; May 1; Serial No. 167,707; published Dec. 26, 1922.

Buffalo Specialty Co., Buffalo, N. Y. Drain solvents. 167,374; May 1; Serial No. 166,630; published Jan. 9, 1923.

Burnham, E., Inc., Chicago, Ill. Preparation for straightening hair. 167,579; May 1; Serial No. 166,496; published Jan. 2, 1923.

Buster Brown Soap Company, Indianapolis, Ind. Soap. 167,600; May 1; Serial No. 169,574; published Jan. 2, 1923.

Butler Laboratories, Inc., New York, N. Y. Iron solution for intravenous and intramuscular use. 167,500; May 1; Serial No. 166,521; published Jan. 2, 1923.

Cabco Iron Works, Inc., Gowanda, N. Y. Gas steam radiators. 167,412; May 1; Serial No. 168,447; published Jan. 23, 1923.

Carey Salt Company, The, Hutchinson, Kans. Medium salt for meat curing and general use. 167,399; May 1; Serial No. 166,653; published Jan. 2, 1923.

Central Radiator Company, New York, N. Y. Hot-water heater. 167,578; May 1; Serial No. 166,523; published Jan. 2, 1923.

Cerecedo Hnos. & Co. Sucrs., San Juan, P. R. Soap. 167,586; May 1; Serial No. 170,122; published Jan. 2. 1923.

Chemische Fabrik Marienfelde G. m. b. H., Berlin-Marienfelde, Germany. Pulverulent sulphur compound for treating sores, cuts, etc. 167,437; May 1; Serial No. 163,737; published Jan. 30, 1923.

Chemitex Products Company, The, Akron, Ohio. Chemical cleaner for shade cloths. 167,448; May 1; Serial No. 163,779; published Jan. 23, 1923.

Chesney, Ernest R., doing business as Fly-Cide Company, Kansas City, Mo. Insecticides. 167,466; May 1; Serial No. 167,118; published Jan. 23, 1923.

Tables, Metal tops for kitchen and other. American Range & Fonndry Company. 173,550; May 1.
Tables, Take-down. G. E. Tomlinson. 173,943; May 1.
Tags. Dennison Manufacturing Co. 176,330; May 1.
Tappets and poppet valves for explosion engines. Wilcox Motor Parts & Manufacturing Company. 173,546; May 1.
Tennis tape reels, baseballs, baseball gloves and mits, bats, etc Charles M. Ghriskey's Sons. 171,456; May 1.
Thermometers. Wilder-Pike Thermometer Company. 176,702; May 1.
Tires, Hungarian Rubber Goods Factory Limited. 172,332; May 1.
Tires and tubes, Rubber. National Tire & Rubber Company. 142,802; May 1.
Tires, Rubber. Fisk Rubber Company. 172,416; May 1.
Tops, Spinning. Sipp Novelty Co. Inc. 175,029; May 1.
Toys, Wheeled. J. T. Casey. 170,968; May 1.
Trucks and automobiles, Motor. Graham Brothers. 172,272; May 1.
Umbrellas. Kortenbach & Rauh. 162,556; May 1.
Varnishes. Edward Smith & Company. 177,629; May 1.
Waists and hosiery. House of Byer. 168,614; May 1.
Wheels, Traction. Buckeye Traction Ditcher Co. 175,843; May 1.
White, Paris. Taintor Company. 176,314; May 1.
Wool. New Zealand Refrigerating Company, Limited. 161,373; May 1.
Wool. New Zealand Refrigerating Company, Limited. 161,378; May 1.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 1ST DAY OF MAY, 1923.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). **Includes patents, reissues, and designs.**

Abraham, Herbert, New York, N. Y., assignor to The Ruberoid Company. Shingle strip. 1,453,373; May 1
Accioly, Francisco de M., Rio de Janeiro, Brazil. Process and apparatus for the manufacture of nonpotable alcoholic liquid. 1,453,374; May 1.
Adams, Harry A., assignor to Allith-Prouty Company, Danville, Ill. Door-opening mechanism. 1,453,778; May 1.
Addressograph Company. (See Jackson, James P., assignor.)
Adland, Victor E., and L. H. Kamper, assignors to Troy Laundry Machinery Company, Ltd., Chicago, Ill. Dry-room tumbler. 1,453,260; May 1.
Advance-Rumely Company. (See Ross, James, assignor.)
Ady, Jacob A., West Concord, Minn. Air-power water pump. 1,453,486; May 1.
Aero Pulverizer Company. (See Hirsch, Paul A., assignor.)
Affel, Herman A. (See Espenschied L., and Affel.)
Ahearn, John J., Palmer, N. Y. Ruler attachment. 1,453,900; May 1.
Albert, Samuel, New York, N. Y. Vanity case. 1,453,563; May 1.
Alexander, Albert M., Valley Mills, Tex. Foot accelerator. 1,453,651; May 1.
Alexander, John R., New Albany, Ind., assignor of one-half to T. Alexander, Toledo, Ohio. Vehicle signal. 1,453,428; May 1.
Alexander, Thomas. (See Alexander, John R., assignor.)
Allen, Edward E., Rutland, and P. M. M. Phelps, Fair Haven, Vt. Coffin. Des. 62,297; May 1.
Allen, William H., Cleveland, Ohio. Mausoleum. 1,453,375; May 1.
Allith-Prouty Company. (See Adams, Harry A., assignor.)
Altenburg, Arthur C., Milwaukee, Wis. Shirt sleeve with detachable cuff. 1,453,779; May 1.
Altgelt, Herman E., New Braunfels, Tex., assignor to Oliver Chilled Plow Works, South Bend, Ind. Power-lift mechanism for plows. 1,453,537; May 1.
Althoff, Walter, assignor to Geneva Cutlery Corporation, Geneva, N. Y. Adapter for safety razors. 1,453,487; May 1.
Aluminum Company of America. (See Edwards, Junius D., assignor.)
American Can Company. (See Widell, M. E., and Jahr, assignors.)
American Cystoscope Makers, Inc. (See Wappler, Reinhold H., assignor.)
American Hardware Corporation. (See Teich, Ernest L., assignor.)
American Liquid Meter Company. (See Babos, Lacey, assignor.)
American Manganese Steel Company. (See Nichols, Wesley G., assignor.)
American Manganese Steel Company. (See Vanderhoef, Ellison E., assignor.)
American Multigraph Company, The. (See Chisholm, Clifton, assignor.
American Platinum Works. (See Gaschke, George, assignor.)
American Steel Foundries. (See Hedgcock, William C., assignor.)
American Telephone and Telegraph Company. (See Blackwell, Otto B., assignor.)
American Telephone and Telegraph Company. (See Espenschied, L., and Affel, assignors.)
American Telephone and Telegraph Company. (See Hoyt, Ray S., assignor.)
Ames, Joseph H., Philadelphia, Pa. Highway and similar foundation. 1,453,261; May 1.
Anchor Cap & Closure Corporation. (See Luhrmann, George W., assignor.)
Anchor Cap & Closure Corporation. (See Ramsey, George, assignor.)
Andersen, Christian S., Dwight, Ill. Work support. 1,453,901; May 1.
Andrews, Edward F., Maywood, Ill. Hydrometer. 1,453,488; May 1.
Anfindsen, Christian B., Charlerol, Pa. Kick-back car dump. 1,453,331; May 1.
Angelus, Louis, New York, N. Y. Steaming cabinet. 1,453,967; May 1.
Arkwright, Delaney, jr., Newton Falls, Ohio. Burner. 1,453,780; May 1.
Armstrong, Frank H., Auburn, assignor to Corona Typewriter Company, Inc., Groton, N. Y. Typewriting machine. 1,453,577; May 1.
Armstrong, Frank H., Auburn, assignor to Corona Typewriter Company, Inc., Groton, N. Y. Typewriting machine. 1,453,578; May 1.
Armstrong, Frank H., Auburn, assignor to Corona Typewriter Company, Inc., Groton, N. Y. Typewriting machine. 1,453,579; May 1.
Armstrong, Frank H., Auburn, assignor to Corona Typewriter Company, Inc., Groton, N. Y. Typewriting machine. 1,453,580; May. 1.
Armstrong, Frank H., Auburn, assignor to Corona Typewriter Company, Inc., Groton, N. Y. Typewriting machine. 1,453,581; May 1.
Armstrong, Frank H., Auburn, assignor to Corona Typewriter Company, Inc., Groton, N. Y. Typewriting machine. 1,453,582; May 1.
Arnold, Homer L., Arcata, Calif. Direction indicator. 1,453,902; May 1.
Ash, Charles S., assignor to California Packing Corporation, San Francisco, Calif. Peeling fruits and vegetables. 1,453,781; May 1.
Ask, George M., Corning, Calif. Power-transmitting mechanism. 1,453,903; May 1.
Askin, Morris W., Washington, D. C. Toilet case. 1,453,332; May 1.
Atlas Powder Company. (See Grotta, Bennett, assignor.)
Atlas Powder Company. (See Long, Ralph A., assignor.)
Auble Die and Stamping Company. (See Auble, James H., and J. L., assignors.)
Auble, James H. and J. L., assignors to The Auble Die and Stamping Company, Cincinnati, Ohio. Method and apparatus for forming sheet-metal articles. 1,453,652; May 1.
Auble, James L. (See Auble, James H., and J. L.)
Auchstetter, William. (See Bright, Albert E., assignor.)
Autrey, Herbert S. (See Balazs, R. J., and Autrey.)
Babos, Lacey, assignor to American Liquid Meter Company, Portland, Oreg. Fractional counter. 1,453,538; May 1.
Baird, Cassius M. C., Chicago, Ill. Hose construction. 1,453,823; May 1.
Balazs, Rudolph J. and H. S. Autrey, Cleveland, Ohio, assignors to Houston Pneumatic Puncture Proof Wheel Company, Houston, Tex. Cushioned vehicle wheel. 1,453,614; May 1.
Baldwin Locomotive Works, The. (See Sykes, J. P., and Stover, assignors.)
Ball, Albert P., Royal Oak, and F. Zenker, Highland Park, assignors to Square D Company, Detroit, Mich. Electrical switch. 1,453,696; May 1.
Banghart, George E., Olney, Ill. Hand embroidery needle. 1,453,262; May 1.
Bar Zim Toy Manufacturing Co. Inc. (See Bartholomae, William, assignor.)
Barger, William B., et al. (See Wood, Joseph C., assignor.)
Bargsley, Sam L. (See Heckman, James, assignor.)
Barker, Albert G. (See Dieterle, Edward P., assignor.)
Bartholomae, William, assignor to Bar Zim Toy Manufacturing Co. Inc., New York, N. Y. Musical toy. 1,453,968; May 1.
Barz, Robert H., Stockton, Calif. Headlight lens. 1,453,539; May 1.
Bass, Rubin, Brooklyn, N. Y. Presser for velour, bolivia, etc. 1,453,697; May 1.
Bates, Arthur, and W. T. Minett, Leicester, England, assignors to United Shoe Machinery Corporation, Patterson, N. J. Pulling-over machine. 1,453,263; May 1.
Battenfeld, Julius J., et al. (See Misner, Edgar D., assignor.)
Baty, Ernest J. (See Cox, K., Kerr, and Baty.)
Bauer, Charles, New York, N. Y. Nonbreakable refuse can. 1,453,824; May 1.
Bauman, Julius C., Miles, Tex. Animal trap. 1,453,615; May 1.
Baumann, Karl, Urmston, England, assignor to Westinghouse Electric & Manufacturing Company. System of ventilation. 1,453,333; May 1.
Baxter, Kenneth S., assignor to Sheet Steel Products Company, Michigan City, Ind. Vehicle sash door. 1,453,825; May 1.

Bay State Optical Company. (See McKinstry, G. W., and Siddall, assignors.)
Beach, Fitch H., and F. S., Charlotte, Mich. Bucket. 1,453,540; May 1.
Beach, Fred S. (See Beach, Fitch H. and F. S.)
Beach, W. S. (See Farnsworth, A. J., and St. Claire, assignors.)
Beaton, Angus, Medicine Hat, Alberta, Canada. Animal poke. 1,453,324; May 1.
Beaujon, Charles A., Canaan, Conn. Sheet-metal spool. 1,453,826; May 1.
Beck, Erasmus W., Griffin, Ga. Pneumatic pump. 1,453,904; May 1.
Beck, Frank H., Larchmont, N. Y. Pencil-display holder. Des. 62,269; May 1.
Bedford, Frederick, Stratton, Nebr. Lamp-reflector attachment. 1,453,739; May 1.
Beggs, Henry C., Fort Morgan, Colo. Head gate. 1,453,429; May 1.
Beisel, William J., Port Richmond, N. Y. Spring wheel. 1,453,541; May 1.
Beisel, William J., Port Richmand, N. Y. Spring wheel. 1,453,542; May 1.
Bell, John T., Redford, Mich. Tractor appliance for trucks. 1,453,782; May 1.
Belluche, Frank R. (See Upham, B. F., Belluche, and Horniz.)
Benedek, Victor, Chicago, Ill. Coffeepot. 1,453,489; May 1.
Benenato, Stella, Phoenix, Ariz. Envelope. 1,453,616; May 1.
Benjamin Electric Manufacturing Company. (See Benjamin, R. B., and Phillips, assignors.)
Benjamin, Reuben B., Chicago, and P. D. Phillips, Elmhurst, assignors to Benjamin Electric Manufacturing Company, Chicago, Ill. Electric-lamp socket. 1,453,827; May 1.
Bennett, William H., Charlotte, N. C. Portable motor-driven meat saw. 1,453,335; May 1.
Benson, Mary D., New York, N. Y. Combined bib and apron or similar article. Des. 62,270; May 1.
Berg, Alfred J. (See Clark, Ewen A., assignor.)
Berg, Fred C., assignor to E. P. Flaugher, Coalinga, Calif. Pump. 1,453,653; May 1.
Bergen, Harry S., assignor to Toledo Scale Company, Toledo, Ohio. Scale-platform lifting mechanism. 1,453,376; May 1.
Bergström, Johan E., Christiania, Norway, assignor to G. Stahle, Stockholm, Sweden. Milling machine. 1,453,654; May 1.
Berman, Paul, Wilmington, Del. Ash sifter. 1,453,583; May 1.
Bernac, Raoul, Bordeaux, France. Pneumatic jack. 1,454,010; May 1.
Berry, Harold R., Brooklyn, N. Y., assignor to Petroleum Research and By-Products Company, Wilmington, Del. Gas making. 1,453,655; May 1.
Bessom, Earl A., assignor to The Wheeler-Schebler Carburetor Co., Indianapolis, Ind. Carburetor. 1,453,490; May 1.
Bierschbach, Leander, Mount Pleasant, Mich. Safety attachment for tractors. 1,453,264; May 1.
Bird, Charles E., Minneapolis, Minn. Tractor. 1,453,265; May 1.
Bishop, Samuel H., and J. Q. Slye, Washington, D. C. Support for moth-repellent holders. Re15,588; May 1.
Blackman, Mabel, assignor to A. S. Joseph, New York, N. Y. Overshoe for horses. 1,453,905; May 1.
Blackwell, Otto B., Garden City, N. Y., assignor to American Telephone and Telegraph Company. System for attaining uniform attenuation. 1,454,011; May 1.
Blackwell, Otto B., Garden City, N. Y., assignor to American Telephone and Telegraph Company. Voice-operated relay. 1,453,430; May 1.
Blankenburg, Johannes, Berlin, Germany, assignor, by mesne assignments, to Naamlooze Vennootschap Finanzieele Maatschapij "Driebergen," Amsterdam, Netherlands. Device for amplifying telephone currents and other electric oscillations. 1,453,584; May 1.
Blosser, John E. (See Tong, J. T., and Blosser.)
Blount, Arlington A., assignor to Sleeper & Hartley, Inc., Worcester, Mass. Coiling machine. 1,453,431; May 1.
Blount, Benjamin H., Houston, Tex. Ice receptacle. 1,453,266; May 1.
Bodnar, Frank R., Bridgeport, Conn. Window-sash lock. 1,453,698; May 1.
Boker Cutlery & Hardware Company. (See Redman, Charles H., assignor.)
Bolkesjö, Leif T., Notodden, Norway. Turning indicator for automobiles. 1,454,012; May 1.
Bolles, Robert O., et al., trustees. (See Snodgrass, C. W., and Whitmoyer, assignors.)
Bond Manufacturing Corporation. (See Bond, William G., assignor.)
Bond, William G., assignor to Bond Manufacturing Corporation, Wilmington, Del. Process of and apparatus for manufacturing articles of comminuted cork. 1,453,617; May 1.
Bonhôte, Gérald. (See de Montmollin, G., Spieler, and Bonhôte.)
Bonnell, Dorothy, Winchester, Ky. Gaseous-fuel mixer. 1,453,656; May 1.
Bonser, Fred, Colorado Springs, Colo. Grasping instrument. 1,453,543; May 1.
Boone Heater Corporation. (See Boone, Robert, assignor.)
Boone, Robert, Asbury Park, N. J., assignor, by mesne assignments, to Boone Heater Corporation, New York, N. Y. Lighting device for gas. 1,453,906; May 1.
Boots, Edgar W. (See Tolla, T., and Boots.)
Bosworth, George P., assignor to Hemphill Company, Central Falls, R. I. Glove and making the same. 1,454,019; May 1.
Boulton, Charles W., Waltham, Mass. Chaplet. 1,454,013; May 1.
Bovender, Alley C., Northwilkesboro, N. C. Motor-vehicle attachment. 1,453,618; May 1.
Bowes, Walter H., Stamford, Conn. Yieldable support for rollers of postmarking and stamp-canceling machines. 1,453,783; May 1.
Boyce, A. Earl, et al. (See Donaldson, Elizabeth C., assignor.)
Boye Needle Company, The. (See Carlson, Gustav A., assignor.)
Bozarth, William H., Vineland, N. J. Oil burner for furnaces. 1,453,907; May 1.
Bozarth, William H., Vineland, N. J. Oil burner for stoves. 1,453,908; May 1.
Bradford, James L., assignor to De Forest Radio Telephone & Telegraph Company, New York, N. Y. Electron-emitting cathode and making the same. 1,453,267; May 1.
Bradner, Hosea T. (See Lees, Ernest J., assignor.)
Bremer, Hugo E., Neheim, Westphalia, Germany. Steering gear for motor vehicles. 1,453,432; May 1.
Brenk, Ernest L., Cicero, Ill. Externally-operable inclosed safety-type switch. 1,453,740; May 1.
Briais, Henry E., New York, N. Y. Differential for motor vehicles. 1,453,909; May 1.
Bridgeford, John J. (See van de Pol, Alfons H., assignor.)
Bridgeport Chain Company, The. (See Hotchkiss, Howard F., assignor.)
Bright, Albert E., assignor of one-half to W. Auchstetter, Idagrove, Iowa. Wagon attachment. 1,453,910. May 1.
Brodeur, Maurice, Montreal, Quebec, Canada. Apparatus for transmitting words. 1,453,741; May 1.
Brooks, Winfred M., South Orange, N. J. Sealing means. 1,453,268; May 1.
Brophy, Charles B. (See Parsons, Theophilus, assignor.)
Brophy, Oscar, Philadelphia, Pa. Method for separating magnetic materials. 1,453,699; May 1.
Broskie, Charles C., Stone, Ky. Phonograph diaphragm and sound box. 1,453,336; May 1.
Brown, Carl D., assignor to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. 1,453,828; May 1.
Brown, Charles A. (See Luce, Grafton E., assignor.)
Brown, Harold D., New York, N. Y. Acoustic device. 1,453,969; May 1.
Brown, Walter H., Pasadena, Calif. Low-pressure alarm for pneumatic tires. 1,453,657; May 1.
Browne, Norton, Chelan, Wash. Automobile signal. 1,453,911; May 1.
Browning, Fletcher W., Kingsport, Tenn. Abrading machine. 1,453,742; May 1.
Bruce, William J. W., Cheshire, England. Drain trap. 1,453,743; May 1.
Bruder, Albert A., Holly, Mich. Furnace or stove. 1,453,544; May 1.
Brunelli, James, Brooklyn, N. Y. Cloth pressing and steaming device. 1,453,433; May 1.
Buck, Clarence M. (See Flick, H., and Buck.)
Buckham, George T. (See Dawson, A. T., Buckham, and Haskell.)
Buckley, McKim C., and H. Kendrick, Franklin, Pa. Fuel mixer. 1,453,912; May 1.
Budd, Edward G., Manufacturing Company. (See Maise, Herman C., assignor.)
Budd, Lester E., Philadelphia, Pa. Furnace-door arch. 1,453,434; May 1.
Buente, Charles F., Pittsburgh, Pa. Concrete-pipe machine. 1,453,269; May 1.
Buettner, Charles H., Cincinnati, Ohio. Method and apparatus for nitrogen fixation. 1,453,435; May 1.
Buffalo Foundry & Machine Co. (See Engel, Godfrey, sr., assignor.)
Buffalo Specialty Company. (See Cabana, Charles, assignor.)
Bumgardner, Frank B., Fort Smith, Ark. Invalid bed. 1,453,970; May 1.
Burdick, Arthur G., New London, Conn. Cylinder-head guide stud and removing key. 1,453,913; May 1.
Burnham, Edward M., San Francisco, Calif. Holder for wheel locks. 1,453,436; May 1.
Burnham, William E., deceased, Minneapolis, Minn.; J. E. Byrnham, special administratrix. Rinsing holder for dishes. 1,453,437; May 1.
Burton, Charles S., Oak Park, Ill. Primer for internal-combustion engines. 1,453,270; May 1.
Busse, Edwin G., assignor to Chicago Railway Equipment Company, Chicago, Ill. Lubricated roller side bearing. 1,453,700; May 1.
Butterfield, Edward H., and F. D. Otterbein, assignors to T. Harvey, jr., Middletown, Ohio. Signal and recording meter for paper-making machinery. 1,453,438; May 1.

Button, Clarence E. (See Button, Edwin W. and C. E.)
Button, Edwin W. and C. E., Corning, N. Y. Automatic cuspidor. 1,453,454; May 1.
Buzzo, Joseph T. (See Reese, C. C., Buzzo, and Woodford.)
Byers, James C., Hickory, N. C. Cotton cleaning and conditioning machine. 1,453,744; May 1.
Byrnham, Julia E., special administratrix. (See Byrnham, William E.)
Cabana, Charles, assignor to Buffalo Specialty Company, Buffalo, N. Y. Connector for mops and the like. 1,453,745; May 1.
Cable, John H., Montclair, N. J. Flush-tank valve. 1,453,914; May 1.
Canale, Mario A., and R. Frias, Buenos Aires, Argentina. Device utilizing the trepidations of vehicles. 1,453,972; May 1.
California Packing Corporation. (See Ash, Charles S., assignor.)
Calkins, Elizabeth, St. Joseph, Mo. Hair curler. 1,453,971; May 1.
Calleson, Amos, Brooklyn, N. Y. Can-heading machine. 1,453,619; May 1.
Camp, George W., Mount Vernon, N. Y., assignor to Ward Leonard Electric Company. Rheostat. 1,453,829; May 1.
Campbell, Argyle, assignor to Enterprise Railway Equipment Company, Chicago, Ill. Car-door-operating mechanism. 1,453,701; May 1.
Campbell, Henry C., New York, N. Y. Map-drawing machine. 1,453,377; May 1.
Canada Carbide Company Limited. (See King, Jesse C., assignor.)
Caplan, Harry, Detroit, Mich. Fender bracket. 1,453,271; May 1.
Captan Glass Company. (See Kucera, Peter, assignor.)
Carey, William H., Wisconsin Rapids, Wis. Making concrete blocks. 1,453,746; May 1.
Carey, William H., Wisconsin Rapids, Wis. Machine for making concrete blocks. 1,453,747; May 1.
Carlson, Anthony E., Los Angeles, Calif. Stone-drilling machine. 1,453,620; May 1.
Carlson, Gustav A., assignor to The Boye Needle Company, Chicago, Ill. Curtain rod. 1,453,748; May 1.
Carmack, William, et al. (See Cowin, Irving R., assignor.)
Carr, Charles W., R. J. Dixon, and P. W. Conover, Ogden, Utah. Elevator-door lock. 1,453,915; May 1.
Carstens, George, Jersey City, assignor of one-fourth to H. E. Muller, Jersey City Heights, N. J. Universal conveyer chain. 1,453,702; May 1.
Cashmer, Jacob, Denver, Colo., assignor, by mesne assignments, to Universal Safety Washout Plug Company. Washout plug for boilers. 1,453,916; May 1.
Cederblom, Barnar, Youngstown, Ohio. Boiler. 1,453,703; May 1.
Cedillo, Nicasio, assignor to C. E. Reed, Houston, Tex. Recoil-operated firearm. 1,453,439; May 1.
Chambers, Paul E., Walsen, Colo. Rail-bending device. 1,453,917; May 1.
Champlin, Franklin J., Pittsfield, Mass., assignor to General Electric Company. Voltage-regulating system. 1,453,491; May 1.
Chappatte, Joseph E., Narberth, Pa. Tassel and pendant. 1,453,440; May 1.
Charter, James A., Chicago, Ill. Explosive Engine. 1,453,304; May 1.
Check, Joseph M., Wilkes-Barre, Pa. Hat protector. 1,453,862; May 1.
Cheetham, George A., Manchester, England, assignor to Westinghouse Electric & Manufacturing Company. Excess-demand meter. 1,453,441; May 1.
Chicago Pneumatic Tool Company. (See Hoffman, Leon F., assignor.)
Chicago Railway Equipment Company. (See Busse, Edwin G., assignor.)
Chicago, Railway Equipment Company. (See Le Beau, Ernest A., assignor.)
Chisholm, Clifton, assignor, by mesne assignments, to The American Multigraph Company, Cleveland, Ohio. Address-printing machine. Re15,589; May 1.
Chisholm, Stanley L. (See Wilson, R. E., Parsons, and Chisholm.)
Choate, William E., Westerly, R. I., assignor, by mesne assignments, to Federal Finance Corporation. Marking machine. 1,453,442; May 1.
Christensen, Niels C., Salt Lake City, Utah. Apparatus for the dewatering, classification, and countercurrent washing of solid particles mixed with liquids. 1,453,749; May 1.
Christensen, Niels C., Salt Lake City, Utah. Apparatus for drying granular products. 1,453,750; May 1.
Cisney, Claud W. (See Pine, H. B., and Cisney.)
Clark, Ernest D., Worcester, Mass. Razor-stropping machine. 1,453,751; May 1.
Clark, Ewen A., Revere, Mass., assignor of one half to A. J. Berg, Kittery, Me. Means for salvaging vessels. 1,453,918; May 1.
Clark, Maurice E., Grenada, Miss. Film-waxing machine. 1,453,920; May 1.
Clarke, John H., London, England. Locking device for covers of portholes of ships or other openings. 1,453,919; May 1.
Cleghorn, Charles A., Woburn Sands, England. Self-sealing petrol tank or other container. 1,453,305; May 1.
Clifford, Sanna, Ossining, N. Y. Steam ring. 1,453,378; May 1.
Cline, Charles W., Augusta, Kans. Nut lock. 1,453,921; May 1.
Clough, George B., Meriden, Conn. Price indicator. 1,453,658; May 1.
Clutter, Le Roy P., Uniontown, Pa. Coupling device. 1,453,922; May 1.
Coakley, Henry, New York, N. Y. Airplane. 1,453,830; May 1.
Cochran, Wesley E., Cleveland, Ohio. Lighting fixture. 1,453,443; May 1.
Colgan, A. H., et al. (See Smith, William J., assignor.)
Collier, James, assignor to S. C. Johnson & Son, Racine, Wis. Brush. 1,453,306; May 1.
Collins, Peter J., Brooklyn, N. Y. Thermostatic valve. 1,453,272; May 1.
Colliver, Harold E., Simcoe, Ontario, Canada, and C. R. Mabee, Buffalo, N. Y. Food compound and producing the same. 1,453,752; May 1.
Conard, Richard W., Atlantic Highlands, N. J. Pliers. 1,453,863; May 1.
Connely, Charles B., Scotia, N. Y., assignor to General Electric Company. Overload-circuit controller. 1,453,492; May 1.
Conover, Peter W. (See Carr, C. W., Dixon, and Conover.)
Conrade, Everette C., Lewisville, N. C. Hedge clipper or trimmer. 1,453,621; May 1.
Conrade, Everette C., Lewisville, N. C. Shutter operating and securing mechanism. 1,453,622; May 1.
Converse, Albert, Pampa, Tex. Harvester thrasher. 1,453,753; May 1.
Cook, Earl H., Watertown, Wis. Table-slide construction. 1,453,546; May 1.
Cooke, Frank V., assignor to K. B. Goddard, Detroit, Mich. Vehicle spring. Re15,586; May 1.
Corona Typewriter Company. (See Armstrong, Frank H., assignor.)
Coryell, William C., assignor to The General Fireproofing Company, Youngstown, Ohio. Clip for corner beads. 1,453,973; May 1.
Coty, Alfred C., assignor to The Watertown Bag Machine Co., Inc., Toledo, Ohio. Tubing machine. 1,453,864; May 1.
Covell, William J., San Francisco, Calif. Dosage bottle. 1,453,444; May 1.
Covell, William J., San Francisco, Calif. Dispensing container. 1,453,445; May 1.
Cowin, Irving R., assignor of one-half to W. Carmack, and one-half to F. C. Werk, Cleveland, Ohio. Pressure regulator. 1,453,704; May 1.
Cowles, Edward P., Sparta, Mich. Automatically-reversing drain board for clothes wringers. 1,453,337; May 1.
Cox, Kenneth, Putney, London, R. P. Kerr, Gateshead-upon-Tyne, and E. J. Baty, Luton, England. Apparatus for gas purification. 1,453,754; May 1.
Coy, Harris S., Anderson, Ind. Manual operating means for automatic temperature-control systems. 1,453,379; May 1.
Craver, Thomas G., assignor of one-fourth to M. L. Parker, Mount Hope, and one-fourth to L. Dougless, Scarboro, W. Va. Advertising device. 1,453,755; May 1.
Crawford, Henry A., Tulsa, Okla. Aeroplane suspension. 1,453,307; May 1.
Crawley, Courtland J., Chicago, Ill. Receptacle. 1,453,784; May 1.
Crombie, James, St. Louis, Mo. Boiler-turning cradle. 1,453,705; May 1.
Crosby, Oliver, St. Paul, Minn. Clip hook. 1,453,706; May 1.
Crotty, Thomas A., Danbury, Conn. Vehicle signal. 1,453,380; May 1.
Culver, Ben F., and W. H. Doyle, Platteville, Wis.; said Culver assignor to said Doyle. Barrel-holding device. 1,453,547; May 1.
Cunningham, George F., Alexandria, La. Fishing tool. 1,453,493; May 1.
Curtiss, George E., New Britain, Conn., assignor to Landers, Frary & Clark. Urn. Des. 62,271; May 1.
D'Alessandro, Dominick, and R. Pace, Quincy, Mass.; said Pace assignor to said D'Alessandro. Machine for making tiles. 1,453,381; May 1.
D'Alessandro, Dominick, and R. Pace, Quincy, Mass.; said Pace assignor to said D'Alessandro. Making tiles. 1,453,382; May 1.
Dath, Charles E., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Shim for center-bearing plates. 1,453,661; May 1.
Davidson, Bruce J., New York, N. Y., assignor to Wirebounds Patents Company, Kittery, Me. Wire-joining tool. 1,453,446; May 1.
Davidson, Bruce J., Marseilles, Ill., assignor to Wirebounds Patents Company. Wire-joining method. 1,453,447; May 1.
Davis, Charles S., et al. (See Donaldson, Elizabeth C., assignor.)
Davison, Walter W., assignor to Wire Wheel Corporation of America, Buffalo, N. Y. Wheel. 1,453,338; May 1.
Dawley, James C. (See Ripsch, C. W., and Dawley.)

Dawson, Arthur T., G. T. Buckham, Westminster, London, England, and G. D. Haskell, Boston, Mass., assignors to Vickers Limited, Westminster, London, England. Machine gun. 1,453,974; May 1.
Day, William R., Cleveland, Ohio. Piston and piston ring. 1,453,448; May 1.
Dedering, Fred P., Kiel, Wis. Tractor hitch. 1,453,383; May 1.
Deeks, Hiram C. J., Sea Cliff, N. Y., and M. Deeks, Rochelle Park, N. J., assignors to J. Deeks, Sea Cliff, N. Y. Method of and apparatus for forming concrete structures. 1,453,707; May 1.
Deeks, Joseph. (See Deeks, Hiram C. J. and M., assignors.)
Deeks, Maurice. (See Deeks, Hiram C. J. and M.)
De Forest Radio Telephone & Telegraph Company. (See Bradford, James L., assignor.)
De Launty, Oliver M., Chicago, Ill. Two-cycle gas engine. 1,453,449; May 1.
De Laval Separator Company, The. (See Miller, Theodore H., assignor.)
Delgado, Juan O., El Paso, Tex. Shock absorber for motor vehicles. 1,453,785; May 1.
Delta-Star Electric Company. (See Van Etten, Frank C., assignor.)
De Montmollin, Guillaume, J. Spieler, and G. Bonhôte, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Intermediate product for the manufacture of dyestuffs and making same. 1,453,659; May 1.
De Montmollin, Guillaume, G. Bonhôte, and J. Spieler, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Azo dyestuffs and the manufacture of same. 1,453,660; May 1.
Dennon, Purly A., Grand Island, Nebr. Air washing and cooling apparatus. 1,453,494; May 1.
De Remer, Jay G., Greenwich, Conn. Compressor. Re15,590; May 1.
De Remer, Jay G., Greenwich, Conn. Refrigerating apparatus. Re15,591; May 1.
Detroit Carrier and Manufacturing Company. (See Taylor, Huston, assignor.)
Dewey, Edward B., Washington, D. C. Hairpin container. 1,453,756; May 1.
De Young, Teunis, jr., South Holland, Ill. Bulb planter. 1,453,923; May 1.
Dickinson, Frederick S., New York, N. Y., and J. Springer, Atlantic Highlands, N. J., assignors to said Dickinson. Constructing pneumatic tires. 1,453,865; May 1.
Dieterle, Edward P., assignor of one-half to A. G. Barker, New York, N. Y. Vibratory tool. 1,453,831; May 1.
Dilas, Harry, Bay City, Mich. Mopping vehicle. 1,453,450; May 1.
Dill, Horace E., Graniteville, S. C., assignor to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. 1,453,451; May 1.
Dillistone, Cecil E., Owen Sound, Ontario, Canada. Foot-operated latch for doors and the like. 1,453,308; May 1.
Dixon, Robert J. (See Carr, C. W., Dixon, and Conover.)
Dobbin, Henry F., assignor to Western Electric Company, Incorporated, New York, N. Y. Centrifugal governor. 1,453,452; May 1.
Doble, John A., assignor to Doble Laboratories, San Francisco, Calif. Liquid-fuel burner. 1,453,495; May 1.
Doble Laboratories. (See Doble, John A., assignor.)
Dodge, Milton L., Newburyport, Mass. Manufacture of turn shoes and apparatus for use therein. 1,453,925; May 1.
Dodge, Milton L., Newburyport, Mass. Turn shoe. 1,453,924; May 1.
Donaldson, Elizabeth C., Highland Park, Mich., assignor to C. S. Davis, R. P. Johnson, J. C. O'Hara, J. F. McNaughton, A. E. Boyce, and H. C. Gordon, Muncie, Ind. Electric heater. 1,453,832; May 1.
Dornier, Claudius, assignor to the Firm Luftschiffbau Zeppelin Gesellschaft mit beschrankter Haftung, Friedrichshafen, Germany. Hydroaeroplane. 1,453,496; May 1.
Douglass, Lem, et al. (See Craver, Thomas G., assignor.)
Doyle, William H. (See Culver, B. F., and Doyle.)
Draper Corporation. (See Brown, Carl D., assignor.)
Draper Corporation. (See Dill, Horace E., assignor.)
Draper Corporation. (See Hunt, Patrick J., assignor.)
Draycott, Walter, Alton, Ill. Lace. Des. 62,298; May 1.
Druar, Frank J., assignor to Packard Motor Car Company, Detroit, Mich. Radiator cover. 1,453,339; May 1.
Druar, Frank J., assignor to Packard Motor Car Company, Detroit, Mich. Attachment for motor-vehicle radiators. 1,453,340; May 1.
Dufresne, Georges A., Trois Rivières, Quebec, Canada. Resilient wheel. 1,453,786; May 1.
Duncan, Joseph S., Chicago, Ill. Making printing-plate blanks and product thereof. 1,453,284; May 1.
Duncan, William M., Alton, Ill. Furnace. 1,453,341; May 1.
Duncombe, Tyrrell H., Detroit, Mich. Overrunning clutch. 1,453,548; May 1.
Dunham, William P., Copperas Cove, Tex., assignor to Nebulizer Oil Burning Company. Firing boilers by means of fuel oils. 1,453,662; May 1.
Dunston, Wayne E., assignor to C. Girl, Kalamazoo, Mich. Automobile bumper. 1,453,806; May 1.
Dyer, Charles B., Indianapolis, Ind. Emblem, badge, brooch, pin, cuff button, watch fob, or an article of similar nature. Des. 62,272; May 1.
Dzutsoff, Paul, Seattle, Wash. Combined oxygen and acetylene cutting and welding torch. 1,453,385; May 1.
Eager, Honor L., Brooklyn, N. Y. Device for removing facial wrinkles. 1,453,926; May 1.
Eaton, Warren J., Midland, Pa. Grab bucket. 1,453,927; May 1.
Eberly, Jacob A., jr., Philadelphia, Pa. Hypodermic syringe. 1,453,309; May 1.
Edwards, Junius D., Oakmont, assignor to Aluminum Company of America, Pittsburgh, Pa. Aluminum-silicon alloy and making it. 1,453,928; May 1.
Electric Phonograph Company. (See Shigley, Cyrus C., assignor.)
Ellison, Thomas J., Richmond, Ky. Animal trap. 1,453,342; May 1.
Engel, Godfrey, sr., Brooklyn, assignor to Buffalo Foundry & Machine Co., Buffalo, N. Y. Filter. 1,453,310; May 1.
Engel, Godfrey, sr., Brooklyn, assignor to Buffalo Foundry & Machine Co., Buffalo, N. Y. Rotary filter. 1,453,311; May 1.
Engel, Godfrey, sr., Brooklyn, assignor to Buffalo Foundry & Machine Co., Buffalo, N. Y. Rotary drier. 1,453,312; May 1.
Engel, Godfrey, sr., Brooklyn, assignor to Buffalo Foundry & Machine Co., Buffalo, N. Y. Dealcoholizing process and apparatus. 1,453,313; May 1.
Engler, William B., Youngstown, Ohio. Dump-body hoist. 1,453,663; May 1.
English & Mersick Co., The. (See Kaimer, Richard V., assignor.)
Ensign, William S., New Rochelle, assignor to Tiffin Products, Inc., Long Island City, N. Y. Plate or similar article. Des. 62,273; May 1.
Enterprise Railway Equipment Company. (See Campbell, Argyle, assignors.)
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,274; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,275; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,276; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,277; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,278; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,279; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,280; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,281; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,282; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,283; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,284; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,285; May 1.
Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,286; May 1.
Espenschied, Lloyd, Hollis, and H. A. Affel, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, System for communicating with moving vehicles. 1,453,387; May 1.
Essex Rubber Company. (See Sanders, Walter E., assignor.)
Evans, Frederick C., Ithaca, N. Y. Draft regulator. 1,453,757; May 1.
Ewell, John A., Quinault, Wash. Clutch-controlling mechanism for automobiles. 1,453,386; May 1.
Fanslow, Benjamin O., assignor to New Era Manufacturing Company, New York, N. Y. Check writer. 1,453,867; May 1.
Fargo, Charles R., Chicago, Ill., assignor to Wilson-Jones Loose Leaf Company. Leaf upsetting and supporting device. 1,453,664; May 1.
Farlow, James N., San Francisco, Calif. Theft-prevention device for automobiles. 1,453,497; May 1.
Farnsworth, Arthur J., and E. M. St. Claire, assignors to W. S. Beach, San Francisco, Calif. Bag. 1,453,549; May 1.
Farrar, B. W. (See Farrar, Carroll J., assignor.)

Farrar, Carroll J., Kirkwood, assignor of one-half to B. W. Farrar, Summerville, Ga. Apparatus for setting rule forms. 1,453,787; May 1.
Fay, Joseph W., Milwaukee, Wis., assignor to Fred Pabst Company. Welded joint. 1,453,343; May 1.
Fay, Thomas J., Brooklyn, N. Y. Automobile body-motion stabilizer. 1,453,344; May 1.
Fayer, Charles, New York, N. Y., assignor to Wappler Electric Co., Inc. Current regulator for X-ray systems. 1,453,314; May 1.
Feder, David P. (See Kimball, Matthew D., assignor.)
Federal Finance Corporation. (See Choate, William E., assignor.)
Feldman, Abraham G., Chicago, Ill. Bracket. 1,453,788; May 1.
Ferguson Brothers Mfg. Co. (See Wagner, Andrew, assignor.)
Ferguson, Joseph B., Newark, N. J. Vehicle. 1,453,345; May 1.
Fermanian, Mark B., Troy, N. Y. Time-controlled draft regulator. 1,453,929; May 1.
Ferngren, Enoch T., and L. D. Soubier, assignors to The Owens Bottle Company, Toledo, Ohio. Glass-cutting mechanism. 1,453,315; May 1.
Fessenden, Reginald A., Brookline, Mass., assignor to Submarine Signal Company, Portland, Me. Acoustic method and apparatus. 1,453,316; May 1.
Field, Alan D., Oakland, assignor to The Field-Ernst Envelope Co., San Francisco, Calif. Envelope. 1,453,758; May 1.
Field-Ernest Envelope Co., The. (See Field, Alan D., assignor.)
Fink, Gail J., Niagara Falls, N. Y., and E. D. Glauque, Niagara Falls, Ontario, Canada, assignors to Hooker Electrochemical Company, New York, N. Y. Preparation of pure selenium oxychloride. 1,453,789; May 1.
Fitz-Empire Double Pivot Last Company. (See Fitz, Guy B., assignor.)
Fitz, Guy B., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me. Last with reenforced toe. 1,453,317; May 1.
Fitzsimmons, James. (See Lubash, Martin, assignor.)
Flading, John W. (See Grieve, R., and Flading.)
Fleming, Clarence C., Amityville, N. Y., and H. L. Myers, Morristown, N. J. Display folder. 1,453,853; May 1.
Flick, Henry, assignor to Hayes Wheel Company, Jackson, Mich. Billet holder for spoke-mitering machines. 1,453,930; May 1.
Flick, Henry, and C. M. Buck, assignors to Hayes Wheel Company, Jackson, Mich. Multiple drill for drilling wood wheels for hub flanges. 1,453,931; May 1.
Fogal, John E. W., Quincy, Ill. Door-operating device. 1,453,550; May 1.
Fogal, John E. W., assignor to Fogal-Williams Safety Devices, Inc., Quincy, Ill. Elevator interlocking device. 1,453,551; May 1.
Fogal-Williams Safety Devices, Inc. (See Fogal, John E. W., assignor.)
Foll, Gerald, Winnipeg, Manitoba, Canada. Attachment to gas stoves. 1,453,665; May 1.
Forbes Lithograph Manufacturing Company. (See Macdonald, John D., assignor.)
Forster, George, Philadelphia, Pa. Notifying or call device for telephones. 1,453,453; May 1.
Fortescue, Charles L., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Electrolytic condenser. 1,453,368; May 1.
Foundation Oven Corporation. (See Roberts, William E., assignor.)
Franovich, Dominick, Venice, La. Drydock. 1,453,666; May 1.
French Battery & Carbon Company. (See Graves, John, assignor.)
Frias, Ricardo. (See Cannle, M. A., and Frias.)
Fritz, Charles, Chicago, Ill. Drain cleaner. 1,453,454; May 1.
Frohock, Rodney C., Augusta, Me. Starting device. 1,453,868; May 1.
Fuller, Franz A., assignor to The J. E. Mergott Co., Newark, N. J. Bag frame. 1,453,455; May 1.
Fuller, Hervey L., W. F. Nesbit, and P. O. Petterson, Galesburg, Ill. Machine to melt snow and ice. 1,453,552; May 1.
G. M. C. Metallic Grease Co. (See Verniaud, Claudius, assignor.)
Gaddis, William E., assignor of one-third to H. L. Stewart, McCune, Kans. Road leveler. 1,453,346; May 1.
Gale, George M., San Antonio, Tex. Fountain brush. 1,454,023; May 1.
Gallagher, Arthur D., assignor to Oliver Chilled Plow Works, South Bend, Ind. Combined plow and planter. 1,453,553; May 1.
Gaschke, George, assignor to American Platinum Works, Newark, N. J. Finger ring and setting. 1,453,708; May 1.
Gee, Hays C. (See Girvin, F. B., and Gee.)
General Electric Company. (See Champlin, Franklin J., assignor.)
General Electric Company. (See Connely, Charles B., assignor.)
General Electric Company. (See Hamilton, Walter L., assignor.)
General Electric Company. (See Heisler, Charles L., assignor.)
General Electric Company. (See Mitchell, L. E., and White, assignors.)
General Electric Company. (See Rogers, Harold W., assignor.)
General Electric Company. (See Seiz, Walter, assignor.)
General Electric Company. (See Stack, George E., assignor.)
General Fireproofing Company, The. (See Coryell, William C., assignor.)
General Motors Research Corporation. (See Kettering, Charles F., assignor.)
Geneva Cutlery Corporation. (See Althoff, Walter, assignor.)
Genthner, Thomas E., and A. L. Stevens, Boston, Mass. Muffler. 1,453,932; May 1.
Gerrard, Alec J., and P. Wright, Chicago, Ill. Wire deforming and severing machine. 1,453,456; May 1.
Glauque, Edmund D. (See Fink, G. J., and Glauque.)
Gibbons, Willis A., New York, N. Y., and A. Given, Newark, N. J. Loading high-explosive shells. 1,453,933; May 1.
Giddings, George C., Springfield, Vt. Mechanically-operated automatic chuck. 1,453,318; May 1.
Gillis, James J., Vancouver, British Columbia, Canada. Penholder. 1,453,667; May 1.
Girl, Christian. (See Dunston, Wayne E., assignor.)
Girvin, Fitzhugh B., and H. C. Gee, Georgetown, Tex. Signal. 1,453,623; May 1.
Gisholt Machine Company. (See Stevens, William N., assignor.)
Giuffre, Joseph, and C. W. Rich, San Francisco, Calif. Dispensing cigarette case. 1,453,585; May 1.
Given, Arthur. (See Gibbons, W. A., and Given.)
Glaspey, Warren E., Bridgeton, N. J., assignor to Spring Stopper Company, New York, N. Y. Machine for making bottles, etc. 1,453,759; May 1.
Glowacki, John B., Chicago, Ill. Crutch armrest. 1,453,790; May 1.
Goddard, Karl B. (See Cooke, Frank V., assignor.)
Goin, George R., and R. E. Hite, Highland Park, Mich.; said Goin assignor to said Hite. Filler and gauge. 1,453,668; May 1.
Good Inventions Co. (See Good, John, assignor.)
Good, John, Garden City, assignor to Good Inventions Co., Brooklyn, N. Y. Engine preheater. 1,453,669; May 1.
Goodrich, Daniel L., Chicago, Ill. Chest. 1,453,935; May 1.
Goodyear Tire & Rubber Company, The. (See Mylrole, John M., assignor.)
Goodyear's India Rubber Glove Manufacturing Company. (See Mahoney, Jeremiah L., assignor.)
Gordon, Henry C., et al. (See Donaldson, Elizabeth C., assignor.)
Gossling, Walter E., New York, N. Y., assignor, by mesne assignments, to The Prest-O-Lite Co., Inc., Indianapolis, Ind. Post and cover clamp and seal. 1,453,791; May 1.
Gould Coupler Company. (See Saurage, William H., assignor.)
Graber, Ellis, Tunbridge Wells, England. Machine for use in drying or treating photographic prints, films, and the like. 1,453,554; May 1.
Grant, Albert E., New York, N. Y. Oil burner. 1,453,834; May 1.
Graves, John, assignor to French Battery & Carbon Company, Madison, Wis. Ejecting mechanism for battery-core-making machines. 1,453,869; May 1.
Green, Arthur H. (See Teves, Frederick W., assignor.)
Greenberg, Geza, New York, N. Y., and W. A. Winter, East Orange, N. J. Urethroscope. 1,453,975; May 1.
Greer, Benjamin J., Poynor, Tex. Wrench. 1,453,670; May 1.
Gregg, Alfred W., Chicago, assignor to Whiting Corporation, Harvey, Ill. Electric furnace. 1,453,347; May 1.
Grella, Larie, Brooklyn, N. Y. Vehicle fender. 1,453,273; May 1.
Grieve, Robert, and J. W. Flading, Lansing, Mich. Puncture proof pneumatic tire. 1,453,348; May 1.
Gross, Ernest A., Lamoille, Minn. Armament for mail and express cars. 1,453,792; May 1.
Grotta, Bennett, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del. Composition for detonators. 1,453,976; May 1.
Guenther, Arthur G. G., assignor to Signode System, Inc., Chicago, Ill. Stretching tool. 1,453,564; May 1.
Guide Motor Lamp Manufacturing Company, The. (See Persons, William F., assignor.)
Gunn, John J., Chicago, Ill. Adjustable bearing box. 1,453,936; May 1.
Guth, Edwin F., St. Louis, Mo. Lighting fixture. 1,453,349; May 1.
Hacker, Horace W., Chicago, Ill. Clamping mechanism. 1,453,350; May 1.
Hadermann, Frederick E., New York, N. Y. Smoker stand. Des. 62,287; May 1.
Hadka, Joseph, Oak Park, Ill. Controlling device for muffler cut-outs. 1,453,624; May 1.
Haldeman, Frank M., assignor to The Master Builders Company, Cleveland, Ohio. Process and composition of matter for coloring mortars. 1,453,457; May 1.
Hamilton, Walter L., Holyoke, Mass., assignor to General Electric Company. Maximum-demand meter. 1,453,498; May 1.

Hamister, Victor C., Cleveland, Ohio, assignor to National Carbon Company, Inc. Electrical connection. 1,453,793; May 1.
Hancock, John W., Denver, Colo. Electric-light fixture. 1,453,794; May 1.
Hansen, Klaus L., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Arc-welding dynamo-electric machine. 1,453,389; May 1.
Harrison, Reuben N., Plains District, Va. Mechanical nurse. 1,453,937; May 1.
Harrold, Sherman, Hartford City, Ind. Wrist mirror. 1,453,671; May 1.
Hart, Henry E. (See Hart, Corda A., and H. E.)
Hart, Corda A. and H. E., Danville, Ill. Adjustable headlight arrangement for motor vehicles. 1,453,938; May 1.
Hart, Harry S. (See Hindahl, David, assignor.)
Hart, Harry S., Chicago, Ill. Hopper-car arrangement. 1,453,835; May 1.
Hart, Harry S., assignor to National Dump Car Company, Chicago, Ill. Dump-car-door latch. 1,453,836; May 1.
Hartmann, John W., Brooklyn, N. Y. Sifting grate. 1,453,870; May 1.
Hartzell, Morris H., Philadelphia, Pa. Umbrella. 1,453,499; May 1.
Hartzell, Morris H., Philadelphia, Pa. Umbrella. 1,453,500; May 1.
Harvey, Tom, jr. (See Butterfield, E. H., and Otterbein, assignors.)
Hash, Charles S., Chadron, Nebr. Automobile light dimmer. 1,453,501; May 1.
Haskell, George D. (See Dawson, A. T., Buckham, and Haskell.)
Hauenstein, John, Kansas City, Mo. Combination mirror and telephone mouthpiece. 1,453,760; May 1.
Haunt, Harry R., St. Louis, Mo. Tire. 1,453,351; May 1.
Hawkinson, Axel W., assignor to Topliff-Ely Company, Washington, Pa. Hood for children's carriages and doll carts. 1,453,871; May 1.
Hawkins, Roe C., and E. S. Hixson, Long Beach, Calif. Grouser. 1,453,872; May 1.
Hayes Wheel Company. (See Flick, Henry, assignor.)
Hayes Wheel Company. (See Flick, H., and Buck, assignor.)
Hearne, Eugene M., Brooklyn, N. Y. Soldering flux. 1,453,586; May 1.
Heath, Frederick, Tacoma, Wash. Pilaster construction. 1,453,837; May 1.
Heaton, Clarence E., assignor to Wilson Brothers, Chicago, Ill. Display box. 1,453,672; May 1.
Hebert, Albert H., Holyoke, Mass. Oil shield for belt pulleys. 1,453,673; May 1.
Heckman, James, assignor of one half to S. L. Bargsley, Electra, Tex. Rat and mouse trap. 1,453,352; May 1.
Hedgcock, William C., assignor to American Steel Foundries, Chicago, Ill. Adjustable brake head. 1,453,838; May 1.
Hedrick, Clarence E., Newton, Kans. Poultry-dipping machine. 1,453,674; May 1.
Heinemann Electric Company. (See Mayer, Walter S., assignor.)
Heinrichs, Berg, assignor to Mid-West Box Company, Anderson, Ind. Machine for making corrugated board. 1,453,458; May 1.
Heisler, Charles L., Schenectady, N. Y., assignor to General Electric Company. Gearing. 1,453,709; May 1.
Hellberg, Harold, Somerville, Mass. Splash counterdrop press. 1,453,390; May 1.
Helmund, Rudolf E., Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company. Alternating-current commutator generator. 1,453,391; May 1.
Hem, Halvor O., assignor to Toledo Scale Company, Toledo, Ohio. Weighing scale. 1,453,353; May 1.
Hem, Halvor O., assignor to Toledo Scale Company, Toledo, Ohio. Dynamometer. 1,453,354; May 1.
Hem, Halvor O., assignor to Toledo Scale Company, Toledo, Ohio. Wire-drawing scale. 1,453,355; May 1.
Hemphill Company. (See Bosworth, George P., assignor.)
Hertzberg, Harry, Brooklyn, N. Y., assignor to Magnus Electric Company, Inc. Switch-controlled electric appliance. 1,453,587; May 1.
Hess, Edward B., Brooklyn, and L. C. Myers, Freeport, assignors to Royal Typewriter Company, Inc., New York, N. Y. Typewriting machine. 1,453,839; May 1.
Heyman, Edward M., assignor to Oliver Chilled Plow Works, South Bend, Ind. Agricultural implement. 1,453,565; May 1.
Hicks, Du Val Q., Fredericksburg, Va. Convertible fan. 1,453,873; May 1.
Hill, Raymond L., Elyria, Ohio, assignor, by mesne assignments, to W. R. Huntington. Resilient heel lift. 1,453,459; May 1.
Hill, Raymond L., Elyria, Ohio, assignor, by mesne assignments, to W. R. Huntington. Resilient heel lift. 1,453,460; May 1.
Hindahl, David, assignor to H. S. Hart, Chicago, Ill. Maximum-capacity railway car. 1,453,675; May 1.
Hinderliter, Cyrus S., Eddyville, Pa. Hook. 1,453,502; May 1.
Hirsch, Paul A., Erie, Pa., assignor to Aero Pulverizer Company, New York, N. Y. Treating and feeding fuel and apparatus therefor. 1,453,977; May 1.
Hite, Rexford E. (See Goin, G. R., and Hite.)
Hixson, Ernest S. (See Hawkins, R. C., and Hixson.)
Hoffman, Leon F., Franklin, Pa., assignor to Chicago Pneumatic Tool Company, New York, N. Y. Electro-thermal ignition device. 1,453,461; May 1.
Hoffman, Rudolph, Kankakee, assignor to Sears, Roebuck and Co., Chicago, Ill. Stove construction. 1,453,710; May 1.
Holley, Earl. (See Meloche, Daniel H., assignor.)
Holman, Arthur J., Boston, Mass., assignor to Motion Picture Improvement Company. Lens-adjusting means. 1,453,462; May 1.
Holmberg, John A., Lindsborg, Kans. Check valve. 1,453,978; May 1.
Holmgren, Eric A., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for shaping uppers over lasts. 1,453,274; May 1.
Holmes, Morris P., Claremont, N. H., assignor, by mesne assignments, to The Jeffery Manufacturing Company, Columbus, Ohio. Reel. 1,454,017; May 1.
Holmes, Thomas J., Chicago, Ill. Golf club. 1,453,503; May 1.
Holmquist, August, Hoopeston, assignor to Sprague Canning Machinery Company, Chicago, Ill. Filling machine. 1,453,840; May 1.
Holsen, Joseph J., Manitowoc, Wis. Combination tool. 1,453,979; May 1.
Hooker, Electrochemical Company. (See Fink, G. J., and Glauque, assignors.)
Horan, Jeremiah, New York, N. Y. Container for packed powder and foodstuffs. 1,453,676; May 1.
Horan, Jeremiah, New York, N. Y. Book container for packaged foodstuffs. 1,453,677; May 1.
Hornig, Kurt F. (See Graham, B. F., Belluche, and Hornig.)
Hotchkiss, Howard F., assignor to The Bridgeport Chain Company, Bridgeport, Conn. Tool for attaching and removing tire chains. 1,453,874; May 1.
Hoting, Hans C., assignor to Troy Laundry Machinery Co., Ltd., Chicago, Ill. Combined washer and drier. 1,453,711; May 1.
House, Henry A., jr., assignor to Wire Wheel Corporation of America, Buffalo, N. Y. Wheel. 1,453,356; May 1.
Houston Pneumatic Puncture Proof Wheel Company. (See Balazs, R. J., and Autrey, assignors.)
Hovell, Thomas M., Elstree, England. Animal trap. 1,453,795; May 1.
Hovell, Thomas M., Elstree, England. Animal trap. 1,453,796; May 1.
Howe, Jesse J. (See Morris, Maynard D., assignor.)
Howell, Sylvester S., assignor to United Chemical and Organic Products Company, Chicago, Ill. Centrifugal separator. 1,453,678; May 1.
Hoyt, Ray S., Brooklyn, N. Y., assignor to American Telephone and Telegraph Company. Attenuation equalizer. 1,453,980; May 1.
H. S. Laboratory. (See Swift, Clement K., assignor.)
Huber, Frederick W., Riverside, Calif., assignor, by mesne assignments, to Western Precipitation Company. Obtaining soluble potassium compounds in the manufacture of cement. 1,453,797; May 1.
Hubert, Conrad. (See Norwalk, Albert B., assignor.)
Hughes, Howard R., Los Angeles, Calif. Lubricator for earth-boring drills. 1,453,875; May 1.
Hume, John R., Chicago, Ill. Street indicator. 1,453,463; May 1.
Hunt, Patrick J., New Bedford, assignor to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. 1,453,841; May 1.
Hunter, William C., St. Louis, Mo. Measuring device. 1,453,876; May 1.
Huntingdon, W. R. (See Hill, Raymond L., assignor.)
Ingersoll-Rand Company. (See Jones, Joseph W., assignor.)
International Precipitation Company. (See Schmidt, Walter A., assignor.)
Iribe, Paul, New York, N. Y. Phonograph cabinet. 1,453,464; May 1.
Iversen, Lorenz, Pittsburgh, Pa. Back shear table. 1,453,319; May 1.
Ishbia, David, Palisades, N. J. Display sign. 1,453,679; May 1.
Jackson, James P., assignor to Addressograph Company, Chicago, Ill. Printing device. 1,453,392; May 1.
Jackson, W. H., Company. (See Koenig, Frank R., assignor.)
Jacobs, William J., Toledo, Ohio, assignor, by mesne assignments, to The Libbey-Owens Sheet Glass Company. Apparatus for drawing sheet glass. 1,453,842; May 1.
Jacobson, Louis, Philadelphia, Pa. Pan for a lighting fixture. Des. 62,299; May 1.
Jacobucci, Raphael, Providence, R. I., assignor of one-half to G. Rivkind, Boston, Mass. Multicolor-printing machine. 1,453,465; May 1.
Jahr, Arthur A. (See Widell, M. E., and Jahr.)
Jameson, Walter R. (See Thompson, W., and Jameson.)
Janisch, John F., Kirksville, Mo. Automatic self-locking folding table. 1,453,504; May 1.
Jeffries, Elijah G., Tacoma, Wash. Tire holder. 1,453,566; May 1.
Jeffery Manufacturing Co., The. (See Holmes, Morris P., assignor.)
Jensen, Charles J., North Plainfield, N. J. Lantern. 1,453,798; May 1.

Jessen, James, Minneapolis, Minn. Portable extensible conveyer. 1,453,393; May 1.
Jette, Archie N., Anaconda, Mont. Reverberatory smelting furnace. 1,454,024; May 1.
Jette, Archie N., Anaconda, Mont. Smelting furnace. 1,454,025; May 1.
Jette, Archie N., Anaconda, Mont. Construction of smelting furnaces. 1,454,026; May 1.
Johnson, Einer, Duluth, Minn. Hook. 1,453,680; May 1.
Johnson, Elias, and S. Peterson, Newhall, Iowa. Cylinder and piston construction. 1,453,981; May 1.
Johnson, Ray P., et al. (See Donaldson, Elizabeth C., assignor.)
Johnson, Robert H., Los Angeles, Calif. Combined compasses, square, etc. 1,453,625; May 1.
Johnson, Robert S., New York, N. Y. Cue-chalk holder. 1,453,877; May 1.
Johnson, S. C., & Son. (See Collier, James, assignor.)
Johnston, Roy W., Chicago, Ill. Focusing mechanism. 1,453,843; May 1.
Jones, George G., Cleveland, Ohio. Combined grave marker and flag holder. Des. 62,288; May 1.
Jones, Joseph W., Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J. Oil governor for compressor engines. 1,453,681; May 1.
Joseph, Arthur S. (See Blackman, Mabel, assignor.)
Joseph, Frank. (See Lather, Carl, assignor.)
Joyce-Cridland Company, The. (See Ripsch, C. W., and Dawley, assignors.)
Kaimer, Richard V., assignor to The English & Mersick Co., New Haven, Conn. Latch for vehicle doors. 1,453,712; May 1.
Kaji, Hilda, assignor to M. B. Leventhal, Philadelphia, Pa. Textile fabric or similar article. Des. 62,290; May 1.
Kamper, Leslie H. (See Adland, V. E., and Kamper.)
Katz, Morris I., Springfield, Mass. Bottle. Des. 62,300; May 1.
Kebler, Leonard, Bronxville, N. Y., assignor to Ward Leonard Electric Company. Rheostat. 1,453,682; May 1.
Keene, Walter E., Baltimore, Md. Brush holder. Des. 62,289; May 1.
Keeping, Thomas J., Los Angeles, Calif. Lamp-shade-delivery box. 1,453,275; May 1.
Kellogg Switchboard and Supply Company. (See Yanochowski, George A., assignor.)
Kendall, Burton W., assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical receiving or repeating apparatus and operating the same. 1,453,982; May 1.
Kendall, Robert C., Chicago, Ill. Cup packing for pistons. 1,453,505; May 1.
Kendall, William G., Newark, N. J. Partition for vanity cases. 1,453,626; May 1.
Kendrick, Harry. (See Buckley, M. C., and Kendrick.)
Kenyon, C., Company. (See Mitchell, Harold D., assignor.)
Kerlin, John W., New Brunswick, N. J. Tank. 1,453,983; May 1.
Kerr, Robert P. (See Cox, K., Kerr, and Baty.)
Kershner, Benjamin V., Kansas City, Mo., assignor to Union Special Machine Company, Chicago, Ill. Sewing machine for stitching waistbands. 1,453,506; May 1.
Kessler, Jacob C. (See Schipplock, C. J., and Kessler.)
Kettering, Charles F., assignor to General Motors Research Corporation, Dayton, Ohio. Joining metals. 1,453,358; May 1.
Kilgour, David, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Balancing machine. 1,453,844; May 1.
Kimball, Matthew D., assignor of one-half to D. Feder, Omaha, Nebr. Nut lock. 1,453,507; May 1.
Kimble, Austin, assignor to Marathon Electric Mfg. Co., Wausau, Wis. Power-transmission apparatus. 1,453,466; May 1.
King, Jesse C., assignor to Canada Carbide Company, Limited, Montreal, Quebec, Canada. Container or receptacle for carbide and the like. 1,453,508; May 1.
King, Ralph A. J., Cherokee, Okla. Air filter for automobiles. 1,453,627; May 1.
Kinsley, John H., Clinton, Mass. Telegraph sounder. 1,453,359; May 1.
Klauminzer, Carl W., Lakewood, Ohio. Typewriting machine. 1,453,628; May 1.
Klepac, Joseph, New York, N. Y. Ventilating insole. 1,453,394; May 1.
Knippel, Henry, Lincoln, Nebr. Rear-spring support for automobiles. 1,453,467; May 1.
Knudsen, William, Fremont, Nebr. Tractor. 1,454,027; May 1.
Kochendarfer, Sirius E., Washington, Pa. Rotary engine. 1,453,683; May 1.
Koenig, Frank R., Brooklyn, assignor to W. H. Jackson Company, New York, N. Y. Roller screen. 1,453,939; May 1.
Koken, Walter F., St. Louis, Mo. Barber pole. Des. 62,301; May 1.
Koken, Walter F., St. Louis, Mo. Barber chair. Des. 62,302; May 1.
Kominz, Jacob S., Rochester, N. Y. Nonskid attachment for vehicle wheels. 1,453,276; May 1.
Kopp, William, assignor to Joseph N. Smith & Co., Detroit, Mich. Mechanical window lift. 1,453,845; May 1.
Kraus, Louis P., jr., New York, N. Y. Making refractory products. 1,453,468; May 1.
Krol, Andy, Uniontown, Pa. Newspaper easel. 1,454,028; May 1.
Krug, William H., Oshkosh, Wis. Antiskid device for vehicles. 1,453,360; May 1.
Kruse, Edward W., Chicago, Ill. Reserve-supply device for gasoline tanks. 1,453,713; May 1.
Kucera, Peter, assignor to Capstan Glass Company, Connellsville, Pa. Matrix device for molds. 1,453,277; May 1.
Kucera, Peter, South Connellsville, assignor to Capstan Glass Company, Connellsville, Pa. Manufacturing ring molds and the like. 1,453,278; May 1.
La Chapelle, Euclid I., Brockton, Mass. Shoe-turning machine. 1,453,799; May 1.
La Croix, Romeo, Holyoke, Mass., assignor to Samuel M. Langston Company, Camden, N. J. Tube-making machine. 1,453,846; May 1.
Labberton, John M., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Gear tooth. 1,453,395; May 1.
Lagemann, Gustav P., Luverne, Minn. Drill. 1,453,878; May 1.
Landers, Frary & Clark. (See Curtiss, George E., assignor.)
Landis Tool Company. (See Stoner, Paul, assignor.)
Lane, George S., San Francisco, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Vehicle brake device. 1,453,509; May 1.
Lane, William M., et al. (See Wood, Joseph C., assignor.)
Lange, William F., Elgin, Ill. Combination egg beater and cream remover. 1,453,761; May 1.
Langston, Samuel M., Company. (See La Croix, Romeo, assignor.)
Lather, Carl, assignor of one-half to F. Joseph, Chicago, Ill. Velocipede. 1,453,469; May 1.
Laub, Leon. (See Mosauer, H. D., and Laub.)
Lavagetto, Joseph T. L., Portland, Oreg. Ship construction. 1,453,588; May 1.
Lawrence, Walter H., assignor of one-half to W. A. Wells, Council Bluffs, Iowa. Car-door lock. 1,453,510; May 1.
Lawrence, William J., Toledo, Ohio. Furnace. 1,453,361; May 1.
Layne, Mahlon E., Los Angeles, Calif. Well mechanism. 1,453,847; May 1.
Le Beau, Ernest A., assignor to Chicago Railway Equipment Company, Chicago, Ill. Third or fourth point suspension support mount or bracket for brake beams. 1,453,684; May 1.
Le Doux, Pearl, Oakland, Calif. Combination doll and pincushion. Des. 62,291; May 1.
Lees, Ernest J., assignor to H. T. Bradner, Cleveland, Ohio. Arbor support. 1,453,470; May 1.
Lees, Joseph, Allentown, Pa. Lawn-edge trimmer. 1,454,018; May 1.
Lefebre, Edward A., Astoria, N. Y. Amplifier. 1,453,879; May 1.
Leggatt, Edward H. A., Woodford Green, England. Dart board or like target. 1,453,396; May 1.
Le Tarte, George M., Detroit, Mich. Spring retainer. 1,453,471; May 1.
Leventhal, Morris B. (See Kaji, Hilda, assignor.)
Levinson, Sol, San Francisco, Calif. Fighting glove. 1,453,714; May 1.
Levinson, Sol, San Francisco, Calif. Fighting glove. 1,453,715; May 1.
Lewis, Grace M., Keene, N. H. Coal or wood carrier. 1,453,629; May 1.
Lewis, Lloyd V., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling system. Re15,592; May 1.
Libbey-Owens Sheet Glass Company. (See Jacobs, William J., assignor.)
Libbey-Owens Sheet Glass Company, The. (See Rowley, C. A., and Reece, assignors.)
Liebau, Richard, New Haven, Conn., assignor to The Westinghouse Air Spring Company. Air-spring suspension. 1,453,589; May 1.
List, Frank X., New York, N. Y. Folding advertising box. 1,453,849; May 1.
Litchfield, Edgar C. and H. L., and V. Speer, Waterloo, Iowa; said Speer assignor to said Edgar C. Litchfield and said H. L. Litchfield. Self-lubricating wheel and pitman. 1,454,021; May 1.
Litchfield, Henry L. (See Litchfield, E. C. and H. L., and Speer.)
Little, George M., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Protection of resistors of electric furnaces. 1,453,397; May 1.
Little, George M., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Self-tightening water-cooled terminal. 1,453,398; May 1.
Little, George M., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Means for protecting resistors in electric furnaces. 1,453,399; May 1.

Lo Giudice, Domenick, Brooklyn, assignor to George Tiemann & Company, New York, N. Y. Surgical instrument. 1,453,934; May 1.
Long, Lewis R. (See White, Fred G., assignor.)
Long, Ralph A., Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del. Manufacture of ammonium perchlorates. 1,453,984; May 1.
Longenbaugh, Charles A., Columbus, Ohio. Shield for motor vehicles. 1,453,685; May 1.
Look, Louis, Chicago, Ill. Tractor or truck wheel. 1,453,686; May 1.
Lorentz, Henry E., Washington, D. C. Keylocking device. 1,453,630; May 1.
Loveland, Emmett O., Kansas City, Mo. Tool-box attachment for motor vehicles. 1,453,362; May 1.
Lowrey, John R., assignor of one-half to J. A. S. Rogers, San Pedro, Calif. Hose-clamping tool. 1,453,940; May 1.
Lubash, Martin, Richmond Hill, assignor of one-half to J. Fitzsimmons, Baldwin, Long Island, N. Y. Pulley. 1,453,400; May 1.
Luce, Grafton E., Chicago, assignor, by mesne assignments, to C. A. Brown, Hinsdale, Ill. Method of and means for burning bricks. 1,453,850; May 1.
Ludwig, Otto F., Zillah, Wash. Pistol holster. 1,453,880; May 1.
Luftschiffbau Zeppelin Gesellschaft mit beschrankter Haftung. (See Dornier, Claudius, assignor.)
Luhrmann, George W., Jersey City, N. J., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y. Method and apparatus for controlling cooling of packages. 1,453,279; May 1.
McAdam, Charles, Company. (See Olsen, Victor O., assignor.)
McBee Binder Company. (See McBee, Harry B., assignor.)
McBee, Harry B., St. Louis, Mo., assignor to McBee Binder Company, Athens, Ohio. Printing press. 1,453,363; May 1.
McClarren, Samuel T., St. Petersburg, Fla. Window-operating device. 1,453,881; May 1.
McGahan, Frederick L., deceased, Los Angeles, Calif.; V. K. Walker, administratrix, assignor to The Purposed Mind Development Security Association of the World. Means for reutilizing steam. 1,453,687; May 1.
McGrath, Sylvester S., West New Brighton, N. Y. Rotary kiln. 1,453,851; May 1.
McHugh, James N., Lexington, Ill. Auto lock. 1,453,882; May 1.
McIntyre, Allan H., assignor to Skinner Machinery Company, Dunedin, Fla. Bin door. 1,453,472; May 1.
McKenna, Raymond J., Denver, Colo., assignor to Magnuson X-Ray Company. X-ray-plate changer. 1,453,473; May 1.
McKennitt, William, Duluth, Minn. Agricultural machine. 1,453,631; May 1.
McKinstry, George W. and W. H. Siddall, assignors to Bay State Optical Company, Attleboro, Mass. Construction of eyeglasses. 1,453,632; May 1.
McNamara, F. S. (See O'Neill, Richard J., assignor.)
McNaughton, John F., et al. (See Donaldson, Elizabeth C., assignor.)
Mabee, Charles R. (See Oliver, H. E., and Mabee.)
Macdonald, John D., assignor to Forbes Lithograph Manufacturing Company, Boston, Mass. Foldable structure. 1,453,567; May 1.
MacGill, Charles F., Cambridge, Mass. Fluid-registering mechanism. 1,453,716; May 1.
Madden, Jesse F., Brooklyn, N. Y. Thread guide. 1,453,941; May 1.
Magnum Import Co. (See Schoenbrun, Arthur, assignor.)
Magnus Electric Company. (See Hertzberg, Harry, assignor.)
Magnuson X-Ray Company. (See McKenna, Raymond J., assignor.)
Mahoney, Jeremiah L., New Haven, Conn., assignor to Goodyear's India Rubber Glove Manufacturing Company. Tubing machine. 1,453,852; May 1.
Maise, Herman C., Springfield, Mass., assignor, by mesne assignments, to Edward G. Budd Manufacturing Company. Door buffer. 1,453,364; May 1.
Malcom, Robert, Chicago, Ill. Respirator. 1,453,365; May 1.
Marathon Electric Mfg. Co. (See Kimble, Austin, assignor.)
Marble, William B., Los Angeles, Calif., assignor to Southern Glass Company. Bottle. Des. 62,303; May 1.
Margotton, Pierre J. C., Mort, France. Tanning of hides and skins. 1,453,800; May 1.
Marquyl, Otto G. (See Marshall, Arthur G.)
Marsden, John E. (See Milliken, John A., assignor.)
Marshall, Arthur G., formerly known as O. G. Marquyl, Pittsburgh, Pa. Cabinet. Des. 62,304; May 1.
Martin, Clement S., Rockville, Md. Demountable tire rim. 1,453,633; May 1.
Martin, David B., and J. Westerby, Hagersville, Ontario, Canada. Concrete mixer. 1,453,634; May 1.
Master Builders Company, The. (See Haldeman, Frank M., assignor.)
Mathieson Alkali Works, Inc. The. (See Mauran, Max, assignor.)
Matsuoka, Chokichi, Los Angeles, Calif. Agar-agar composition and producing the same. 1,453,848; May 1.
Matthiessen, Conrad H., jr., Irvington-on-Hudson, N. Y. Valve mechanism for internal-combustion engines. 1,453,801; May 1.
Mattson, Mary W., Hansboro, N. Dak. Plant waterer. 1,453,401; May 1.
Mauran, Max, Niagara Falls, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Multitank crandle. 1,453,474; May 1.
Mauran, Max, Niagara Falls, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Multiple-unit tank car. 1,453,475; May 1.
Mauran, Max, Niagara Falls, assignor to The Mathieson Alkali Works Inc., New York, N. Y. Double-tier multiple-unit tank car. 1,453,476; May 1.
Mayer, Walter S., assignor to Heinemann Electric Company, Philadelphia, Pa. Plug-receiving wall outlet. 1,453,590; May 1.
Mayer, Walter S., assignor to Heinemann Electric Company, Philadelphia, Pa. Electric switch. 1,453,591; May 1.
Measuregraph Company, The. (See Wheeler, John I., assignor.)
Meier, Charles F., White Haven, assignor to Wilmot Engineering Company, Hazleton, Pa. Drive chain. 1,453,592; May 1.
Mellor, Laurence B., Clifford Park, Germantown, Pa. Golf-ball dipper or retriever. 1,453,511; May 1.
Meloche, Daniel H., assignor to E. Holley, Detroit, Mich. Coating for metal molds. 1,453,593; May 1.
Menor, Charles E., Spirit Lake, Iowa. Banking apparatus. 1,453,512; May 1.
Mergott, J. E., Co., The. (See Fuller, Franz A., assignor.)
Metal Saw and Machine Co., Inc. (See Stowell, Byron F., assignor.)
Metz, Charles H., assignor to C. A. Metz, Canton, Ohio. Water ejector. 1,453,513; May 1.
Metz, Clara A. (See Metz, Charles H., assignor.)
Meyer, Frederick, Buffalo, N. Y. Closure for storage compartments. 1,453,402; May 1.
Meyers, Edward G., Cincinnati, Ohio. Automatic marking machine. 1,453,985; May 1.
Michalski, Joseph J., Buffalo, N. Y. Theft detector for automobiles. 1,453,320; May 1.
Michigan Malleable Iron Company. (See Waterbor, Elmer F., assignor.)
Mid-West Box Company. (See Heinrichs, Berg, assignor.)
Miehle, Robert F., jr., Chicago, Ill. Cylinder printing press. 1,453,853; May 1.
Milker, Herbert P., assignor to Charles J. Tagliabue Manufacturing Co., Brooklyn, N. Y. Instrument of precision. 1,453,688; May 1.
Miller, Alten S., Baltimore, Md. Time fuse. 1,453,717; May 1.
Miller, Alten S., Baltimore, Md. Controlling the burning of time powder trains. 1,453,718; May 1.
Miller, Orin J., Hurdsfield, N. Dak. Sliding door. 1,453,986; May 1.
Miller, Theodore H., Poughkeepsie, assignor to The De Laval Separator Company, New York, N. Y. Combined milk reservoir and bowl-clamp support for cream separators. 1,453,802; May 1.
Milliken, John A., Bayonne, assignor to J. E. Marsden, Egg Harbor City, N. J. Glassworking apparatus. 1,453,803; May 1.
Millin, John J., New York, N. Y. Carton-wrapping machine. 1,453,719; May 1.
Mills, Neva L., Los Angeles, Calif. Bassinet. 1,453,942; May 1.
Mills, Samuel, New York, N. Y. Sinker. 1,453,987; May 1.
Miner, William H. (See Dath, Charles E., assignor.)
Miner, William H. (See O'Connor, John F., assignor.)
Miner, William H. (See Williams, Keith, assignor.)
Minett, Wilfrid T. (See Bates, A., and Minett.)
Misner, Edgar D., assignor of one-fifth to J. J. Battenfeld and one-fifth to H. R. Retz, Detroit, Mich. Wringer. 1,453,568; May 1.
Mitchell, Charles F., Torrance, Calif. Record-filing device. 1,453,943; May 1.
Mitchell, Harold D., assignor to C. Kenyon Company, Brooklyn, N. Y. Tire tread. Des. 62,292; May 1.
Mitchell, Loris E., and A. J. White, Cleveland, Ohio, assignors to General Electric Company. Sealing-in machine. 1,453,594; May 1.
Mitchell, Loris E., and A. J. White, Cleveland, Ohio, assignors to General Electric Company. Manufacture of incandescent electric lamps and similar articles. 1,453,595; May 1.
Mitchell, Oliver, Brookline, Mass. Fountain pen. 1,453,596; May 1.
Mittinger, George E., Youngstown, Ohio. Barrel or keg. 1,453,883; May 1.
Mohler, Charles M., Ypsilanti, Mich. Brake equalizer. 1,453,597; May 1.
Mojonnier Bros. Co. (See Retzbach, Edward J., assignor.)
Monitor Controller Company. (See Whittingham, George H., assignor.)
Montgomery, Samuel A. (See Payne, E. H., and Montgomery.)
Morris, Maynard D., Winnipeg, assignor of one-half to J. J. Howe, Dauphin, Manitoba, Canada. Breaker-arm synchronizer. 1,453,635; May 1.

Mosauer, Harry D., New York, N. Y., and L. Laub, Newark, N. J. Dice. 1,453,762; May 1.
Mote, John E., Dayton, Ohio. Resilient vehicle tire. 1,453,804; May 1.
Motion Picture Improvement Company. (See Holman, Arthur J., assignor.)
Motor Products Corporation. (See Seeley, Halstead H., assignor.)
Motto, Charles E. (See Powell, E. L., and Motto.)
Moutray, Van O., Muskogee, Okla. Tire filler. 1,453,884; May 1.
Mueller, Henry A., Stockholm, Sweden. Briquetting sawdust, peat, coal dust, and similar pulverous substances. 1,453,988; May 1.
Muller, Harold E. (See Carstens, George, assignor.)
Murchie, Robert, Detroit, Mich. Bottle closure or cap. 1,453,514; May 1.
Murrill, Paul I., Plainfield, N. J., assignor to R. T. Vanderbilt Company, Inc., New York, N. Y. Making vulcanization accelerators. 1,453,515; May 1.
Myers, Harold L. (See Fleming, Clarence C., assignor.)
Myers, Lewis C. (See Hess, E. B., and Myers.)
Mylroie, John M., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Tire-making machine. 1,453,763; May 1.
Naamlooze Vennootschap Finanzieele Maatschapij "Driebergen." (See Blankenburg Johannes, assignor.)
National Carbon Company. (See Hamister, Victor C., assignor.)
National Dump Car Company. (See Hart, Harry S., assignor.)
Nebulizer Oil Burning Company. (See Dunham, William P., assignor.)
Nelson, Anna J., Nome, Alaska. Necktie holder. 1,453,885; May 1.
Nesbit, Walter F. (See Fuller, H. L., Nesbit, and Petterson.)
Neusella, Albert, assignor of one-half to A. A. Patterson, Chicago, Ill. Liquid for treating fabrics. 1,453,764; May 1.
New Era Manufacturing Company. (See Fanslow, Benjamin O., assignor.)
Nichols, Wesley G., Chicago Heights, assignor to American Manganese Steel Company, Chicago, Ill. Dipper tooth. 1,453,805; May 1.
Nitsch, Charles H., and W. A. Weightman, Logan, Philadelphia, assignors to Stokes & Smith Company, Summerdale, Philadelphia, Pa. Package-feed mechanism. 1,453,720; May 1.
Noble, Roy L., Sac City, Iowa. Draft equalizer. 1,453,886; May 1.
Nole, Vito, Newark, N. J. Curtain-supporting attachment. 1,453,689; May 1.
Nord, Nels A., Red Wing, Minn. Building block. 1,453,806; May 1.
Norlund, Olof A., Williamsport, Pa. Folding brace. 1,453,989; May 1.
Norton Company. (See Saxe, Charles W., assignor.)
Norwalk, Albert B., New York, assignor of one-half to C. Hubert, White Plains, N. Y. Tire valve. 1,453,721; May 1.
Nuoffer, Otto, New York, N. Y. Sled attachment for carriages and the like. 1,453,722; May 1.
Nutt, Norman W., Trenton, N. J. Electric-lamp fixture or support. 1,453,887; May 1.
Obele, Lawrence T., Philadelphia, Pa. Folding shelf and paper rack. 1,453,598; May 1.
O'Connell, Vincent, New York, N. Y. Toilet accessory. 1,453,690; May 1.
O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Friction shock-absorbing mechanism. 1,453,691; May 1.
O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Friction shock-absorbing mechanism. 1,453,692; May 1.
O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Friction shock-absorbing mechanism. 1,453,693; May 1.
O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Friction shock-absorbing mechanism. 1,453,694; May 1.
O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Antifriction side bearing. 1,453,695; May 1.
Octave, Anatole, Herblay, France. Automatic machine for grinding the saw blades with revolving grinding wheels. 1,453,765; May 1.
O'Hara, J. Carl, et al. (See Donaldson, Elizabeth C., assignor.)
Oldham, George, and Son Company. (See Oldham, Samuel, assignor.)
Oldham, Samuel, assignor to George Oldham and Son Company, Philadelphia, Pa. Tool retainer. 1,453,807; May 1.
Oliver Chilled Plow Works. (See Altgelt, Herman E., assignor.)
Oliver Chilled Plow Works. (See Gallagher, Arthur D., assignor.)
Oliver Chilled Plow Works. (See Heylman, Edward M., assignor.)
Olsen, Victor O., assignor to Charles McAdam Company, Chicago, Ill. Composition for use in finishing dry-cleaned leather. 1,453,723; May 1.
O'Neill, Richard J., assignor of one-half to F. S. McNamara, Denver, Colo. Smokestack cover. 1,453,477; May 1.
Ormiston, Gilbert J., Chicago, Ill. Spur. Des. 62,305; May 1.
Osborn, Alden E., New York, N. Y. Cone-gear transmission mechanism. 1,453,478; May 1.
Otterbein, Ferdinand D. (See Butterfield, E. H., and Otterbien.)
Owens Bottle Company, The. (See Ferngren, E. T., and Soubier, assignors.)
Owens Bottle Company, The. (See Rule, John F., assignor.)
Owens Bottle Company, The. (See Soubier, Leonard D., assignor.)
P & M Company, The. (See Poor, Fred A., assignor.)
Pabst, Fred, Company. (See Fay, Joseph W., assignor.)
Paca, William S., Oil City, Pa., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y. Call-distributing system. 1,453,321; May 1.
Pace, Raffaele. (See D'Alessandro, D., and Pace.)
Pachter, Peter, Chicago, Ill. Tipping and wrapping machine. 1,453,636; May 1.
Packard Motor Car Company. (See Druar, Frank J., assignor.)
Packard Motor Car Company. (See Vincent, Jesse G., assignor.)
Page, Victor W., Kew Gardens, N. Y. Lubricator for intermediate gearing. 1,453,991; May 1.
Page, Victor W., Kew Gardens, N. Y. Tilting steering wheel. 1,453,990; May 1.
Pagelsen, Edward N., assignor to E. H. Vincent, Detroit, Mich. Tilting locking steering wheel. Re15,587; May 1.
Palin, Arthur J., Pawtucket, R. I. Warper seat. 1,453,992; May 1.
Palmer, Richard, South Alburg, Vt. Rail tie. 1,453,322; May 1.
Palmeter, William E., Elmwood, Nebr. Mixing apparatus. 1,453,323; May 1.
Park, Henry A., South Roanoke, Va. Window screen. 1,453,280; May 1.
Parker, Burton H., Detroit, Mich., assignor to Trimont Manufacturing Company, Roxbury, Mass. Pipe wrench. 1,453,854; May 1.
Parker, Clark W., New York, N. Y. Friction disk. 1,453,599; May 1.
Parker, M. L., et al. (See Craver, Thomas G., assignor.)
Parrella, Joseph A., Washington, D. C. Resilient heel. 1,453,403; May 1.
Parsons, Leon W. (See Wilson, R. E., Parsons, and Chisholm.)
Parsons, Theophilus, Camp Dodge, Iowa, assignor to C. B. Brophy, Rye, N. Y. Phonograph stylus. 1,453,637; May 1.
Patterson, Arthur A. (See Neusella, Albert, assignor.)
Patterson, Charles C. (See Winner, W. E., and Patterson.)
Payne, Elmer H., and S. A. Montgomery, Woodriver, Ill., assignors to Standard Oil Company, Whiting, Ind. Catalyst and making the same. 1,453,766; May 1.
Payson, Joseph R., Chicago, Ill. Gas holder. 1,453,516; May 1.
Payton, Calvin, Douglas, Ariz., assignor of fifty-five one-hundredths to Phelps Dodge Corporation. Metallurgical refractory material and producing the same. 1,453,993; May 1.
Pedroarena, Urbano, Gardnerville, Nev. Cultivator and harrow. 1,453,944; May 1.
Pelton, Clyde S., Cleveland Heights, Ohio, assignor to The Perfection Heater and Manufacturing Company, Cleveland, Ohio. Heater for motor-propelled vehicles. 1,453,855; May 1.
Penksa, Stanley, Long Island City, N. Y. Duplicate tag. 1,453,517; May 1.
Pennsylvania Textile Mills Inc., The. (See Ericson, E., and Weiss, assignors.)
Perfection Heater and Manufacturing Company, The. (See Pelton, Clyde S., assignor.)
Perigo, Everett J. (See Wolbert, Everett D., assignor.)
Perkins, Robert W., Norwich, Conn. Brake. 1,453,600; May 1.
Perry, Cyril S. D., Port Arthur, Ontario, Canada. Boiler superheater. 1,453,638; May 1.
Persch, John P., Houston, assignor of one-fifth to B. Tolles, Ho-ho-kus, Tex. Treating hydrocarbon oils. 1,453,479; May 1.
Persons, William F., assignor to The Guide Motor Lamp Manufacturing Company, Cleveland, Ohio. Lamp-bulb-tilting device. 1,453,281; May 1.
Peters, Carl, Sherburn, Minn. Automatic door latch. 1,453,282; May 1.
Peterson, Alfred G. S., Los Angeles, Calif. Tiled sink and drain board. 1,453,945; May 1.
Peterson, Simon. (See Johnson, E., and Peterson.)
Petroleum Research and By-Products Company. (See Berry, Harold R., assignor.)
Petterson, Per O. (See Fuller, H. L., Nesbit, and Petterson.)
Pfluger, Frank X., Portland, Oreg. Wooden tub. 1,453,994; May 1.
Phelps Dodge Corporation. (See Payton, Calvin, assignor.)
Phelps, Philip M. M. (See Allen, E. E., and Phelps.)
Phillips, Paul D. (See Benjamin, R. B., and Phillips.)

Picklo, Valentine, assignor of one-half to G. Walat, Johnstown, Pa. Car coupling. 1,453,404; May 1.
Pine, Harry B., and C. W. Cisney, Phoenix, Ariz. Combined cabinet and table. 1,453,946; May 1.
Platt, Ocron S., Bridgeport, Conn. Bottle capper. 1,453,405; May 1.
Plaugher, Eli P. (See Berg, Fred C., assignor.)
Pohrt, Henry O., Flint, Mich. Tool holder. 1,453,047; May 1.
Poor, Fred A., assignor to The P & M Company, Chicago, Ill. Rail anchor. Re15,593; May 1.
Pottala, John, Fitchburg, Mass. Sled. 1,453,948; May 1.
Powell, Edwin L., and C. E. Motto, Washington, D. C. Grid leak. 1,453,724; May 1.
Powell, Milton W., Baltimore, Md. Stopper. 1,453,601; May 1.
Powers, Leland. (See Price, David R., assignor.)
Powers, Timothy B., Brooklyn, assignor, by mesne assignments to Turn-O-Stop Manufacturing Corporation, Inc., New York, N. Y. Signal for vehicles. Re15,594; May 1.
Pratt, George R., Richmond, Va. Portable drinking fountain. 1,453,725; May .
Prest-O-Lite Co. (See Gossling, Walter E., assignor.)
Price, David R., assignor of one-half to L. Powers, Newtonville, Mass. Liquid-level indicator. 1,453,602; May 1.
Price Engine Corporation. (See Price, William T., assignor.)
Price, William T., Easton, Pa., assignor to Price Engine Corporation. Main bearing. 1,453,518; May 1.
Privett, Charles B., et al. (See Privett, Henry C., assignor.)
Privett, Helen E., et al. (See Privett, Henry C., assignor.)
Privett, Henry C., Long Beach, assignor of one-half to C. R. Privett, Burbank, three-sixteenths to H. E. Privett and one-sixteenth to H. F. Privett, Long Beach, Calif. Inner tube. 1,453,949; May 1.
Privett, Hollis F., et al. (See Privett, Henry C., assignor.)
Prouty, Theodore C., Los Angeles, assignor to Prontyline Products Company, Hermosa Beach, Calif. Insulating composition and making same. 1,453,726; May 1.
Prontyline Products Company. (See Prouty, Theodore C., assignor.)
Puhakka, Emil, Hancock, Mich. Shoe. 1,453,950; May 1.
Pumphrey, Willard V., Oakland, Calif. Adjustable license-plate holder. 1,453,727; May 1.
Purposed Mind Development Security Association of the World. (See McGahan, Frederick L., assignor.)
Purtle, Albert D., Marietta, Ohio. Brass-liner stuffing-box head. 1,453,324; May 1.
Purvis, Thomas E., Tekamah, Nebr. Workholder. 1,453,406; May 1.
Radford, George, Oakland Beach, assignor to Richmond Lace Works, Alton, R. I. Lace. Des. 62,306; May 1.
Radford, George, Oakland Beach, assignor to Richmond Lace Works, Alton, R. I. Lace. Des. 62,307; May 1.
Radford, George, Oakland Beach, assignor to Richmond Lace Works, Alton, R. I. Lace. Des. 62,308; May 1.
Radford, George, Oakland Beach, assignor to Richmond Lace Works, Alton, R. I. Lace. Des. 62,309; May 1.
Rairden, James S., Waterford, Calif. Safety device for tractors. 1,453,995; May 1.
Ramsey, George, Brooklyn, assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y. Paper closure. 1,453,283; May 1.
Randall, Winfield E., Kyota, Minn. Chicken roost. 1,453,569; May 1.
Rastetter, William C., Fort Wayne, Ind. Steering wheel. 1,453,808; May 1.
Rawls, Archie M., Dixon, Ill. Alcohol flame intensifier. 1,453,519; May 1.
Rawson, Jerome S., et al. (See Smith, William J., assignor.)
Raymond, John M., New Orleans, La. Flying-machine propeller. 1,453,951; May 1.
Redfern, Alfred E. (See Redfern, Winifred V. and A. E.)
Redfern, Charles E. (See Redfern, Winifred V. and A. E., assignors.)
Redfern, Winifred V. and A. E., assignors of one-third to C. E. Redfern, Victoria, British Columbia, Canada. Finger guard for the line-space and carriage-return levers of typewriters. 1,454,014; May 1.
Redman, Charles H., East Orange, N. J., assignor to Boker Cutlery & Hardware Company, Inc., New York, N. Y. Pruning shears and other implement. 1,453,603; May 1.
Reece, Joseph A. (See Bowley, C. A., and Reece.)
Reed, Burton I., Concord, N. H. Badge or button. Des. 62,293; May 1.
Reed, C. E., (See Cedillo, Nicasio, assignor.)
Reese, Charles C., San Francisco, J. T. Buzzo, Oakland, and R. S. Woodford, Crockett, Calif. Sugar-packing machine. 1,453,767; May 1.
Reilly, Alfred F., North Attleboro, Mass. Vanity case. Des. 62,310; May 1.
Repath, Charles J., Los Angeles, Calif. Flour sifter. 1,453,604; May 1.
Retz, Henry, et al. (See Misner, Edgar D., assignor.)
Retzbach, Edward J., St. Louis, Mo., assignor to Mojonnier Bros. Co., Chicago, Ill. Ice-cream-bricking machine. 1,453,407; May 1.
Rhodes, Fernand J., Paris, France. Means for devising ornamental designs. 1,453,728; May 1.
Rice & Adams Corporation. (See Wolf, Frank F., assignor.)
Rich, Curtis W. (See Giuffre, J., and Rich.)
Richardson, Hamitage L., Sebringville, Ontario, Canada. Tatting shuttle. 1,453,639; May 1.
Richardson, William, San Francisco, Calif. Horizontally-moving window for automobiles. 1,453,520; May 1.
Richmond Lace Works. (See Radford, George, assignor.)
Richmond Lace Works. (See Seel, Hans, assignor.)
Riddle, George W., Chicago, Ill. Composite structure. 1,453,996; May 1.
Riedele, Philip, Los Angeles, Calif. Bumper-bar-supporting bracket. 1,453,521; May 1.
Ripsch, Charles W., and J. C. Dawley, assignors to The Joyce-Gridland Company, Dayton, Ohio. Self-lowering jack. 1,454,029; May 1.
Rivet, Joseph H., Woonsocket, R. I. Telephone bracket or support. 1,453,997; May 1.
Rivkind, George. (See Jacobucci, Raphael, assignor.)
Robbins, William T., Mayfield, Ky. Animal-control-feeder. 1,453,768; May 1.
Robe, Eugene A., New Concord, Ohio. Receptacle. 1,453,284; May 1.
Roberts, Daniel M., Homestead, Fla. Harrow and scarifier. 1,453,908; May 1.
Roberts, William E., assignor, by mesne assignments, to Foundation Oven Corporation, New York, N. Y. Coke oven. 1,453,605; May 1.
Rockwell, Edward A., New York, N. Y., assignor, by mesne assignments, to Stewart-Warner Speedometer Corporation. Means for supporting vacuum feeding systems. 1,453,729; May 1.
Rockwell, Hugh M., Bristol, Conn., assignor, by mesne assignments, to Standard Steel and Bearings Incorporated, Wilmington, Del. Manufacture of antifriction bearings. 1,453,366; May 1.
Rogers, Harold W., Schenectady, N. Y., assignor to General Electric Company. Control of dynamo-electric machines. 1,453,522; May 1.
Rogers, John A. S. (See Lowrey, John R., assignor.)
Rogers, Wm. A., Limited. (See Thompson, W., and Jameson, assignors.)
Rogge, William E., Gulfport, Miss. Operating means for window sashes. 1,453,523; May 1.
Rohne, Even J., Minneapolis, Minn. Tire vulcanizer. 1,453,889; May 1.
Ropp, Frank A., Smithton, Pa. Wire splicer. 1,453,524; May 1.
Ross, James, assignor to Advance-Rumely Company, LaPorte, Ind. Adjustable front axle. 1,453,525; May 1.
Rowley, Clifford A., and J. A. Reece, assignors to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Apparatus for cutting sheet glass. 1,453,856; May 1.
Royal Typewriter Company. (See Hess, E. B., and Myers, assignors.)
Royer, George F., Wilkes-Barre, Pa. Air-hose stand. 1,453,999; May 1.
Ruberoid Company, The. (See Abraham, Herbert, assignor.)
Rule, John F., assignor to The Owens Bottle Company, Toledo, Ohio. Apparatus for gathering and transferring molten glass. 1,453,285; May 1.
Russell, Charles P., Brandon, Manitoba, Canada. Electric heater for washing machines. 1,453,640; May 1.
Ruth, Joseph P., jr., Denver, Colo. Grinding mill. 1,453,408; May 1.
Ryan, Albert J., Cincinnati, Ohio. Forming box toes for shoes. 1,453,526; May 1.
Sacksteder, Andrew H., Tiffin, Ohio. Washing machine. 1,453,606; May 1.
Samanich, Andrew, Los Angeles, Calif. Lock bolt. 1,453,952; May 1.
Sanders, Walter E., assignor to Essex Rubber Company, Trenton, N. J. Shipping container. 1,453,480; May 1.
Sandvoss, Hermann, Frankfort-on-the-Main, Germany. Thermostat. 1,453,769; May 1.
Sartain, Louis M., Pelham, Tenn. Rail fastener. 1,453,641; May 1.
Saucier, Henry L., Providence, R. I. Ratchet socket wrench. 1,453,607; May 1.
Sauvage, William H., assignor, by mesne assignments, to Gould Coupler Company, New York, N. Y. Slack adjuster. 1,453,857; May 1.
Saxe, Charles W., assignor to Norton Company, Worcester, Mass. Ceramic ware and making same. 1,454,000; May 1.
Schipplock, Charles J., and J. C. Kessler, Chicago, Ill. Pie cutter. 1,453,367; May 1.
Schmidt, Henry F., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Co. Power-developing apparatus. 1,453,858; May 1.
Schmidt, Walter A., assignor to International Precipitation Company, Los Angeles, Calif. Apparatus for electrical precipitation of suspended material from gases. 1,453,325; May 1.
Schmitz, William, New York, N. Y. Combination lock. 1,453,642; May 1.
Schneider, Frank G., Brooklyn, N. Y. Voice for dolls. 1,453,527; May 1.
Schneider, William N., Cincinnati, Ohio. Angle-iron machine. 1,453,953; May 1.

Schoenbrun, Arthur, assignor to Magnum Import Co., Inc., New York, N. Y. Stoppered liquid container. Des. 62,311; May 1.
Schofield, Henry N., Frederick, Md. Cooler attachment for engines. 1,453,528; May 1.
Scholtes, Albert J., Mobile, Ala. Chassis brace. 1,453,054; May 1.
Schommer, Frank. (See Schuetz, Michael, assignor.)
Schuerg, William, Menard, Tex. Truss. 1,453,570; May 1.
Schuetz, Michael, assignor of one-fourth to F. Schommer, Sheboygan, Wis. Animal trap. 1,454,015; May 1.
Schwab, Charles E., Lyons, N. Y. Combined chute and bag holder. 1,453,286; May 1.
Scott, Clinton A., Chicago, Ill. Razor-blade holder. 1,453,409; May 1.
Scott Paper Company. (See Tong, J. T., and Blosser, assignors.)
Sears, Roebuck and Co. (See Hoffman, Rudolph, assignor.)
Seel, Hans, Hopkinton, assignor to Richmond Lace Works, Alton, R. I. Lace. Des. 62,312; May 1.
Seeley, Halstead H., assignor to Motor Products Corporation, Detroit, Mich. Windshield-pivot construction. 1,453,955; May 1.
Seiz, Walter, Baden, Switzerland, assignor to General Electric Company. Compound regulating set for induction motors. 1,453,529; May 1.
Sellers, Harvey A., Decatur, Ill. Kite. 1,453,287; May 1.
Sentrop, Johannes T., jr., Montreal, Quebec, Canada. Motor and other cycle. 1,453,326; May 1.
Sharp, Joseph W., Philadelphia, Pa. Gas burner. 1,453,327; May 1.
Shearer, Harry T., Waynesboro, Pa. Reaming tool for truing valve seats. 1,453,643; May 1.
Sheet Steel Products Company. (See Baxter, Kenneth S., assignor.)
Shields, Roland, Baltimore, Md. Combined license-plate, tail-light and signal-light bracket. 1,453,770; May 1.
Shigley, Cyrus C., Grand Rapids, assignor to Electric Phonograph Company, Kalamazoo, Mich. Speed-regulating device. 1,453,890; May 1.
Shuey, Willis A., Boise, Idaho. Pneumatic-tire attachment. 1,453,530; May 1.
Siddall, Wilbur H. (See McKinstry, G. W., and Siddall.)
Signode System, Inc. (See Guenther, Arthur G. G., assignor.)
Sirot, Harry, New York, and H. Sirot, Brooklyn, N. Y. Collar button. 1,453,809; May 1.
Sirot, Hyman. (See Sirot, Harry and H.)
Sivley, Joseph W., Trinity, Ala. Cultivator fender. 1,453,891; May 1.
Skinner Machinery Company. (See McIntyre, Allan H., assignor.)
Sleen, Otto, Rocky Mountain House, Alberta, Canada. Tree protector. 1,453,810; May 1.
Sleeper & Hartley, Inc. (See Blount, Arlington A., assignor.)
Slepian, Joseph, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Dynamo-electric machine. 1,453,410; May 1.
Slye, John Q. (See Bishop, S. H., and Slye.)
Small, James A., Youngstown, Ohio. Annealing sheet iron. 1,453,411; May 1.
Smillie, James, Stretford, England, assignor to Westinghouse Electric & Manufacturing Company. System of ventilation. 1,453,328; May 1.
Smith, Gerald F., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. System of control. 1,453,412; May 1.
Smith, Jay H., Rochester, N. Y. Receptacle opener. 1,453,956; May 1.
Smith, Joseph N., & Co. (See Kopp, William, assignor.)
Smith, Peter E., Philadelphia, Pa. Underfeed stoker. 1,453,892; May 1.
Smith, Richard C., Seattle, Wash. Lantern-slide projecting apparatus. 1,453,893; May 1.
Smith, William J., assignor of one-fourth to J. S. Rawson and one-fourth to J. A. H. Colgan, New York, N. Y. Automobile lock. 1,453,531; May 1.
Smithers, William E. G., Kingston-on-Thames, England. Cinematograph machine adapted for advertising purposes. 1,454,001; May 1.
Snodgrass, Charles W., et al., trustees. (See Snodgrass, C. W., and Whitmoyer, assignors.)
Snodgrass, Charles W., Denver, Colo., and W. R. Whitmoyer, Detroit, Mich., assignors to R. O. Bolles, C. W. Snodgrass, and W. R. Whitmoyer, trustees of S. & W. Transmission Association, Denver, Colo. Gear transmission. 1,453,413; May 1.
Snowman, William D., Ashland, Me. Tool-handle remover. 1,453,288; May 1.
Snyder, Edward H., Salt Lake City, Utah. Separating zinc and lead. 1,453,289; May 1.
Society of Chemical Industry in Basle. (See de Montmollin, G., Spieler, and Bonhôte, assignors.)
Soubier, Leonard D. (See Ferngren, E. T., and Soubier.)
Soubier, Leonard D., assignor to The Owens Bottle Company, Toledo, Ohio. Method of and means for feeding molten glass. 1,453,290; May 1.
Southern Glass Company. (See Marble, William B., assignor.)
Sparkes, Harry P., Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company. Measuring instrument. 1,453,414; May 1.
Speer, Victor. (See Litchfield, E. C. and H. L., and Speer.)
Spencer, Andy O., Sheffield, Ala. Boltless rail joint. 1,453,957; May 1.
Spiegel, Chris F. H., Hamburg, Iowa. Heater for water tanks. 1,453,481; May 1.
Spieler, Josef. (See de Montmollin, G., Spieler, and Bonhôte.)
Sprague Canning Machinery Company. (See Holmquist, August, assignor.)
Sprague, William A., Islington, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe stretcher. 1,453,608; May 1.
Spring Stopper Company. (See Glaspey, Warren E., assignor.)
Springer, John. (See Dickinson, F. S., and Springer.)
Square D Company. (See Ball, A. P., and Zenker, assignors.)
Stack, George E., Ballston Spa, N. Y., assignor to General Electric Company. Electromagnet and control therefor. 1,453,555; May 1.
Staehelin, Emil, Chicago, Ill. Wrench. 1,453,730; May 1.
Stafford, Benjamin E. D., Pittsburgh, Pa. Collapsible dispensing tube. 1,453,415; May 1.
Stahle, Gustaf. (See Bergström, Johan E., assignor.)
Staley, Allen C., assignor to Standard Engineering Company, St. Louis, Mo. Regulator for systems of apparatus. 1,453,291; May 1.
Standard Engineering Company. (See Staley, Allen C., assignor.)
Standard Oil Company. (See Payne, E. H., and Montgomery, assignors.)
Standard Optical Company, The. (See Van Tassel, John R., assignor.)
Standard Steel and Bearings Incorporated. (See Rockwell, Hugh M., assignor.)
Stanley, Robert L., Richmond, Me. Organ blower. 1,453,416; May 1.
Staples, Arthur L., assignor to Winchester Repeating Arms Company, New Haven, Conn. Roller-skate roll. 1,453,894; May 1.
Starkweather, Oscar H., Needham, Mass. Snowplow. 1,453,811; May 1.
St. Claire, Ethelbert M. (See Farnsworth, A. J., and St. Claire.)
Steen, Buford J., Christine, Tex. Pipe wrench. 1,450,016; May 1.
Steffa, Homer I., Chicago, Ill. Heat-exchange apparatus. 1,453,292; May 1.
Stephenson, George E., Chicago, Ill. Display light. 1,453,731; May 1.
Stephenson, William M., Dallas, Tex. Oil-saver device. 1,453,293; May 1.
Stevens, Adelbert L. (See Genthner, T. E., and Stevens.)
Stevens, Clarence S., Sheboygan, Wis. Milk product and making the same. 1,453,859; May 1.
Stevens, Frederick R., Schenectady, N. Y. Steam-engine-valve-reversing gear. 1,453,532; May 1.
Stevens, William N., Madison, Ill., assignor to Gisholt Machine Company, Madison, Wis. Automatic machine tool. 1,453,732; May 1.
Stevenson, Earl P., Newton, Mass. Treating phosphate rock. 1,453,571; May 1.
Stewart, Hancle L. (See Gaddis, William E., assignor.)
Stewart-Warner Speedometer Corporation. (See Rockwell, Edward A., assignor.)
Stokes & Smith Company. (See Nitsch, C. H., and Weightman, assignors.)
Stone, John M., Carrizo Springs, Tex. Detachable hub for eccentrics. 1,453,417; May 1.
Stoner, Paul, assignor to Landis Tool Company, Waynesboro, Pa. Machine for grinding crank pins. 1,453,572; May 1.
Stover, Harmon E. (See Sykes, J. P., and Stover.)
Stowell, Byron F., assignor to Metal Saw and Machine Co., Inc., Springfield, Mass. Band-cutter cutting machine. 1,453,609; May 1.
Strohacker, Louis, assignor to Structo Manufacturing Company, Freeport, Ill. Loom reed. 1,453,533; May 1.
Stromberg-Carlson Telephone Manufacturing Company. (See Paca, William S., assignor.)
Structo Manufacturing Company. (See Strohacker, Louis, assignor.)
Submarine Signal Company. (See Fessenden, Reginald A., assignor.)
Submarine Signal Company. (See Williams, Robert L., assignor.)
Swift, Clement K., Highland Park, assignor of one-half to M. I. Hartman and A. Hartman, Philadelphia, Pa., trading as H. S. Laboratory. Stopcock remover. 1,453,895; May 1.
Sykes, John P., Wallingford, and H. E. Stover, assignors to The Baldwin Locomotive Works, Philadelphia, Pa. Jig for assembling locomotive frames. 1,453,896; May 1.
Taggart, Joseph W., Watertown, N. Y. Paper-bag-bottoming machine. 1,453,294; May 1.
Tagliabue, Charles J., Manufacturing Co. (See Milker, Herbert P., assignor.)
Taylor, Huston, assignor to Detroit Carrier and Manufacturing Company, Detroit, Mich. Demountable-rim lock. 1,453,295; May 1.
Taylor, Lewis B., Gooding, Idaho. Automatic retainer for haystackers. 1,453,771; May 1.

Teich, Ernest L., assignor to The American Hardware Corporation, New Britain, Conn. Lock. 1,454,020; May 1.
Tessmer, John A., Worcester, Mass. Hypodermic syringe. 1,453,418; May 1.
Teves, Frederick W., East Elmhurst, assignor of one-half to A. H. Green, New York, N. Y. Speed regulator for automobiles. 1,453,368; May 1.
Teves, Frederick W., East Elmhurst, assignor of one-half to A. H. Green, New York, N. Y. Speed regulator for automobiles. 1,453,369; May 1.
Thacher, George H., jr., North Providence, R. I. Stoker. 1,453,482; May 1.
Thacher, George H., jr., North Providence, R. I. Stoker. 1,453,483; May 1.
Thacher, George H., jr., North Providence, R. I. Stoker grate. 1,453,484; May 1.
Thexton, Henry A., assignor to Thexton Manufacturing Company, Minneapolis, Minn. Door latch and lock. 1,453,556; May 1.
Thexton Manufacturing Company. (See Thexton, Henry A., assignor.)
Thomas, Arthur, Bailey, Mich., assignor to Triumph Trap Co., Inc., Oneida, N. Y. Trap placer. 1,453,812; May 1.
Thomas, Edward G., assignor to Toledo Scale Company, Toledo, Ohio. Dashpot. 1,453,733; May 1.
Thomas, Edward G., assignor to Toledo Scale Company, Toledo, Ohio. Weighing scale. 1,453,370; May 1.
Thomas, Haynes L., Brunswick, Ga. Saw set. 1,453,958; May 1.
Thomas, Henry, Cleveland, Ohio. Refining iron and steel. 1,453,734; May 1.
Thomas, Paul R., Berkeley, Calif. Brush holder. 1,453,959; May 1.
Thompson, Wilfred, and W. R. Jameson, assignors to Wm. A. Rogers, Limited, Niagara Falls, N. Y. Electroplating apparatus. 1,453,419; May 1.
Thornton, James L., Camp Hill, Pa. Litter carrier. 1,453,610; May 1.
Tiemann, George, & Company. (See Lo Giudice, Domenick, assignor.)
Tiffin Products, Inc. (See Ensign, William S., assignor.)
Tingle, William R., Charlotte, N. C. Necktie holder. 1,453,644 May 1.
Toledo Scale Company. (See Bergen, Harry S., assignor.)
Toledo Scale Company. (See Hem, Halvor O., assignor.)
Toledo Scale Company. (See Thomas, Edward G., assignor.)
Tolia, Theodore and E. W. Boots, Ellwood City, Pa. Automatic cut-off for gas lines. 1,453,573; May 1.
Tolles, Brainard. (See Perrch, John P., assignor.)
Tolston, Elbert M., Macon, Ga. Railway-crossing signal. 1,453,420; May 1.
Tong, James T. and J. E. Blosser, Chester, Pa., assignors to Scott Paper Company. Absorbent-cotton substitute for medical bandages. 1,453,575; May 1.
Topliff-Ely Company. (See Hawkinson, Axel W., assignor.)
Townsend, Mary I., Seattle, Wash., assignor of two-thirds to W. B. Van Valin, Los Angeles, Calif. Toy figure. Des. 62,294; May 1.
Trachtenberg, Samuel, Cleveland, Ohio. Mechanical flag-waving device. 1,453,772; May 1.
Trimont Manufacturing Company. (See Parker, Burton H., assignor.)
Triumph Trap Co. (See Thomas, Arthur, assignor.)
Trotzer, Zoltan, Budapest, Hungary. Electric water heater. 1,453,574; May 1.
Troy Laundry Machinery Company Ltd. (See Adland, V. E., and Kamper, assignors.)
Troy Laundry Machinery Co. (See Hoting, Hans C., assignor.)
Turn-O-Stop Manufacturing Corporation. (See Powers, Timothy B., assignor.)
Twining, Ralph H., Marquette, Mich. Distillation apparatus. 1,453,735; May 1.
Ulp, Alfred R., Pasadena, Calif. Spring-lubricating protector. 1,453,421; May 1.
Union Special Machine Company. (See Kershner, Benjamin V., assignor.)
Union Switch & Signal Company, The. (See Lewis, Lloyd V., assignor.)
Union Switch & Signal Company, The. (See Wells, Wesley B., assignor.)
United Chemical and Organic Products Company. (See Howell, Sylvester S., assignor.)
United Printing Machinery Company. (See Upham, B. F., Belluche, and Hornig, assignors.)
United Shoe Machinery Corporation. (See Bates, A., and Minett, assignors.)
United Shoe Machinery Corporation. (See Holmgren, Eric A., assignor.)
United Shoe Machinery Corporation. (See Sprague, William A., assignor.)
United Shoe Machinery Corporation. (See Wentworth, Jesse S., assignor.)
Universal Safety Washout Plug Company. (See Cashmer, Jacob, assignor.)
Upham, Burt F., Brookline, R. Belluche, Mansfield, and K. F. Hornig, Ameebury, assignors to United Printing Machinery Company, Boston, Mass. Mechanism for transferring and timing sheets. 1,453,773; May 1.
Van de Pol, Alfons H., assignor of one-half to J. J. Bridgeford, Philadelphia, Pa. Furnace construction. 1,453,960; May 1.
Vanderbilt, R. T., Company. (See Murrill, Paul L., assignor.)
Vanderhoef, Ellison E., Jerome, Ariz., assignor to American Manganese Steel Company, Chicago, Ill. Dipper front. 1,453,813; May 1.
Van Etten, Frank C., assignor to Delta-Star Electric Company, Chicago, Ill. High-tension cut-out system and the like. 1,453,774; May 1.
Van Tassel, John R., assignor to The Standard Optical Company, Geneva, N. Y. Lens mounting. 1,453,814; May 1.
Van Valin, William B. (See Townsend, Mary I., assignor.)
Vedder, John W., Worcester, Mass. Slat drier for drying paper. 1,453,645; May 1.
Verniaud, Claudius, deceased, by C. J. Verniaud, administratrix, assignor, by mesne assignments, to G. M. C. Metallic Grease Co., Quincy, Ill. Lubricant. 1,454,002; May 1.
Verniaud, Clotilde J., administratrix. (See Verniaud, Claudius.)
Vickers Limited. (See Dawson, A. T., Buckham, and Haskell, assignors.)
Vincent, Edward H. (See Pegelsen, Edward N., assignor.)
Vincent, Franz, Bridgeport, Conn. Pocketknife. 1,453,897; May 1.
Vincent, Jesse G., assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. 1,453,646; May 1.
Viser, William M., Louisville, Ky. Public trash receptacle. Des. 62,313; May 1.
Vonderharr, Frank J., Granville, Iowa. End gate. 1,454,003; May 1.
Vosburgh, John R., Johnstown, N. Y. Repair plug for inner tubes. 1,453,485; May 1.
Wagner, Albert, assignor to Wagner Research Society, Cincinnati, Ohio. Auxiliary air valve for internal-combustion engines. 1,453,296; May 1.
Wagner, Andrew, West Hoboken, assignor to Ferguson Brothers Mfg. Co., Hoboken, N. J. Table. 1,453,736; May 1.
Wagner Research Society. (See Wagner, Albert, assignor.)
Wagner, William F., Washington, D. C. Masonry structure. 1,453,557; May 1.
Wakefield, F. W., Brass Company, The. (See Wakefield, Frederick W., assignor.)
Wakefield, Frederick W., assignor to The F. W. Wakefield Brass Company, Vermilion, Ohio. Lamp for automobiles and the like. 1,453,534; May 1.
Walat, Gregor. (See Picklo, Valentine, assignor.)
Walden, Frederick E., Worcester, Mass., assignor, by mesne assignments, to Walden-Stax Manufacturing Co., Stoneham, Mass. Wrench. 1,453,898; May 1.
Walden-Stax Manufacturing Co. (See Walden, Frederick E., assignor.)
Walkenhorst, Hermann, Milton, Ky. Hatpin fastener. 1,453,422; May 1.
Walker, Chester E., Peoria, Ill. Prie dieu. Des. 62,314; May 1.
Walker, Viola K., administratrix. (See McGahan, Frederick L.)
Waildow, Carl, San Jose, Calif. Sack holder. 1,453,961; May 1.
Wappler Electric Co. (See Fayer, Charles, assignor.)
Wappler, Reinhold H., Yonkers, N. Y., assignor to American Cystoscope Makers, Inc. Lamp mounting for certain optical instruments. 1,453,207; May 1.
Ward Leonard Electric Company. (See Camp, George W., assignor.)
Ward Leonard Electric Company. (See Kebler, Leonard, assignor.)
Ware, Raymond, Ithaca, N. Y. Mechanical movement. 1,453,815; May 1.
Waterbor, Elmer F., assignor to Michigan Malleable Iron Company, Detroit, Mich. Vehicle wheel. 1,453,371; May 1.
Waterman, William A., Exeter, Calif. Distributing-gate machine. 1,453,647; May 1.
Watertown Bag Machine Co., The. (See Coty, Alfred C., assignor.)
Watson, John E., Philadelphia, Pa. Attachment device for electric fixtures. 1,453,860; May 1.
Way, William H., Ankeny, Iowa. Hen's nest. 1,453,558; May 1.
Weaver, John R., Baltimore, Md. Rope guide. 1,453,576; May 1.
Webb, Benjamin F., assignor to Webb Multispeed Winch Manufacturing Company, Sistersville, W. Va. Winch. 1,453,559; May 1.
Webb Multispeed Winch Manufacturing Company. (See Webb, Benjamin F., assignor.)
Weidborn, Isidore A. (See Weiss, Morris, assignor.)
Weigel, Daniel M., London, England. Internal-combustion engine. 1,453,423; May 1.
Weightman, William A. (See Nitsch, C. H., and Weightman.)
Weiss, Morris, New York, assignor of one-half to I. A. Weidhorn, Lynbrook, N. Y. Pivot button. 1,454,004; May 1.
Weiss, Roger. (See Ericson, E., and Weiss.)

Weitling, William W., College Point, N. Y. Battery jar. Des. 62,295; May 1.
Wells, Wesley B., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Light signal. 1,453,535; May 1.
Wells, William A. (See Lawrence, Walter H., assignor.)
Welpley, Walter W., Detroit, Mich. Toothbrush holder. 1,453,816; May 1.
Wendling, George X., San Francisco, Calif. Foldable shipping box. 1,453,611; May 1.
Wentworth, Jesse S., Norwood, Ohio, assignor to United Shoe Machinery Corporation, Paterson, N. J. Starting and stopping mechanism. 1,453,298; May 1.
Wenzel, Nicolas, Twin Falls, Idaho. Regulating transformer. 1,454,005; May 1.
Werk, F. C., et al. (See Cowin, Irving R., assignor.)
Westerby, John. (See Martin, D. B., and Westerby.)
Western Electric Company. (See Dobbin, Henry F., assignor.)
Western Electric Company. (See Kendall, Burton W., assignor.)
Western Precipitation Company. (See Huber, Frederick W., assignor.)
Westinghouse Air Brake Company, The. (See Lane, George S., assignor.)
Westinghouse Air Brake Company, The. (See Westinghouse, Henry H., assignor.)
Westinghouse Air Spring Company, The. (See Liebau, Richard, assignor.)
Westinghouse Electric & Manufacturing Company. (See Baumann, Karl, assignor.)
Westinghouse Electric & Manufacturing Company. (See Cheetham, George A., assignor.)
Westinghouse Electric & Manufacturing Company. (See Fortescue, Charles L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hanson, Klaus L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hellmund, Rudolf E., assignor.)
Westinghouse Electric & Manufacturing Company. (See Jolley, John E., assignor.)
Westinghouse Electric & Manufacturing Company. (See Kilgour, David, assignor.)
Westinghouse Electric & Manufacturing Company. (See Labberton, John M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Little, George M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Schmidt, Henry F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Slepian, Joseph, assignor.)
Westinghouse Electric & Manufacturing Company. (See Smillie, James, assignor.)
Westinghouse Electric & Manufacturing Company. (See Smith, Gerald F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Sparks, Harry P., assignor.)
Westinghouse Electric & Manufacturing Company. (See Williams, Seldon T., assignor.)
Westinghouse, Henry H., New York, N. Y., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Electric coupling for cars. 1,453,817; May 1.
Westwell, Herbert R., Methuen, Mass. Adjustable bearing cap. 1,453,962; May 1.
Wetzel, Eugene, Appleton, Wis. Fluid-tight container and closure therefor. 1,453,299; May 1.
Wheeler, John L., assignor to The Measuregraph Company, St. Louis, Mo. Mounting for measuring machines and the like. 1,453,300; May 1.
Wheeler-Schebler Carburetor Co. (See Bessom, Earl A., assignor.)
Whetstine, Walter W., Portland, Oreg. Attachment for internal-combustion engines. 1,453,560; May 1.
White, Arthur J. (See Mitchell, L. E., and White.)
White, Fred G., assignor to L. R. Long, Kansas City, Mo. Signboard. 1,453,536; May 1.
Whiteacre, Joseph G., Vancouver, British Columbia, Canada. Tie fastener. 1,453,648; May 1.
Whitehurst, William E., Midville, Ga. Window shade. 1,453,775; May 1.
Whiting Corporation. (See Gregg, Alfred W., assignor.)
Whitmoyer, Walter R., et al., trustees. (See Snodgrass, C. W., and Whitmoyer, assignors.)
Whitmoyer, Walter R. (See Snodgrass, C. W., and Whitmoyer.)
Whittingham, George H., assignor to Monitor Controller Company, Baltimore, Md. Thermally-controlled switch. 1,454,022; May 1.
Wilkinson, Edwin H., Omaha, Nebr. Ironing table. 1,453,649; May 1.
Willson, Howard C., Worcester, Mass. Base for stools and other furniture. 1,453,650; May 1.
Widell, Magnus E., Maywood, and A. A. Jahr, Forest Park, Ill., assignors to American Can Company, New York, N. Y. End feed for double seamers. 1,453,818; May 1.
Wilberding, Alfred, Jacksonville, Fla. Plant protector. 1,453,963; May 1.
Williams, Brice, Kokomo, Ind. Vending machine. 1,453,424; May 1.
Williams, Brice, Kokomo, Ind. Controlling means for vending machines. 1,453,425; May 1.
Williams, Keith, Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Jig for grinding purposes. 1,453,737; May 1.
Williams, Robert L., Newton, Mass., assignor to Submarine Signal Company, Portland, Me. Selective receiver. 1,453,612; May 1.
Williams, Seldon T., Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company. Fair-lead or guide for the control cables of aircraft. 1,453,426; May 1.
Willshaw, William, Des Moines, Iowa. Steam pump. 1,453,561; May 1.
Wilmot Engineering Company. (See Meier, Charles F., assignor.)
Wilson Brothers. (See Heaton, Clarence E., assignor.)
